Gov. J. M. Allen

THE CENTURY MAGAZINE.

VOL. XXX.

MAY, 1885.

NO. 1.

THE NEW ORLEANS EXPOSITION.

AT the close of the Centennial Exhibition in Philadelphia, in 1876, there was a general opinion among people familiar with world's fairs that the ambition to assemble the products and arts of the whole earth in enormous aggregations of raw materials, machinery, fabrics, and pictures had culminated and would go no further. Such great and costly displays, it was argued, had had their day and would be seen no more. Yet barely two years later Paris followed and in some respects surpassed Philadelphia; and now comes New Orleans, with seventy-six acres under roofs; and France is already preparing to outdo herself and all the rest of the world by a monstrous exhibition in 1889, to celebrate the Centennial of her Revolution. Evidently the world's fair, as a phase and means of human progress, is not growing obsolete, whatever

people may think who turn away weary and sated after efforts to mentally digest miles and miles of merchandise and machinery.

If anything would demonstrate beyond the possibility of question the continued vitality of the universal exhibition idea, it is the fact that such an exhibition has been successfully created on the extreme southern border of the United States, in a city of less than a quarter of a million inhabitants, surrounded by a sparsely peopled country on two sides and by the Gulf of Mexico and its bordering marshes on the other two. Of all great undertakings, the work of forming one of these enormous conglomerate displays is among the most difficult and arduous. It might well be compared to that of organizing an army out of raw levies; but in the case of the new army arbitrary power and military discipline are potent to bring order out of chaos, while in that of the exhibition the schemes, stubbornness, and often the stupidity of thousands of individuals must be dealt with respectfully. The coöperation of a multitude of exhibitors must be secured, and their clashing projects for precedence and advantage harmonized. Then there are always formidable financial difficulties, except when a generous government opens wide its treasury; and if the money required is forthcoming, a thousand obstacles arise to prevent the completion of the plan at the date specified—delays of exhibitors, the slowness of transportation lines, the failures of building contractors to come up to time, the inefficiency of officials, and an enormous amount of raveled threads of detail to carry along and tie at the last moment into the symmetrical knots of the general scheme. All who had obtained much knowledge by experience or observation of the great difficulty of the task of bringing into life a world's fair had grave doubts of the possibility of the success of the ambitious project put forth about two years ago by the ancient, easy-going, semi-tropical city near the mouth of the Mississippi. That this project has succeeded, and in a very notable way too, is due not so much to the efforts of the New Orleans

people as to the good fortune of very intelligent and energetic direction, and to the rise of a new national idea,—namely, that there are vast and inviting fields to the south of us waiting to be conquered for our industries and our commerce. This idea, which occasionally appears in our politics and governmental relations, has taken strong hold of the manufacturers of the North. They have sent their fabrics and machinery to New Orleans because it is the natural mart of all the regions bordering upon the Gulf of Mexico, in which they hope to find a new outlet for their goods, and because they expect to meet here the people of those regions.

There is still another idea back of this remarkable exhibition, namely, that the Southern States of the Union, having recovered from the ravages of the civil war and mastered, at least for a time, their political and race problems, now stand in the portal of a great industrial development which is to exploit their mines and forests, establish manufactures, revivify their agriculture, and bring them an influx of capital and immigration. An eagerness to show their readiness for this development led the Southern communities warmly to advocate the plan of a great fair which should be largely Southern in its character. It is not, in fact, as markedly Southern as its projectors expected, but this is because the Northern States, and especially the new States of the West, came forward with striking displays of their resources and achievements.

Having thus glanced at the ideas which lay back of the New Orleans Exposition, let us see how the show itself was brought into existence. The first impetus was given by a letter written by Edward Atkinson, the political economist, and published in the "New York Herald" in August, 1880. Mr. Atkinson urged a celebration of the centennial of the cotton industry in the United States by an exhibition in the city of New York. The

project was taken up in Georgia, and its immediate result was the Cotton Exhibition at Atlanta in 1881, a very creditable display, of moderate dimensions, followed by a larger one at Louisville in 1883. Neither, however, greatly interested the people of the lower Mississippi Valley, who thought that the proper place to glorify King Cotton was in the chief city of the cotton-belt, and not in a town on the extreme northern border of that belt. This feeling led to an agitation among the cotton-planters of the Valley, who have an association which holds annual meetings. The president of this association, F. C. Morehead of Vicksburg, editor of a journal devoted to the cotton industry, took up the subject, stimulated the agitation, and pushed it forward into a popular demand for a cotton-show in New Orleans.

Cotton was first exported from America in the year 1784; so 1884 was the year talked of for the proposed fair. Among the early advocates of the project was E. A. Burke, editor of the New Orleans "Times-Democrat" and Treasurer of the State of Louisiana, a man of large activities in politics and public affairs and of wide acquaintance and influence throughout the South. Major Burke, as he is always called, in accordance with the Southern custom of preserving military titles originating in the civil war, had labored zealously with his newspaper to stimulate the industrial and commercial life of the Gulf States, and to foster trade-relations with the natives and colonies of the tropical regions of America. He had dispatched correspondents to Mexico and the Central American republics, and had fitted out an expedition which explored the *terra incognita* of southern Florida. In his active mind the plan of a show of cotton and its manufactures soon broadened into the conception of a universal exhibition in which the Southern States and their foreign neighbors should play the most prominent part, and to which the nations of the earth should be

HORTICULTURAL HALL.

invited—an exhibition which would spread the fame of New Orleans around the globe and emphasize its advantages as the commercial emporium of all the lands and islands surrounding the Gulf of Mexico.

Congress passed a bill in 1883 which in effect placed the Government in the attitude of forming a partnership with the National Cotton-Planters' Association to create the Exposition. It formed a governing body of thirteen directors, six named by the President on the recommendation of the Association, and seven by him on that of a majority of the subscribers to the enterprise in the city where it might be located.

The bill did not establish the exhibition at New Orleans, but left the location to the Board, who determined to give it to the city that would subscribe \$500,000. There was no competition for the honor. Half a million was a large sum for any Southern city to raise; besides, public opinion had clearly indicated New Orleans as the proper place for the fair. Of the Board of Directors, Edmund Richardson of Mississippi, the largest planter of cotton in the United States, and with the exception of the Khedive of Egypt the largest in the world, was made President, and Samuel Mullen Secretary. Mr. Morehead, Major Burke, and William B. Schmidt, a public-spirited New Orleans merchant, were made a committee to solicit subscriptions. The first subscription was that of the "Times-Democrat," of \$5000. Pledges of about \$225,000 were obtained, payable in installments, chiefly from the railroad companies, the banks, and the Cotton Exchange. Some effort was made to obtain Northern contributors to the fund, but only one subscription came from that section—\$1000 from Potter Palmer of Chicago. The city government of New Orleans gave \$100,000. Thus there was in all \$325,000 in sight—a pitiful sum with which to venture upon the gigantic enterprise of creating a world's fair. At that time, however, few people, perhaps nobody besides Major Burke, had

VOL. XXX.—2.

A CORNER IN JAPAN.

any notions beyond a small exhibition like those so successfully conducted at Atlanta and Louisville. The directors offered Burke the management of the enterprise, with the title of Director-General and a salary of \$25,000 a year. He was not willing to neglect his newspaper and his other business interests, and declined. They came to him again, saying that they could find no other man in the South competent for the task, and that if he did not accept they would be forced to go North and engage an exhibition expert. He finally told them he would take the place, but with a salary of \$10,000 only, which should be invested in exhibition stock and the stock presented to the Agricultural and Mechanical College of the State of Louisiana.

Once at the head of the undertaking, Mr. Burke proceeded to expand the original plan from that of a regional show in honor of cotton to the ambitious dimensions of a universal exhibition of all products, industries,

and arts. When there was only \$300,000 available in money, and no definite prospect beyond another hundred thousand, he began the erection of a building to cost \$325,000. In face of some opposition and much inertia on the part of members of the Board who could not get far beyond the conception of a county fair, he pushed his ideas into execution. Mr. Morehead was made Commissioner-General to travel and interest State governments, manufacturing firms, and foreign nations in making displays. For the money absolutely requisite to go forward with the scheme, Congress was appealed to. Major Burke went to Washington, where his large acquaintance as a politician came into play, aroused an interest in the project among the leaders of both parties, and succeeded, in May, 1884, in having a bill passed loaning the exhibition \$1,000,000, to be paid back out of the receipts, if there should be any surplus over expenses. This appropriation gave life to the whole project, which before had been dragged along by the hardest by a few earnest men through many difficulties, the greatest of which was that of awakening a general interest in the public mind. The Congressional fund was tied up by a restrictive clause making it available only when \$500,000 had been raised from other sources. Only about \$400,000 had been pledged in all, and much

of that was to come in in installments. The Director-General hastened to Baton Rouge, where the Legislature of Louisiana was luckily in session, obtained a grant of a hundred thousand from the State, and then persuaded the subscribers to pay up their deferred installments. Much precious time was lost, and it was not until August 7th, 1884, that the million was obtained from the United States Treasury.

In all there was only \$1,500,000 with which to create the exhibition—a meager amount, in view of the fact that the buildings alone at the Philadelphia Centennial cost over \$5,000,000. Of this scanty fund, \$5000 was given to each State and Territory, to be expended, under the direction of the governor, by a commissioner nominated by him and appointed by the President of the United States, in forming a State exhibit. This seeming act of extravagance, which disposed at one stroke of nearly a quarter of a million, was sagacious and far-sighted. It stimulated the State commissioners, who would otherwise have looked upon their appointments as honorary only, to efforts to organize creditable displays of the resources and attainments of their several communities. Five thousand dollars would not go far, but it was a nucleus for a State fund, which was increased by public subscriptions, or by legislative appropriations, where legislatures were in session. State pride was aroused, and the result was a collective national exhibit embracing every State and Territory except Utah. These exhibits constitute the strongest feature of the entire exhibition. Here New Orleans far surpasses the Philadelphia Centennial. Indeed, there have never before been shown under one roof the products of the mines, fields, orchards, and forests of all our American commonwealths, and the attainments of each in education and industry. To contain this display, a second building was erected, almost as large as the first. It was not begun until August, and it was finished in November. The original plan was that the huge Main Building should contain all the exhibits, but by this time the applications for space had shown that it was going to prove wholly inadequate. The act of Congress provided that the Exposition should be held in 1884; and, to comply with this requirement, it

MEXICAN SILVER.

was opened to the public on the 16th day of December, although in a very inchoate condition. Not until about the 1st of February were all departments of the fair brought into a tolerably complete state. At that time a debt of about \$300,000 had been incurred by the management beyond the \$1,500,000 placed at their disposition and the money obtained from gate receipts and the sale of concessions.

We have thus seen how the Exposition came into existence; now let us glance at the result as a whole. It is manifestly unfair to compare the New Orleans display, made so hastily, with such scanty means and at such a great distance from the chief centers of population, with the Philadelphia Centennial, which was three years in preparation, which was strongly supported by the United States Government, a rich city, and a great State, and had behind it a powerful sentiment of patriotism; and still more unfair to draw the parallel with the last Paris Exposition, of which the French Government took entire charge, and for which it expended more than ten millions of dollars. Yet as far as magnitude is concerned this show in the Far South can well claim rank with the two greatest world's fairs ever held. Witness the following figures as to areas of buildings:

| | | | | |
|---------------------|---------------|-------|-------|-------|
| Philadelphia, 1876. | Main Building | | 20.11 | acres |
| Paris, 1878. | " | " | 54 | " |
| New Orleans, 1885. | " | " | 31.3 | " |

At Philadelphia the machinery was in a separate structure; at New Orleans it is placed in the Main Building. Perhaps a better comparison is that of the total areas under roof at the three exhibitions.

| | | | | |
|---------------------|---------------|-------|------|-------|
| Philadelphia, 1876. | All buildings | | 71.5 | acres |
| Paris, 1878. | " | " | 100 | " |
| New Orleans, 1885. | " | " | 76 | " |

The area of the principal buildings at Philadelphia was forty-eight acres, a multitude of small structures—restaurants and special buildings erected by exhibitors—making up

the total of 71.5 acres. At New Orleans the corresponding principal buildings cover 62 acres. Their several areas in square feet are shown in the following table:

THE WHITE STALLION.

| | | | |
|---|-------|-----------|---------|
| Main Building | | 1,656,300 | sq. ft. |
| Government Building | | 616,400 | " " |
| Art Gallery | | 25,000 | " " |
| Saw-mill Building | | 36,000 | " " |
| Brick-making Machinery Building | .. | 12,000 | " " |
| Machinery Annex | | 60,300 | " " |
| Horticultural Hall | | 69,600 | " " |
| Boiler House | | 20,000 | " " |
| Furniture Pavilion | | 13,500 | " " |
| 2 Pump Houses, 2304 sq. ft. each | .. | 4,608 | " " |
| 6 Live Stock Stables, 22,800 sq. ft. each | | 136,800 | " " |
| Wagon Building | | 23,080 | " " |

Total amount, 2,673,588 sq. ft. or 62 acres.

The Mexican buildings, restaurants, etc., make up a total area of about 76 acres.

When we come to the cost of the buildings at these three recent world's fairs, New Orleans can boast of having accomplished great results with a surprisingly small outlay. After the French had dismantled and sold their main building, and disposed of the palace of Trocadero to the city of Paris, the Government was still out of pocket on account of the fair in the round sum of five millions of dollars. The buildings at the Philadelphia Centennial cost \$5,242,295, and the improvements of the grounds \$922,782. At New Orleans only \$978,000 has been spent on both buildings

PIG-SHOW.

and grounds; yet for all practical purposes of housing an exhibition the New Orleans structures are good enough. The rigid economy applied to their construction is apparent in the cheapness of material, the lack of ornamentation, and the bareness of walls and pillars; but here are the enormous areas, well floored, well roofed, and admirably well lighted. Besides, here are stately portals, and the great size of the structures gives them dignity. To have obtained an area of exhibition-space greater than that at Philadelphia at one-fourth the cost is an achievement of which Director-General Burke and his architect, Mr. G. M. Torgersen, have a right to be proud. They have shown that great exhibitions can be effectually housed without the heavy outlay hitherto supposed to be necessary.

This cheapness has not been at the cost of effective equipment in any department. At Philadelphia the great Corliss engine furnished 1400 horse-power, to which about 600 more was added by other engines. At New Orleans the aggregate of motor force is 5500 horse-power, supplied by a group of thirty-two engines of all sizes, from one to five hundred horse-power. This plan enables a number of engine-builders to show their machines in motion. For the electric lights 1900 horse-

power is required. Steam is supplied by the largest boiler-plant in the world. So quietly does the two and a half miles of shafting run that it was prematurely set in motion, on the opening day, three minutes before the telegraphic signal came from Washington, without any of the visitors assembled for the ceremonial exercises knowing of the mistake. The water supply comes from the Mississippi River close at hand, and the two Worthington pumps that force the yellow flood to the top of the 100 feet of stand-pipe have a capacity of 4,000,000 gallons in twenty-four hours. There are over five miles of pipes. Around the two principal buildings are ten-inch mains, and every hundred feet there are four-inch mains running across. Water can thus be thrown on the roof at intervals of one hundred feet, and upon every part of the interior spaces. The Mississippi water carries a large amount of yellow mud, and to purify it the greatest filtering-plant ever constructed is employed, cleansing 80,000 gallons per hour. This is a new feature in exhibition work, and so is the huge refrigerating and cold storage house, inside of the Main Building, which is three hundred and seventy feet long, and which preserves fruits, fish, flowers, and dairy products, and makes five tons of ice a day. Another new feature is the elevator system to convey visitors to the gallery, and at the same time display the various inventions in the way of vertical locomotion. There are eighteen elevators in the Main Building and eight in the Government Building.

We have thus seen that in magnitude of structures and efficiency of motive power the "World's Industrial and Cotton Centennial Exposition," as it is officially called, compares very well with the Centennial Exhibition at Philadelphia, and has a right to take rank beside the greatest world's fairs of history. Let us carry a little further the comparison with the Philadelphia show, which is still, no doubt, fresh in the memories of thousands of CENTURY readers. In brilliancy of general effect, in variety of interest, and in its foreign features, the New Orleans fair does not equal that held in Fairmount Park. We miss here the multitude of structures erected by the States and by foreign governments, the picturesque restaurants of many nationalities, the costly fabrics and wares displayed from motives of national pride, such as the Sèvres and Limoges porcelains, the Doulton potteries, the Elkington silver, the

Japanese and Paris bronzes, the tapestries and laces, the diamonds and jewelry. The foreign departments, except those of Mexico and Belgium, are weak and of very slight interest to people who have made a study of the exhibitions at Vienna, Paris, or Philadelphia. What one finds in them is mainly the goods of the shops, displayed with an evident commercial motive. On the other

the resources, activities, and social condition of the people of every political division of this great continental republic. Nothing approaching this immense and admirable exhibit was ever before attempted. There is talk of a movement to transfer the whole collection to London, and make of it there a distinctively American exhibition; but for this Congress would have to supply the funds, and Con-

SUGAR-CANE AND RICE-HOUSE.

hand, there are some notably strong and original features. The Government Building, with its display from the National Museum in Washington, its departmental exhibits, and its striking arrays of the products and educational achievements of forty-four States and Territories, is itself a university, teaching by object lessons all the essential facts concerning our national resources and national life. Upon its fourteen acres of floor space every important industry can be studied, and all essential information obtained concerning

gress will not be in session when the Exposition here closes.

The general American display in the Main Building is more impressive than that made at Philadelphia, although there are fewer exhibitors. Very liberal allotments of space were made when doubters were arguing that the building could not be filled, and the result is many novel and picturesque methods of display. A severe taste might object to Greek temples of soap and cathedrals of cracker-boxes; to the representation of the

old tower at Newport in spools of thread, and to costumed pigs holding a reception and inviting to a luncheon of cold ham; but it must be borne in mind that the object of an exhibition is to exhibit, and that each exhibitor naturally seeks to catch for his wares the notice of the passing crowd. The view from the galleries in the Main Building over the broad acres covered with exhibits of brilliant colors and novel forms, and over the adjoining acres of machinery in motion, is a fascinating spectacle. These galleries, twenty-three feet wide and encircling the entire building, are one of the best features of the structure. They enable visitors in a lounging mood to escape from the crowds and to look down upon the show with a sense of peaceful superiority.

Here is, perhaps, a good place to interject a few words about the floor-plan, arranged and carried out by Mr. Samuel Mullen, Chief of Installation, in the face of much pressure from exhibitors seeking prominent positions. All aisles are fourteen feet wide, and the ex-

hibiting spaces are based on the unit of four feet square, allotments being made in multiples of that space. The aisles have been kept absolutely free, and extend unbroken from end to end of the building, except in the machinery space, where the group of engines obstructs them, and in the center of the edifice, where the gigantic music-hall is a distinct architectural feature. As all are of the same width, there is no main aisle. This detracts from the general effect; for there is wanting the stately central avenue of the Philadelphia Exhibition, with its symbolical national façades and its rich displays. The advantage of this plan is that it relieves the management from the strife of exhibitors for the desirable positions on a central broad aisle, and from resulting accusations of partiality, and facilitates a systematic classification. Another of Mr. Mullen's ideas is not to put exhibits of a kind side by side, but to separate them within the space allotted to the class, in order to produce a varied effect.

The foreign countries which accepted the invitation of the President to the Ex-

position, and appointed commissioners to look after their exhibits, were Great Britain, France, Belgium, Russia, China, Japan, Siam, Mexico, Guatemala, Honduras, British Honduras, and Jamaica.

This is a curious list, remarkable for its omissions as well as for some of the names it includes. It is supplemented by a number of exhibits made by individual firms without governmental aid, which have been grouped under their respective national banners. Thus there is a very fair display of Italian goods, and especially of Venetian glass, extensive enough to form a creditable Italian department; and Bohemian glass, Viennese bent-wood furniture, and a few other articles are displayed beneath the imperial black and yellow of Austria-Hungary. Bismarck's prejudice against the United States was, perhaps, the cause of Germany's refusal to contribute to the

Esch. Remble
New Orleans
Feb 35

AT THE ENTRANCE OF THE MAIN BUILDING.

Exposition; but it has not prevented a number of German manufacturers from grouping their goods into an unofficial German department. Spain, from which much might have been expected on account of the proximity of her colony of Cuba to New Orleans, has done nothing officially, and very little by the private enterprise of her people. A Hawaiian exhibit is coming, but at the time this article is written has not yet appeared. China seems to have read the invitation by its title, and, supposing the show was to be mainly of cotton, has sent an admirable exhibit of cotton in all its forms and fabrics, with life-sized costumed figures, and nothing else. In its way this exhibit is the best thing in the whole Exposition. It is accompanied by a catalogue in Chinese and English, prefaced by a monograph on the cultivation and manufacture of cotton in China, that is so thorough and instructive as to put to the blush all the catalogue-making of the self-styled advanced nations of Europe and America. On one of the screens at the entrance of the yellow-roofed pagoda which is the central object

of the display is the following quaint legend: "As from far beyond the clouds in spring, the moon, with liquid refulgence, shines, so the luster of a proper observance of what is right is reflected upon our country and our literature, causing both to flourish."

Japan has sent an educational exhibit strongly colored by the new Western ideas that have revolutionized life and thought in the ancient empire; to this is added, by the enterprise of two of the great commercial companies, a mercantile exhibit of porcelain and other wares, such as can be found in the Japanese shops in Broadway. Siam has a small display of cotton fabrics.

At the head of all foreign countries in space occupied and liberality shown towards the Exposition is our southern neighbor Mexico, whose exhibit is governmental in its character, thoroughly classified, and comprehensive in its presentation of all national products and

THE COTTON PAVILION.

industries. The advertising feature so conspicuous in most foreign departments, and so obtrusive in nearly all the American displays, is wholly absent here. One walks among the long lines of uniform black cases containing the Mexican contributions with the satisfactory feeling that his intelligence is alone appealed to, and that an honest effort has been made to instruct him as to what the Mexican people are doing, and what resources their country possesses inviting further development. The Mexican Government has erected two handsome buildings on the exhibition grounds. One is a pavilion in the Moorish style of architecture, containing a display of mining products; the other a graceful and dignified structure forming a quadrangle around a large court-yard in the style of the houses of the wealthy classes, and serving for the offices of the commissioners and for quarters for a detachment of soldiers and a military band. All

this is significant of the new life that is stirring in Mexico since the building of railways from the United States, and of the ambition of the educated element to put their country in line with the forward march of civilization.

Three of the Central American countries, Guatemala, Honduras, and British Honduras, make small but well-classified and instructive exhibits of natural products, giving especial prominence to their native woods, and show-

CHINA'S DUMMY.

ing many hard, handsome furniture woods as yet unknown to commerce, besides their mahogany, rose-wood and red-wood. Jamaica sends sugar, rum, coffee, woods, fibers, and fruits, and adds a case of work from the Woman's Self-help Society, whose president is Lady Musgrave, a daughter of David Dudley Field, Esq., of New York. The South American countries are all absent, save Brazil, which shows only coffee; and the movement to extend our commercial relations southward, as symbolized by the Exposition, stops, therefore, at the Isthmus of Panama.

Returning now to the European departments, one is disappointed to find nothing but an ordinary shop-keeping exhibit of very limited extent and variety from Great Britain, and nothing much better from France, save the excellent educational exhibit sent in charge of a special commissioner, and placed in the gallery of the Government Building. Russia has sent a few fine furs, some costly malachite and lapis-lazuli tables, a number of droll little droskys, sumptuous Moscow fabrics of gold, green, and crimson for wall-hangings, and, most attractive

of all, a few admirable *genre* bronzes, representing peasant life and hunting scenes, by Professor Lieberich of St. Petersburg, who died in 1883, and A. Poseneve, of Pultowa, a living artist. Belgium's exhibit occupies more space than at Philadelphia. This busy little hive of varied industry appreciates the commercial value of world's fairs, and is never absent from them. Her display here covers the whole field of her chief manufactures, of iron, cotton, linen, woolen, and glass, and contains examples of the map-making work of her Geographical Society. The Belgian goods have not all emerged from the packing-cases at the time I write, and I hope to be able to return to this praiseworthy department in another article.

In the general exhibit of American manufactures there are many evidences of progress in taste and artistic feeling since the Centennial Exhibition of 1876. This is especially manifest in the Trenton pottery, which has advanced from the production of coarse, stout wares, plain or crudely decorated, to the making of many graceful shapes almost as delicate as porcelain, and beautifully ornamented with original designs. It is equally manifest in the furniture. Chairs and sofas have progressed from stiff and stereotyped forms to things of beauty and individuality, each a separate and original conception of the artisan's brain. Here the West rivals the East, and Cincinnati competes successfully with New

York and Boston. I have seen nothing at any world's fair finer than some of the carved walnut and mahogany in the Cincinnati exhibit. Oddly enough, the graceful bent-wood, cane-seat furniture, an Austrian specialty, first introduced in this country in 1876, is now exactly imitated by a factory in Sheboygan, Wisconsin. The chief seat of furniture-making in the West is Grand Rapids, Michigan. The manufacturers of that place have joined in the erection of a special building to show their goods. Stained glass is a new art industry which shows decided progress. So does the weaving of silk and of carpets, imitating Oriental fabrics. Other noticeable industries growing out of the new feeling for combining art and utility are the manufacture of encaustic tiles and of terra-cotta architectural ornaments, both of which are strikingly displayed. In the direction of the progress of invention, the striking and only notable feature of the Exposition is the electric lighting, which is applied to buildings and grounds. Never before has a world's fair been brilliantly illuminated throughout at night. The

illumination of the two chief structures is perfect, but it is in the glass palace of the Horticultural Hall that it produces the finest effects, falling upon the luxuriant tropical foliage and the piles and pyramids of fruit. Machinery is amply represented in its chief lines; best of all in those of locomotive and stationary engines, cotton-ginning, milling (and here Hungary competes with Minneapolis), thread-spinning, and wood-working. The machines at work making barbed wire afford a glimpse of a new and important industry which has grown up with the settlement of the treeless plains of the Far West. An electric railway in the grounds is a novelty to most visitors.

Enormous sheds, well lighted, and with broad passages running from end to end, are provided for the temporary displays of live stock and poultry, which have been notably good. The huge Norman and Clydesdale draft horses, sent from the stock-farms of Illinois, amaze the Southern farmers, whose ideas on the subject of draft animals do not go much beyond the lean and stolid mule.

In the Government Building the Federal Government occupies perhaps a third of the floor-space with the great glass globe of the State Department, the Post-Office building, the War and Navy displays, the maps of the Land Department, the striking pictorial presentation of the progress of railway building made by the Commissioner of Railroads, the instructive exhibits of the National Museum and the Agricultural Department, and the melancholy memorials of arctic exploration. The rest of the space is given to the States in varying areas, according to their demands; and they have filled it in various ways, each commissioner doing as he pleased in his little domain, with the means provided him by legislative grants or private subscriptions. The result is an enormous aggregate of interesting objects, and a pleasing absence of monotony in arrangement. One wanders from State to State, sure of finding everywhere something novel and striking, and sure also with a little examination to find much that is characteristic of the life and industry of each division of our great federated Republic. Thus Kansas and Nebraska are rich in wheat and corn; Mississippi erects a pavilion of cotton, and Louisiana a trophy of sugar-cane; while Massachusetts shows her fisheries and the work of her art-schools and benevolent institutions. Vermont raises a marble arch, and Connecticut arrays the multiform products of her manufacturing industries. As a rule all seek to present a few of their natural resources and farm and mine products. Some add educational exhibits and displays of women's work. Ohio makes a cornice for her pavilion of the

portraits of her governors. Kentucky shows her towns, scenery, and rural life by transparent photographs. Missouri shows relics of the Mound-builders. Colorado makes of rocks and painted canvas a picture of the Rocky Mountains, and heaps around it her gold and silver ores. Dakota builds a house of corn, arranges a little artificial park with specimens of her wild animals, sets in motion a model of a grain elevator, and under the shadow of her wheat trophy pitches the wigwam of a Sioux war-chief, who sits all day with wife and child to be stared at by the passing multitude.

In the galleries on two sides of the Government Building are the educational exhibits, in the midst of which the hairy mammoth, in the zoölogical collection of Ward of Rochester, looms up. Another gallery space is devoted to the display of the work of the colored race, and the fourth to the Women's Department. I hope to return to these two significant departments when they shall be more fully arranged than they are at this date (February 1st).

The iron building of the Art Gallery is not open to the public at this writing, and more than half the pictures have not emerged from their packing-cases. Of those that are unpacked I have seen enough to say that this department of the fair will be successful. Within rather narrow bounds as to space and foreign coöperation, Belgium, alone of the European countries, has sent a good representative exhibit of the works of contemporary painters. The collection was made up by the Society of Belgian Artists, and was accompanied by a diagram indicating where each picture should be hung. France and England send a few canvases, but by no means enough in either case to form a national collection. Mexico occupies as much space as Belgium, and has formed an interesting historical collection, beginning three centuries ago, and divided into periods of twenty-five years. The older pictures, inspired by the genius of the great Spanish masters, are the best. In the American gallery there are many attractive canvases, and a tolerably good representation of the younger artists of established reputation. A few of the old Academicians have also contributed.

There remain to mention the Exposition grounds, which are as level as a billiard table, and just as green in this midwinter season, and are diversified by groups and avenues of stately, wide-spreading live oaks hung with a profusion of the trailing gray tree-moss which decks all forest growths in the lowland regions of the South. To many visitors, fresh from lands of snow, these magnificent trees and the verdant turf they shade form the most pleasing sight in all the great show. The

grounds front upon the turbid current of the Mississippi, and lie within the upper suburbs of the city, four miles and a half from the heart of the business district. They are reached by steamboats from the foot of Canal street, and by four lines of street railway, upon which the one-mule cars, rarely crowded, travel at a jog-trot, and carry passengers out to the gates in three-quarters of an hour, from the Clay statue in Canal street, the focus of all tramway movement.

It may occur to the reader that it is time something should be said about cotton in a description of a Cotton Centennial Exposition, but there is really little to say. Besides the machinery for ginning and pressing the Southern staple in the annex to the Main Building, and a few attempts to display it symbolically in tro-

phies and decorations in the State departments of the Government Building, no prominence is given to it. Indeed, the grains of the West are much more strikingly presented. The supremacy of King Cotton is audaciously challenged here in the chief city of his dominions by the new State of Nebraska, which proclaims on an enormous screen, in letters of golden ears, that "Corn is King," and shows a huge portrait of the rival sovereign formed of red and yellow kernels. Many other States join in allegiance to maize, or proclaim by trophies and pyramids and emblematic figures the praise of wheat; while Mississippi alone in her pretty temple of white fiber surmounted by the cotton-plant announces in a striking way her fidelity to the old traditions of Southern agriculture.

Eugene V. Smalley.

F. D. L.

(Died February 19th, 1885.)

ALL praise her goodness, talents, loveliness,
 And weep that such should perish; but alone
 One thought repeats within me, like the moan
 Of the monotonous sea, with surging stress,
 Beating upon the wind-swept sand where press
 The sobbing waves, with dull persistence thrown
 Against the hollow shore when day is flown
 And cold night reigns without one star to bless.
 I loved her! Oh, I loved her! This one thought
 Is all my heart has room for. Let them praise
 Who loved her less. I'll sit outside the door
 Of him whom most she loved, nor strive to raise
 The voice of consolation, for no more
 I know: I loved her, and all else is naught.

L.

THE RISE OF SILAS LAPHAM.*

BY W. D. HOWELLS,

Author of "Venetian Life," "A Chance Acquaintance," "A Modern Instance," "A Woman's Reason," etc.

xv.

LAPHAM'S strenuous face was broken up with the emotions that had forced him to this question: shame, fear of the things that must have been thought of him, mixed with a faint hope that he might be mistaken, which died out at the shocked and pitying look in Corey's eyes.

"Was I drunk?" he repeated. "I ask you, because I was never touched by drink in my life before, and I don't know." He stood with his huge hands trembling on the back of his chair, and his dry lips apart, as he stared at Corey.

"That is what every one understood, Colonel Lapham," said the young man. "Every one saw how it was. Don't——"

"Did they talk it over after I left?" asked Lapham, vulgarly.

"Excuse me," said Corey, blushing, "my father doesn't talk his guests over with one another." He added, with youthful superfluity, "You were among gentlemen."

"I was the only one that wasn't a gentleman there!" lamented Lapham. "I disgraced you! I disgraced my family! I mortified your father before his friends!" His head dropped. "I showed that I wasn't fit to go with you. I'm not fit for any decent place. What did I say? What did I do?" he asked, suddenly lifting his head and confronting Corey. "Out with it! If you could bear to see it and hear it, I had ought to bear to know it!"

"There was nothing—really nothing," said Corey. "Beyond the fact that you were not quite yourself, there was nothing whatever. My father *did* speak of it to me," he confessed, "when we were alone. He said that he was afraid we had not been thoughtful of you, if you were in the habit of taking only water; I told him I had not seen wine at your table. The others said nothing about you."

"Ah, but what did they think!"

"Probably what we did: that it was purely a misfortune—an accident."

"I wasn't fit to be there," persisted Lap-

ham. "Do you want to leave?" he asked, with savage abruptness.

"Leave?" faltered the young man.

"Yes; quit the business? Cut the whole connection?"

"I haven't the remotest idea of it!" cried Corey in amazement. "Why in the world should I?"

"Because you're a gentleman, and I'm not, and it ain't right I should be over you. If you want to go, I know some parties that would be glad to get you. I will give you up if you want to go before anything worse happens, and I sha'n't blame you. I can help you to something better than I can offer you here, and I will."

"There's no question of my going, unless you wish it," said Corey. "If you do——"

"Will you tell your father," interrupted Lapham, "that I had a notion all the time that I was acting the drunken blackguard, and that I've suffered for it all day? Will you tell him I don't want him to notice me if we ever meet, and that I know I'm not fit to associate with gentlemen in anything but a business way, if I am that?"

"Certainly, I shall do nothing of the kind," retorted Corey. "I can't listen to you any longer. What you say is shocking to me—shocking in a way you can't think."

"Why, man!" exclaimed Lapham, with astonishment; "if *I* can stand it, *you* can!"

"No," said Corey, with a sick look, "that doesn't follow. You may denounce yourself, if you will; but I have my reasons for refusing to hear you—my reasons why I *can't* hear you. If you say another word I must go away."

"I don't understand you," faltered Lapham, in bewilderment, which absorbed even his shame.

"You exaggerate the effect of what has happened," said the young man. "It's enough, more than enough, for you to have mentioned the matter to me, and I think it's unbecoming in me to hear you."

He made a movement toward the door, but Lapham stopped him with the tragic humility of his appeal. "Don't go yet! I

can't let you. I've disgusted you,—I see that; but I didn't mean to. I—I take it back."

"Oh, there's nothing to take back," said Corey, with a repressed shudder for the abasement which he had seen. "But let us say no more about it—think no more. There wasn't one of the gentlemen present last night who didn't understand the matter precisely as my father and I did, and that fact must end it between us two."

He went out into the larger office beyond, leaving Lapham helpless to prevent his going. It had become a vital necessity with him to think the best of Lapham, but his mind was in a whirl of whatever thoughts were most injurious. He thought of him the night before in the company of those ladies and gentlemen, and he quivered in resentment of his vulgar, braggart, uncouth nature. He recognized his own allegiance to the exclusiveness to which he was born and bred, as a man perceives his duty to his country when her rights are invaded. His eye fell on the porter going about in his shirt-sleeves to make the place fast for the night, and he said to himself that Dennis was not more plebeian than his master; that the gross appetites, the blunt sense, the purblind ambition, the stupid arrogance were the same in both, and the difference was in a brute will that probably left the porter the gentler man of the two. The very innocence of Lapham's life in the direction in which he had erred wrought against him in the young man's mood: it contained the insult of clownish inexperience. Amidst the stings and flashes of his wounded pride, all the social traditions, all the habits of feeling, which he had silenced more and more by force of will during the past months, asserted their natural sway, and he rioted in his contempt of the offensive boor, who was even more offensive in his shame than in his trespass. He said to himself that he was a Corey, as if that were somewhat; yet he knew that at the bottom of his heart all the time was that which must control him at last, and which seemed sweetly to be suffering his rebellion, secure of his submission in the end. It was almost with the girl's voice that it seemed to plead with him, to undo in him, effect by effect, the work of his indignant resentment, to set all things in another and fairer light, to give him hopes, to suggest palliations, to protest against injustices. It *was* in Lapham's favor that he was so guiltless in the past, and now Corey asked himself if it were the first time he could have wished a guest at his father's table to have taken less wine; whether Lapham was not rather to be honored for not knowing how to contain his folly where a veteran transgressor might have held his tongue. He asked him-

self, with a thrill of sudden remorse, whether, when Lapham humbled himself in the dust so shockingly, he had shown him the sympathy to which such *abandon* had the right; and he had to own that he had met him on the gentlemanly ground, sparing himself and asserting the superiority of his sort, and not recognizing that Lapham's humiliation came from the sense of wrong, which he had helped to accumulate upon him by superfinely standing aloof and refusing to touch him.

He shut his desk and hurried out into the early night, not to go anywhere, but to walk up and down, to try to find his way out of the chaos, which now seemed ruin, and now the materials out of which fine actions and a happy life might be shaped. Three hours later he stood at Lapham's door.

At times what he now wished to do had seemed forever impossible, and again it had seemed as if he could not wait a moment longer. He had not been careless, but very mindful of what he knew must be the feelings of his own family in regard to the Laphams, and he had not concealed from himself that his family had great reason and justice on their side in not wishing him to alienate himself from their common life and associations. The most that he could urge to himself was that they had not all the reason and justice; but he had hesitated and delayed because they had so much. Often he could not make it appear right that he should merely please himself in what chiefly concerned himself. He perceived how far apart in all their experiences and ideals the Lapham girls and his sisters were; how different Mrs. Lapham was from his mother; how grotesquely unlike were his father and Lapham; and the disparity had not always amused him.

He had often taken it very seriously, and sometimes he said that he must forego the hope on which his heart was set. There had been many times in the past months when he had said that he must go no farther, and as often as he had taken this stand he had yielded it, upon this or that excuse, which he was aware of trumping up. It was part of the complication that he should be unconscious of the injury he might be doing to some one besides his family and himself; this was the defect of his diffidence; and it had come to him in a pang for the first time when his mother said that she would not have the Laphams think she wished to make more of the acquaintance than he did; and then it had come too late. Since that he had suffered quite as much from the fear that it might not be as that it might be so; and now, in the mood, romantic and exalted, in which he found himself concerning Lapham, he was as

far as might be from vain confidence. He ended the question in his own mind by affirming to himself that he was there, first of all, to see Lapham and give him an ultimate proof of his own perfect faith and unabated respect, and to offer him what reparation this involved for that want of sympathy — of humanity — which he had shown.

XVI.

THE Nova Scotia second-girl who answered Corey's ring said that Lapham had not come home yet.

"Oh," said the young man, hesitating on the outer step.

"I guess you better come in," said the girl. "I'll go and see when they're expecting him."

Corey was in the mood to be swayed by any chance. He obeyed the suggestion of the second-girl's patronizing friendliness, and let her shut him into the drawing-room, while she went upstairs to announce him to Penelope.

"Did you tell him father wasn't at home?"

"Yes. He seemed so kind of disappointed, I told him to come in, and I'd see when he *would* be in," said the girl, with the human interest which sometimes replaces in the American domestic the servile deference of other countries.

A gleam of amusement passed over Penelope's face, as she glanced at herself in the glass. "Well," she cried, finally, dropping from her shoulders the light shawl in which she had been huddled over a book when Corey rang, "I will go down."

"All right," said the girl, and Penelope began hastily to amend the disarray of her hair, which she tumbled into a mass on the top of her little head, setting off the pale dark of her complexion with a flash of crimson ribbon at her throat. She moved across the carpet once or twice with the quaint grace that belonged to her small figure, made a dissatisfied grimace at it in the glass, caught a handkerchief out of a drawer and slid it into her pocket, and then descended to Corey.

The Lapham drawing-room in Nankeen Square was in the parti-colored paint which the Colonel had hoped to repeat in his new house: the trim of the doors and windows was in light green and the panels in salmon; the walls were a plain tint of French gray paper, divided by gilt moldings into broad panels with a wide stripe of red velvet paper running up the corners; the chandelier was of massive imitation bronze; the mirror over the mantel rested on a fringed mantel-cover of green reps, and heavy curtains of that stuff hung from gilt lambrequin frames at the window; the carpet was of a small pattern in

crude green, which, at the time Mrs. Lapham bought it, covered half the new floors in Boston. In the paneled spaces on the walls were some stone-colored landscapes, representing the mountains and cañons of the West, which the Colonel and his wife had visited on one of the early official railroad excursions. In front of the long windows looking into the square were statues, kneeling figures which turned their backs upon the company within doors, and represented allegories of Faith and Prayer to people without. A white marble group of several figures, expressing an Italian conception of Lincoln Freeing the Slaves,— a Latin negro and his wife,— with our Eagle flapping his wings in approval, at Lincoln's feet, occupied one corner, and balanced the what-not of an earlier period in another. These phantasms added their chill to that imparted by the tone of the walls, the landscapes, and the carpets, and contributed to the violence of the contrast when the chandelier was lighted up full glare, and the heat of the whole furnace welled up from the registers into the quivering atmosphere on one of the rare occasions when the Laphams invited company.

Corey had not been in this room before; the family had always received him in what they called the sitting-room. Penelope looked into this first, and then she looked into the parlor, with a smile that broke into a laugh as she discovered him standing under the single burner, which the second-girl had lighted for him in the chandelier.

"I don't understand how you came to be put in there," she said, as she led the way to the cozier place, "unless it was because Alice thought you were only here on probation, anyway. Father hasn't got home yet, but I'm expecting him every moment; I don't know what's keeping him. Did the girl tell you that mother and Irene were out?"

"No, she didn't say. It's very good of you to see me." She had not seen the exaltation which he had been feeling, he perceived with half a sigh; it must all be upon this lower level; perhaps it was best so. "There was something I wished to say to your father—I hope," he broke off, "you're better to-night."

"Oh, yes, thank you," said Penelope, remembering that she had not been well enough to go to dinner the night before.

"We all missed you very much."

"Oh, thank you! I'm afraid you wouldn't have missed me if I had been there."

"Oh, yes, we should," said Corey, "I assure you."

They looked at each other.

"I really think I believed I was saying something," said the girl.

"And so did I," replied the young man.

They laughed rather wildly, and then they both became rather grave.

He took the chair she gave him, and looked across at her, where she sat on the other side of the hearth, in a chair lower than his, with her hands dropped in her lap, and the back of her head on her shoulders as she looked up at him. The soft-coal fire in the grate purred and flickered; the drop-light cast a mellow radiance on her face. She let her eyes fall, and then lifted them for an irrelevant glance at the clock on the mantel.

"Mother and Irene have gone to the Spanish Students' concert."

"Oh, have they?" asked Corey; and he put his hat, which he had been holding in his hand, on the floor beside his chair.

She looked down at it for no reason, and then looked up at his face for no other, and turned a little red. Corey turned a little red himself. She who had always been so easy with him now became a little constrained.

"Do you know how warm it is out-of-doors?" he asked.

"No; is it warm? I haven't been out all day."

"It's like a summer night."

She turned her face towards the fire, and then started abruptly. "Perhaps it's too warm for you here?"

"Oh, no, it's very comfortable."

"I suppose it's the cold of the last few days that's still in the house. I was reading with a shawl on when you came."

"I interrupted you."

"Oh, no. I had finished the book. I was just looking over it again."

"Do you like to read books over?"

"Yes; books that I like at all."

"What was it?" asked Corey.

The girl hesitated. "It has rather a sentimental name. Did you ever read it?—'Tears, Idle Tears.'"

"Oh, yes; they were talking of that last night; it's a famous book with ladies. They break their hearts over it. Did it make you cry?"

"Oh, it's pretty easy to cry over a book," said Penelope, laughing; "and that one *is* very natural till you come to the main point. Then the naturalness of all the rest makes that seem natural too; but I guess it's rather forced."

"Her giving him up to the other one?"

"Yes; simply because she happened to know that the other one had cared for him first. Why should she have done it? What right had she?"

"I don't know. I suppose that the self-sacrifice——"

"But it *wasn't* self-sacrifice—or not self-sacrifice alone. She was sacrificing him, too; and for some one who couldn't appreciate him

half as much as she could. I'm provoked with myself when I think how I cried over that book—for I did cry. It's silly—it's wicked for any one to do what that girl did. Why can't they let people have a chance to behave reasonably in stories?"

"Perhaps they couldn't make it so attractive," suggested Corey, with a smile.

"It would be novel, at any rate," said the girl. "But so it would in real life, I suppose," she added.

"I don't know. Why shouldn't people in love behave sensibly?"

"That's a very serious question," said Penelope, gravely. "I couldn't answer it," and she left him the embarrassment of supporting an inquiry which she had certainly instigated herself. She seemed to have finally recovered her own ease in doing this. "Do you admire our autumnal display, Mr. Corey?"

"Your display?"

"The trees in the square. *We* think it's quite equal to an opening at Jordan & Marsh's."

"Ah, I'm afraid you wouldn't let me be serious even about your maples."

"Oh, yes, I should—if you like to be serious."

"Don't you?"

"Well, not about serious matters. That's the reason that book made me cry."

"You make fun of everything. Miss Irene was telling me last night about you."

"Then it's no use for me to deny it so soon. I must give Irene a talking to."

"I hope you won't forbid her to talk about you!"

She had taken up a fan from the table, and held it, now between her face and the fire, and now between her face and him. Her little visage, with that arch, lazy look in it, topped by its mass of dusky hair, and dwindling from the full cheeks to the small chin, had a Japanese effect in the subdued light, and it had the charm which comes to any woman with happiness. It would be hard to say how much of this she perceived that he felt. They talked about other things awhile, and then she came back to what he had said. She glanced at him obliquely round her fan, and stopped moving it. "Does Irene talk about me?" she asked.

"I think so—yes. Perhaps it's only I who talk about you. You must blame me if it's wrong," he returned.

"Oh, I didn't say it was wrong," she replied. "But I hope if you said anything very bad of me, you'll let me know what it was, so that I can reform——"

"No, don't change, please!" cried the young man.

Penelope caught her breath, but went on

resolutely, "Or rebuke you for speaking evil of dignities." She looked down at the fan, now flat in her lap, and tried to govern her head, but it trembled, and she remained looking down. Again they let the talk stray, and then it was he who brought it back to themselves, as if it had not left them.

"I have to talk *of* you," said Corey, "because I get to talk *to* you so seldom."

"You mean that I do all the talking, when we're — together?" She glanced sidewise at him; but she reddened after speaking the last word.

"We're so seldom together," he pursued.

"I don't know what you mean —"

"Sometimes I've thought — I've been afraid — that you avoided me."

"Avoided you?"

"Yes! Tried not to be alone with me."

She might have told him that there was no reason why she should be alone with him, and that it was very strange he should make this complaint of her. But she did not. She kept looking down at the fan, and then she lifted her burning face and looked at the clock again. "Mother and Irene will be sorry to miss you," she gasped.

He instantly rose and came towards her. She rose too, and mechanically put out her hand. He took it as if to say good-night. "I didn't mean to send you away," she besought him.

"Oh, I'm not going," he answered, simply. "I wanted to say — to say that it's I who make her talk about you. To say I — There is something I want to say to you; I've said it so often to myself that I feel as if you must know it." She stood quite still, letting him keep her hand, and questioning his face with a bewildered gaze. "You *must* know — she must have told you — she must have guessed —" Penelope turned white, but outwardly quelled the panic that sent the blood to her heart. "I — I didn't expect — I hoped to have seen your father — but I must speak now, whatever — I love you!"

She freed her hand from both of those he had closed upon it, and went back from him across the room with a sinuous spring. "*Me!*" Whatever potential complicity had lurked in her heart, his words brought her only immeasurable dismay.

He came towards her again. "Yes, *you*. Who else?"

She fended him off with an imploring gesture. "I thought — I — it was —"

She shut her lips tight, and stood looking at him where he remained in silent amaze. Then her words came again, shudderingly.

"Oh, what have you done?"

"Upon my soul," he said, with a vague smile, "I don't know. I hope no harm?"

"Oh, don't laugh!" she cried, laughing hysterically herself. "Unless you want me to think you the greatest wretch in the world!"

"I?" he responded. "For heaven's sake tell me what you mean!"

"You know I can't tell you. Can you say — can you put your hand on your heart and say that — you — say you never meant — that you meant me — all along?"

"Yes! — Yes! Who else? I came here to see your father, and to tell him that I wished to tell you this — to ask him — But what does it matter? You must have known it — you must have seen — and it's for you to answer me. I've been abrupt, I know, and I've startled you; but if you love me, you can forgive that to my loving you so long before I spoke."

She gazed at him with parted lips.

"Oh, mercy! What shall I do? If it's true — what you say — you must go!" she said. "And you must never come any more. Do you promise that?"

"Certainly not," said the young man. "Why should I promise such a thing — so abominably wrong? I could obey if you didn't love me —"

"Oh, I don't! Indeed I don't! Now will you obey?"

"No. I don't believe you."

"Oh!"

He possessed himself of her hand again.

"My love — my dearest! What is this trouble, that you can't tell it? It can't be anything about yourself. If it is anything about any one else, it wouldn't make the least difference in the world, no matter what it was. I would be only too glad to show by any act or deed I could that nothing could change me towards you."

"Oh, you don't understand!"

"No, I don't. You must tell me."

"I will never do that."

"Then I will stay here till your mother comes, and ask her what it is."

"Ask *her*?"

"Yes! Do you think I will give you up till I know why I must?"

"You force me to it! Will you go if I tell you, and never let any human creature know what you have said to me?"

"Not unless you give me leave."

"That will be never. Well, then —" She stopped, and made two or three ineffectual efforts to begin again. "No, no! I can't. You must go!"

"I will not go!"

"You said you — loved me. If you do, you will go."

He dropped the hands he had stretched towards her, and she hid her face in her own.

"There!" she said, turning it suddenly

upon him. "Sit down there. And will you promise me — on your honor — not to speak — not to try to persuade me — not to — touch me? You won't touch me?"

"I will obey you, Penelope."

"As if you were never to see me again? As if I were dying?"

"I will do what you say. But I shall see you again; and don't talk of dying. This is the beginning of life ——"

"No. It's the end," said the girl, resuming at last something of the hoarse drawl which the tumult of her feeling had broken into those half-articulate appeals. She sat down too, and lifted her face towards him. "It's the end of life for me, because I know now that I must have been playing false from the beginning. You don't know what I mean, and I can never tell you. It isn't my secret — it's some one else's. You — you must never come here again. I can't tell you why, and you must never try to know. Do you promise?"

"You can forbid me. I must do what you say."

"I do forbid you, then. And you shall not think I am cruel ——"

"How could I think that?"

"Oh, how hard you make it!"

Corey laughed for very despair. "Can I make it easier by disobeying you?"

"I know I am talking crazily. But I'm not crazy."

"No, no," he said, with some wild notion of comforting her; "but try to tell me this trouble! There is nothing under heaven — no calamity, no sorrow — that I wouldn't gladly share with you, or take all upon myself if I could!"

"I know! But this you can't. Oh, my ——"

"Dearest! Wait! Think! Let me ask your mother — your father ——"

She gave a cry.

"No! If you do that, you will make me hate you! Will you ——"

The rattling of a latch-key was heard in the outer door.

"Promise!" cried Penelope.

"Oh, I promise!"

"Good-bye!" She suddenly flung her arms round his neck, and, pressing her cheek tight against his, flashed out of the room by one door as her father entered it by another.

Corey turned to him in a daze. "I — I called to speak with you — about a matter —— But it's so late now. I'll — I'll see you to-morrow."

"No time like the present," said Lapham, with a fierceness that did not seem referable to Corey. He had his hat still on, and he glared at the young man out of his blue eyes with a fire that something else must have kindled there.

"I really can't, now," said Corey, weakly.

"It will do quite as well to-morrow. Good-night, sir."

"Good-night," answered Lapham abruptly, following him to the door, and shutting it after him. "I think the devil must have got into pretty much everybody to-night," he muttered, coming back to the room, where he put down his hat. Then he went to the kitchen-stairs and called down, "Hello, Alice! I want something to eat!"

XVII.

"WHAT'S the reason the girls never get down to breakfast any more?" asked Lapham when he met his wife at the table in the morning. He had been up an hour and a half, and he spoke with the severity of a hungry man. "It seems to me they don't amount to *anything*. Here I am, at my time of life, up the first one in the house. I ring the bell for the cook at quarter-past six every morning, and the breakfast is on the table at half-past seven right along, like clock-work, but I never see anybody but you till I go to the office."

"Oh, yes, you do, Si," said his wife, soothingly. "The girls are nearly always down. But they're young, and it tires them more than it does us to get up early."

"They can rest afterwards. They don't do anything after they *are* up," grumbled Lapham.

"Well, that's your fault, ain't it? You oughtn't to have made so much money, and then they'd have had to work." She laughed at Lapham's Spartan mood, and went on to excuse the young people. "Irene's been up two nights hand running, and Penelope says she ain't well. What makes you so cross about the girls? Been doing something you're ashamed of?"

"I'll tell you when I've been doing anything to be ashamed of," growled Lapham.

"Oh, no, you won't!" said his wife, jollily. "You'll only be hard on the rest of us. Come, now, Si; what is it?"

Lapham frowned into his coffee with sulky dignity, and said, without looking up, "I wonder what that fellow wanted here last night?"

"What fellow?"

"Corey. I found him here when I came home, and he said he wanted to see me; but he wouldn't stop."

"Where was he?"

"In the sitting-room."

"Was Pen there?"

"I didn't see her."

Mrs. Lapham paused, with her hand on the cream-jug. "Why, what in the land *did* he want? Did he say he wanted you?"

"That's what he said."

"And then he wouldn't stay?"

"No."

"Well, then, I'll tell you just what it is, Silas Lapham. He came here"—she looked about the room and lowered her voice—"to see you about Irene, and then he hadn't the courage."

"I guess he's got courage enough to do pretty much what he wants to," said Lapham, glumly. "All I know is, he was here. You better ask Pen about it, if she ever gets down."

"I guess I sha'n't wait for her," said Mrs. Lapham; and, as her husband closed the front door after him, she opened that of her daughter's room and entered abruptly.

The girl sat at the window, fully dressed, and as if she had been sitting there a long time. Without rising, she turned her face towards her mother. It merely showed black against the light, and revealed nothing till her mother came close to her with successive questions. "Why, how long have you been up, Pen? Why don't you come to your breakfast? Did you see Mr. Corey when he called last night? Why, what's the matter with you? What have you been crying about?"

"Have I been crying?"

"Yes! Your cheeks are all wet!"

"I thought they were on fire. Well, I'll tell you what's happened." She rose and then fell back in her chair. "Lock the door!" she ordered, and her mother mechanically obeyed. "I don't want Irene in here. There's nothing the matter. Only, Mr. Corey offered himself to me last night."

Her mother remained looking at her, helpless, not so much with amaze, perhaps, as dismay.

"Oh, I'm not a ghost! I wish I was! You had better sit down, mother. You have got to know all about it."

Mrs. Lapham dropped nervelessly into the chair at the other window, and while the girl went slowly but briefly on, touching only the vital points of the story, and breaking at times into a bitter drollery, she sat as if without the power to speak or stir.

"Well, that's all, mother. I should say I had dreamt it, if I had slept any last night; but I guess it really happened."

The mother glanced round at the bed, and said, glad to occupy herself delayingly with the minor care: "Why, you have been sitting up all night! You will kill yourself."

"I don't know about killing myself, but I've been sitting up all night," answered the girl. Then, seeing that her mother remained blankly silent again, she demanded, "Why don't you blame me, mother? Why don't you say that I led him on, and tried to get him away from her? Don't you believe I did?"

Her mother made her no answer, as if these

ravings of self-accusal needed none. "Do you think," she asked, simply, "that he got the idea you cared for him?"

"He knew it! How could I keep it from him? I said I didn't—at first!"

"It was no use," sighed the mother. "You might as well said you did. It couldn't help Irene any, if you didn't."

"I always tried to help her with him, even when I——"

"Yes, I know. But she never was equal to him. I saw that from the start; but I tried to blind myself to it. And when he kept coming——"

"You never thought of me!" cried the girl, with a bitterness that reached her mother's heart. "I was nobody! I couldn't feel! No one could care for me!" The turmoil of despair, of triumph, of remorse and resentment, which filled her soul, tried to express itself in the words.

"No," said the mother humbly. "I didn't think of you. Or I didn't think of you enough. It did come across me sometimes that maybe—— But it didn't seem as if—— And your going on so for Irene——"

"You let me go on. You made me always go and talk with him for her, and you didn't think I would talk to him for myself. Well, I didn't!"

"I'm punished for it. When did you—begin to care for him?"

"How do I know? What difference does it make? It's all over now, no matter when it began. He won't come here any more, unless I let him." She could not help betraying her pride in this authority of hers, but she went on anxiously enough: "What will you say to Irene? She's safe as far as I'm concerned; but if he don't care for her, what will you do?"

"I don't know what to do," said Mrs. Lapham. She sat in an apathy from which she apparently could not rouse herself. "I don't see as anything can be done."

Penelope laughed in a pitying derision.

"Well, let things go on then. But they won't go on."

"No, they won't go on," echoed her mother. "She's pretty enough, and she's capable; and your father's got the money—I don't know what I'm saying! She ain't equal to him, and she never was. I kept feeling it all the time, and yet I kept blinding myself."

"If he had ever cared for her," said Penelope, "it wouldn't have mattered whether she was equal to him or not. *I'm* not equal to him either."

Her mother went on: "I might have thought it was you; but I had got set—— Well! I can see it all clear enough, now it's too late. *I* don't know what to do."

"And what do you expect *me* to do?"

demanded the girl. "Do you want *me* to go to Irene and tell her that I've got him away from her?"

"Oh, good Lord!" cried Mrs. Lapham. "What shall I do? What do you want I should do, Pen?"

"Nothing for me," said Penelope. "I've had it out with myself. Now do the best you can for Irene."

"I couldn't say you had done wrong, if you was to marry him to-day."

"Mother!"

"No, I couldn't. I couldn't say but what you had been good and faithful all through, and you had a perfect right to do it. There ain't any one to blame. He's behaved like a gentleman, and I can see now that he never thought of her, and that it was you all the while. Well, marry him, then! He's got the right, and so have you."

"What about Irene? I don't want you to talk about me. I can take care of myself."

"She's nothing but a child. It's only a fancy with her. She'll get over it. She hain't really got her heart set on him."

"She's got her heart set on him, mother. She's got her whole life set on him. You know that."

"Yes, that's so," said the mother, as promptly as if she had been arguing to that rather than the contrary effect.

"If I could give him to her, I would. But he isn't mine to give." She added in a burst of despair, "He isn't mine to keep!"

"Well," said Mrs. Lapham, "she has got to bear it. I don't know what's to come of it all. But she's got to bear her share of it." She rose and went toward the door.

Penelope ran after her in a sort of terror. "You're not going to tell Irene?" she gasped, seizing her mother by either shoulder.

"Yes, I am," said Mrs. Lapham. "If she's a woman grown, she can bear a woman's burden."

"I can't let you tell Irene," said the girl, letting fall her face on her mother's neck. "Not Irene," she moaned. "I'm afraid to let you. How can I ever look at her again?"

"Why, you haven't done anything, Pen," said her mother, soothingly.

"I wanted to! Yes, I must have done something. How could I help it? I did care for him from the first, and I must have tried to make him like me. Do you think I did? No, no! You mustn't tell Irene! Not—not—yet! Mother! Yes! I did try to get him from her!" she cried, lifting her head, and suddenly looking her mother in the face with those large dim eyes of hers. "What do you think? Even last night! It was the first time I ever had him all to myself, for myself,

and I know now that I tried to make him think that I was pretty and—funny. And I didn't try to make him think of her. I knew that I pleased him, and I tried to please him more. Perhaps I could have kept him from saying that he cared for me; but when I saw he did—I must have seen it—I couldn't. I had never had him to myself, and for myself, before. I needn't have seen him at all, but I wanted to see him; and when I was sitting there alone with him, how do I know what I did to let him feel that I cared for him? Now, will you tell Irene? I never thought he did care for me, and never expected him to. But I liked him. Yes—I did like him! Tell her that! Or else *I* will."

"If it was to tell her he was dead," began Mrs. Lapham, absently.

"How easy it would be!" cried the girl in self-mockery. "But he's worse than dead to her; and so am I. I've turned it over a million ways, mother; I've looked at it in every light you can put it in, and I can't make anything but misery out of it. You can see the misery at the first glance, and you can't see more or less if you spend your life looking at it." She laughed again, as if the hopelessness of the thing amused her. Then she flew to the extreme of self-assertion. "Well, I *have* a right to him, and he has a right to me. If he's never done anything to make her think he cared for her,—and I know he hasn't; it's all been our doing,—then he's free and I'm free. We can't make her happy, whatever we do; and why shouldn't I—— No, that won't do! I reached that point before!" She broke again into her desperate laugh. "You may try now, mother!"

"I'd best speak to your father first——"

Penelope smiled a little more forlornly than she had laughed.

"Well, yes; the Colonel will have to know. It isn't a trouble that I can keep to myself exactly. It seems to belong to too many other people."

Her mother took a crazy encouragement from her return to her old way of saying things. "Perhaps he can think of something."

"Oh, I don't doubt but the Colonel will know just what to do!"

"You mustn't be too down-hearted about it. It—it'll all come right——"

"You tell Irene that, mother."

Mrs. Lapham had put her hand on the door-key; she dropped it, and looked at the girl with a sort of beseeching appeal for the comfort she could not imagine herself. "Don't look at me, mother," said Penelope, shaking her head. "You know that if Irene were to die without knowing it, it wouldn't come right for me."

"Pen!"

"I've read of cases where a girl gives up the man that loves her so as to make some other girl happy that the man doesn't love. That might be done."

"Your father would think you were a fool," said Mrs. Lapham, finding a sort of refuge in her strong disgust for the pseudo-heroism. "No! If there's to be any giving up, let it be by the one that sha'n't make anybody but herself suffer. There's trouble and sorrow enough in the world, without *making* it our purpose!"

She unlocked the door, but Penelope slipped round and set herself against it. "Irene shall not give up!"

"I will see your father about it," said the mother. "Let me out now ——"

"Don't let Irene come here!"

"No. I will tell her that you haven't slept. Go to bed now, and try to get some rest. She isn't up herself yet. You must have some breakfast."

"No; let me sleep if I can. I can get something when I wake up. I'll come down if I can't sleep. Life has got to go on. It does when there's a death in the house, and this is only a little worse."

"Don't you talk nonsense!" cried Mrs. Lapham, with angry authority.

"Well, a little better, then," said Penelope, with meek concession.

Mrs. Lapham attempted to say something, and could not. She went out and opened Irene's door. The girl lifted her head drowsily from her pillow. "Don't disturb your sister when you get up, Irene. She hasn't slept well ——"

"*Please* don't talk! I'm almost *dead* with sleep!" returned Irene. "Do go, mamma! I sha'n't disturb her." She turned her face down in the pillow, and pulled the covering up over her ears.

The mother slowly closed the door and went down-stairs, feeling bewildered and baffled almost beyond the power to move. The time had been when she would have tried to find out why this judgment had been sent upon her. But now she could not feel that the innocent suffering of others was inflicted for her fault; she shrank instinctively from that cruel and egotistic misinterpretation of the mystery of pain and loss. She saw her two children, equally if differently dear to her, destined to trouble that nothing could avert, and she could not blame either of them; she could not blame the means of this misery to them; he was as innocent as they, and though her heart was sore against him in this first moment, she could still be just to him in it. She was a woman who had been used to

seek the light by striving; she had hitherto literally worked to it. But it is the curse of prosperity that it takes work away from us, and shuts that door to hope and health of spirit. In this house, where everything had come to be done for her, she had no tasks to interpose between her and her despair. She sat down in her own room and let her hands fall in her lap,—the hands that had once been so helpful and busy,—and tried to think it all out. She had never heard of the fate that was once supposed to appoint the sorrows of men irrespective of their blamelessness or blame, before the time when it came to be believed that sorrows were penalties; but in her simple way she recognized something like that mythic power when she rose from her struggle with the problem, and said aloud to herself, "Well, the witch is in it." Turn which way she would, she saw no escape from the misery to come—the misery which had come already to Penelope and herself, and that must come to Irene and her father. She started when she definitely thought of her husband, and thought with what violence it would work in every fiber of his rude strength. She feared that, and she feared something worse—the effect which his pride and ambition might seek to give it; and it was with terror of this, as well as the natural trust with which a woman must turn to her husband in any anxiety at last, that she felt she could not wait for evening to take counsel with him. When she considered how wrongly he might take it all, it seemed as if it were already known to him, and she was impatient to prevent his error.

She sent out for a messenger, whom she dispatched with a note to his place of business: "Silas, I should like to ride with you this afternoon. Can't you come home early? Persis." And she was at dinner with Irene, evading her questions about Penelope, when answer came that he would be at the house with the buggy at half-past two. It is easy to put off a girl who has but one thing in her head; but, though Mrs. Lapham could escape without telling anything of Penelope, she could not escape seeing how wholly Irene was engrossed with hopes now turned so vain and impossible. She was still talking of that dinner, of nothing but that dinner, and begging for flattery of herself and praise of him, which her mother had till now been so ready to give.

"Seems to me you don't take very much interest, mamma!" she said, laughing and blushing, at one point.

"Yes,—yes, I do," protested Mrs. Lapham, and then the girl prattled on.

"I guess I shall get one of those pins that

Nanny Corey had in her hair. I think it would become me, don't you?"

"Yes; but, Irene — I don't like to have you go on so, till — unless he's said something to show — You oughtn't to give yourself up to thinking —" But at this the girl turned so white, and looked such reproach at her, that she added, frantically: "Yes, get the pin. It is just the thing for you! But don't disturb Penelope. Let her alone till I get back. I'm going out to ride with your father. He'll be here in half an hour. Are you through? Ring, then. Get yourself that fan you saw the other day. Your father won't say anything; he likes to have you look well. I could see his eyes on you half the time the other night."

"I should have liked to have Pen go with me," said Irene, restored to her normal state of innocent selfishness by these flatteries. "Don't you suppose she'll be up in time? What's the matter with her that she didn't sleep?"

"I don't know. Better let her alone."

"Well," submitted Irene.

XVIII.

MRS. LAPHAM went away to put on her bonnet and cloak, and she was waiting at the window when her husband drove up. She opened the door and ran down the steps. "Don't get out; I can help myself in," and she clambered to his side, while he kept the fidgeting mare still with voice and touch.

"Where do you want I should go?" he asked, turning the buggy.

"Oh, I don't care. Out Brookline way, I guess. I wish you hadn't brought this fool of a horse," she gave way, petulantly. "I wanted to have a talk."

"When I can't drive this mare and talk too, I'll sell out altogether," said Lapham. "She'll be quiet enough when she's had her spin."

"Well," said his wife; and while they were making their way across the city to the Mill-dam she answered certain questions he asked about some points in the new house.

"I should have liked to have you stop there," he began; but she answered so quickly, "Not to-day," that he gave it up and turned his horse's head westward, when they struck Beacon street.

He let the mare out, and he did not pull her in till he left the Brighton road and struck off under the low boughs that met above one of the quiet streets of Brookline, where the stone cottages, with here and there a patch of determined ivy on their northern walls, did what they could to look English amid the glare of the autumnal foliage. The

smooth earthen track under the mare's hoofs was scattered with flakes of the red and yellow gold that made the air luminous around them, and the perspective was gay with innumerable tints and tones.

"Pretty sightly," said Lapham, with a long sigh, letting the reins lie loose in his vigilant hand, to which he seemed to relegate the whole charge of the mare. "I want to talk with you about Rogers, Persis. He's been getting in deeper and deeper with me; and last night he pestered me half to death to go in with him in one of his schemes. I ain't going to blame anybody, but I hain't got very much confidence in Rogers. And I told him so last night."

"Oh, don't talk to me about Rogers!" his wife broke in. "There's something a good deal more important than Rogers in the world, and more important than your business. It seems as if you couldn't think of anything else — that and the new house. Did you suppose I wanted to ride so as to talk Rogers with you?" she demanded, yielding to the necessity a wife feels of making her husband pay for her suffering, even if he has not inflicted it. "I declare —"

"Well, hold on, now!" said Lapham. "What *do* you want to talk about? I'm listening."

His wife began, "Why, it's just this, Silas Lapham!" and then she broke off to say, "Well, you may wait, now — starting me wrong, when it's hard enough anyway."

Lapham silently turned his whip over and over in his hand and waited.

"Did you suppose," she asked at last, "that that young Corey had been coming to see Irene?"

"I don't know what I supposed," replied Lapham sullenly. "You always said so." He looked sharply at her under his lowering brows.

"Well, he hasn't," said Mrs. Lapham; and she replied to the frown that blackened on her husband's face, "And I can tell you what, if you take it in that way I sha'n't speak another word."

"Who's takin' it what way?" retorted Lapham savagely. "What are you drivin' at?"

"I want you should promise that you'll hear me out quietly."

"I'll hear you out if you'll give me a chance. I haven't said a word yet."

"Well, I'm not going to have you flying into forty furies, and looking like a perfect thunder-cloud at the very start. I've had to bear it, and you've got to bear it too."

"Well, let me have a chance at it, then."

"It's nothing to blame anybody about, as I can see, and the only question is, what's the best thing to do about it. There's only one

thing we can do; for if he don't care for the child, nobody wants to make him. If he hasn't been coming to see her, he hasn't, and that's all there is to it."

"No, it ain't!" exclaimed Lapham.

"There!" protested his wife.

"If he hasn't been coming to see her, what *has* he been coming for?"

"He's been coming to see Pen!" cried the wife. "Now are you satisfied?" Her tone implied that he had brought it all upon them; but at the sight of the swift passions working in his face to a perfect comprehension of the whole trouble, she fell to trembling, and her broken voice lost all the spurious indignation she had put into it. "Oh, Silas! what are we going to do about it? I'm afraid it'll kill Irene."

Lapham pulled off the loose driving-glove from his right hand with the fingers of his left, in which the reins lay. He passed it over his forehead, and then flicked from it the moisture it had gathered there. He caught his breath once or twice, like a man who meditates a struggle with superior force and then remains passive in its grasp.

His wife felt the need of comforting him, as she had felt the need of afflicting him. "I don't say but what it can be made to come out all right in the end. All I say is, I don't see my way clear yet."

"What makes you think he likes Pen?" he asked, quietly.

"He told her so last night, and she told me this morning. Was he at the office to-day?"

"Yes, he was there. I haven't been there much myself. He didn't say anything to me. Does Irene know?"

"No; I left her getting ready to go out shopping. She wants to get a pin like the one Nanny Corey had on."

"Oh, my Lord!" groaned Lapham.

"It's been Pen from the start, I guess, or almost from the start. I don't say but what he was attracted some by Irene at the *very* first; but I guess it's been Pen ever since he saw her; and we've taken up with a notion, and blinded ourselves with it. Time and again I've had my doubts whether he cared for Irene any; but I declare to goodness, when he kept coming, I never hardly thought of Pen, and I couldn't help believing at last he *did* care for Irene. Did it ever strike you he might be after Pen?"

"No. I took what you said. I supposed you knew."

"Do you blame me, Silas?" she asked timidly.

"No. What's the use of blaming? We don't either of us want anything but the chil-

dren's good. What's it all of it for, if it ain't for that? That's what we've both slaved for all our lives."

"Yes, I know. Plenty of people *lose* their children," she suggested.

"Yes, but that don't comfort me any. I never was one to feel good because another man felt bad. How would you have liked it if some one had taken comfort because his boy lived when ours died? No, I can't do it. And this is worse than death, someways. That comes and it goes; but this looks as if it was one of those things that had come to stay. The way I look at it, there ain't any hope for anybody. Suppose we don't want Pen to have him; will that help Irene any, if he don't want her? Suppose we don't want to let him have either; does that help either?"

"You talk," exclaimed Mrs. Lapham, "as if our say was going to settle it. Do you suppose that Penelope Lapham is a girl to take up with a fellow that her sister is in love with, and that she always thought was in love with her sister, and go off and be happy with him? Don't you believe but what it would come back to her, as long as she breathed the breath of life, how she'd teased her about him, as I've heard Pen tease Irene, and helped to make her think he was in love with her, by showing that she thought so herself? It's ridiculous!"

Lapham seemed quite beaten down by this argument. His huge head hung forward over his breast; the reins lay loose in his moveless hand; the mare took her own way. At last he lifted his face and shut his heavy jaws.

"Well?" quavered his wife.

"Well," he answered, "if he wants her, and she wants him, I don't see what that's got to do with it." He looked straight forward, and not at his wife.

She laid her hands on the reins. "Now, you stop right here, Silas Lapham! If I thought that—if I really believed you could be willing to break that poor child's heart, and let Pen disgrace herself by marrying a man that had as good as killed her sister, just because you wanted Bromfield Corey's son for a son-in-law——"

Lapham turned his face now, and gave her a look. "You had better *not* believe that, Persis! Get up!" he called to the mare, without glancing at her, and she sprang forward. "I see you've got past being any use to yourself on this subject."

"Hello!" shouted a voice in front of him. "Where the devil you goin' to?"

"Do you want to *kill* somebody?" shrieked his wife.

There was a light crash, and the mare recoiled her length, and separated their wheels

from those of the open buggy in front which Lapham had driven into. He made his excuses to the occupant; and the accident relieved the tension of their feelings and left them far from the point of mutual injury which they had reached in their common trouble and their unselfish will for their children's good.

It was Lapham who resumed the talk. "I'm afraid we can't either of us see this thing in the right light. We're too near to it. I wish to the Lord there was somebody to talk to about it."

"Yes," said his wife; "but there ain't anybody."

"Well, I dunno," suggested Lapham, after a moment; "why not talk to the minister of your church? May be he could see some way out of it."

Mrs. Lapham shook her head hopelessly. "It wouldn't do. I've never taken up my connection with the church, and I don't feel as if I'd got any claim on him."

"If he's anything of a man, or anything of a preacher, you *have* got a claim on him," urged Lapham; and he spoiled his argument by adding, "I've contributed enough *money* to his church."

"Oh, that's nothing," said Mrs. Lapham. "I ain't well enough acquainted with Dr. Langworthy, or else I'm *too* well. No; if I was to ask any one, I should want to ask a total stranger. But what's the use, Si? Nobody could make us see it any different from what it is, and I don't know as I should want they should."

It blotted out the tender beauty of the day and weighed down their hearts ever more heavily within them. They ceased to talk of it a hundred times, and still came back to it. They drove on and on. It began to be late. "I guess we better go back, Si," said his wife; and as he turned without speaking, she pulled her veil down and began to cry softly behind it, with low little broken sobs.

Lapham started the mare up and drove swiftly homeward. At last his wife stopped crying and began trying to find her pocket. "Here, take mine, Persis," he said kindly offering her his handkerchief, and she took it and dried her eyes with it. "There was one of those fellows there the other night," he spoke again, when his wife leaned back against the cushions in peaceful despair, "that I liked the looks of about as well as any man I ever saw. I guess he was a pretty good man. It was that Mr. Sewell." He looked at his wife, but she did not say anything. "Persis," he resumed, "I can't bear to go back with nothing settled in our minds. I can't bear to let you."

"We must, Si," returned his wife, with gentle gratitude. Lapham groaned. "Where does he live?" she asked.

"On Bolingbroke street. He gave me his number."

"Well, it wouldn't do any good. What could he say to us?"

"Oh, I don't know as he could say anything," said Lapham hopelessly; and neither of them said anything more till they crossed the Milldam and found themselves between the rows of city houses.

"Don't drive past the new house, Si," pleaded his wife. "I couldn't bear to see it. Drive—drive up Bolingbroke street. We might as well see where he *does* live."

"Well," said Lapham. He drove along slowly. "That's the place," he said finally, stopping the mare and pointing with his whip.

"It wouldn't do any good," said his wife, in a tone which he understood as well as he understood her words. He turned the mare up to the curbstone.

"You take the reins a minute," he said, handing them to his wife.

He got down and rang the bell, and waited till the door opened; then he came back and lifted his wife out. "He's in," he said.

He got the hitching-weight from under the buggy-seat and made it fast to the mare's bit.

"Do you think she'll stand with that?" asked Mrs. Lapham.

"I guess so. If she don't, no matter."

"Ain't you afraid she'll take cold," she persisted, trying to make delay.

"Let her!" said Lapham. He took his wife's trembling hand under his arm, and drew her to the door.

"He'll think we're crazy," she murmured, in her broken pride.

"Well, we *are*," said Lapham. "Tell him we'd like to see him alone awhile," he said to the girl who was holding the door ajar for him, and she showed him into the reception-room, which had been the Protestant confessional for many burdened souls before their time, coming, as they did, with the belief that they were bowed down with the only misery like theirs in the universe; for each one of us must suffer long to himself before he can learn that he is but one in a great community of wretchedness which has been pitilessly repeating itself from the foundation of the world.

They were as loath to touch their trouble when the minister came in as if it were their disgrace; but Lapham did so at last, and, with a simple dignity which he had wanted in his bungling and apologetic approaches, he laid the affair clearly before the minister's compassionate and reverent eye. He spared Corey's name, but he did not pretend that it

was not himself and his wife and their daughters who were concerned.

"I don't know as I've got any right to trouble you with this thing," he said, in the moment while Sewell sat pondering the case, "and I don't know as I've got any warrant for doing it. But, as I told my wife here, there was something about you—I don't know whether it was anything you *said* exactly—that made me feel as if you could help us. I guess I didn't say so much as that to her; but that's the way I felt. And here we are. And if it ain't all right——"

"Surely," said Sewell, "it's all right. I thank you for coming—for trusting your trouble to me. A time comes to every one of us when we can't help ourselves, and then we must get others to help us. If people turn to me at such a time, I feel sure that I was put into the world for something—if nothing more than to give my pity, my sympathy."

The brotherly words, so plain, so sincere, had a welcome in them that these poor outcasts of sorrow could not doubt.

"Yes," said Lapham huskily, and his wife began to wipe the tears again under her veil.

Sewell remained silent, and they waited till he should speak. "We can be of use to one another here, because we can always be wiser for some one else than we can for ourselves. We can see another's sins and errors in a more merciful light—and that is always a fairer light—than we can our own; and we can look more sanely at others' afflictions." He had addressed these words to Lapham; now he turned to his wife. "If some one had come to you, Mrs. Lapham, in just this perplexity, what would you have thought?"

"I don't know as I understand you," faltered Mrs. Lapham.

Sewell repeated his words, and added, "I mean, what do you think some one else ought to do in your place?"

"Was there ever any poor creatures in such a strait before?" she asked, with pathetic incredulity.

"There's no new trouble under the sun," said the minister.

"Oh, if it was any one else, I should say—I should say—Why, of course! I should say that their duty was to let——" She paused.

"One suffer instead of three, if none is to blame?" suggested Sewell. "That's sense, and that's justice. It's the economy of pain which naturally suggests itself, and which would insist upon itself, if we were not all perverted by traditions which are the figment of the shallowest sentimentality. Tell me, Mrs.

Lapham, didn't this come into your mind when you first learned how matters stood?"

"Why, yes, it flashed across me. But I didn't think it could be right."

"And how was it with you, Mr. Lapham?"

"Why, that's what *I* thought, of course. But I didn't see my way——"

"No," cried the minister, "we are all blinded, we are all weakened by a false ideal of self-sacrifice. It wraps us round with its meshes, and we can't fight our way out of it. Mrs. Lapham, what made you feel that it might be better for three to suffer than one?"

"Why, she did herself. I know she would die sooner than take him away from her."

"I supposed so!" cried the minister bitterly. "And yet she is a sensible girl, your daughter?"

"She has more common sense——"

"Of course! But in such a case we somehow think it must be wrong to use our common sense. I don't know where this false ideal comes from, unless it comes from the novels that befool and debauch almost every intelligence in some degree. It certainly doesn't come from Christianity, which instantly repudiates it when confronted with it. Your daughter believes, in spite of her common sense, that she ought to make herself and the man who loves her unhappy, in order to assure the lifelong wretchedness of her sister, whom he doesn't love, simply because her sister saw him and fancied him first! And I'm sorry to say that ninety-nine young people out of a hundred—oh, nine hundred and ninety-nine out of a thousand!—would consider that noble and beautiful and heroic; whereas you know at the bottom of your hearts that it would be foolish and cruel and revolting. You know what marriage is! And what it must be without love on both sides."

The minister had grown quite heated and red in the face.

"I lose all patience!" he went on vehemently. "This poor child of yours has somehow been brought to believe that it will kill her sister if her sister does not have what does not belong to her, and what it is not in the power of all the world, or any soul in the world, to give her. Her sister will suffer—yes, keenly!—in heart and in pride; but she will not die. You will suffer, too, in your tenderness for her; but you must do your duty. You must help her to give up. You would be guilty if you did less. Keep clearly in mind that you are doing right, and the only possible good. And God be with you!"

GILEAD.

“And I will bring them into the land of Gilead.”

OH, who will take my hand and let mine eyes have rest,
And lead me like a child into the quiet west,
Until beneath my feet I press the short wild grass,
And feel the wind come shorewards down the granite pass;
So, fashioned darkly round the mirror of the mind,
The solemn forms I loved in infancy to find
Bent down to shut me in, in billowy solitude,—
Harsh tor and quaking sedge and devil-haunted wood,—
Behind the thin pink lids I should not dare to raise,
Would gather and console the turmoil of my days?

A grain of balm has lain within my scentless breast
Through all these roaring years of tempest,— and shall rest,
A single grain, how sweet! but, ah! what perfumes rise,
Where, bathed by sacred dews, the soul's full Gilead lies!

There, with the sands around, and many a mirage faint
To tempt the faded sight of fakir and of saint,
Cool, with their clump of palms, by wells like crystal pure,
The myrrh-trees of the Lord, the dripping boughs endure.

Oh, lead me by the hand, and I with eyelids close
Will hear the wind that sighs, the bubbling stream that flows,
The shrill Arabian sounds of blessed aged men,
And the low cries of weary souls at home again;

Yet never raise my lids, lest all these Eastern things,
These forms of alien garb, these palm-surrounded springs,
Surprise my brain that grew in colder zones of light,
Betray with homeless home my impulse of delight.

But when I think I feel the west wind, not the east,
From drought and chilly blue by soft gray airs released,
I'll bend my hand and touch the country at my feet,
And find the sun-dew there, and moor-ferns coarse and sweet,
And the rough bilberry-leaves, and feel the mountain-moss
Stretch warm along the rock, and cross it, and re-cross.

What we loved first and lost in Nature, yet retain
In memory, prized the most, worn to a single grain,
That scene, though wild and far, and acrid with the sea,
Pilgrim of life, is still Gilead to thee and me;
And there where never yet to break the shadows come
Battalions of the world, with maniac fife and drum,
There, in the ancient hush, the elfin spirit of sleep
Preserves for child-like hearts a pillow broad and deep,
And in a tender twilight, mystic and divine,
The homely scenes we loved take hues of Palestine.

Edmund Gosse.

TYPICAL DOGS.

LUXURIOUS self-gratification, the accompaniment of our growing wealth, is ever seeking new methods for the exhibition of its passing whims and fancies. While in one direction the resources of art and science are exhausted to minister to its wants, in another the animal world is ransacked to pander to its bizarre and eccentric longing for novelty. The extraordinary prominence accorded the canine race emphasizes this tendency. Within a few years the breeding of choice varieties of dogs has assumed remarkable proportions. The best products of the kennels of Europe and quaint sorts from the far East are eagerly sought for by our people, without regard to cost. This rage for superior dogs applies equally to the toy, miscellaneous, and sporting breeds. One need but visit the bench shows held in any of our larger cities, and observe the care bestowed upon the animals on exhibition, to have ample confirmation of this statement. The tender solicitude of which these dogs are the object is not confined to pets dear to the gentler sex, but extends equally to the breeds high in the estimation of their male competitors. Women, however, to whom a dog is significant of a fidelity sometimes lacking in man, carry their adoration to the extreme. Moreover, when a woman falls completely under the control of this canine craze, she demands from all about her an absorbing interest equal to her own. The luxurious appointments of modern days are lavishly bestowed upon these pets. The resources of the furrier and the jeweler are exhausted, the one to provide the costliest clothing, and the other, collars and bracelets which equal in cost those worn by their loving owners. Women go even beyond this; they hold canine receptions at which cards, flowers, and elaborate refreshments are

as much *de rigueur* as at their own social reunions. These pets feed off the rarest porcelain on food prepared by a *chef*. When they die their bodies are embalmed and their graves decorated with the choicest flowers.

Men are no less enthusiastic in their love for dogs. This is applicable alike to toy, miscellaneous, and sporting breeds. Every sort has its admirers. The hideous bull-dog, worshiped by some as the apotheosis of comeliness, the majestic St. Bernard and mastiff, the faithful colley, the graceful greyhound, and dozens of other varieties, whether useful or merely ornamental, are bred with a care and discrimination which has resulted in the production of animals of extraordinary beauty and value. One is indeed astonished at the enormous prices asked—and sometimes paid. It is not alone the professional fancier who devotes himself to the breeding of dogs. Men of large wealth are equally successful. They own and maintain extensive kennels, the product of which is eagerly absorbed by an appreciative public.

“Typical dogs” is perhaps rather an elastic term. The points of the same breed of dog are subject to modification and change. Fashion is as important a factor in this direction as in every other. The jaw of the bull-dog, the curve of his fore-legs, the width of his skull; the head of the mastiff, the snake-like cranium of the greyhound, the length of ears of the King Charles spaniel, the nose of the pug, the coloring, markings of the hair,—all these by skillful breeding may be modified to conform to the caprice of the moment. The dog which to-day is considered the model of his kind may to-morrow be looked upon merely as an example of what was considered “good form” in the past. The general charac-

ENGLISH MASTIFF, "DUKE."

teristics are preserved. The changes are subtle, invisible to the layman, but full of significance to the microscopic eye of the fancier.

It is hardly possible for one man to possess a complete knowledge of every breed of dog. As a means of securing within a limited space the most "advanced" views concerning the various breeds, the present article, and other articles which are to follow on the same subject, will be composed of brief papers, each by a writer familiar with the particular variety of which he treats. Later on the portraits of six famous pointers and six equally distinguished setters will be given. Particular mention is made of this on account of the heated controversies which have prevailed on the subject of sporting dogs. The disciples of the various schools will thus have an opportunity of expressing their views in the presence of the audience which *THE CENTURY* commands.

Gaston Fay.

THE MASTIFF.

THE origin of the English mastiff is so lost in the mists of antiquity, that no positive as-

sertions concerning it should be made. It is evident that dogs with his characteristics existed in Britain when the Romans first landed there. They speak of them as "the broad-mouthed dogs of Britain." Whether these were of the mastiff or bull-dog type, or whether the two breeds have the same origin, cannot be determined. Much written on this subject is necessarily pure conjecture; consequently we need only concern ourselves with the immediate progenitors of the mastiff, and that dog as he exists to-day.

Of all the known canine races the mastiff is the largest and eminently the most massive. Exceptional specimens of the St. Bernard, the boar-hound, and the Siberian blood-hound may exceed in height and weight the average of large mastiffs; but these examples are so rare as not to materially modify the assertion of the superiority of the proportions of the mastiff.

The distinguishing marks of this breed are size, massiveness, dignity, and majesty of appearance. Twenty-eight to thirty-one inches may be accepted as a good average height at the shoulders. The girth of the chest should never be less than one-third more than

the height. The body should be long and well filled out, without any approach to the tucked-up loin of the hound. This is very objectionable. The legs should be straight, with immense bone and muscle; the feet round and close; the tail thick at the root, tapering evenly to a point, and not extending much below the hocks. The head is now the great point with fanciers. It should be broad across the skull, flat to the eyebrow, well indented up the center, with small, close-lying ears, partly erected when attention is aroused; the muzzle broad, short, and square-looking, as though it had been sawed off. Fashion changes much in this direction. The great show dogs of ten years since would stand no chance in a modern competition. A very much shorter, blunter muzzle is now

grows. He seldom bites, even under the severest provocation. To guard those living in isolated localities, as a protector of women and children, he is without a peer—the sturdy and faithful watchman of the home.

W. Wade.

THE ST. BERNARD.

To THE visitor at the Hospice of the Great St. Bernard, situated at the summit of Mons Jovis in the Alps, is pointed out a very old picture of Bernard de Menthon, accompanied by his dog, who, in the year 962 A. D., founded this hospice for the benefit of pilgrims to Rome. This animal, somewhat resembling a blood-hound, is supposed to be the progenitor of the famous race of St. Bernards,

ST. BERNARD, "BONIVARD."

the standard. Whether the dog of to-day has really gained in appearance by his shorter muzzle is certainly open to doubt. The grand preëminent qualities of the mastiff are shown in his affectionate, true, noble, faithful disposition and even temper. He is above all others *the* watch-dog. Bred for generations for this purpose, his impulses lead him exclusively in this direction—to watch and guard, and to repulse trespassers within his precinct. He accomplishes this end by a resolute and imposing bearing, never resorting to force until repeated gentle warnings have been ignored. Menace to the person of his master the mastiff fiercely resents. His mode of attack is to spring upon an evil-doer, knock him down, and subdue him with significant

now the universal favorites among the large-sized dogs of the day.

The manner in which the Alpine or St. Bernard dog carried food and covering to exhausted travelers is too well known to need repetition. Suffice it to say, that while they have been instrumental in saving hundreds of lives, increase of population and modern enterprise combined have rendered their services almost a thing of the past. The law of evolution, in its onward march during the past nine hundred years, would naturally engender some changes in the race. Great loss of life, due to climate, disease, and accident, has necessitated at various times during this period recourse to the owners of private kennels in the adjacent valleys, who,

CHAMPION BULL-DOG, "BOZ."

possessing representatives of the breed in their original purity, purchased when puppies, kindly presented them to the monks to replace those lost. While two varieties, rough and smooth coated, are recognized to an extent sufficient to entitle them to distinct show classes, they differ in no respect from one another except in coat. The former, the preference in temperate climates, is almost useless for hospice purposes, the adhesion of snow and ice to the long hair endangering the life of the dog. Their temper, always gentle, obedient, evincing a particular affection for children, of great intelligence, immense size, and relative contour, all combine to render them extremely valuable as companions. Our engraving of Bonivard (a corruption of Bonnivard, the Prior of St. Victor, immortalized in Byron's "Prisoner of Chillon") may be received as that of a typical rough-coated St. Bernard dog. As the winner of forty-six prizes in England and America, he unquestionably stands near the lead of all dogs of his class. He is now five years of age, in color a rich orange-tawny and brindle, having the white muzzle, white blaze-up poll, white collar, white chest, feet, and tip of tail so highly valued by

the monks as representing the vestments peculiar to religious orders. His head is square and massive, with high brow and occipital protuberance, medium-sized ears, and eyes dark and bold, slightly showing the haw. His neck and shoulders are proportionate to an animal of his size; his legs straight, with large feet and double dew-claws. He measures thirty-one and a half inches high at shoulder. Girth of head, twenty-six inches; girth of chest, forty inches; girth of loin, thirty-five inches; total length, seventy-four inches; weight, one hundred and fifty pounds.

Among the smooth-coated variety, Leila is said to be the best female St. Bernard ever reared. She is tawny-brindle in color, with perfectly white markings, and is now three and a half years of age. She is the winner of fourteen prizes, having twice won the hundred-guinea challenge cup abroad. She measures thirty inches high at shoulder. Girth of chest, thirty-nine inches; girth of head, twenty-seven inches. Both Bonivard and Leila constitute part of the Hermitage kennels, owned by a resident of Passaic, N. J., whose kennels, in addition, contain many other choice specimens of the St. Bernard breed.

THE BULL-DOG.

THE bull-dog belongs to one of the oldest races of dogs, as it is evidently this animal which is described under the name of Alaunt in Edmond de Langley's "Mayster of Game," the manuscript of which is now in the British Museum.

To the bull-dog many other species owe some of their best qualities, such as endur-

ance, courage, and perseverance, and it may even with truth be said the very continuance of their existence; for there is scarcely a species of the canine tribe which has not at some period been crossed with the bull-dog, that it might from him imbibe those sturdy and lasting qualities which distinguish it, and also to prevent its becoming extinct when it has deteriorated by in-breeding.

For this purpose a dog from about forty pounds to forty-five pounds weight was considered preferable to a larger one, as the mode

BULL-TERRIER, "SILK II."

of attacking the bull was by crawling up to it upon the belly and then springing at its nose, clinging on with determined obstinacy, and, when the bull's energy was exhausted, either holding it perfectly still or throwing it upon its side, according to the word of command. It will thus be seen that a small dog ran less chance of being gored by the bull than a large one.

The bull-dog may be almost any color except black, black-and-tan, or blue,—such as brindle and white, white, brindle, fallow, fawn smut, or fawn pied. The general appearance is of a small dog, very compact, and of great strength. One of the leading points is the head, which should be large and square, characterized by a short and *retroussé*

One can scarcely fail to appreciate its worth when one considers for how long and how highly this animal has been prized by the English; indeed, it has become so identified with them that it is frequently used to typify their national character.

It was formerly bred and almost exclusively used for the purpose of bull-baiting,

nose, enabling the animal to breathe freely while holding on to anything for an indefinite length of time.

The proverb "dogs delight to bark and bite" holds good in the latter respect only with this breed; for they do not often bark, and give no warning when about to attack.

R. and W. Livingston.

THE BULL-TERRIER.

THE original bull-terrier was, without doubt, produced by a cross between the bull-dog and terrier, resulting in a dog having a longer and more punishing head than the pure bull-dog, and on that account better adapted for fighting, for which purpose, undoubtedly, the bull-terrier was primarily bred. It is, however, more or less a matter of conjecture as to what other elements have assisted in the development of the bull-terrier in his modern and improved form from the old bull-dog and terrier cross; but authorities on the subject seem to agree that in many of the larger specimens there is a dash of greyhound blood, while the smaller breed often show more of the characteristics of the white English terrier than is desirable.

The bull-terrier of the present day may be described as a dog having the full head,—though in a less degree,—the strong jaw, well-developed chest, powerful shoulders, and fine, thin tail of the bull-dog, united with the flat skull, level mouth, long jaw, small eye, and fuller proportions of the hind-quarters of the terrier.

These points, combined into a symmetrical whole,—of any weight, from five pounds up to fifty, with a brilliant white coat, a lively and vivacious disposition, together with a very high degree of courage, intelligence, and affection,—go to make up the modern bull-terrier, the handsomest and best of all terriers, and *the dog, par excellence*, for a gentleman's pet and companion both in and out of doors. The generally received impression seems to be that the bull-terrier is a quarrelsome, dangerous, and especially bad-tempered dog. This may be true of his mongrel cousins, the thick-headed, sullen-looking, and many-colored brutes often called bull-terriers, but which are about as much like the bull-terrier of the proper stamp as a Suffolk Punch is like a Derby winner. It certainly is not true of the thoroughbred. The bull-terrier has been slandered in this respect. He has a high temper when roused,—with his great courage it could not be otherwise,—and, like all high-spirited animals, his disposition may be easily spoiled by abuse and bad management;

but, when properly trained and kindly treated, his temper is especially good.

No dog exhibits greater affection toward his master; neither is he quarrelsome, and, though at all times ready to defend himself, he seldom begins a fight. Toward strangers he is generally indifferent, nor does he make friends quickly. His qualities are positive; he has strong likes and dislikes; but his confidence and affection once gained, he is exceptionally faithful and steadfast.

In his intercourse with mankind he follows the advice of Polonius:

"The friends thou hast, and their adoption tried,
Grapple them to thy soul with hoops of steel;
But do not dull thy palm with entertainment
Of each new-hatch'd, unfledg'd comrade."

There are few things the bull-terrier cannot do as well or better than any other non-sporting dog. He is an excellent guard, good on rats or other vermin, an especially good water-dog, and easily taught to retrieve from land or water, though too hard-mouthed to make a perfect retriever.

In this country he is not a universal favorite, owing to the prevailing but unfounded belief in his ferocity. Wherever he is well known, however, this prejudice disappears, and closer acquaintance will insure his popularity. The present short sketch of this engaging breed of dog may worthily be concluded by quotations from two of the best authorities on the subject:

"For thorough gameness, united with obedience, good temper, and intelligence, he surpasses any breed in existence."—J. H. WALSH ("Stonehenge"), "Dogs of the British Isles."

"Do not frighten him, don't knock him about or ill-use him, and no dog will treat his master with greater love and respect than the game, handsome, intelligent, and lovable bull-terrier."—VERO SHAW, in "The Book of the Dog."

James Page Stinson.

THE GREYHOUND.

UPON the still smooth surface of the monuments that adorn the broad plains of Egypt, erected 1200 B. C., we find chiseled, by the side of his royal master, the form of the greyhound, which from that time to this the sportsmen of the world have associated with them in the pursuit of game. The term greyhound is a corruption of the word gaze-hound, signifying that it pursues its game by sight and not by scent.

Flavius Arrian, 150 A. D., in his "History of Hunting," minutely describes the greyhound and its use. It corresponds with our modern dog, save that the coat is not long and silky. At the present time the same dog exists in Lower Egypt, Arabia, and Persia. In ancient Greece and Rome he was the

“BOUNCING BOY”—GREYHOUND.

companion of the nobles, and no household was considered complete in all its appointments without him. As represented on the monuments, he was not the perfect type of all that is graceful, fleet, and courageous to the same degree as the modern dog. This improvement is due solely to the judicious breeding by the British people, since the sport of coursing became the recognized entertainment of the leisured and wealthy classes. In fact, it is only within a few years, comparatively speaking, that he was allowed to be possessed by any save the princes and nobles. The grand march of liberality and equality, however, has done away with these severe restrictions. In such highest esteem was this dog held by the nobles that the killing or even maiming of one was *felony*, punishable with *death*.

At the time when his value for coursing purposes became apparent, he was found to be deficient in two essential qualities, viz., endurance coupled with speed, and courage not only to continue to the end, but to kill. In order to overcome these defects, an infusion of bull-dog blood became necessary. Taking the progeny that showed a predominance of bull-dog characteristics and greyhound form, and breeding back to the latter, we find in the fifth generation a dog which, though robbed of the ferocious tendencies of the bull-dog, still possesses all his courage, stamina, and desire to kill, with the graceful form of the greyhound. Thus we see the dog

of three thousand years ago, passing through all the various changes of country and people, not only preserved in its general outline, but improved in form and character, making him, *par excellence*, the dog-companion of the sportsman, and the aristocrat of the canine race.

The use of the greyhound is coursing. The training required to bring him down to a nicety of condition, though long and tedious, is fully compensated as day by day we note the rapid advancement in development of muscle, wind-power, and speed. When thoroughly “conditioned,” leashed with another he is taken into a field, there to await the starting-up of the hare by beaters employed for that purpose. The race is not always to the swifter, unless possessed of the greater ability to turn in the shortest space and regain the ground lost by the artful turnings of the hare. The great event in coursing circles in England is the “Waterloo Cup,” valued at £500, which is run for at Altcar, near Liverpool, annually.

Thomas, Duke of Norfolk, in Queen Elizabeth’s reign, was the first to compile a set of rules governing coursing, whereby points of merit earned in the race could be properly awarded. They are substantially the same as those now in use. The first club devoted entirely to coursing was the Swaffham, of Norfolk, founded by Lord Orford in 1776.

The characteristics, or, in the language of the dog-shows, the “points,” of the grey-

hound are as follows: The muzzle is long and lean; the teeth strong and long enough to hold the hare when seized; the eyes small, of a dark color, and very bright; the ears small and fine; and the skull at the base broad. The neck is long, round, and symmetrical; the fore-legs, of good bone, are well set under the shoulders, which are laid obliquely on the body. The back is strong and broad, and the ribs well sprung, showing a proper placement of the vertebræ; the hind-legs well crooked at

little attention should have been given to the preservation of the purity of blood of that idol of the wild-fowl gunner, the Chesapeake Bay retriever. The origin of this very valuable animal is somewhat uncertain and obscure. It is supposed, however, that his first appearance on the shores of Maryland was coincident with the visit of certain foreign fishing vessels from the far North, in or about the first year of the present century. His close, heavy under fur and color—brown—sug-

CHESAPEAKE DUCK-DOG, "CHESS."

the stifles, while the hocks are well let down. The tail is long, thin, and gracefully carried. Thus formed, he is the very picture of speed, power, elegance, and poetry of motion.

Patronized by the nobility, and accepted by every sportsman as the greatest conception of true sport with the dog, coursing has made him *the* dog of the British Isles. California has already enjoyed this invigorating sport; Kansas, too, has adopted it; and so, eastward the greyhound rapidly wends his way in the favor of sportsmen.

H. W. Huntington.

THE CHESAPEAKE DUCK-DOG.

It is sincerely to be regretted, in view of his exceptionally valuable qualities, that so

gested a close relationship to the otter-dog. His ability as a retriever emphasized this supposition. His superior qualities in this direction were so manifestly phenomenal that the few original specimens were eagerly purchased from their foreign owners by the gunners of Chesapeake Bay. The ability of this dog to withstand cold and exposure was far beyond that of the Irish retriever. Within a brief period he entirely superseded the last-named animal as a water-dog. For some unknown reason the Chesapeake duck-dog never became numerous; hence the owner of a pure-blooded specimen could hardly be induced to part with him at any price. In time this dog so identified himself with the waters of Chesapeake Bay as to be known by no other name than that borne by this estuary. Twenty-

five years ago he was at the apogee of his fame. Nearly every family living in the bay counties of Maryland owned one or more of untainted blood. Through carelessness the breed was allowed to deteriorate; in consequence, to-day few, if any, of pure blood are in existence. A small number, however, remain of sufficient purity of race and perfection of training to almost equal in efficiency their distinguished and untainted ancestors. There were, in reality, two varieties of this dog, the long and the smooth coated, the latter not so popular as the former. The Chesapeake duck-dog is of the same size as the small Newfoundland, head broad, nose sharp, eyes small and bright, ears somewhat insignificant and set high; coat in color dark sedge, strong and tightly curled, with a peculiar under fur, so thick that the dog can remain in the water a long time without his skin becoming wet. The hair on the legs is not so long. It is particularly short about the nose and eyes. The Chesapeake duck-dog is used by sportsmen who shoot wild fowl either from points or from "booby blinds" set in the water a short distance from the shore. This dog so closely resembles the color of sedge-grass as not to

be distinguishable except very near by. He remains in concealment until ordered to "fetch." At the command he springs into the water, breaking his way even through ice of considerable thickness. The wounded birds he first retrieves. When these are all gathered in, he secures the dead. Ducks in the Maryland waters generally fly in long strings. It often happens that the gunner, armed with a breech-loader, puts in several shots while the gang of birds is passing. In this case the well-trained and sagacious dog has much hard work to do, particularly if the weather be rough. His endurance, however, is remarkable, and he never seems to tire at his task. This continuous immersion in the water would be impossible to any animal not provided with the thick and almost water-proof under fur of the Chesapeake duck-dog.

With his affectionate disposition, great intelligence, strength, and the peculiar physical qualities which he possesses, adapting him to the retrieving of wild fowl beyond any other known breed, it is a great misfortune that closer attention has not been given to the preservation of the purity of the race.

George Norbury Appold.

MY THOUGHT AND I.

THE clock is ticking the night away,
And oh! what a blessed rest I take;
With nothing more to do or to say
Until the light of the morning break.

The room may be ten by five — no more;
It bounds but the scantiest comforts, too;
But the weights of life are outside its door,
And its rest pervades me through and through.

The breath of my soul comes full and free,
However my body may find the space;
With genius lighting the dark for me,
It is heaven just here my Thought to face.

To-night I belong alone to her,
To-night she is solely and fully mine;
No meeting of lovers could quicker stir
To the sense that *two* make the night divine.

Ah, yes! now that creaky door is still,
And the old bolt slipped, there is nothing missed.
Let the great world go; let it work its will;
Since my Thought and I are keeping tryst!

Charlotte Fiske Bates.

WHITTIER.

A PLEASANT story, that went the round shortly after the close of our Civil War, shows the character of Whittier's hold upon his countrymen. It was said that one among a group of prominent men, when conversation on politics and finance began to lag, asked the question, Who is the best American poet? Horace Greeley, who was of the party, replied with the name of Whittier, and his judgment was instantly approved by all present. These active, practical Americans, patriots or demagogues,—some of them, doubtless, of the "heated barbarian" type,—for once found their individual preferences thus expressed and in accord. At that climacteric time the Pleiad of our elder poets was complete and shining,—not a star was lost. But the instinct of these stern, hard-headed men was in favor of the Quaker bard, the celibate and prophetic recluse; he alone appealed to the poetic side of their natures. We do not hold a press-item to absolute exactness in its report of words. The epithet "best" may not have been employed by the questioner on that occasion; were it not for the likelihood that those to whom he spoke would not have laid much stress upon verbal distinctions, one might guess that he said the most national, or representative, or inborn of our poets. The value of the incident remains; it was discovered that Whittier most nearly satisfied the various poetic needs of the typical, resolute Americans, men of his own historic generation, who composed that assemblage.

With this may be considered the fact that it is the habit of compilers and brief reviewers, whose work is that of generalization, to speak of him as a "thoroughly American" poet. An English critic, in a notice marked by comprehension of our home-spirit and with the honest effort of a delicate mind to get at the secret of Whittier's unstudied verse and gain the best that can be gained from it, finds him to be the "most national" of our writers, and the most characteristic through his extraordinary fluency, narrow experience, and wide sympathy,—language which implies a not unfriendly recognition of traits which have been thought to be American,—loquacity, provincialism, and generosity of heart.

In sentiments thus spoken and written there is a good deal of significance. But the words of the foreign verdict cannot be taken precisely as they stand. Has there been a time, as yet, when any writer could be thoroughly

American? What is the meaning of the phrase—the most limited meaning which a citizen, true to our notion of this country's future, will entertain for a moment? Assuredly not a quality which is collegiate, like Longfellow's,—or of a section, like Whittier's,—or of a special and cultured class, which alone can enjoy Whitman's sturdy attempt to create a new song for the people before the accepted and accepting time. During the period of these men America scarcely has been more homogeneous in popular characteristics than in climate and topography. I have discussed the perplexing topic of our nationalism, and am willing to believe that these States are blending into a country whose distinctions of race and tendency will steadily lessen; but whether such a faith is well grounded is still an open question. And whatsoever change is to ensue, in the direction of homogeneity, will be the counter-swing of a vibration whose first impulse was away from the uniformity of the early colonies to the broadest divergence consistent with a common language and government. At Whittier's time this divergence was greater than before—greater, possibly, than it ever can be again. In fact, it is partly as a result of this superlative divergence that he is called our most national poet. If his song was not that of the people at large, it aided to do away with something which prevented us from being one people; and it was national in being true to a characteristic portion of America—the intense expression of its specific and governing ideas.

The most discriminating *précis* is that which Mr. Parkman contributed at a gathering in honor of the Quaker bard. The exact eye of the author of "Frontenac" saw the poet as he is: "The Poet of New England. His genius drew its nourishment from her soil; his pages are the mirror of her outward nature, and the strong utterance of her inward life." The gloss of this sentiment belonged to the occasion; its analysis is specifically correct, and this with full recognition of Whittier's most famous kinsmen in birth and song. The distinction has been well made, that the national poet is not always the chief poet of a nation. As a poet of New England, Whittier had little competition from the bookish Longfellow, except in the latter's sincere feeling for the eastern sea and shore, and artistic handling of the courtier legends of the province.

He certainly found a compeer in Lowell, whose dialect idyls prove that only genius is needed to enable a scholar, turned farmer, to extract the richest products of a soil. And the lyric fervor of Lowell's odes is our most imaginative expression of that New England sentiment which has extended itself, an ideal influence, with the movement of its inheritors to the farthest West. Emerson, on his part, has volatilized the essence of New England thought into wreaths of spiritual beauty. Yet Mr. Parkman, than whom no scholar is less given to looseness of expression, terms Whittier the poet of New England, as if by eminence, and I think with exceeding justice. The title is based on apt recognition of evidence that we look to the people at large for the substance of national or sectional traits. The base, not the peak, of the pyramid determines its bearings. There is, to be sure, as much human nature in the mansion as in the cottage, in the study or drawing-room as in the shop and field. But just as we call those *genre* canvases whereon are painted idyls of the fireside, the roadside, and the farm, pictures of "real life," so we find the true gauge of popular feeling in songs that are dear to the common people and true to their unsophisticated life and motive.

Here we again confront the statement that the six Eastern States were not and are not America; not the nation, but a section,—the New Englanders seeming almost a race by themselves. But what a section! And what a people, when we take into account, super-added to their genuine importance, a self-dependence ranking with that of the Scots or Gascons. As distinct a people, in their way, as Mr. Cable's creoles, old or new. Go by rail along the Eastern coast and note the nervous, wiry folk that crowd the stations;—their eager talk, their curious scrutiny of ordinary persons and incidents, make it easy to believe that the trait chosen by Sprague for the subject of his didactic poem still is a chief motor of New England's progress, and not unjustly its attribute by tradition. This hive of individuality has sent out swarms, and scattered its ideas like pollen throughout the northern belt of our States. As far as these have taken hold, modified by change and experience, New England stands for the nation, and her singer for the national poet. In their native, unadulterated form, they pervade the verse of Whittier. It is notable that the sons of the Puritans should take their songs from a Quaker; yet how far unlike, except in the doctrine of non-resistance, were the Puritans and Quakers of Endicott's time? To me, they seem grounded in the same inflexible ethics, and alike disposed to supervise the

ethics of all mankind. Time and culture have tempered the New England virtues; the Eastern frugality, independence, propagandism, have put on a more attractive aspect; a sense of beauty has been developed,—the mental recognition of it finally granted to a northern race, who still lack the perfect flexibility and grace observable wherever that sense comes by nature and directs the popular conscience. As for the rural inhabitants of New England, less changed by travel and accomplishments, we know what they were and are,—among them none more affectionate, pious, resolute, than Whittier, beyond doubt their representative poet.

He belongs, moreover,—and hence the point of the incident first related,—to the group, now rapidly disappearing, of which Horace Greeley was a conspicuous member, and to an epoch that gave its workers little time for over-refinement, Persian apparatus, and the cultivation of æsthetics. That group of scarred and hardy speakers, journalists, agitators, felt that he was of them, and found his song revealing the highest purpose of their boisterous, unsentimental careers. These men—like all men who do not retrograde—had an ideal. This he expressed, in measures that moved them, and whose perfection they had no thought or faculty of questioning. Many of them came from obscure and rural homes, and to read his verse was to recall the scent of the clover and apple-bloom, to hear again the creak of the well-pole, the rattle of the bars in the lane,—the sights and freshness of youth passing for a moment, a vision of peace, over their battle-field. They needed, also, their own pibroch and battle-cry, and this his song rang out; their determination was in it, blended with the tenderness from which such men are never wholly free.

His ultimate reputation, then, will be inseparable from that of his section and its class. He may not hold it as one of those whose work appeals to all times and races, and whose art is so refined as to be the model of after-poets. But he was the singer of what was not an empty day,—and of a section whose movement became that of a nation, and whose purpose in the end was grandly consummated. We already see, and the future will see it more clearly, that no party ever did a vaster work than his party; that he, like Hampden and Milton, is a character not produced in common times; that no struggle was more momentous than that which preceded our Civil War, no question ever affected the destinies of a great people more vitally than the anti-slavery issue, as urged by its promoters. Neither Greece nor Rome, not even England, the battle-ground of Anglo-

Saxon liberty, has supplied a drama of more import than that in which the poets and other heroes of our Civil Reformation played their parts.

II.

WHITTIER'S origin and early life were auspicious for one who was to become a poet of the people. His muse shielded him from the relaxing influence of luxury and superfine culture. These could not reach the primitive homestead in the beautiful Merrimack Valley, five miles out from the market-town of Haverhill, where all things were elementary and of the plainest cast. The training of the Friends made his boyhood still more simple; otherwise, as I have said, it mattered little whether he derived from Puritan or Quaker sources. Still, it was much, in one respect, to be descended from Quakers and Huguenots used to suffer and be strong for conscience' sake. It placed him years in advance of the comfortable Brahmin class, with its blunted sense of right and wrong, and, to use his own words, turned him "so early away from what Roger Williams calls 'the world's great trinity, pleasure, profit, and honor,' to take side with the poor and oppressed." The Puritans conformed to the rule of the Old Testament, the Friends to the spirit of the New. One has only to read our colonial annals to know how the Jews got on under the Mosaic law, inasmuch as to the end of the Mather dynasty the pandect of Leviticus, in all its terror, was sternly enforced by church and state. The Puritans had two gods, Deus and Diabolus; the Quakers recognized the former alone, and chiefly through his incarnation as the Prince of Peace. They exercised, however, the right of interference with other people's code and practice, after a fashion the more intolerable from a surrender of the right to establish their own by rope and sword. Whittier's Quaker strain, as Frothingham has shown, yielded him wholly to the "intellectual passion" that Transcendentalism aroused, and still keeps him obedient to the Inward Light. And it made him a poet militant, a crusader whose moral weapons, since he must disown the carnal, were keen of edge and seldom in their scabbards. The fire of his deep-set eyes, whether betokening, like that of his kinsman Webster, the Batchelder blood, or inherited from some old Feuilletvert, strangely contrasts with the benign expression of his mouth — that firm serenity, which by transmitted habit dwells upon the lips of the sons and daughters of peace.

There was no affectation in the rusticity of his youth. It was the real thing — the neat

and saving homeliness of the Eastern farm. All the belongings of the household were not the equivalent of a week's expenses in a modern city home, yet there was no want and nothing out of tone. We see the wooden house and barn, set against the background of rugged acres,—indoors, still the loom and wheel, and still the Quaker mother, dear old toiling one, the incarnation of faith and charity, beloved by a loyal, bright-eyed family group. There was little to read but the Bible, "Pilgrim's Progress," and the weekly newspaper; no schooling but in the district school-house; nothing to learn of the outer world except from the eccentric and often picturesque strollers that in those days peddled, sang, or fiddled from village to village. Yet the boy's poetic fancy and native sense of rhythm were not inert. He listened eagerly to the provincial traditions and legends, a genuine folklore, recounted by his elders at the fireside; and he began to put his thoughts in numbers at the earliest possible age. A great stimulus came in the shape of Burns's poems, a cheap volume of which fell into his possession by one of those happenings that seem ordained for poets. His first printed efforts were an imitation of the dialect and measures of the Scottish bard, and perhaps no copybook could have been more suitable until he formed his own hand — a time not long postponed. He well might have fancied that in his experience there was much in common with that of his master; that he, too, might live to affirm, though surely in words less grandiloquent, "The Genius of Poetry found me at the plow, and threw her inspiring mantle over me." Of our leading poets, he was almost the only one who learned Nature by working with her at all seasons, under the sky and in the wood and field. So much for his boyhood; his after course was affected greatly by the man then coming into notice as a fanatic and agitator, the lion-hearted champion of freedom, long since glorified with the name he gave to his first pronunciamiento, the Liberator. A piece of verse sent by young Whittier to the Newburyport "Free Press" led Garrison, its editor, to look up his contributor, and to encourage him with praise and counsel. From that time we see the poet working upward in the old-fashioned way. A clever youth need not turn gauger in a land of schools and newspapers. Whittier's training was supplemented by a year or more at the academy, and by a winter's practice as a teacher himself,—fulfilling thus the customary *Lehrjahre* of our village aspirants. In another year we find him the conductor of a tariff newspaper in Boston. Before his twenty-fifth birthday he had experienced the vicissitudes of old-

time journalism, changing from one desk to another, at Haverhill, Boston, and Hartford, still pursuing literature, ere long somewhat known as a poet and sketch-writer, and near the close of this period issuing his first book of *Legends*, in prose and verse. At Hartford also he edited, with a well-composed preface, the posthumous collection of his friend Brainard's poems.

But the mission of his life now came upon him. He received a call. In 1831 Garrison had begun "The Liberator." He was Whittier's ally and guide; the ardor of the poet required an heroic purpose, and Garrison's crusade was one to which his whole nature inclined him. It was no personal ambition that made him the psalmist of the new movement. His verses, crude as they were, had gained favor; he already had a name, and a career was predicted for him. He now doomed himself to years of retardation and disfavor, and had no reason to foresee the honors they would bring him in the end. What he tells us is the truth: "For twenty years my name would have injured the circulation of any of the literary or political journals in the country." During this term his imaginative writings were to be "simply episodical," something apart from what he says had been the main purpose of his life. He was bent upon the service which led Samuel May to declare that of all our poets he "has, from first to last, done most for the abolition of slavery. All my anti-slavery brethren, I doubt not, will unite with me to crown him as our laureate." Bryant, many years later, pointed out that in recent times the road of others to literary success had been made smooth by anti-slavery opinions, adding that in Whittier's case the reverse of this was true; that he made himself the champion of the slave "when to say aught against the national curse was to draw upon one's self the bitterest hatred, loathing, and contempt of the great majority of men throughout the land." Unquestionably Whittier's ambition, during his novitiate, had been to do something as a poet and man of letters. Not that he had learned what few, in fact, at that time realized, that the highest art aims at creative beauty, and that devotion, repose, and calm are essential to the mastery of an ideal. But he was a natural poet, and, if he had not been filled with convictions, might have reached this knowledge as soon as others who possessed the lyrical impulse. The fact that he made his rarest gift subsidiary to his new purpose, in the flush of early reputation when one is most sensitive to popular esteem, has led me to dwell a little upon the story of his life, and to observe how life itself may be made no less inspiring than a poem. I would

not be misunderstood; we measure poetry at its worth, not at the worth of its maker. This is the law; yet in Whittier's record, if ever, there is an appeal to the higher law that takes note of exceptions. Some of his verse, as a pattern for verse hereafter, is not what it might have been if he had consecrated himself to poetry as an art; but it is memorably connected with historic times, and his rudest shafts of song were shot true and far and tipped with flame. This should make it clear to foreigners why we entertain for him a measure of the feeling with which Hungarians speak of Petöfi, and Russians of Turgueneff. His songs touched the hearts of his people. It was the generation which listened in childhood to the "Voices of Freedom" that fulfilled their prophecies.

Garrison started his journal with the watchword of "unconditional emancipation," and the pledge to be "harsh as truth and uncompromising as justice; . . . not to retreat a single inch, and to be heard." Whittier reinforced him with lyre and pen,—though sometimes the two differed in policy,—and soon was writing abolition pamphlets, editing "The Freeman," and active in the thick of the conflict. He was the secretary of the first anti-slavery convention, a signer of the Declaration of Sentiments, and, at an age when bardlings are making sonnets to a mistress's eyebrow, he was facing mobs at Plymouth, Boston, Philadelphia. After seven or eight years of this stormy service, he settled down in quarters at Amesbury, sending out, as ever, his prose and verse to forward the cause. But now his humane and fervent motives were understood even by opponents, and the sweetness of his rural lyrics and idyls had testified for him as a poet. In 1843 the most eclectic of publishing houses welcomed him to its list; the rise of poetry had set in, and Longfellow, Emerson, Lowell, were gaining a constituency. As he grew in favor, attractive editions of his poems appeared, and his later volumes came from the press as frequently as Longfellow's,—more than one of them, like "Snow-Bound," receiving in this country as warm and wide a welcome as those of the Cambridge laureate. After the war, Garrison—at last crowned with honor, and rejoicing in the consummation of his work—was seldom heard. Whittier, in his hermitage, the resort of many pilgrims, has steadily renewed his song. While chanting in behalf of every patriotic or humane effort of his time, he has been the truest singer of our homestead and wayside life, and has rendered all the legends of his region into familiar verse. The habit of youth has clung to him, and he often misses, in his too facile rhyme and

rhythm, the graces, the studied excellence of modern work. But all in all, as we have seen, and more than others, he has read the heart of New England, and expressed the convictions of New England at her height of moral supremacy,—the distinctive enjoyment of which, in view of the growth of the Union, and the spread of her broods throughout its territory, may not recur again.

III.

It would not be fair to test Whittier by the quality of his off-hand work. His verse always was auxiliary to what he deemed the main business of his life, and has varied with the occasions that inspired it. His object was not the artist's, to make the occasion serve his poem, but directly the reverse. Perhaps his naïveté and carelessness more truthfully spoke for his constituents than the polish of those bred in seats of culture; many of his stanzas reflect the homeliness of a provincial region, and are the spontaneous outcome of what poetry there was in it. His feeling gained expression in simple speech and the forms which came readily. Probably it occurred somewhat late to the mind of this pure and duteous enthusiast that there is such a thing as duty to one's art, and that diffuseness, bad rhymes, and prosaic stanzas are alien to it. Nor is it strange that the artistic moral sense of a Quaker poet, reared on a New England farmstead, at first should be deficient. A careless habit, once formed, made it hard for him to master the touch that renders a new poem by this or that expert a standard, and its appearance an event. His ear and voice were naturally fine, as some of his early work plainly shows. "Cassandra Southwick," "The New Wife and the Old," and "The Virginia Slave-mother" were of an original flavor and up to the standards of that day. If he had occupied himself wholly with poetic work, he would have grown as steadily as his most successful compeers. But his vocation became that of trumpeter to the impetuous reform brigade. He supplied verse on the instant, often full of vigor, but often little more than the rallying-blast of a passing campaign. We are told by May that "from 1832 to the close of our dreadful war in 1865, his harp of liberty was never hung up. Not an important occasion escaped him. Every significant incident drew from his heart some pertinent and often very impressive or rousing verses." It is safe to assume that if he had been more discriminating, or had cherished the resolve of Longfellow or Tennyson to make even conventional pieces artistic, many occasions would have

escaped him. We see again that Art will forego none of its attributes. Sincerity and spontaneity are the well-springs of its clearest flow; yet, if dependent on these traits alone, it may become cheap and common, and utterly fail of permanence. In the time under notice there was nothing more likely to confuse the imagination than the life of a journalist, especially of a provincial or reform editor. The case of Hood, one of the truest of poets by nature, has shown us something of the dangers that beset a journalist-poet. This Whittier emphatically became, though in every way superior to the band of temperance, abolition, and partisan rhymesters that, like the shadows of his own failings, sprang up in his train. He wrote verses very much as he wrote editorials, and they were forcible only when he was deeply moved by stirring crises and events. Some of his best were tributes to leaders, or rebukes of great men fallen. But he was too apt to write weak eulogies of obscurer people; for every friend or ally had a claim upon his muse.

His imperfections were those of his time and class, and he was too engrossed with a mission to overcome them. He never learned compression, and still is troubled more with fatal fluency than our other poets of equal rank,—by an inability to reject poor stanzas and to stop at the right place. Mrs. Browning was a prominent sufferer in this respect. The two poets were so much alike, with their indifference to method and taste, as to suggest the question (especially in view of the subaltern reform-verse-makers) whether advocates of causes, and other people of great moral zeal, are not relatively deficient in artistic conscientiousness and what may be called æsthetic rectitude.

An occasional looseness in matters of fact may be forgiven one who writes from impulse. We owe "Barbara Frietchie" to the glow excited by a newspaper report; and the story of "Skipper Ireson's Ride," now challenged, if not true, is too well told to be lost. Whittier became, like a mother's careless, warm-hearted child, dearer for his very shortcomings. But they sometimes mar his bravest outbursts. Slight changes would have made that eloquent lyric, "Randolph of Roanoke," a perfect one. Feeling himself a poet, he sang by ear alone, in a somewhat primitive time; but the finest genius, in music or painting for example, with the aid of a commonplace teacher can get over more ground in a month than he would cover unaided in a year; since the teacher represents what is already discovered and established. There came a period when Whittier's verse was composed solely with poetic intent, and after a less careless fashion.

It is chiefly that portion of it, written from 1860 onward, that has secured him a more than local reputation. His ruder rhymes of a day bear witness to an experience which none could better illustrate than by citing the words of the poet himself:

“Hater of din and riot,
He lived in days unquiet;
And, lover of all beauty,
Trode the hard ways of duty.”

In prose he soon became skilled. His letters often are models of epistolary style; the best articles and essays from his pen are written with a true and direct hand, though rather barren of the epigram and original thought which enrich the prose of Lowell, Holmes, and Emerson. “Margaret Smith’s Journal” is a charming *nuova antica*; a trifle thin in plot, but such a quaint reproduction of the early colonial period—its people, manners, and discourse—as scarcely any other author save Hawthorne, at the date of its production, could have given us.

IV.

His metrical style, except in certain lyrics of marked individuality, is that of our elders who wrote in diffuse measures, and whose readers favored sentiment more than beauty or wit. It is a degree more old-fashioned than styles which are so much older as to become new by revival; that is to say, its fashion was current within our own recollection and is now passing away. Some forms put on a new type with each successive period, such as blank-verse and the irregular ode-measures in which Lowell, Taylor, and Stoddard have been successful. Whittier uses these rarely, and to less advantage than his ballad-verse. He has conformed less than any one but Holmes to the changes of the day. Imagine him with an etching-needle, tracing the deft lines of a triolet or villanelle! If he could, and would, it would be seen that when one leaves a natural vein, the yield, lacking what is characteristic, is superfluous. Even his recent sonnets, “Requirement,” “Help,” etc., are little more than fourteen-line homilies. Those who know their author find something of him in them, but such efforts do not reveal him to a new acquaintance. A poet’s voice must have a distinct quality to be heard above the general choir.

We turn to his early verse, as still acknowledged, to see in what direction his first independent step was made, and we note an effort to become a true American poet—to concern himself with the story and motive of his own land. For a time it was rather ineffective.

The author of “Mogg Megone” and “The Bride of Pennacook” was on the same trail with the New York squadron that sought the red man’s path. It is queer, at this distance, to see the methods of Scott and Coleridge applied to the Indian legendary of Maine. Among works of this sort, however, these were the best preceding “Hiawatha.” Longfellow had the tact to perceive that if the savage is not poetical his folk-lore may be made so. The prelude to Whittier’s “Bridal” is quite modern and natural. It contains a suggestive plea that this experiment in a home field may not seem amiss even to those who are best pleased

“while wandering in thought,
Pilgrims of Romance o’er the olden world.”

And, after all, “Mogg” was a planned and sustained effort, and full of promise. Its writer’s later management of local themes was more to the point. The “Songs of Labor” are American chiefly in topic,—in manner they are much like what Mackay or Massey might have written,—yet they became popular, and their rhetorical flow adapted them to recitation in the country schools. The poet’s distinctive touch first appears in the legendary ballads which now precede the “Voices of Freedom” in his late editions. “The New Wife and the Old” is almost our best specimen of a style that Mrs. Hemans affected, and which Miss Ingelow, Mrs. Browning, and others have employed more picturesquely. It is a weird legend, musically told, and clearly the lyric of a poet. The early Quaker pieces are as good, and have all the traits of his verse written forty years afterward. His first ballads give the clew to his genius, and now make it apparent that most of his verse may be considered without much regard to dates of production. “Cassandra Southwick,” alone, showed where his strength lay: of all our poets he is the most natural balladist, and Holmes comes next to him. The manner of that poem doubtless was suggested by Macaulay’s “Battle of Ivry,” and nothing could better serve the purpose. The colonial tone is well maintained. Here is a touching picture of the inspired maid’s temptation to recant, of her endurance, trial, and victory. A group, also, of the populace—cloaked citizens, grave and cold, hardy sea-captains, and others—gathered where

“on his horse, with Rawson, his cruel clerk at hand,
Sat dark and haughty Endicott, the ruler of the land.”

The bigoted priest, a “smiter of the meek,” is a type that was to reappear in our poet’s scornful indictments of the divines who, within pub-

lic remembrance, upheld the slavery system under the sanction of Noah's curse of Canaan. This ballad is well-proportioned, and thus escapes the defect of "The Exiles," which is otherwise a good piece of idiomatic verse.

On the whole, it is as a balladist that Whittier displays a sure metrical instinct. The record of the Quakers has always served his muse, from the date of "Cassandra Southwick" to the recent production of "The Old South," "The King's Missive," and "How the Women went from Dover." Neither Bernard Barton nor Bayard Taylor is so well entitled to the epithet of the Quaker Poet. His Quaker strains, chanted while the sect is slowly blending with the world's people, seem like its swan-song. It is worth noting that of the nine American poets discussed in these essays, one is still a Friend, and two others, Whitman and Taylor, came of Quaker parentage on both sides. The strong ballad, "Barclay of Ury," would be almost perfect but for the four moralizing stanzas at the close. It is annoying to see a fine thing lowered, and even in moral effect, by an offense against the ethics of art. Whittier's successes probably have been scored most often through ballads of our eastward tradition and supernaturalism, such as those pertaining to witchcraft,—a province which, from "Calef in Boston" to "The Witch of Wenham," he never has long neglected. Some of his miscellaneous ballads are idyllic; others, in strong relief, were inspired by incidents of the War, during which our non-combatant sounded more than one blast, like that of Roderick, worth a thousand men. His ballads vary as much in excellence as in kind; among the most noteworthy are "Mary Garvin," "Parson Avery," "John Underhill," and that pure bit of melody and feeling, the lay of "Marguerite." Yet some of the poems which he classes in this department properly are eclogues, or slow-moving narratives. He handles well a familiar measure; when aiming at something new, as in "The Ranger," he usually is less at ease, despite the fact that the nonpareil of his briefer pieces is thoroughly novel in form and refrain, and doubtless chanced to come to him in such wise. "Skipper Ireson's Ride" certainly is unique. Dialect-poems are too often unfaithful or unpoetic. Imagination, humor, and dramatic force are found in the ballad of the Marblehead skipper's dole, and its movement is admirable. The culmination is more effective than is usual in a piece by Whittier. We have the widow of the skipper's victim saying "God has touched him! why should we?"—an old dame, whose only son has perished, bidding them "Cut the rogue's tether and let him run"; and

"So, with soft relentings and rude excuse,
Half scorn, half pity, they cut him loose,
And gave him a cloak to hide him in,
And left him alone with his shame and sin.
Poor Floyd Ireson, for his hard heart,
Tarred and feathered and carried in a cart
By the women of Marblehead!"

The change of feeling is indicated by the single word "poor." This is only a minor piece, but quantity is the plane, and quality the height, of lyrical verse. Were it not for two of Collins's briefest poems, where would his name be?

A balladist should be a good reciter of tales. Our poet's prose work on "The Supernaturalism of New England" was devoted to the ghost and witch stories of his own neighborhood. In general design his chief story-book in verse, "The Tent on the Beach," like Longfellow's "Tales of a Wayside Inn,"—the first series of which it post-dated and did not equal,—follows the oft-borrowed method of Boccaccio and Chaucer. The home tales of this group are the best, among them "The Wreck of Rivermouth" and "Abraham Davenport." Throw out a ballad or two, and, but for a want of even finish, "The Tent on the Beach" might be taken for a portion of Longfellow's extended work. As a bucolic poet of his own section, rendering its pastoral life and aspect, Whittier surpasses all rivals. This is established chiefly by work that increased, after he reached middle age, with a consciousness of his lost youth. In some breathing-spell from the stress of his reform labors, he longed for the renewal of

"boyhood's painless play,
Sleep that wakes in laughing day,
Health that mocks the doctor's rules,
Knowledge never learned of schools."

His eye fell upon the Barefoot Boy, and memory brought back a time when he too was

"rich in flowers and trees,
Humming-birds and honey-bees."

To rate the country life at its worth, one must have parted from it long enough to become a little tired of that for which it was exchanged. The best eclogues are those which, however simple, have a feeling added by the cast of thought. Poets hold Nature dear when refined above her. Goldsmith, after years of wandering; Burns, when too well acquainted with the fickle world. The maker of rural verse, moreover, should be country-bred, or he will fall short. Unless Nature has been his nurse in childhood, he never will read with ease the text of her story-book. The distinction between artifice and sincerity is involved. Watteau's pictures are exquisite in their way, but Millet gave us the real thing. Long-

fellow's rural pieces were done by a skilled workman, who could regard his themes objectively and put them to good use. Lowell delights in outdoor life, and his Yankee studies are perfect; still, we feel that he is, intellectually and socially, miles above the people of the vale. Whittier is of their blood, and always the boy-poet of the Essex farm, however advanced in years and fame. They are won by the sincerity and ingenuousness of his verse, rooted in the soil and native as the fern and wild rose of the wayside. His brother-poets are more exact: which of them would hit upon "Maud" as a typical farm-girl's name? But incongruities are the sign-manual of a rural bard, as one can discover from Burns's high-sounding letters and manifestoes. Whittier himself despises a sham pastoral. There is good criticism, a clear sense of what was needed, in his paper on Robert Dinsmore, the old Scotch bard of his childhood. He says of rural poetry that "the mere dilettante and the amateur ruralist may as well keep their hands off. The prize is not for them. He who would successfully strive for it must be himself what he sings,—part and parcel of the rural life, . . . one who has added to his book-lore the large experience of an active participation in the rugged toil, the hearty amusements, the trials and pleasures he describes." I need not dwell upon our poet's fidelity to the landscape and legends of the Eastern shore and the vales of the Piscataqua and Merrimack. Those who criticize his pastoral spirit as lacking Bryant's breadth of tone, Emerson's penetration, and Thoreau's detail, confess that it is honest and that it comes by nature. His most vivid pictures are of scenes which lie near his heart, and relate to common life—to the love and longing, the simple joys and griefs, of his neighbors at work and rest and worship. Lyrics such as "Telling the Bees," "Maud Muller," and "My Playmate" are miniature classics; of this kind are those which confirmed his reputation and still make his volumes real household books of song.

These rustic verses, as we have seen, came like the sound of falling waters to jaded men and women. Years ago, when "Snow-Bound" was published, I was surprised at the warmth of its reception. I must have underrated it in every way. It did not interest one not long escaped from bounds, to whom the poetry of action then was all in all. And in truth such poetry, conceived and executed in the spirit of art, is of the higher grade. But I now can see my mistake, a purely subjective one, and do justice to "Snow-Bound" as a model of its class. Burroughs well avows it to be the "most faithful picture of our north-

ern winter that has yet been put into poetry." If his discussion had not been restricted to "Nature and the Poets," he perhaps would have added that this pastoral gives, and once for all, an ideal reproduction of the inner life of an old-fashioned American rustic home; not a peasant-home,—far above that in refinement and potentialities,—but equally simple, frugal, and devout; a home of which no other land has furnished the coadequate type.

This poem is not rich in couplets to be quoted for their points of phrase and thought. Point, decoration, and other features of modern verse are scarcely characteristic of Whittier. In "Snow-Bound" he chose the best subject within his own experience, and he made the most of it. Taken as a whole, it is his most complete production, and a worthy successor to "The Deserted Village" and "The Cotter's Saturday Night." Here is that air which writers of quality so often fail to capture. "Hermann and Dorothea," "Enoch Arden," even "Evangeline," memorable for beauty of another kind, leave the impression that each of their authors said, as Virgil must have said, "And now I will compose an idyl." Whittier found his idyl already pictured for him by the camera of his own heart. It is a work that can be praised, when measured by others of the sort, as heartily as we praise the "Biglow Papers" or "Evangeline," and one that ranks next to them as an American poem. This "Winter Idyl" is honestly named. Under the title, however, is a passage from Cornelius Agrippa on the "Fire of Wood," followed by Emerson's matchless heralding of the snow-storm. Devices of this kind add to the effect of such a poem, only, as "The Ancient Mariner." The texts are needless at the outset of a work whose lovely and unliterary cast is sufficient in itself. From the key struck at the opening to the tender fall at the close, there is a sense of proportion, an adequacy and yet a restraint, not always observed in Whittier. This is a sustained performance that conforms to the maxim *ne quid nimis*. Its genuineness is proved by a severe test, the concord with which imaginative passages glide into homely, realistic verse:

"The wind blew east: we heard the roar
Of Ocean on his wintry shore,
And felt the strong pulse throbbing there
Beat with low rhythm our inland air.

"Meanwhile we did our nightly chores,—
Brought in the wood from out of doors,
Littered the stalls, and from the mows
Raked down the herd's-grass for the cows;
Heard the horse whinnying for his corn;
And, sharply clashing horn on horn,
Impatient down the stanchion rows
The cattle shake their walnut bows."

The gray day darkens to

"A night made hoary with the swarm
And whirl-dance of the blinding storm;

The white drift piled the window-frame,
And through the glass the clothes-line posts
Looked in like tall and sheeted ghosts."

The poet's child-vision makes this fancy natural and not grotesque. The whole transfiguration is recalled :

"The old familiar sights of ours
Took marvelous shapes; strange domes and
towers

Rose up where sty or corn-crib stood,
Or garden-wall, or belt of wood;

The bridle-post an old man sat
With loose-flung coat and high cocked hat;
The well-curb had a Chinese roof;
And even the long sweep, high aloof,
In its slant splendor, seemed to tell
Of Pisa's leaning miracle."

More imaginative touches follow :

"The shrieking of the mindless wind,
The moaning tree-boughs swaying blind,
And on the glass the unmeaning beat
Of ghostly finger-tips of sleet.

From the crest
Of wooded knolls that ridged the west,
The sun, a snow-blown traveler, sank
From sight beneath the smothering bank."

The building and lighting of the wood-fire,
the hovering family group that

"watched the first red blaze appear,
Heard the sharp crackle, caught the gleam
On whitewashed wall and sagging beam,"

the rude-furnished room thus glorified and
transformed, while even

"The cat's dark silhouette on the wall
A couchant tiger's seemed to fall,"—

all this is an interior painted by our Merrimack Teniers. His hand grows free in artless delineations of each sharer of the charmed blockade: the father, with his stories of woodcraft and adventure; the Quaker mother rehearsing tales from Sewell and Chalkley "of faith fire-winged by martyrdom"; then a foil to these, the unlettered uncle "rich in lore of fields and brooks,"

"A simple, guileless, childlike man,
Content to live where life began";

the maiden aunt; the elder sister, full of self-sacrifice, a true New England girl; lastly, the "youngest and dearest," seated on the braided mat,

"Lifting her large, sweet, asking eyes."

The guests are no less vividly portrayed. The schoolmaster, distinct as Goldsmith's, is of an original type. The group is completed, with an

instinct for color and contrast, by the introduction of a dramatic figure, the half-tropical, prophetic woman, who was born to startle,

"on her desert throne,
The crazy Queen of Lebanon
With claims fantastic as her own."

The poem returns to its theme, and records the days of farm-house life during the chill embargo of the snow, until

"a week had passed
Since the great world was heard from last."

But the treading oxen break out the highways,
the rustic carnival of sledding and sleighing is at hand,

"Wide swung again our ice-locked door,
And all the world was ours once more."

From the subject thus chosen and pursued, an unadventured theme before, our poet has made his masterpiece. Its readers afterward loved to hear his voice, whether at its best or otherwise; and the more so for his pleased and assured reflection,

"And thanks untraced to lips unknown
Shall greet me like the odors blown
From unseen meadows newly mown."

A claim that he has found, and preserved in fit and winning verse, the poetic aspect of his own section, can be grounded safely on this idyl. We return from the work in which his taste is most effectual to that inspired by his life-long convictions. It is in this that the faults heretofore noted are most common, but here also his natural force is at its height, and results from what is lacking in some of his group—the element of passion. The verse of his period, especially the New England verse, is barren enough of this. For what there was, and is, of love-poetry we must look south of the region where poets are either too fortunate or too self-controlled to die because a woman's fair. The song of the Quaker bard is almost virginal, in so far as what we term the master-passion is concerned. Its passion comes from the purpose that heated his soul and both strengthened and impeded lyrical expression. Active service in any strife, even the most humane, is unrest, and therefore hostile to the perfection of art. But the conflict often engenders in its cloud the flash of eloquence and song. Three-fourths of Whittier's anti-slavery lyrics are clearly effusions of the hour; their force was temporal rather than poetic. There are music and pathos in "The Virginia Slave Mother," and "The Slave Ship" is lurid and grotesque enough to have furnished Turner with his theme. The poet's deep-voiced scorn and invective rendered his anti-slavery verse a very different thing from Longfellow's, and made

the hearer sure of his "effectual calling." Even rhetoric becomes the outburst of true passion in such lines as these upon "Elliott":

"Hands off! thou tith-fat plunderer! play
No trick of priestcraft here!
Back, puny lordling! darest thou lay
A hand on Elliott's bier?"

A little of this, however, goes quite far enough in poetry. As a writer of personal tributes, whether pæans or monodies, the reform bard, with his peculiar faculty of characterization, has been happily gifted. Scarcely one of these that might not be retouched to advantage, but they are many and various and striking. John Randolph lives for us in the just balancing, the masterly and sympathetic portraiture, of Whittier's fine elegy. Channing, Elliott, Pius IX., Foster, Rantoul, Kosuth, Sumner, Garibaldi,—all these historic personages are idealized by this poet, and haloed with their spiritual worth; his tributes are a lyrical commentary, from the minstrel's point of view, upon an epoch now gone by. The wreath his aged hands have laid upon the tomb of Garrison is a beautiful and consecrated offering. One of his memorable improvisations was "Ichabod," the lament for Webster's defection and fall,—a tragical subject handled with lyric power. In after years, his passion tempered by the flood of time, he breathes a tenderer regret in "The Lost Occasion":

"Thou shouldst have lived to feel below
Thy feet Disunion's fierce upthrow,—
The late-sprung mine that underlaid
Thy sad concessions vainly made.

Ah, cruel fate, that closed to thee,
O sleeper by the Northern sea,
The gates of opportunity!"

But the conception of "Ichabod" is most impressive; those darkening lines were graven too deeply for obliteration. In thought we still picture the deserted leader, the shadow gathering about his "august head," while he reads such words as these:

"All else is gone; from those great eyes
The soul has fled:
When faith is lost, when honor dies,
The man is dead.

"Then, pay the reverence of old days
To his dead fame;
Walk backward, with averted gaze,
And hide the shame!"

Among our briefer poems on topics of dramatic general interest, I recall but one which equals this in effect,—and that, coming from a hand less familiar than Whittier's, is now almost unknown. I refer to the "Lines on a Great Man Fallen," written by William W. Lord, after the final defeat of Clay, and in

scorn of the popular judgment that to be defeated is to fall. The merit of this eloquent piece has been strangely overlooked by the makers of our literary compilations.

It is matter of history that our strictest clerical monitors, during the early struggle for abolition, opposed agitation of the slavery question, and often with a rancor that Holy Willie might envy. Not even this one-sided *odium theologicum* could long debar Whittier from the respect of the church-going classes, for he is the most religious of secular poets, and there is no gainsaying to a believer the virtues of one who guides his course by the life and teachings of Jesus Christ. A worshipful spirit, a savor "whose fragrance smells to heaven," breathes from these pages of the Preacher-Poet's song. The devotional bent of our ancestors was the inheritance of his generation. Domesticity, patriotism, and religion were, and probably still are, American characteristics often determining an author's success or failure. A reverent feeling, emancipated from dogma and imbued with grace, underlies the wholesome morality of our national poets. No country has possessed a group, equal in talent, that has presented more willingly whatsoever things are pure, lovely, and of good report. There is scientific value in an influence, during a race's formative period, so clarifying to the general conscience. We have no proof that the unmorality of a people like the French, with exquisite resources at command, can evolve an art or literature greater than in the end may result from the virile chastity of the Saxon mind. Whittier is the Galahad of modern poets, not emasculate, but vigorous and pure; he has borne Christian's shield of faith and sword of the Spirit. His steadfast insistence upon the primitive conception of Christ as the ransom of the oppressed had an effect, stronger than argument or partisanship, upon the religiously inclined; and of his lyrics, more than of those by his fellow-poets, it could be averred that the songs of a people go before the laws. Undoubtedly a flavor smacking of the caucus, the jubilee, and other adjuvants of "the cause" is found in some of his polemic strains; but again they are like the trumpeting of passing squadrons, or the muffled drumbeat for chieftains fallen in the fray. The courage that endures the imputation of cowardice, as in "Barclay of Ury," the suffering of man for man, the cry of the human, never fail to move him. He celebrates all brave deeds and acts of renunciation. The heroism of martyrs and resistants, of the Huguenot, the Vaudois, the Quakers, the English reformers, serves him for many a song and ballad. At every pause after some new de-

votion, after some supreme offering by one of his comrades, it was the voice of Whittier that sang the pæan and the requiem. His cry,

“Thou hast fallen in thine armor,
Thou martyr of the Lord!”

compares with Turgueneff's thought of the Russian maiden crossing the threshold of dishonor and martyrdom, the crowd crying “Fool!” without, while from within and above a rapturous voice utters the words, “Thou saint!” His sympathy flows to prisoners, emancipationists, throughout the world; and in “The May-Flower” he has a lurking kindness even for the Puritans,—but of the sort that Burns extends to Auld Hornie. This compassion reaches a climax in the lyric of the two angels who are commissioned to ransom hell itself. The injunction to beware of the man of one book applies to the poet whose Bible was interpreted for him by a Quaker mother. Its letter rarely is absent from his verse, and its spirit never. His hymns, than which he composes nothing more spontaneously, are so many acts of faith. The emancipationists certainly fought with the sword in one hand and the Bible in the other,—and Whittier's hymns were on their lips. The time came when these were no longer of hope, but of thanksgiving. Often his sacred numbers, such as the “Invocation,” have a sonorous effect and positive strength of feeling. It was by the common choice of our poets that he wrote the “Centennial Hymn”; no one else would venture where the priest of song alone should go. The composition begins imposingly:

“Our fathers' God! from out whose hand
The centuries fall like grains of sand”;

and it is difficult to see how a poem for sacred music, or for such an occasion, could be more adequately wrought.

His occasional and personal pieces reveal his transcendental habit of thought. We find him imagining the after-life of the good, the gifted, the maligned. The actuality of his conceptions is impressive:

“I have friends in spirit-land;
Not shadows in a shadowy band,
Not others, but themselves, are they.”

The change is only one from twilight into dawn:

“*Thou livest, Follen!*—not in vain
Hath thy fine spirit meekly borne
The burthen of Life's cross of pain.”

And in “Snow-Bound” he thus invokes a sister of his youth:

“And yet, dear heart, remembering thee,
Am I not richer than of old?
Safe in thy immortality,
What change can reach the wealth I hold?”

Whittier's religious mood is far from being superficial and temporary. It is the life of his genius, out of which flow his ideas of earthly and heavenly content. In outward observance he is loyal to the simple ways of his own sect, and still a frequenter of the Meeting, where

“from the silence multiplied
By these still forms on either side,
The world that time and sense have known
Falls off and leaves us God alone.”

God should be most, he says,

“where man is least;
So, where is neither church nor priest,
And never rag of form or creed
To clothe the nakedness of need,—
Where farmer-folk in silence meet,—
I turn my bell-unsummoned feet.”

He clings in this wise to the formal formlessness of the Quakers, as he would cling, doubtless, to the usages of any church in which he had been bred, provided that its creed rested upon the cardinal doctrines of the Master. Channing seemed to him a hero and saint, with whom he could enter into full communion:

“No bars of sect or clime were felt,—
The Babel strife of tongues had ceased,—
And at one common altar knelt
The Quaker and the priest.”

With this liberal inclusion of all true worshipers, he is so much the more impatient of clerical bigotry. “Wo unto you, scribes and Pharisees, hypocrites!” has been often on his lips,—sometimes the outbreak of downright wrath:

“Woe to the priesthood! woe
To those whose hire is with the price of blood,—
Perverting, darkening, changing, as they go,
The searching truths of God!”

at other times varied with grim and humorous contempt, as in “The Pastoral Letter” and “The Haschish”; and never more effectively than in the vivid and stinging ballad of the fugitive slave-girl, captured in the house of God, in spite of tearful and defying women's eyes, and of the stout hands that rise between “the hunter and the flying.” Down comes the parson, bowing low:

“Of course I know your right divine
To own and work and whip her;
Quick, deacon, throw that Polyglot
Before the wench, and trip her!”

The basic justification of Whittier's religious trust appears to be the “inward light” vouchsafed to a nature in which the prophet and the poet are one. This solvent of doubt removes him alike from the sadness of Clough and Arnold and the paganism of certain other poets. In the striking “Questions of Life,” a piece which indicates his highest intellectual

mark and is in affinity with some of Emerson's discourse, he fairly confronts his own share of our modern doubts; questioning earth, air, and heaven; perplexed with the mystery of our alliance to the upper and lower worlds; asking what is this

“centred self, which feels and is;
A cry between the silences?”

He finds no resource but to turn, from

“book and speech of men apart
To the still witness of my heart.”

His repose must come from the direction in which the Concord transcendentalists also have sought for it, the soul's temple irradiated by the presence of the inward light. I have seen a fervent expression of this belief, in a voluntary letter of Whittier's, to a poet who had written an ode concerning intuition as the refuge of the baffled investigator. In fine, the element of faith gives a tone to the whole range of his verse, both religious and secular, and more distinctively than to the work of any other living poet of equal reputation. What he has achieved, then, is greatly due to a force which is the one thing needful in modern life and art. Faith, of some kind, in things as they are or will be, has elevated all great works of human creation. The want of it is felt in that insincere treatment which weakens the builder's, the painter's, and the poet's appeal; since faith leads to rapture and that to exaltation,—the *passio vera*, without which art gains no hold upon the senses and the souls of men.

v.

THE leaders of our recent poetic movement, with the exception of Longfellow,—who, like Tennyson and Browning, devoted himself wholly to ideal work,—seem to have figured more distinctively as personages, in both their lives and writings, than their English contemporaries. This remark certainly applies to Poe, Emerson, Whitman, Holmes, and Lowell, and to none more clearly than to the subject of this review. His traits, moreover, have begotten a sentiment of public affection, which, from its constant manifestation, is not to be overlooked in any judgment of his career. In recognition of a beautiful character, critics have not found it needful to measure this native bard with tape and callipers. His service and the spirit of it offset the blemishes which it is their wont to condemn in poets whose exploits are merely technical. A life is on his written page; these are the chants of a soldier, and anon the hymnal of a saint. Contemporary honor is not the

final test, but it has its proper bearing,—as in the case of Mrs. Browning, whom I have called the most beloved of English poets. Whittier's audience has been won by unaffected pictures of the scenes to which he was bred, by the purity of his nature, and even more by the *earnestness* audible in his songs, injurious as it sometimes is to their artistic purpose. Like the English sibyl, he has obeyed the heavenly vision, and the verse of poets who still trust their inspiration has its material, as well as spiritual, ebb and flow.

It must be owned that Goethe's calm distinction between the poetry of humanity and that of a high ideal is fully illustrated in Whittier's reform-verse. Yet even his failings have “leaned to virtue's side.” Those who gained strength from his music to endure defeat and obloquy cherish him with a devotion beyond measure. For his righteous and tender heart, they would draw him with their own hands, over paths strewn with lilies, to a shrine of peace and remembrance. They comprehend his purpose — that he has “tried to make the world a little better, . . . to awaken a love of freedom, justice, and good will,” and to have his name, like Ben Adhem's, enrolled as of “one that loved his fellow-men.” In their opinion a grace is added to his poetry by the avowal, “I set a higher value on my name as appended to the Anti-Slavery Declaration of 1833, than on the title-page of my book.”

Our eldest living poet, then, is canonized already by his people as one who left to silence his personal experience, yet entered thoroughly into their joy and sorrow; who has been, like a celibate priest, the consoler of the hearts of others and the keeper of his own; who has best known the work and feeling of the humble household, and whose legend surely might be *Pro aris et focis*. He has stood for New England, also, in his maintenance of her ancient protest against tyranny. He is the veteran of an epoch that can never recur; that scarcely can be equaled, however significant future periods may seem from the artist's point of view. The primitive life, the old struggle for liberty, are idealized in his strains. Much of both his strength and incompleteness is due to his Hebraic nature; for he is the incarnation of Biblical heroism, of the moral energy that breathed alike, through a cycle of change from dogma to reason, in Hooker, Edwards, Parker, Garrison, and Emerson. In his outbursts against oppression and his cries unto the Lord, we recognize the prophetic fervor, still nearer its height in some of his personal poems, which popular instinct long ago attributed to him. Not only of Ezekiel, but also of himself, he

chanted in that early time of anointment and consecration :

“The burden of a prophet’s power
Fell on me in that fearful hour ;
From off unutterable woes
The curtain of the future rose ;
I saw far down the coming time
The fiery chastisement of crime ;
With noise of mingling hosts, and jar
Of falling towers and shouts of war,
I saw the nations rise and fall,
Like fire-gleams on my tent’s white wall.”

Oliver Johnson’s tribute, a complement to Parkman’s, paid honor to “The Prophet Bard of America, poet of freedom, humanity, and religion ; whose words of holy fire aroused the conscience of a guilty nation, and melted the fetters of the slaves.” This eulogy from a comrade is the sentiment of a multitude in whose eyes their bard seems almost transfigured by the very words that might be soonest forgotten if precious for their poetry alone. I confess to my own share of this feeling. It may be that he has thought too little of the canons which it is our aim to discover and illustrate ; yet it was to him above all that the

present writer felt moved to dedicate a volume with the inscription “Ad Vatem,” and to invoke for him

“the Land that loves thee, she whose child
Thou art,—and whose uplifted hands thou long
Hast stayed with song arising like a prayer.”

For surely no aged servant, his eyes having seen in good time the Lord’s salvation, ever was more endowed with the love and reverence of a chosen people. They see him resting in the country of Beulah, and there solacing himself for a season. From this comfortable land, where the air is sweet and pleasant (and he is of those who here have “met abundance of what they had sought for in all their pilgrimage”), they are not yet willing to have him seek the Golden City of his visions, but would fain adjure him,—

“And stay thou with us long ! vouchsafe us long
This brave autumnal presence, ere the hues
Slow-fading, ere the quaver of thy voice,
The twilight of thine eye, move men to ask
Where hides the chariot,—in what sunset vale,
Beyond thy chosen river, champ the steeds
That wait to bear thee skyward.”

Edmund C. Stedman.

THE PRINCE'S LITTLE SWEETHEART.

SHE was very young. No man had ever made love to her before. She belonged to the people, the common people. Her parents were poor, and could not buy any wedding trousseau for her. But that did not make any difference. A carriage was sent from the Court for her, and she was carried away “just as she was,” in her stuff gown—the gown the Prince first saw her in. He liked her best in that, he said ; and, moreover, what odds did it make about clothes ? Were there not rooms upon rooms in the palace, full of the most superb clothes for Princes’ Sweethearts ?

It was into one of these rooms that she was taken first. On all sides of it were high glass cases reaching up to the ceiling, and filled with gowns, and mantles, and laces, and jewels : everything a woman could wear was there, and all of the very finest. What satins, what velvets, what feathers and flowers ! Even down to shoes and stockings, every shade and color of stockings, of the daintiest silk. The Little Sweetheart gazed, breathless, at them all. But she did not have time to wonder, for in a moment more she was met by attendants, some young, some old, all dressed gayly. She did not dream at first that they were servants, till they began, all together,

asking her what she would like to put on. Would she have a lace gown, or a satin ? Would she like feathers, or flowers ? And one ran this way, and one that ; and among them all, the Little Sweetheart was so flustered she did not know if she were really alive and on the earth, or had been transported to some fairy land ; and before she fairly realized what was being done, they had her clad in the most beautiful gown that was ever seen. White satin with gold butterflies on it, and a white lace mantle embroidered in gold butterflies ; all white and gold she was, from top to toe, all but one foot : and there was something very odd about that. She heard one of the women whispering to the other, behind her back : “It is too bad there isn’t any mate to this slipper. Well, she will have to wear this pink one. It is too big, but if we pin it up at the heel she can keep it on. The Prince really must get some more slippers.”

And then they put on her left foot a pink satin slipper, which was so much too big it had to be pinned up in plaits at each side, and the pearl buckle on the top hid her foot quite out of sight. But the Little Sweetheart did not care. In fact she had no time to think, for the Queen came sailing in and

spoke to her, and crowds of ladies in dresses so bright and beautiful that they dazzled her eyes; and the Prince was there kissing her, and in a minute they were married, and went floating off in a dance, which was so swift it did not feel so much like dancing as it did like being carried through the air by a gentle wind.

Through room after room,—there seemed no end to the rooms, and each one more beautiful than the last,—from garden to garden, some full of trees, some with beautiful lakes in them, some full of solid beds of flowers, they went, sometimes dancing, sometimes walking, sometimes, it seemed to the Little Sweetheart, floating. Every hour there was some new beautiful thing to see, some new beautiful thing to do. And the Prince never left her for more than a few minutes; and when he came back he brought her gifts and kissed her. Gifts upon gifts he kept bringing, till the Little Sweetheart's hands were so full she had to lay the things down on tables or window-sills, wherever she could find place for them, which was not easy, for all the rooms were so full of beautiful things that it was difficult to move about without knocking something down.

The hours flew by like minutes. The sun came up high in the heavens, but nobody seemed tired; nobody stopped; dance, dance, whirl, whirl, song, and laughter, and ceaseless motion. That was all that was to be seen or heard in this wonderful Court to which the Little Sweetheart had been brought.

Noon came, but nothing stopped. Nobody left off dancing, and the musicians played faster than ever.

And so it was all the long afternoon and through the twilight; and as soon as it was really dark, all the rooms, and the gardens, and the lakes blazed out with millions of lamps, till it was lighter far than day, and the ladies' dresses, as they danced back and forth, shone and sparkled like butterflies' wings.

At last the lamps began, one by one, to go out, and by degrees a soft sort of light, like moonlight, settled down on the whole place, and the fine-dressed servants that had robbed the Little Sweetheart in her white satin gown took it off, and put her to bed in a gold bedstead, with golden silk sheets.

"Oh!" thought the Little Sweetheart, "I shall never go to sleep in the world; and I'm sure I don't want to! I shall just keep my eyes open all night and see what happens next."

All the beautiful clothes she had taken off were laid on a sofa near the bed—the white satin dress at top, and the big pink satin slipper, with its huge pearl buckle, on the floor, in plain sight. "Where is the other?" thought the Little Sweetheart. "I do believe I lost it

off. That's the way they come to have so many odd ones. But, how queer, I lost off the tight one! But the big one was pinned to my foot," she said, speaking out loud before she thought. "That was what kept it on."

"You are talking in your sleep, my love," said the Prince, who was close by her side, kissing her.

"Indeed I am not asleep at all. I haven't shut my eyes," said the Little Sweetheart.

And the next thing she knew it was broad daylight, the sun streaming into her room, and the air resounding in all directions with music and laughter, and flying steps of dancers, just as it had been yesterday.

The Little Sweetheart sat up in bed and looked around her. She thought it very strange that she was all alone, the Prince gone, no one there to attend to her; in a few moments more she noticed that all her clothes were gone too.

"Oh," she thought, "I suppose one never wears the same clothes twice in this Court, and they will bring me others. I hope there will be two slippers alike to-day."

Presently she began to grow impatient; but, being a timid little creature, and having never before seen the inside of a Court or been a Prince's Sweetheart, she did not venture to stir or to make any sound, only sat still in her bed, waiting to see what would happen. At last she could not bear the sounds of the dancing, and laughing, and playing, and singing any longer. So she jumped up, and, rolling one of the golden silk sheets around her, looked out of the window. There they all were, the crowds of gay people, just as they had been the day before when she was among them, whirling, dancing, laughing, singing. The tears came into the Little Sweetheart's eyes as she gazed. What could it mean that she was deserted in this way, not even her clothes left for her? She was as much a prisoner in her room as if the door had been locked.

As hour after hour passed, a new misery began to oppress her. She was hungry, seriously, distressingly hungry. She had been too happy to eat, the day before. Though she had sipped and tasted many delicious beverages and viands, which the Prince had pressed upon her, she had not taken any substantial food, and now she began to feel faint for the want of it. As noon drew near, the time at which she was accustomed in her father's house to eat dinner, the pangs of her hunger grew unbearable.

"I can't bear it another minute," she said to herself. "I must and I will have something to eat. I will slip down by some back way to the kitchen. There must be a kitchen, I suppose."

So saying, she opened one of the doors and timidly peered into the next room. It chanced to be the room with the great glass cases full of fine gowns and laces, where she had been dressed by the obsequious attendants on the previous day. No one was in the room. Glancing fearfully in all directions, she rolled the golden silk sheet tightly around her, and flew, rather than ran, across the floor and took hold of the handle of one of the glass doors. Alas, it was locked. She tried another, another; all were locked. In despair she turned to fly back to her bedroom, when suddenly she spied on the floor, in a corner close by the case where hung her beautiful white satin dress, a little heap of what looked like brown rags. She darted toward it, snatched it from the floor, and in a second more was safe back in her room. It was her own old stuff gown.

"What luck!" said the Little Sweetheart; "nobody will ever know me in this. I'll put it on and creep down the back stairs, and beg a mouthful of food from some of the servants, and they'll never know who I am; and then I'll go back to bed, and stay there till the Prince comes to fetch me. Of course he will come before long; and if he comes and finds me gone, I hope he will be frightened half to death, and think I have been carried off by robbers!"

Poor foolish Little Sweetheart! It did not take her many seconds to slip into the ragged old stuff gown; then she crept out, keeping close to the walls, so that she could hide behind the furniture if any one saw her.

She listened cautiously at each door before she opened it, and turned away from some where she heard sounds of merry talking and laughing. In the third room that she entered she saw a sight that arrested her instantly and made her cry out in astonishment: a girl, who looked so much like her that she might have been her own sister, and, what was stranger, wore a brown stuff gown exactly like her own, was busily at work in this room with a big broom killing spiders. As the Little Sweetheart appeared in the doorway, this girl looked up and said, "Oh, ho! There you are, are you? I thought you'd be out before long." And then she laughed unpleasantly.

"Who are you?" said the Little Sweetheart, beginning to tremble all over.

"Oh, I'm a Prince's Sweetheart," said the girl, laughing still more unpleasantly; and, leaning on her broom, she stared at the Little Sweetheart from top to toe.

"But ——" began the Little Sweetheart.

"Oh, we're all Princes' Sweethearts," interrupted several voices, coming all at once from

different corners of the big room; and before the Little Sweetheart could get out another word, she found herself surrounded by half a dozen or more girls and women, all carrying brooms, and all laughing unpleasantly as they looked at her.

"What!" she gasped, as she gazed at their stuff gowns and their brooms. "You were all of you Princes' Sweethearts? Is it only for one day, then?"

"Only for one day," they all replied.

"And always after that do you have to kill spiders?" she cried.

"Yes; that or nothing," they said. "You see it is a great deal of work to keep all the rooms in this Court clean."

"Isn't it very dull work to kill spiders?" said the Little Sweetheart.

"Yes, very," they said, all speaking at once. "But it's better than sitting still, doing nothing."

"Don't the Princes ever speak to you?" sobbed the Little Sweetheart.

"Yes, sometimes," they answered.

Just then the Little Sweetheart's own Prince came hurrying by, all in armor from head to foot, splendid shining armor that clinked as he walked.

"Oh, there he is!" cried the Little Sweetheart, springing forward; then suddenly she recollected her stuff gown, and shrunk back into the group. But the Prince had seen her.

"Oh, how d' do!" he said kindly. "I was wondering what had become of you. Good-bye! I'm off for the grand review to-day. Don't tire yourself out over the spiders. Good-bye!" and he was gone.

"I hate him!" cried the Little Sweetheart, her eyes flashing and her cheeks scarlet.

"Oh, no, you don't!" exclaimed all the spider-sweepers. "That's the worst of it. You may think you do, but you don't. You love him all the time after you've once begun."

"I'll go home!" said the Little Sweetheart.

"You can't," said the others. "It is not permitted."

"Is it always just like this, in this Court?" she asked.

"Yes, always the same. One day just like another; all whirl and dance from morning till night, and new people coming and going all the time, and spiders most of all. You can't think how fast brooms wear out in this Court!"

"I'll die!" said the Little Sweetheart.

"Oh, no, you won't," they said. "There are some of us, in some of the rooms here, that are wrinkled and gray-haired. The most of the Sweethearts live to be old."

"Do they?" said the Little Sweetheart, and burst into tears. . . .

BROKEN WINGS.

GRAY-HEADED poets, whom the full years bless
With life and health and chance still multiplied
To hold your forward course — fame and success
Close at your side ; —

Who easier won your bays because the fields
Lacked reapers :— time has been your helper long ;
Rich are the crops your busy tillage yields —
Your arms still strong.

Honor to you, your talent and your truth.
As ye have soared and sung, still may you sing.
Yet we remember some who fell in youth
With broken wing.

Names nigh forgotten now, by time erased,
Or else placarded o'er by those long known.
Had fate permitted, might they not have blazed
Beside your own ?

Ah, yes, due fame for all who have achieved.
And yet a thought for those who died too young —
Their green fruit dropped, — their visions half conceived, —
Their lays unsung !

A tribute song for them ! Reach forth, renowned
And honored ones, from your green sunny glades,
And grasp their spirit-hands, the bards uncrowned
Amid the shades !

Not those whom glory follows to a bier
Enshrined in marble, decked with costly flowers.
The loud world speaks their praise from year to year.
They need not ours.

But for the dead whose promise failed through death ;
The great who might have been, whose early bloom
Dropping like roses in the north wind's breath,
Found but a tomb.

Yet it may be, in some bright land, unchecked
By fate — some fair Elysian field unknown,
Their brows by brighter laurel wreaths are decked,
Their seat a throne ;

While spirits of the illustrious dead, the seers,
Prophets, and poets of the olden days
Mingle, perchance, with theirs, as with their peers,
Immortal lays !

C. P. Cranch.

MOURNING HER BRAVE.

[Engraved by H. Davidson from the painting by George de Forest Brush, in the possession of Thomas B. Clark, Esq.]

AN ARTIST AMONG THE INDIANS.

[THE pictures of one of the younger artists of America, Mr. George de Forest Brush, have attracted attention in recent exhibitions for their original and vigorous rendering of scenes among the aborigines of the North American continent. Two of these paintings in oil we are permitted to reproduce here by means of wood-engraving — "Mourning her Brave," engraved by Mr. H. Davidson, and "The Picture-Writer," engraved by Mr. J. H. E. Whitney. We call attention also to the same artist's illustrations to "How Squire Coyote brought Fire to the Cahrocs," in *THE CENTURY* for January, 1885. At our request Mr. Brush has written out a few notes with regard to the Indians as subjects of pictorial art. — THE EDITOR.]

EVERY one who goes far West sees about the streets of the little railroad towns a few Indians. The squaws are fat and prematurely wrinkled; the men give the impression of dark-skinned tramps, and we seldom look under their dirty old felt hats to study their features. Certainly, when one first sees these wretched creatures, and recalls the pictures in the geography, the pages of travelers, or the imagery which the musical and high-sounding names — such as Crow Nation or Land of the Dakotas — awoke within him when a boy, there is some reason for feeling as if one had been deceived; as if a false charm had been thrown around these poor brutes. This, indeed, is the feeling of most people in the East to-day regarding Indians. One cannot speak of them without the certain response, "Well, as for me, I have not much faith in the noble red man"; and so deep is the prejudice against them that travelers who are aware of this sentiment, and who have lived long among the aborigines, knowing how much of interest and good there is to be told, are tempted to counterbalance prejudice with over-statement; they exaggerate the beauty and suppress all mention of the ugly that is to be found in their manners and life. In reading Catlin, one is oppressed with a certain partiality, a constant tendency to throw into relief all their good and to subordinate the bad.

It is true that, from the point of view of the civilized merchant, who loves one woman, lives in a stone mansion, and tastes the sweets of intellectual life, they are a sad sight, with their limited enjoyments, licentiousness, and coarse palates that can relish a boiled dog, — their old people blind and dirty, with brutal jaws and uncombed hair, and blood on the faces of old women, who have cut themselves in mourning, and which they refuse to wash off. But the question whether they are fit to enter the kingdom of heaven is apart from that of their artistic interest. Many people fail to see this; but such persons are as badly off as the farmer who lived in the house of a celebrated author which I went to sketch. On learning my errand, the old man eyed the moss-covered shingles and defective chimney

with a mixed look of humor and humiliation, and questioned whether it would not be better to return in the spring, when he hoped to have a new house in its place!

All that Rembrandt asked of the human figure was that it might exhibit light and shade; he never looked for pretty people, but found in this aspect of things a life-work. It is not necessary that an Indian learn to spell and make changes before we see that his long locks are beautiful as he rides against the prairie winds. A hawk is cruel, yet who has not loved to watch its spiral course in the summer heavens?

It is also a mistake to suppose that Indians are all homely. A really handsome squaw is rare, but there are more superb and symmetrical men among them than I have ever seen elsewhere, their beardless faces reminding one always of the antique; these are not rare, but are to be seen at every dance, where they are mostly naked, decorated in feathers and light fineries. Their constant light exercise, frequent steam-baths, and freedom from over-work develop the body in a manner only equaled, I must believe, by the Greek.

When we study them in their own homes, see them well fed, independent, unembarrassed, dressed in their elk-skins and feathers, dancing nearly nude when the November snows lie deep upon the ground, smoking their long pipes and chatting with the children about the door of the lodge, or sadly climbing the brown October foot-hills to bury a departed villager on some chosen cliff, — then they are beautiful. It is when we detach them from all thoughts of what we would have them be, and enjoy them as part of the landscape, that they fill us with lovely emotions. The vulgar think that only roses are beautiful; but the weed which we root up also illustrates the divine law of harmony. It is not by trying to imagine the Indian something finer than he is that the artistic sense finds delight in him.

We do not miss human refinement in the sow and her litter; we admire them, as we look over the old fence, simply as pigs, their tiny pink feet plunging into the trough in their

THE PICTURE-WRITER.

[Engraved by J. H. E. Whitney from the painting by George de Forest Brush, in the possession of Washington Wilson, Esq.]

greed, and the little black brother trying to find room. The beauty of the maid who brings their food does not lessen theirs. So the Indian is a part of nature, and is no more ridiculous than the smoke that curls up from the wigwam, or the rock and pines on the mountain-side.

The custom of mourning the dead, as represented in the picture, is common to all the tribes of the North-west, I believe. I have witnessed it daily among the Crows. I know that we do not mourn in this manner, but death and grief we are all acquainted with. In the picture I was afraid of making the body too prominent, on account of the effect in the composition. In the engraving I fear the point is quite lost, and does need expla-

nation. "The Picture-Writer" is supposed to be a scene in the interior of a Mandan lodge. The Mandans were not a roving tribe, but built these large huts of poles and mud, and raised corn.

But in choosing Indians as subjects for art, I do not paint from the historian's or the antiquary's point of view; I do not care to represent them in any curious habits which could not be comprehended by us; I am interested in those habits and deeds in which we have feelings in common. Therefore, I hesitate to attempt to add any interest to my pictures by supplying historical facts. If I were required to resort to this in order to bring out the poetry, I would drop the subject at once.

George de Forest Brush.

MAY-BLOOM.

Oh, for You that I never knew! —
 Now that the Spring is swelling,
 And over the way is a whitening may,
 In the yard of my neighbor's dwelling.

Oh, may, oho! do your sisters blow
 Out there in the country grasses —
 A-mocking the white of the cloudlet light,
 That up in the blue sky passes?

Here in town the grass it is brown,
 Right under your beautiful clusters;
 But your sisters thrive where the sward's alive
 With emerald lights and lustres.

Dream of my dreams! vision that seems
 Ever to scorn my praying,
 Love that I wait, face of my fate,
 Come with me now a-maying!

Soul of my song! all my life long
 Looking for you I wander;
 Long have I sought — shall I find naught,
 Under the may-bushes yonder?

Oh, for You that I never knew,
 Only in dreams that bind you! —
 By Spring's own grace I shall know your face,
 When under the may I find you!

H. C. Bunner.

THE BOSTONIANS.*

BY HENRY JAMES,

Author of "Portrait of a Lady," "Daisy Miller," "Lady Barberina," etc.

xv.

TARRANT, however, kept an eye in that direction; he was solemnly civil to Miss Chancellor, handed her the dishes at table over and over again, and ventured to intimate that the apple-fritters were very fine; but, save for this, alluded to nothing more trivial than the regeneration of humanity and the strong hope he felt that Miss Birdseye would again have one of her delightful gatherings. With regard to this latter point, he explained that it was not in order that he might again present his daughter to the company, but simply because on such occasions there was a valuable interchange of hopeful thought, a contact of mind with mind. If Verena had anything suggestive to contribute to the social problem, the opportunity would come—that was part of their faith. They couldn't reach out for it and try and push their way; if they were wanted, their hour would strike; if they were not, they would just keep still and let others press forward who seemed to be called. If they were called, they would know it; and if they weren't, they could just hold on to each other as they had always done. Tarrant was very fond of alternatives, and he mentioned several others; it was never his fault if his listeners failed to think him impartial. They hadn't much, as Miss Chancellor could see; she could tell by their manner of life that they hadn't raked in the dollars; but they had faith that, whether one raised one's voice or simply worked on in silence, the principal difficulties would straighten themselves out; and they had also a considerable experience of great questions. Tarrant spoke as if, as a family, they were prepared to take charge of them on moderate terms. He always said "ma'am" in speaking to Olive, to whom, moreover, the air had never been so filled with the sound of her own name. It was always in her ear, save when Mrs. Tarrant and Verena conversed in prolonged and ingenuous asides; this was still for her benefit, but the pronoun sufficed them. She had wished to judge Dr. Tarrant (not that she believed he had come honestly by his title) to make up her mind. She had done these things now, and she expressed to

herself the kind of man she believed him to be in reflecting that if she should offer him ten thousand dollars to renounce all claim to Verena, keeping—he and his wife—clear of her for the rest of time, he would probably say, with his fearful smile, "Make it twenty, money down, and I'll do it." Some image of this transaction, as one of the possibilities of the future, outlined itself for Olive among the moral incisions of that evening. It seemed implied in the very place, the bald bareness of Tarrant's temporary lair, a wooden cottage, with a rough front yard, a little naked piazza, which seemed rather to expose than to protect, facing upon an unpaved road, in which the footway was overlaid with a strip of planks. These planks were embedded in ice or in liquid thaw, according to the momentary mood of the weather, and the advancing pedestrian traversed them in the attitude, and with a good deal of the suspense, of a rope-dancer. There was nothing in the house to speak of; nothing, to Olive's sense, but a smell of kerosene; though she had a consciousness of sitting down somewhere,—the object creaked and rocked beneath her,—and of the table at tea being covered with a cloth stamped in bright colors.

As regards the pecuniary transaction with Selah, it was strange how she should have seen it through the conviction that Verena would never give up her parents. Olive was sure that she would never turn her back upon them, would always share with them. She would have despised her had she thought her capable of another course; yet it baffled her to understand why, when parents were so trashy, this natural law should not be suspended. Such a question brought her back, however, to her perpetual enigma, the mystery she had already turned over in her mind for hours together,—the wonder of such people being Verena's progenitors at all. She had explained it, as we explain all exceptional things, by making the part, as the French say, of the miraculous. She had come to consider the girl as a wonder of wonders, to hold that no human origin, however congruous it might superficially appear, would sufficiently account for her; that her springing up between Selah and his wife was an exquisite whim of the creative force; and that in such a case a

* Copyright, 1884, by Henry James.

few shades more or less of the inexplicable didn't matter. It was notorious that great beauties, great geniuses, great characters, take their own times and places for coming into the world, leaving the gaping spectators to make them "fit in," and holding from far-off ancestors, or even, perhaps, straight from the divine generosity, much more than from their ugly or stupid progenitors. They were incalculable phenomena, anyway, as Selah would have said. Verena, for Olive, was the very type and model of the "gifted being"; her qualities had not been bought and paid for; they were like some brilliant birthday present, left at the door by an unknown messenger, to be delightful for ever as an inexhaustible legacy, and amusing for ever from the obscurity of its source. They were superabundantly crude as yet,—happily for Olive, who promised herself, as we know, to train and polish them,—but they were as genuine as fruit and flowers, as the glow of the fire or the splash of water. For her scrutinizing friend Verena had the disposition of the artist, the spirit to which all charming forms come easily and naturally. It required an effort at first to imagine an artist so untaught, so mistaught, so poor in experience; but then it required an effort also to imagine people like the old Tarrants, or a life so full as her life had been of ugly things. Only an exquisite creature could have resisted such associations, only a girl who had some natural light, some divine spark of taste. There were people like that, fresh from the hand of Omnipotence; they were far from common, but their existence was as incontestable as it was beneficent.

Tarrant's talk about his daughter, her prospects, her enthusiasm, was terribly painful to Olive; it brought back to her what she had suffered already from the idea that he laid his hands upon her to make her speak. That he should be mixed up in any way with this exercise of her genius was a great injury to the cause, and Olive had already determined that in future Verena should dispense with his cooperation. The girl had virtually confessed that she lent herself to it only because it gave him pleasure, and that anything else would do as well, anything that would make her quiet a little before she began to "give out." Olive took upon herself to believe that *she* could make her quiet, though, certainly, she had never had that effect upon any one; she would mount the platform with Verena if necessary, and lay her hands upon her head. Why in the world had a perverse fate decreed that Tarrant should take an interest in the affairs of Woman—as if she wanted *his* aid to arrive at her goal; a charlatan of the poor, lean, shabby sort, without the humor, brilliancy,

prestige, which sometimes throw a drapery over shallowness? Mr. Pardon evidently took an interest as well, and there was something in his appearance that seemed to say that his sympathy would not be dangerous. He was much at his ease, plainly, beneath the roof of the Tarrants, and Olive reflected that though Verena had told her much about him, she had not given her the idea that he was as intimate as that. What she had mainly said was that he sometimes took her to the theater. Olive could enter, to a certain extent, into that; she herself had had a phase (some time after her father's death,—her mother's had preceded his,—when she bought the little house in Charles street and began to live alone) during which she accompanied gentlemen to respectable places of amusement. She was accordingly not shocked at the idea of such adventures on Verena's part; than which, indeed, judging from her own experience, nothing could well have been less adventurous. Her recollections of these expeditions were as of something solemn and edifying—of the earnest interest in her welfare exhibited by her companion (there were few occasions on which the young Bostonian appeared to more advantage), of the comfort of other friends sitting near, who were sure to know whom she was with, of serious discussion between the acts in regard to the behavior of the characters in the piece, and of the speech at the end with which, as the young man quitted her at her door, she rewarded his civility—"I must thank you for a very pleasant evening." She always felt that she made that too prim; her lips stiffened themselves as she spoke. But the whole affair had always a primness; this was discernible even to Olive's very limited sense of humor. It was not so religious as going to evening service at King's Chapel; but it was the next thing to it. Of course all girls didn't do it; there were families that viewed such a custom with disfavor. But this was where the girls were of the romping sort; there had to be some things they were known not to do. As a general thing, moreover, the practice was confined to the decorous; it was a sign of culture and quiet tastes. All this made it innocent for Verena, whose life had exposed her to much worse dangers; but the thing referred itself in Olive's mind to a danger which cast a perpetual shadow there—the possibility of the girl's embarking with some ingenuous youth on an expedition that would last much longer than an evening. She was haunted, in a word, with the fear that Verena would marry, a fate to which she was altogether unprepared to surrender her; and this made her look with suspicion upon all male acquaintances.

Mr. Pardon was not the only one she knew; she had an example of the rest in the persons of two young Harvard law-students, who presented themselves after tea on this same occasion. As they sat there Olive wondered whether Verena had kept something from her, whether she were, after all (like so many other girls in Cambridge), a college "belle," an object of frequentation to undergraduates. It was natural that at the seat of a big university there should be girls like that, with students dangling after them, but she didn't want Verena to be one of them. There were some that received the Seniors and Juniors; others that were accessible to Sophomores and Freshmen. Certain young ladies distinguished the professional students; there was a group, even, that was on the best terms with the young men who were studying for the Unitarian ministry in that queer little barrack at the end of Divinity Avenue. The advent of the new visitors made Mrs. Tarrant bustle immensely; but after she had caused every one to change places two or three times with every one else, the company subsided into a circle, which was occasionally broken by wandering movements on the part of her husband, who, in the absence of anything to say on any subject whatever, placed himself at different points in listening attitudes, shaking his head slowly up and down, and gazing at the carpet with an air of supernatural attention. Mrs. Tarrant asked the young men from the Law School about their studies, and whether they meant to follow them up seriously; said she thought some of the laws were very unjust, and she hoped they meant to try and improve them. She had suffered by the laws herself, at the time her father died; she hadn't got half the prop'ty she should have got if they had been different. She thought they should be for public matters, not for people's private affairs; the idea always seemed to her to keep you down if you *were* down, and to hedge you in with difficulties. Sometimes she thought it was a wonder how she had developed in the face of so many; but it was a proof that freedom was everywhere, if you only knew how to look for it.

The two young men were in the best humor; they greeted these sallies with a merriment of which, though it was courteous in form, Olive was by no means unable to define the spirit. They talked naturally more with Verena than with her mother; and, while they were so engaged, Mrs. Tarrant explained to her who they were, and how one of them, the smaller, who was not quite so spruce, had brought the other, his particular friend, to introduce him. This friend, Mr. Burrage, was from New York; he was very fashionable, he went out a great deal in Boston ("I have no

doubt you know some of the places," said Mrs. Tarrant); his father was very rich.

"Well, he knows plenty of that sort," Mrs. Tarrant went on, "but he felt unsatisfied; he didn't know any one like *us*. He told Mr. Gracie (that's the little one) that he felt as if he *must*; it seemed as if he couldn't hold out. So we told Mr. Gracie, of course, to bring him right round. Well, I hope he'll get something from us, I'm sure. He has been reported to be engaged to Miss Winkworth; I have no doubt you know who I mean. But Mr. Gracie says he hasn't looked at her more than twice. That's the way rumors fly round in that set, I presume. Well, I am glad we are not in it, wherever we are! Mr. Gracie is very different; he is intensely plain, but I believe he is very learned. You don't think him plain? oh, you don't know? Well, I suppose you don't care, you must see so many. But I must say, when a young man looks like that, I call him painfully plain. I heard Doctor Tarrant make the remark the last time he was here. I don't say but what the plainest are the best. Well, I had no idea we were going to have a party when I asked you. I wonder whether Verena hadn't better hand the cake, we generally find the students enjoy it so much?"

This office was ultimately delegated to Selah, who, after a considerable absence, reappeared with a dish of dainties, which he presented successively to each member of the company. Olive saw Verena lavish her smiles on Mr. Gracie and Mr. Burrage; the liveliest relation had established itself, and the latter gentleman in especial abounded in appreciative laughter. It might have been fancied, just from looking at the group, that Verena's vocation was to smile and talk with young men who bent towards her; might have been fancied, that is, by a person less sure of the contrary than Olive, who had reason to know that a "gifted being" is sent into the world for a very different purpose, and that making the time pass pleasantly for conceited young men is the last duty you are bound to think of if you happen to have a talent for embodying a cause. Olive tried to be glad that her friend had the richness of nature that makes a woman gracious without latent purposes; she reflected that Verena was not in the smallest degree a flirt, that she was only enchantingly and universally genial, that nature had given her a beautiful smile, which fell impartially on every one, man and woman, alike. Olive may have been right, but it shall be confided to the reader that in reality she never knew, by any sense of her own, whether Verena were a flirt or not. This young lady could not possibly have told her (even if she herself knew, which she didn't), and Olive,

destitute of the quality, had no means of taking the measure in another of the subtle feminine desire to please. She could see the difference between Mr. Gracie and Mr. Burrage; her being bored by Mrs. Tarrant's attempting to point it out is perhaps a proof of that. It was a curious incident of her zeal for the regeneration of her sex that manly things were, perhaps, on the whole, what she understood best. Mr. Burrage was rather a handsome youth, with a laughing, clever face, a certain sumptuousness of apparel, an air of belonging to the *jeunesse dorée*,—a precocious, good-natured man of the world, curious of new sensations, and containing, perhaps, the making of a *dilettante*. Being, doubtless, a little ambitious, and liking to flatter himself that he appreciated worth in lowly forms, he had associated himself with the ruder but at the same time acuter personality of a genuine son of New England, who had a harder head than his own and a humor in reality more cynical, and who, having earlier knowledge of the Tarrants, had undertaken to show him something indigenous and curious, possibly even fascinating. Mr. Gracie was short, with a big head; he wore eye-glasses, looked unkempt, almost rustic, and said good things with his ugly mouth. Verena had replies for a good many of them, and a pretty color came into her face as she talked. Olive could see that she produced herself quite as well as one of these gentlemen had foretold the other that she would. Miss Chancellor knew what had passed between them as well as if she had heard it; Mr. Gracie had promised that he would lead her on, that she should justify his description and prove the raciest of her class. They would laugh about her as they went away, lighting their cigars, and for many days afterwards their discourse would be enlivened with quotations from the "woman's rights girl."

It was amazing how many ways men had of being antipathetic; these two were very different from Basil Ransom, and different from each other, and yet the manner of each conveyed an insult to one's womanhood. The worst of the case was that Verena would be sure not to perceive this outrage— not to dislike them in consequence. There were so many things that she hadn't yet learned to dislike, in spite of her friend's earnest efforts to teach her. She had the idea vividly (that was the marvel) of the cruelty of man, of his immemorial injustice; but it remained abstract, platonic; she didn't detest him in consequence. What was the use of her having that sharp, inspired vision of the history of the sex (it was, as she had said herself, exactly like Joan of Arc's absolutely supernatural apprehension of the state of France) if

she wasn't going to carry it out, if she was going to behave as the ordinary pusillanimous, conventional young lady? It was all very well for her to have said that first day that she would renounce: did she look, at such a moment as this, like a young woman who had renounced? Suppose this glittering, laughing Burrage youth, with his chains and rings and shining shoes, should fall in love with her and try to bribe her, with his great possessions, to practice renunciation of another kind—to give up her holy work and to go with him to New York, there to live as his wife, partly bullied, partly pampered, in the accustomed Burrage manner? There was as little comfort for Olive as there had been on the whole alarm in the recollection of that off-hand speech of Verena's about her preference for "free unions." This had been mere maiden flippancy; she had not known the meaning of what she said. Though she had grown up among people who took for granted all sorts of queer laxities, she had kept the consummate innocence of the American girl, that innocence which was the greatest of all, for it had survived the abolition of the walls and locks elsewhere so jealously maintained; and of the various remarks that had dropped from Verena expressing this quality, that startling observation certainly expressed it most. It implied, at any rate, that unions of some kind or other had her approval, and did not exclude the dangers that might arise from encounters with young men in search of sensations.

XVI.

MR. PARDON, as Olive observed, was a little out of this combination; but he was not a person to allow himself to droop. He came and seated himself by Miss Chancellor and broached a literary subject; he asked her if she were following any of the current "serials" in the magazines. On her telling him that she never followed anything of that sort, he undertook a defense of the serial system, which she presently reminded him that she had not attacked. He was not discouraged by this retort, but glided gracefully off to the question of Mount Desert; conversation on some subject or other being evidently a necessity of his nature. He talked very quickly and softly, with words, and even sentences, imperfectly formed; there was a certain amiable flatness in his tone, and he abounded in exclamations—"Goodness gracious!" and "Mercy on us!"—not much in use among the sex whose profanity is apt to be coarse. He had small, fair features, remarkably neat, and pretty eyes, and a mustache that he caressed, and an air of juvenility much at variance with his grizzled

locks, and the free familiar reference in which he was apt to indulge to his career as a journalist. His friends knew that, in spite of his delicacy and his prattle, he was what they called a live man; his appearance was perfectly reconcilable with a large degree of literary enterprise. It should be explained that for the most part they attached to this idea the same meaning as Selah Tarrant—the frequentation of the newspapers, the cultivation of the great arts of publicity. For this ingenuous son of his age, all distinction between the person and the artist had ceased to exist; the writer was personal, the person food for newsboys, and everything and every one were every one's business. All things, with him, referred themselves to print, and print meant simply infinite reporting, a promptitude of announcement, abusive when necessary, or even when not about his fellow-citizens. He poured contumely on their private life, on their personal appearance, with the best conscience in the world. His faith, again, was the faith of Selah Tarrant—that being in the newspapers is a condition of bliss, and that it would be fastidious to question the terms of the privilege. He was an *enfant de la balle*, as the French say. He had begun his career, at the age of fourteen, by going the rounds of the hotels, to cull flowers from the big, greasy registers which lie on the marble counters; and he might flatter himself that he had contributed in his measure, and on behalf of a vigilant public opinion, the pride of a Democratic State, to the great end of preventing the American citizen from attempting clandestine journeys. Since then he had ascended other steps of the same ladder; he was the most brilliant young interviewer on the Boston press. He was particularly successful in drawing out the ladies; he had condensed into shorthand many of the most celebrated women of his time,—some of these daughters of fame were very voluminous,—and he was supposed to have a remarkably insinuating way of waiting upon *prime donne* and actresses the morning after their arrival, or sometimes the very evening, while their luggage was being brought up. He was only twenty-eight years old, and, with his hoary head, was a thoroughly modern young man; he had no idea of not taking advantage of all the modern conveniences. He regarded the mission of mankind upon earth as a perpetual evolution of telegrams; everything to him was very much the same, he had no sense of proportion or quality; but the newest thing was what came nearest exciting in his mind the sentiment of respect. He was an object of extreme admiration to Selah Tarrant, who believed that he had mastered all the secrets

of success, and who, when Mrs. Tarrant remarked (as she had done more than once) that it looked as if Mr. Pardon was really coming after Verena, declared that if he was, he was one of the few young men he should want to see in that connection, one of the few he should be willing to allow to handle her. It was Tarrant's conviction that if Matthias Pardon should seek Verena in marriage, it would be with a view to producing her in public; and the advantage for the girl of having a husband who was at the same time reporter, interviewer, manager, agent, who had the command of the principal "dailies," would write her up and work her, as it were, scientifically—the attraction of all this was too obvious to be insisted on. Matthias had a mean opinion of Tarrant, thought him quite second-rate, a votary of played-out causes. It was his impression that he himself was in love with Verena, but his passion was not a jealous one, and included a remarkable disposition to share the object of his affection with the American people.

He talked some time to Olive about Mount Desert, told her that in his letters he had described the company at the different hotels. He remarked, however, that a correspondent suffered a good deal to-day from the competition of the "lady writers"; the sort of article they produced was sometimes more acceptable to the papers. He supposed she would be glad to hear that—he knew she was so interested in woman's having a free field. They certainly made lovely correspondents; they picked up something bright before you could turn round; there wasn't much you could keep away from them; you had to be lively if you wanted to get there first. Of course, they were naturally more chatty, and that was the style of literature that seemed to take most to-day; only they didn't write much but what ladies would want to read. Of course, he knew there were millions of lady readers, but he intimated that *he* didn't address himself exclusively to the gynecæum; he tried to put in something that would interest all grades. If you read a lady's letter you knew pretty well in advance what you would find. Now, what he tried for was that you shouldn't have the least idea; he always tried to have something that would make you jump. Mr. Pardon was not conceited more, at least, than is proper when youth and success go hand in hand, and it was natural he should not know in what spirit Miss Chancellor listened to him. Being aware that she was a woman of culture, his desire was simply to supply her with the pabulum that she would expect. She thought him very inferior; she had heard he was intensely bright, but there was probably some mistake; there couldn't

be any danger for Verena from a mind that took merely a gossip's view of great tendencies. Besides, he wasn't half educated, and it was her belief, or at least her hope, that an educative process was now going on for Verena (under her own direction) which would enable her to make such a discovery for herself. Olive had a standing quarrel with the levity, the good-nature of the judgments of the day; many of them seemed to her weak to imbecility, losing sight of all measures and standards, lavishing superlatives, delighted to be fooled. The age seemed to her relaxed and demoralized, and I believe she looked to the influx of the great feminine element to make it feel and speak more sharply.

"Well, it's a privilege to hear you two talk together," Mrs. Tarrant said to her; "it's what I call real conversation. It isn't often we have anything so fresh; it makes me feel as if I wanted to join in. I scarcely know whom to listen to most; Verena seems to be having such a time with those gentlemen. First I catch one thing and then another; it seems as if I couldn't take it all in. Perhaps I ought to pay more attention to Mr. Burrage; I don't want him to think we are not so cordial as they are in New York."

She decided to draw nearer to the trio on the other side of the room, for she had perceived (as she devoutly hoped Miss Chancellor had not) that Verena was endeavoring to persuade either of her companions to go and talk to her dear friend, and that these unscrupulous young men, after a glance over their shoulder, appeared to plead for remission, to intimate that this was not what they had come round for. Selah wandered out of the room again with his collection of cakes, and Mr. Pardon began to talk to Olive about Verena, to say that he felt as if he couldn't say all he did feel with regard to the interest she had shown in her. Olive could not imagine why he was called upon to say or to feel anything, and she gave him short answers; while the poor young man, unconscious of his doom, remarked that he hoped she wasn't going to exercise any influence that would prevent Miss Tarrant from taking the rank that belonged to her. He thought there was too much hanging back; he wanted to see her in a front seat; he wanted to see her name in the biggest kind of bills and her portrait in the windows of the stores. She had genius, there was no doubt of that, and she would take a new line altogether. She had charm, and there was a great demand for that nowadays in connection with new ideas. There were so many that seemed to have fallen dead for want of it. She ought to be carried straight ahead; she ought to walk right up to the top.

There was a want of bold action; he didn't see what they were waiting for. He didn't suppose they were waiting till she was fifty years old; there were old ones enough in the field. He knew that Miss Chancellor appreciated the advantage of her girlhood, because Miss Verena had told him so. Her father was dreadfully slack, and the winter was ebbing away. Mr. Pardon went so far as to say that if Dr. Tarrant didn't see his way to do something, he should feel as if he should want to take hold himself. He expressed a hope at the same time that Olive had not any views that would lead her to bring her influence to bear to make Miss Verena hold back; also that she wouldn't consider that he pressed in too much. He knew that was a charge that people brought against newspaper-men—that they were rather apt to cross the line. He only worried because he thought those who were no doubt nearer to Miss Verena than he could hope to be were not sufficiently alive. He knew that she had appeared in two or three parlors since that evening at Miss Birdseye's, and he had heard of the delightful occasion at Miss Chancellor's own house, where so many of the first families had been invited to meet her. (This was an allusion to a small luncheon-party that Olive had given, when Verena discoursed to a dozen matrons and spinsters, selected by her hostess with infinite consideration and many spiritual scruples; a report of the affair, presumably from the hand of the young Matthias, who naturally had not been present, appeared with extraordinary promptness in an evening paper.) That was very well so far as it went, but he wanted something on another scale, something so big that people would have to go round if they wanted to get past. Then, lowering his voice a little, he mentioned what it was: a lecture in the Music Hall, at fifty cents a ticket, without her father, right there on her own basis. He lowered his voice still more and revealed to Miss Chancellor his innermost thought, having first assured himself that Selah was still absent and that Mrs. Tarrant was inquiring of Mr. Burrage whether he visited much on the new land. The truth was, Miss Verena wanted to "shed" her father altogether; she didn't want him pawing round her that way before she began; it didn't add in the least to the attraction. Mr. Pardon expressed the conviction that Miss Chancellor agreed with him in this, and it required a great effort of mind on Olive's part, so small was her desire to act in concert with Mr. Pardon, to admit to herself that she did. She asked him, with a certain lofty coldness,—he didn't make her shy, now, a bit,—whether he took a great interest in the improvement of the position of women.

The question appeared to strike the young man as abrupt and irrelevant, to come down on him from a height with which he was not accustomed to hold intercourse. He was used to quick operations, however, and he had only a moment of bright blankness before replying:

"Oh, there is nothing I wouldn't do for the ladies; just give me a chance and you'll see."

Olive was silent a moment. "What I mean is—is your sympathy a sympathy with our sex, or a particular interest in Miss Tarrant?"

"Well, sympathy is just sympathy—that's all I can say. It takes in Miss Verena and it takes in all others—except the lady correspondents," the young man added, with a jocosity which, as he perceived even at the moment, was lost on Verena's friend. He was not more successful when he went on: "It takes in even you, Miss Chancellor!"

Olive rose to her feet, hesitating; she wanted to go away, and yet she couldn't bear to leave Verena to be exploited, as she felt that she would be after her departure, that indeed she had already been, by those offensive young men. She had a strange sense, too, that her friend had neglected her for the last half hour, had not been occupied with her, had placed a barrier between them—a barrier of broad male backs, of laughter that verged upon coarseness, of glancing smiles directed across the room, directed to Olive, which seemed rather to disconnect her with what was going forward on that side than to invite her to take part in it. If Verena recognized that Miss Chancellor was not in report, as her father said, when jocose young men ruled the scene, the discovery implied no great penetration; but the poor girl might have reflected further that to see it taken for granted that she was unadapted for such company could scarcely be more agreeable to Olive than to be dragged into it. This young lady's worst apprehensions were now justified by Mrs. Tarrant's crying to her that she must not go, as Mr. Burrage and Mr. Gracie were trying to persuade Verena to give them a little specimen of inspirational speaking, and she was sure her daughter would comply in a moment if Miss Chancellor would just tell her to compose herself. They had got to own up to it, Miss Chancellor could do more with her than any one else; but Mr. Gracie and Mr. Burrage had excited her so that she was afraid it would be rather an unsuccessful effort. The whole group had got up, and Verena came to Olive with her hands outstretched and no signs of a bad conscience in her bright face.

"I know you like me to speak so much—I'll try to say something if you want me to. But I'm afraid there are not enough people; I can't do much with a small audience."

"I wish we had brought some of our friends

—they would have been delighted to come if we had given them a chance," said Mr. Burrage. "There is an immense desire throughout the University to hear you, and there is no such sympathetic audience as an audience of Harvard men. Gracie and I are only two, but Gracie is a host in himself, and I am sure he will say as much of me." The young man spoke these words freely and lightly, smiling at Verena, and even a little at Olive, with the air of one to whom a mastery of clever "chaff" was commonly attributed.

"Mr. Burrage listens even better than he talks," his companion declared. "We have the habit of attention at lectures, you know. To be lectured by you would be an advantage indeed. We are sunk in ignorance and prejudice."

"Ah, my prejudices," Burrage went on; "if you could see them—I assure you they are something monstrous!"

"Give them a regular ducking and make them gasp," Matthias Pardon cried. "If you want an opportunity to act on Harvard College, now's your chance. These gentlemen will carry the news; it will be the narrow end of the wedge."

"Not so narrow, sir," Mr. Burrage rejoined, indicating his companion, who made up in thickness what he lacked in another dimension.

"I can't tell what you like," Verena said, still looking into Olive's eyes.

"I'm sure Miss Chancellor likes everything here," Mrs. Tarrant remarked, with a noble confidence.

Selah had reappeared by this time; his lofty, contemplative person was framed by the doorway. "Want to try a little inspiration?" he inquired, looking round on the circle with an encouraging inflection.

"I'll do it alone, if you prefer," Verena said soothingly to her friend. "It might be a good chance to try without father."

"You don't mean to say you ain't going to be supported?" Mrs. Tarrant exclaimed, with dismay.

"Ah, I beseech you, give us the whole programme—don't omit any leading feature!" Mr. Burrage was heard to plead.

"My only interest is to draw her out," said Selah, defending his integrity. "I will drop right out if I don't seem to vitalize. I have no desire to draw attention to my own poor gifts." This declaration appeared to be addressed to Miss Chancellor.

"Well, there will be more inspiration if you don't touch her," Matthias Pardon said to him. "It will seem to come right down from—well, wherever it does come from."

"Yes, we don't pretend to say that," Mrs. Tarrant murmured.

This little discussion had brought the blood

to Olive's face; she felt that every one present was looking at her — Verena most of all — and that here was a chance to take a more complete possession of the girl. Such chances were agitating; moreover, she didn't like, on any occasion, to be so prominent. But everything that had been said was benighted and vulgar; the place seemed thick with the very atmosphere out of which she wished to lift Verena. They were treating her as a show, as a social resource, and the two young men from the College were laughing at her shamelessly. She was not meant for that, and Olive would save her. Verena was so simple, she couldn't see herself; she was the only pure spirit in the odious group.

"I want you to address audiences that are worth addressing — to convince people who are serious and sincere." Olive herself, as she spoke, heard the great shake in her voice. "Your mission is not to exhibit yourself as a pastime for individuals, but to touch the heart of communities, of nations."

"Dear madam, I'm sure Miss Tarrant will touch my heart!" Mr. Burrage objected, gallantly.

"Well, I don't know but she judges you young men fairly," said Mrs. Tarrant, with a sigh.

Verena, diverted a moment from her communion with her friend, considered Mr. Burrage, with a smile. "I don't believe you have got any heart, and I shouldn't care much if you had!"

"You have no idea how much the way you say that increases my desire to hear you speak."

"Do as you please, my dear," said Olive, almost inaudibly. "My carriage must be there — I must leave you, in any case."

"I can see you don't want it," said Verena, wondering. "You would stay if you liked it, wouldn't you?"

"I don't know what I should do. Come out with me!" Olive spoke almost with fierceness.

"Well, you'll send them away no better than they came," said Matthias Pardon.

"I guess you had better come round some other night," Selah suggested pacifically, but with a significance which fell upon Olive's ear.

Mr. Gracie seemed inclined to make the sturdiest protest. "Look here, Miss Tarrant; do you want to save Harvard College, or do you not?" he demanded, with a humorous frown.

"I didn't know *you* were Harvard College!" Verena returned as humorously.

"I am afraid you are rather disappointed in your evening if you expected to obtain some insight into our ideas," said Mrs. Tarrant, with an air of impotent sympathy, to Mr. Gracie.

"Well, good-night, Miss Chancellor," she went on; "I hope you've got a warm wrap.

I suppose you'll think we go a good deal by what you say in this house. Well, most people don't object to that. There's a little hole right there in the porch; it seems as if Doctor Tarrant couldn't remember to go for the man to fix it. I am afraid you'll think we're too much taken up with all these new hopes. Well, we *have* enjoyed seeing you in our home; it quite raises my appetite for social intercourse. Did you come out on wheels? I can't stand a sleigh myself; it makes me sick."

This was her hostess's response to Miss Chancellor's very summary farewell, uttered as the three ladies proceeded together to the door of the house. Olive had got herself out of the little parlor with a sort of blind, defiant dash; she had taken no perceptible leave of the rest of the company. When she was calm she had very good manners, but when she was agitated she was guilty of lapses, every one of which came back to her magnified in the watches of the night. Sometimes they excited remorse, and sometimes triumph; in the latter case she felt that she could not have been so justly vindictive in cold blood. Tarrant wished to guide her down the steps, out of the little yard, to her carriage; he reminded her that they had had ashes sprinkled on the planks on purpose. But she begged him to let her alone, she almost pushed him back; she drew Verena out into the freshness of the night, closing the door of the house behind her. There was a splendid sky, all dark blue and silver — a sparkling wintry vault, where the stars were like a myriad points of ice. The air was silent and sharp, and the vague snow looked cruel. Olive knew now very definitely what the promise was that she wanted Verena to make; but it was too cold, she could keep her there bareheaded but an instant. Mrs. Tarrant, meanwhile, in the parlor, remarked that it seemed as if she couldn't trust Verena with her own parents; and Selah intimated that, with a proper invitation, his daughter would be very happy to address Harvard College at large. Mr. Burrage and Mr. Gracie said they would invite her on the spot, in the name of the University; and Matthias Pardon reflected (and asserted) with glee that this would be the newest thing yet. But he added that they would have a high time with Miss Chancellor first, and this was evidently the conviction of the company.

"I can see you are angry at something," Verena said to Olive, as the two stood there in the starlight. "I hope it isn't me. What have I done?"

"I am not angry — I am anxious. I am so afraid I shall lose you. Verena, don't fail me — don't fail me!" Olive spoke low, with a kind of passion.

"Fail you? How can I fail?"

"You can't, of course you can't. Your star is above you. But don't listen to *them*."

"To whom do you mean, Olive? To my parents?"

"Oh, no, not your parents," Miss Chancellor replied, with some sharpness. She paused a moment, and then she said: "I don't care for your parents. I have told you that before; but now that I have seen them,—as they wished, as you wished, and I didn't,—I don't care for them; I must repeat it, Verena. I should be dishonest if I let you think I did."

"Why, Olive Chancellor!" Verena murmured, as if she were trying, in spite of the sadness produced by this declaration, to do justice to her friend's impartiality.

"Yes, I am hard; perhaps I am cruel; but we must be hard if we wish to triumph. Don't listen to young men when they try to mock you and entangle you. They don't care for you; they don't care for *us*. They care only for their pleasure, for what they believe to be the right of the stronger. The stronger? I am not so sure!"

"Some of them care so much—are supposed to care too much—for us," Verena said, with a smile that looked dim in the darkness.

"Yes, if we will give up everything. I have asked you before—are you prepared to give up?"

"Do you mean, to give *you* up?"

"No, all our wretched sisters—all our hopes and purposes—all that we think sacred and worth living for!"

"Oh, they don't want that, Olive." Verena's smile became more distinct, and she added: "They don't want so much as that!"

"Well, then, go in and speak for them—and sing for them—and dance for them!"

"Olive, you are cruel!"

"Yes, I am. But promise me one thing, and I shall be—oh, so tender!"

"What a strange place for promises," said Verena, with a shiver, looking about her into the night.

"Yes, I am dreadful; I know it. But promise." And Olive drew the girl nearer to her, flinging over her with one hand the fold of a cloak that hung ample upon her own meager person, and holding her there with the other, while she looked at her, suppliant, but half hesitating. "Promise!" she repeated.

"Is it something terrible?"

"Never to listen to one of them, never to be bribed——"

At this moment the house-door was opened

again, and the light of the hall projected itself across the little piazza. Matthias Pardon stood in the aperture, and Tarrant and his wife, with the two other visitors, appeared to have come forward as well, to see what detained Verena.

"You seem to have started a kind of lecture out here," Mr. Pardon said. "You ladies had better look out, or you'll freeze together!"

Verena was reminded by her mother that she would catch her death, but she had already heard sharply, low as they were spoken, five last words from Olive, who now abruptly released her and passed swiftly over the path from the porch to her waiting carriage. Tarrant creaked along in pursuit to assist Miss Chancellor; the others drew Verena into the house. "Promise me not to marry!"—that was what echoed in her startled mind, and repeated itself there when Mr. Burrage returned to the charge and asked her if she wouldn't at least appoint some evening when they might listen to her. She knew that Olive's injunction ought not to have surprised her; she had already felt it in the air; she would have said at any time, if she had been asked, that she didn't suppose Miss Chancellor would want her to marry. But the idea, uttered as her friend had uttered it, had a new solemnity, and the effect of that quick, violent colloquy was to make her nervous and impatient, as if she had had a sudden glimpse of futurity. That was rather awful, even if it reserved the fate one would like.

When the two young men from the college pressed their petition, she asked, with a laugh that surprised them, whether they wished to "mock and entangle" her. They went away, assenting to Mrs. Tarrant's last remark: "I am afraid you'll feel that you don't quite understand us yet." Matthias Pardon remained; her father and mother, expressing their perfect confidence that he would excuse them, went to bed and left him sitting there. He staid a good while longer, nearly an hour, and said things that made Verena think that *he*, perhaps, would like to marry her. But while she listened to him, more abstractedly than her custom was, she remarked to herself that there could be no difficulty in promising Olive so far as he was concerned. He was very pleasant, and he knew an immense deal about everything, or, rather, about every one, and he would take her right into the midst of life. But she didn't wish to marry him all the same, and after he had gone she reflected that, once she came to think of it, she didn't want to marry any one. So it would be easy, after all, to make Olive that promise, and it would give her so much pleasure!

IMMORTALITY AND MODERN THOUGHT.

“Philosophy can bake no bread; but she can procure for us God, Freedom, Immortality.”—*Novalis*.

THE apparent futility that has attended all efforts to prove the immortality of man springs largely from the fact that a sense of immortality is an achievement in morals, and not an inference drawn by logical processes from the nature of things. It is not a demonstration to, or by, the reason, but a conviction gained through the spirit in the process of human life. All truth is an achievement. If you would have truth at its full value, go win it. If there is any truth whose value lies in a moral process, it must be sought by that process. Other avenues will prove hard and uncertain, and will stop short of the goal. Eternal wisdom seems to say: If you would find immortal life, seek it in human life; look neither into the heavens nor the earth, but into your own heart as it fulfills the duty of present existence. We are not mere minds for seeing and hearing truth, but beings set in a real world to achieve it. This is the secret of creation.

But if demonstration cannot yield a full sense of immortality, it does not follow that discussion and evidence are without value. Mind is auxiliary to spirit, and intellectual conviction may help moral belief. Doubts may be so heavy as to cease to be incentives, and become burdens. If there are any hints of immortality in the world or in the nature of man, we may welcome them. If there are denials of it that lose their force under inspection, we may clear our minds of them, for so we shall be freer to work out the only demonstration that will satisfy us.

Whatever is here said upon this subject has for its end, not demonstration, but a clearing and paving of the way to that demonstration which only can be realized in the process of moral life—that is, by personal experience in a spirit of duty. Or, I might say, my object is to make an open and hospitable place for it in the domain of thought.

This result would be nearly gained if it were understood how the idea of immortality came into the world. It cannot be linked with the early superstitions that sprang out of the childhood of the race—with fetichism and polytheism and image-worship; nor is it akin to the early thought that personified and dramatized the forces of nature, and so built up the great mythologies. These were the

first rude efforts of men to find a cause of things, and to connect it with themselves in ways of worship and propitiation. But the idea of immortality had no such genesis. It is a late comer into the world. Men worshiped and propitiated long before they attained to a clear conception of a future life. A forecasting shadow of it may have hung over the early races; a voice not fully articulate may have uttered some syllable of it, and gained at last expression in theories of metempsychosis and visions of Nirvana; but the doctrine of personal immortality belongs to a later age. It grew into the consciousness of the world with the growth of man,—slowly and late,—and marked in its advent the stage of human history when man began to recognize the dignity of his nature. It does not belong to the childhood of the race, nor can it be classed with the dreams and guesses in which ignorance sought refuge, nor with the superstitions through which men strove to ally themselves with nature and its powers. It belongs to them neither in its history nor in its nature. It came with the full consciousness of selfhood, and is the product of man's full and ripe thought; it is not only not allied with the early superstitions, but is the reversal of them. These, in their last analysis, confessed man's subjection to nature and its powers, and shaped themselves into forms of expiation and propitiation; they implied a low and feeble sense of his nature, and turned on his condition rather than on his nature—on a sense of the external world, and not on a perception of himself. But the assertion of immortality is a triumph over nature—a denial of its forces. Man marches to the head and says: “I too am to be considered; I also am a power; I may be under the gods, but I claim for myself their destiny; I am allied to nature, but I am its head, and will no longer confess myself to be its slave.” The fact of such an origin should not only separate it from the superstitions, where of late there has been a tendency to rank it, but secure for it a large and generous place in the world of speculative thought. We should hesitate before we contradict the convictions of any age that wear these double signs of development and resistance; nor should we treat lightly any lofty assertions that man may make of

himself, especially when those assertions link themselves with truths of well-being and evident duty.

The idea of immortality, thus achieved, naturally allies itself to religion, for a high conception of humanity is in itself religious. It built itself into the foundations of Christianity, and became also its atmosphere and its main postulate, its chief working factor and its ultimate hope. It is of one substance with Christianity — having the same conception of man; it runs along with every duty and doctrine, tallying at every point; it is the inspiration of the system; each names itself by one synonym — life.

Lodged thus in the conviction of the civilized world, the doctrine of immortality met with no serious resistance until it encountered modern science. It may have been weakened and obscured in the feature of personality by pantheistic conceptions that have prevailed from time to time, but pantheism never will prevail in a hurtful degree so long as it stands face to face with the freedom of our Western civilization. A slight infusion of it is wholesome, and necessary to correct an excessive doctrine of individualism, and to perfect the conception of God; and it has never gone far enough in its one line to impair the substantial validity of the doctrine of immortality. We may repeat without hesitation the verse of Emerson:

“Lost in God, in Godhead found.”

But when modern science — led by the principle of induction — transferred the thought of men from speculation to the physical world, and said, “Let us get at the facts; let us find out what our five senses reveal to us,” then immortality came under question simply because science could find no data for it. Science, as such, deals only with gases, fluids, and solids, with length, breadth, and thickness. In such a domain and amongst such phenomena no hint even of future existence can be found, and science could only say, “I find no report of it.” I do not refer more to the scientific class than to a scientific habit of thought that diffused itself throughout society, and became general by that wise and gracious contagion through which men are led to think together and move in battalions of thought, — for so only can the powers of darkness be driven out. We do not to-day regret that science held itself so rigidly to its field and its principles of induction — that it refused to leap chasms, and to let in guesses for the sake of morals. If it held to its path somewhat narrowly, it still went safely and firmly, and left no gaps in the mighty argument it is framing and will yet perfect. The severity and even bigotry that at-

tended its early stages, even with its occasional apparent damage to morals, were the best preparation for the thoroughness of its future work. If its leaders — moved by the conviction that all truth is linked together — at times forsook the field of the three dimensions, and spoke hastily of what might *not* lie beyond it, they are easily forgiven. When scientists and metaphysicians are found in each other's camps, they are not to be regarded as intruders, even if they have not learned the pass-word, but rather as visitors from another corps of the grand army. The sappers and miners may undervalue the flying artillery, and the cavalry may gird at the builders of earthworks; but as the campaign goes on each will come to recognize the value of the other, and perhaps, in some dark night of defeat when the forces of the common enemy are pressing them in the rear, they will welcome the skill of those who can throw a bridge across the fatal river in front to the unseen shore beyond.

But science has its phases and its progress. It held itself to its prescribed task of searching matter until it eluded its touch in the form of simple force — leaving it, so to speak, empty-handed. It had got a little deeper into the heavens with its lenses, and gone a little farther into matter with its retorts, but it had come no nearer the nature of things than it was at the outset. I may cleave a rock once and have no proper explanation of it, but I know as little when I have cleaved it a thousand times and fused it in flame. In these researches of science many useful facts have been passed over to man, so that easier answer is given to the question, What shall we eat and wherewithal shall we be clothed? But it came no nearer to an answer of those imperative questions which the human mind will ask until they are answered — Whence? How? For what? Not what shall I eat and how shall I be clothed, but what is the meaning of the world? explain me to myself; tell me what sort of a being I am — how I came to be here, and for what end. Such are the questions that men are forever repeating to themselves, and casting upon the wise for possible answer. When chemistry put the key of the physical universe into the hand of science, it was well enough to give up a century to the dazzling picture it revealed. A century of concentrated and universal gaze at the world out of whose dust we are made, and whose forces play in the throbs of our hearts, is not too much; but after having sat so long before the brilliant play of elemental flames, and seen ourselves reduced to simple gas and force under laws for whose strength adamant is no measure, we have become a little restive and take up again the old questions. Science

has not explained us to ourselves, nor compassed us in its retort, nor measured us in its law of continuity. You have shown me of what I am made, how put together, and linked my action to the invariable energy of the universe; now tell me what I am; explain to me consciousness, will, thought, desire, love, veneration. I confess myself to be all you say, but I know myself to be more; tell me what that more is. Science, in its early and wisely narrow sense, could not respond to these demands. But it has enlarged its vocation under two impulses. It has pushed its researches until it has reached verges beyond which it cannot go, yet sees forces and phenomena that it cannot explain nor even speak of without using the nomenclature of metaphysics. In a recent able work of science the word "spirit" is adopted into the scientific vocabulary. Again, physical science has yielded to the necessity of allying itself with other sciences—finding itself on their borders. Chemistry led up to biology, and this in turn to psychology, and so on to sociology and history and religion, and even to metaphysics, whose tools it had used with some disdain of their source. In short, it is found that there is no such thing as a specific science, but that all sciences are parts of one universal science. The broad studies of Darwin and Herbert Spencer have done much toward establishing this conviction, which has brought about what may be called a comity of the sciences, or an era of good feeling. The chemist sits down by the metaphysician and says, Tell me what you know about consciousness; and the theologian listens eagerly to the story of evolution. Unless we greatly misread the temper of recent science, it is ready to pass over certain phenomena it has discovered and questions it has raised to theology. And with more confidence we may assert that theology is parting with the conceit it had assumed as "queen of the sciences," and—clothing itself with its proper humility—is ready to accept a report from any who can aid it in its exalted studies.

This comity between the sciences, or rather necessary correlation, not only leads to good feeling and mutual respect, but insures a recognition of each other's conclusions. Whatever is true in one must be true in all. Whatever is necessary to the perfection of one cannot be ruled out of another. That which is true in man's spiritual life must be true in his social life; and whatever is true in social life must not contradict anything in his physical life. We might reverse this, and say that no true physiologist will define the physical man so as to exclude the social man; nor will he so define the social and political man as

to shut out the spiritual man; nor will he so define the common humanity as to exclude personality. He will leave a margin for other sciences whose claims are as valid as those of his own. If, for example, immortality is a necessary coördinate of man's moral nature,—an evident part of its content,—the chemist and physiologist will not set it aside because they find no report of it in their fields. If it is a part of spiritual and moral science, it cannot be rejected because it is not found in physical science. So much, at least, has been gained by the new comity in the sciences,—that opinions are respected, and questions that belong to other departments are relegated to them in a scientific spirit.

But this negative attitude of natural science toward immortality does not by any means describe its relation to the great doctrine. The very breadth of its studies has made it humble and tolerant of hypothesis in other fields. It is parting with a narrow and confining positivism, and is keenly alive to the analogies and sweep of the great truths it has discovered—truths which, as science, it cannot handle. More than this: while it has taught us to distrust immortality, because it could show us no appearance of it, it has provided us with a broader principle that undoes its work,—namely, the principle of reversing appearances. The whole work of natural science might be described under this phrase; it has laid hold of the physical universe and shown that the reality is unlike that which first appears. It has thus bred a fine, wholesome skepticism which is the basis of true knowledge and of progress. Once men said, This is as it appears; to-day they say, The reality is not according to the first appearance, but is probably the reverse. The sky seems solid; the sun seems to move; the earth seems to be at rest, and to be flat. Science has reversed these appearances and beliefs. But the Copernican revolution was simply the beginning of an endless process, and science has done little since but exchange Ptolemaic appearance for Copernican reality, and the process is commonly marked by reversal. Matter seems to be solid and at rest; it is shown to be the contrary. The energy of an active agent seems to end with disorganization, but it really passes into another form. So it is throughout. The appearance in nature is nearly always, not false, but illusive, and our first interpretations of natural phenomena usually are the reverse of the reality. Of course this must be so; it is the wisdom of creation—the secret of the world; else knowledge would be immediate and without process, and man a mere eye for seeing. Nature puts the reality at a distance

and hides it behind a veil, and it is the office of mind in its relation to matter to penetrate the distance and get behind the veil; and to make the process valuable in the highest degree, this feature of contrariety is put into nature. What greater achievement has mind wrought than to turn the solid heavens into empty space, and fix the moving sun in the heavens, and round the flat world into a sphere? Truth is always an achievement, and it becomes such by reversing appearance—turning rest into motion, solids into fluids, centers into orbits, breaking up inclosing firmaments into infinite spaces. The human mind tends to rest in the first appearance; science—more than any other teacher—tells it that it may not. But it is this premature confidence in first appearance that induces skepticism of immortality. No one wishes to doubt it; our inmost soul pleads for it; our higher nature disdains a denial of it as ignoble. No poet, no lofty thinker suffers the eclipse of it to fall upon his page, but many a poet and thinker is—nay, are we not all?—tormented by a horrible uncertainty cast by the appearance of dissolving nature, and reënforced by the blank silence of science? The heavens are empty; the earth is resolving back to fire-mist; what theater is there for living man? Thought and emotion are made one with the force of the universe, shut up for a while in a fleeting organism. What is there besides it? Brought together out of nature, sinking back into nature,—has man any other history? What, also, is so absolute in its appearance as death? How silent are the generations behind us. How fast locked is the door of the grave. How speechless the speaking lips; how sightless the seeing eye; how still the moving form. Touch the cold hand; cry to the ear; crown the brow with weed or with flower—they are alike to it. It is an awful appearance; is it absolute—final? Say what we will, here is the source of the dread misgiving that haunts the mind of the age. Science has helped to create it, but it also has discovered its antidote. The minister of faith stands by this horrible appearance and says: “Not here, but risen.” He might well be joined by the priest of science with words like these: “My vocation is to wrest truth out of illusive appearances. I do not find what you claim; I find instead an appearance of the contrary; but on that very principle you may be right; the truth is generally the reverse of the appearance.” I do not advance this as an argument, but to create an atmosphere for argument. For we still think of death under Ptolemaic illusion; we have not yet learned the secret of the world, the order of truth—inverting the landscape

in the lens of the eye that the mind may get a true picture. To break away from the appearance of death—this is the imperative need; and whatever science may say in detail, its larger word and also its method justify us in the effort. Hence the need of the imaginative eye and of noble thought. Men of lofty imagination are seldom deceived by death, surmounting more easily the illusions of sense. Victor Hugo probably knows far less of science than do Büchner and Vogt, but he knows a thousand things they have not dreamed of, which invest their science like an atmosphere, and turn its rays in directions unknown to them. Goethe was a man of science, but he was also a poet, and did not go amiss on this subject.

I pass now to more positive ground—speaking still of science, for the antagonist of immortality is not science, but a contagion or filtration from science that permeates common thought.

Assuming evolution,—it matters not now what form of it, except the extremest which is not worthy of the name of science,—I remark that the process of development creates a skepticism at every stage of its progress so great that one has no occasion even to hesitate when the claim of immortality is made. Doubt has so often broken down that it is no longer wise to doubt. Improbability has so often given way to certainty and fact that it becomes almost a basis of expectation. One who traces evolution step by step, and sees one wonder follow another, should be prepared at the end to say, “I will wonder no longer at anything; I have turned too many sharp corners to be surprised at another.” Take your stand at any stage of evolution, and the next step is no stranger, no more to be anticipated, it is no broader leap than that from death to future life. Plant yourself at any given stage, with the knowledge then given off by phenomena, and report what you can see ahead. Go back to the time when the swirl of fire-mist was drawing into spheres and predicate future life;—the raging elements laugh you to scorn. Life from fire!—no dream of metempsychosis is so wild as that. You detect a law of progress; but to what are you now listening—to the elements or to mind? The elements can tell you nothing, but mind detects a law in the elements that affords a ground for expectation. The appearance silences you; the hint leads you on, and you become perhaps a very credulous and unscientific believer, confronted by entirely scientific facts to the contrary. If one is skeptical of the reality of the spiritual world on scientific grounds, or on the score of simple improbability, the best practi-

cal advice that can be given him is—to transport himself back into early geologic or chemic ages, and then attempt to use a positive philosophy to find out what shall or shall not be, on the ground of appearance. But I yield too much; the development of life from nebulous fire is a fact so immensely improbable, that mind cannot be conceived of as accepting it. Take later contrasts,—the headless mollusk glued to rock in a world of water, and an antlered deer in a world of verdure; or the huge monsters of the prime, and thinking man. Here are gulfs across which contemporaneous imagination cannot leap, but looking back we see that they have been crossed, and by a process of orderly development. We see the process and the energy by which it was wrought, but of the source of the process or of the energy we know nothing until we postulate it. But, shut off as we are at every stage of the process from the next by its improbability, and only able to accept it as we look back upon it, and even then with an essential unknown factor at work,—what right have we, with so confounding a history behind us, to cut it short and close it up with a doubt on the ground of improbability? Are we not rather taught to expect other wonders? I am quite ready to hear the answer of science, that the process under which immortality is claimed is unlike that of development,—that it cannot be gained under the same laws nor according to the same method. Evolution does not spare the individual nor the class. Life, as we see it, is a functional play of something—we know not what—set in favorable relations to an environment, and ending when the relations become unfavorable. When environment ceases to play well into the organization, and the organization fails to adjust itself to the changing environment, life ends; and the life of that organization cannot go on because it was simply a thing of relations which have been destroyed. This seems logical, and would be final if all the factors and all their processes were embraced and understood in the argument. This, we claim, is not the case, but, on the contrary, claim that there are factors and elements not recognized, which may involve other processes and another history. Science responds: This is all we find; we cannot go outside of the facts and the processes. Life is a functional play of something—we know not what; but, not knowing it, we have no right to deal with it, and so set it aside.

This is the crucial point upon which immortality as a speculative question turns. Shall it be silenced in its claim on such evidence? Is there no higher tribunal, of wider

powers and profounder wisdom, before which it may plead its eternal cause? We turn to that which is the substantial method of all ages—the necessary habit of the human mind—to philosophy.

We now have the grave question whether we are to be limited in our thought and belief by the *dicta* of natural science. In accounting for all things, are we shut up to matter and force and their phenomena? Science as positivism says: Yes, because matter and force are all we know, or can know. Another school says boldly: Matter and force account for all things—thought, and will, and consciousness; a position denied by still another school, which admits the existence of something else, but claims that it is unknowable. If any one of these positions is admitted, the question we are considering is an idle one, so far as demonstration is concerned; it is even decided in the negative. The antagonist to these positions is metaphysics. Faith may surmount, but it cannot confute them without the aid of philosophy. And how goes the battle? I think an impartial judge of this friendly conflict, in which a man is often arrayed against himself, would say that metaphysics not only holds, but is master of the field. At least, science is speechless before several fundamental questions that itself has put into the mouth of philosophy. Science begins with matter in a homogeneous state of diffusion,—that is, at rest and without action, either eternally so, or as the result of exhausted force. Now, whence comes force? Science has no answer except such as is couched under the phrase “an unknowable cause,” which is a contradiction of terms, since a cause with a visible result is so far forth known. Again, there are mathematical formulæ, or thought, in the stars, and in matter, as in crystallization. The law or thought of gravitation necessarily goes before its action. What is the origin of this law as it begins to act?—and why does it begin to act in matter at rest?—a double question to which science renders no answer except to the latter part, which it solves by polarization; but this is simply putting the tortoise under the elephant. Again, evolution, as interpreted by all the better schools of science, admits teleology or an end in view; and the end is humanity. But the teleological end was present when the nebulous matter first began to move. In what did this purpose then reside?—in the nebulous matter, or in some mind outside of matter and capable of the conception of man?

Again, how do you pass from functional action of the brain to consciousness? Science does not undertake to answer, but confesses that the chasm is impassable from its side.

What, then, shall we do with the fact and phenomena of consciousness? Again, what right has science, knowing nothing of the origin of force, and therefore not understanding its full nature,—what right has it to limit its action and its potentiality to the functional play of an organism? As science it can, of course, go no farther; but, with an unknown factor, on what ground can it make a negative and final assertion as to the capability of that factor? Again, you test and measure matter by mind; but if matter is inclusive of mind, how can matter be tested and measured by it? It is one clod or crystal analyzing another; it is getting into the scales along with the thing you would weigh.

These are specimens of the questions that philosophy puts to science—or rather, as I prefer to phrase it, that one's mind puts to one's five senses. The observing senses are silent before the thinking mind. But these questions are universal and imperative. No further word of denial or assertion can be spoken until they are answered. And as science does not answer them, philosophy undertakes to do so, and its answer is—Theism. The universe requires a creating mind; it rests on mind and power. Metaphysics holds the field, and on its triumphant banner is the name of God. Science might also be pressed into close quarters as to the nature of this thing that it calls *matter*, which it thinks it can see and feel; and how it sees and feels it, it does not know. When Sir William Thompson—led by a hint of Faraday's—advances the theory that all the properties of matter probably are attributes of motion, a surmise is awakened if matter be not a mere semblance or phantasm; and if force, or that which creates force, is not the only reality—a true substance upon which this play and flux of unstable matter takes place. Under this theory of advanced science, it is no longer spirit that seems vague, illusive, unreal, but matter—slipping away into modes of motion, dissolving into mere activity, and so shading off toward some great Reality that is full of life and energy—not matter, and therefore spirit. Science itself has led up to a point where matter, and not God, becomes the unknowable. A little further struggle through this tangle of matter, and we may stand on a "peak of Darien" in "wild surmise" before the ocean of the Spirit.

The final word which the philosophical man within us addresses to our scientific man is this: Stop when you come to what seems to you to be an end of man; and for this imperative reason, namely, you do not claim that you have compassed him; you find in him that which you cannot explain—some-

thing that lies back of energy and function, and is the cause or ground of the play of function. You admit consciousness; you admit that while thought depends upon tissue, it is not tissue nor the action of tissue, and therefore may have some other ground of action; you admit an impassable chasm between brain-action and consciousness. What right has science as science to leap that chasm with a negative in its hand? And why should science object to attempts to bridge the chasm from the other side? Physical science has left unexplained phenomena; may no other science take them up? Science has left an entity—a something that it has felt but could not grasp, just as it has felt but could not grasp the ether. May not the science that gave to physics the ether try its hand at this unexplained remainder? Let us have, then, no negative assertions; this is the bigotry of science. But a generous-minded science will pass over this mystery to psychology, or to metaphysics, or to theology. If it is a substance, it has laws. If it is force or a life, it has an environment and a correspondence. If it is mind and spirit, it has a mental and spiritual environment; and if the correspondence is perfect and the environment ample enough, this mind and spirit may have a commensurate history. This is logical, and also probable, even on the ground of science, for all its analogies indicate and sustain it. My conclusion is this: Until natural science can answer these questions put by other sciences, it has no right to assume the solution of the problem of immortality, because this question lies within the domain of the unanswered questions. Not to the Trojan belongs the wounded immortal Diomed, but to the Greek, who vindicates the claim of his heart by the strength of his weapons.

BUT has science no positive word to offer? The seeming antagonist of immortality during its earlier studies of evolution, it now seems, in its later studies, about to become an ally. It suddenly discovered that man was in the category of the brutes and of the whole previous order of development. It is now more than suspecting that, although in that order, he stands in a relation to it that forbids his being merged in it, and exempts him from a full action of its laws, and therefore presumably from its destinies. It has discovered that because man is the end of development he is not wholly in it—the product of a process, and for that very reason cut off from the process. What thing is there that is made by man, or by nature after a plan and for an end, that is not separated from the process when it is finished, set in entirely

different relations and put to different uses? When we build a wagon, we gather metal and wood, bring them together, forge, hew, fit, and paint till it is made; but we do not then break it into pieces, cast the iron into the forge and the timber into the forest; we trundle it out of the shop and put it to its uses which have little to do with the processes by which it was framed,—made under one set of laws but used under another. When a child is born, the first thing done is to sever the cord that binds it to its origin and through which it became what it is. And what is creation with its progressive and orderly development,—heat acting upon matter overshadowed by the Spirit; then a simple play of forces; at length a quickening into life, and then a taking on of higher and more complex forms, till at last the hour comes and man is born into the world,—what is creation but a divine incubation or gestation within the womb of eternity? The thought is startling, but I disclaim a rhetorical interpretation and offer it as a generalization of science. What then? The embryotic condition and processes and laws are left behind, and man walks forth under the heavens—the child of the stars and of the earth, born of their long travail, their perfect and only offspring. Now he has new conditions, new laws, new methods and ends of his own. Now we have the image of the creating God—the child of the begetting Spirit. It is to such conclusions that recent science is leading. Nowhere have they been indicated so clearly and ably as in the recent work of Professor Fiske, “The Destiny of Man.” It is indeed meager, though not weak, as a plea for immortality, not touching fields where the considerations are strongest, the moral nature and history of man; but it meets successfully and unanswerably the main point which, if not met, renders all after arguments vain, or leaves them in an empirical state. The march of Hannibal into Italy was a triumph of military genius, but the difficult part was a few miles on the summit of the St. Bernard pass. Mr. Fiske’s book conducts us over the Alps of the question. The imperative requirement is to take man out of the category of physical nature and the process of evolution as it has been going on, and put him into another category, and under laws that are the reverse of those heretofore acting in material and brute development. The author I have referred to does this through a broader generalization than his *confères* in science usually indulge in. Briefly stated, the thought is this: Man is the end or product that nature had in view during the whole process of evolution; when he is produced, the process ceases, and its laws either end at once

or gradually, or take on a form supplementary to other laws, or are actually reversed. Thus, the struggle for existence ceases, and a moral or humane law of preservation takes its place. The secret of history is the dethronement of the strong by the weak, or rather the introduction of a force by which the meek become the inheritors and rulers of the earth. Natural selection gives way to intelligent choice. Instinct ends, and thought determines action. The whole brute inheritance is being gradually thrown off; its methods constitute evil—the serpent whose head the seed of woman is bruising and shall finally crush. The imperative conclusion follows that man is not to be regarded as in the process, nor under the laws, nor even under the analogies of the order from which he has been evolved or created. The leaden suggestion of nature, as it destroyed the individual and the type, no longer has even scientific weight. The thing that has been is the very thing that shall not be; and Tennyson, with this fresh page of science before him, could now stretch out towards his great hope hands no longer lame, and gather something more than dust and chaff as he calls to the Lord of all; for it is the appearance and analogy of nature that crush our hope. But science itself bids us turn our back upon physical nature, or but look to it to find that we are no longer of it.

The importance of this generalization or revelation of science cannot be exaggerated. Canon Mozley, in his great sermon on Eternal Life, says substantially, “It does not matter how we came to be what we are; we are what we are,” and from that builds up his masterly argument for immortality. Still, it does matter whether we face the great question weighted by our previous history or freed from it. It is possible, indeed, to scale the heights of our hope burdened with the clay out of which we were made; but why bear it, when friendly science offers to take it off? Besides, man is a logical being, and he cannot be induced to leave unexplained phenomena behind him, nor to leap chasms in his thought; nor will he build the heavenly city upon reason while it is confused by its relations to physical nature. So freed, we have man as mind and spirit, evolved or created out of nature, but no longer correlated to its methods,—correlated instead to contrasting methods,—face to face with laws and forces hitherto unknown or but dimly shadowed, moving steadily in a direction opposite to that in which he was produced.

Receiving man thus at the hands of science, what shall we do with him but pass him over into the world to the verge of which science has brought him—the world of mind and spirit? From cosmic dust he has become

a true person. What now? The end of the demiurgic strife reached, its methods cease. Steps lead up to the apex of the pyramid. What remains? What, indeed, but flight, if man be found to have wings? Or does he stand for a moment on the summit, exulting in his emergence from nature, only to roll back into the dust at its base? There is a reason why the reptile should become a mammal: it is more life. Is there no like reason for man? Shall he not have more life? If not, then to be a reptile is better than to be a man, for it can be more than itself; and man, instead of being the head of nature, goes to its foot. The dream of pessimism becomes a reality, justifying the remark of Schopenhauer that consciousness is the mistake and malady of nature. If man becomes no more than he now is, the whole process of gain and advance by which he has become what he is turns on itself and reverses its order. The benevolent purpose, seen at every stage as it yields to the next, stops its action, dies out, and goes no farther. The ever-swelling bubble of existence, that has grown and distended till it reflects the light of heaven in all its glorious tints, bursts on the instant into nothingness.

The question is, whether such considerations are subjects for thought; whether they have in them an element of reason that justifies a conclusion; whether they are phenomena, and may be treated scientifically; whether they do not address us in a way as impressive as physical science could address us at any particular stage of evolution. Having thought up to this point and found always a path leading through the improbabilities of the future, shall we think no longer because we face other improbabilities? We cannot, indeed, think facts out of existence—the world is real; but natural science justifies us in regarding man as under the laws of the intellectual and moral world into which it has delivered him. It has shown us the chemical coming under the subjection of the dynamic, and the dynamic yielding to the organic, and the organic, with man in it and over it, working miracles of his own—a power over nature, under laws that are neither chemical nor dynamic nor organic, but creative in their essence and spiritual in their force. He is therefore to be measured, not by the orders behind him, but by that into which he has come.

Proceeding now under theistic conceptions, I am confident that our scientific self goes along with our reasoning self when I claim that the process of evolution at every step and in every moment rests on God, and draws its energy from God. The relation, doubtless, is organic, but no less are its proc-

esses conscious, voluntary, creative acts. Life was crowded into the process as fast as the plan admitted; it was life and more life till the process culminated in man—the end towards which it had been steadily pressing. We have in this process the surest possible ground of expectation that God will crown his continuous gift of life with immortal life. When, at last, he has produced a being who is the image of himself, who has full consciousness and the creative will, who can act in righteousness, who can adore and love and commune with his Creator, there is a reason—and if there is a reason there will be found a method—why the gift of immortal life should be conferred. God has at last secured in man the image of himself—an end and solution of the whole process. Will he not set man in permanent and perfect relations? Having elaborated his jewel till it reflects himself, does he gaze upon it for a briefer moment than he spent in producing it, and then cast it back into elemental chaos? Science itself forces upon us the imperious question, and to science also are we indebted for a hopeful answer—teaching us at last that we are not bound to think of man as under the conditions and laws that produced him,—the *end* of the creative process, and therefore not *of* it. Such is the logic of evolution, and we could not well do without it. But we must follow it to its conclusions. Receiving at its hands a Creating Mind working by a teleological process toward man as the final product, we are bound to think consistently of these factors; nor may we stop in our thought and leave them in confusion. If immortality seems a difficult problem, the denial or doubt of it casts upon us one more difficult. We have an intelligent Creator starting with such elements as cosmic dust, and proceeding in an orderly process that may be indicated under Darwin's five laws, or Wallace's more pronounced theism, or Argyll's or Naudin's theory of constant creative energy,—it matters not which be followed,—developing the solid globe; then orders of life that hardly escape matter; then other orders that simply eat and move and procreate; and so on to higher forms, but always aiming at man, for "the clod must think," the crystal must reason, and the fire must love,—all pressing steadily toward man, for whom the process has gone on and in whom it ends, because he—being what he is—turns on these very laws that produced him and reverses their action. The instincts have died out; for necessity there is freedom; for desire there is conscience; natural selection is lost in intelligence; the struggle for existence is checked and actually reversed

under the moral nature, so that the weak live and the strong perish unless they protect the weak. A being who puts a contrast on all the ravening creation behind him, and lifts his face toward the heavens in adoration, and throws the arms of his saving love around all living things, and so falls into sympathetic affinity with God himself and becomes a conscious creator of what is good and true and beautiful—such is man. What will God do with this being after spending countless eons in creating him? what will God do with his own image? is the piercing question put to reason. I speak of ideal man—the man that has been and shall be; of the meek who inherit the earth and rule over it in the sovereign power of love and goodness. How much of time, what field of existence and action, will God grant to this being? The pulses of his heart wear out in less than a hundred years. Ten years are required for intelligence to replace the loss of instinct, so that relatively his full life is briefer than that of the higher animals. A quarter of his years is required for physical and mental development; a half—perchance a little more—is left for work and achievement, and the rest for dying. And he dies saying: I am the product of eternity, and I can return into eternity; I have lived under the inspiration of eternal life, and I may claim it; I have loved my God, my child, my brother man, and I know that love is an eternal thing. It has so announced itself to me, and I pass into its perfect and eternal realization. Measure this being thus, and then ask reason, ask God himself, if the pitiful three score and seven is a reasonable existence. There is no proportion between the production of man and the length of his life; it is like spending a thousand years in building a pyrotechnic piece that burns against the sky for one moment and leaves the blackness of a night never again to be lighted. Such a destiny can be correlated to no possible conception of God nor of the world except that of pessimism—the philosophy of chaos—the logic that assumes order to prove disorder—that uses consciousness to show that it is a disease. But any rational conception of God forces us to the conclusion that he will hold on to the final product of his long creative struggle. If man were simply a value, a fruit of use, an actor of intelligence, a creator of good, he would be worth preserving; but if God loves man and man loves God, and so together they realize the ultimate and highest conception of being and destiny, it is impossible to believe that the knife of Omnipotence will cut the cords of that love and suffer man to fall back into elemental flames; for, if we do not live when we

die, we pass into the hands of oxygen. Perhaps it is our destiny—it must be under some theories; but it is not yet necessary under any accredited theory of science or philosophy to conceive of God as a Moloch burning his children in his fiery arms, nor as a Saturn devouring his own offspring.

I am well aware that just here a distinction is made that takes off the edge of these horrible conclusions,—namely, that humanity survives though the individual perishes. This theory, which is not recent, had its origin in that phase of nature which showed a constant disregard of the individual and a steady care for the type or class. It found its way from science into literature, where it took on the form of lofty sentiment and became almost a religion. It is a product of the too hasty theory that we may carry the analogies of nature over into the world of man, and lay them down squarely and without qualification as though they compassed him. Science no longer does this, but the blunder lives on in literature and the every-day thought of the world. But suppose it were true that the individual perishes and humanity survives, how much relief does it afford to thought? It simply lengthens the day that must end in horrible doom. For the question recurs, how long will humanity continue? For long, indeed, if man can preserve the illusion of immortality and the kindred illusions of love and duty and sacrifice that go with it, and can be kept apart from an altruism that defeats itself by cutting the nerve of personality. Humanity will stay long upon the earth if love and conscience are fed by their proper and only sustaining inspirations; but even then how long will the earth entertain that golden era when the individual shall peacefully live out his allotted years, and yield up the store of his life to the general fund of humanity, in the utter content of perfect negation? I might perhaps make a total sacrifice for an eternal good, but I will sit down with the pessimists sooner than sacrifice myself for a temporary good; the total cannot be correlated to the temporary. If such sacrifice is ever made, it is the insanity of self-estimate, or rather is the outcome of an unconscious sense of a continuous life. How long do I live on in humanity? Only till the crust of the earth becomes a little thicker, and days and nights grow longer, and the earth sucks the air into its “interlunar caves”—now a sister to the moon. Chaos does not lie behind this world, but ahead. The picture of the evolution of man through “dragons of the prime” is not so dreadful as that foreshadowed when the world shall have grown old, and environment no longer favors full life. Human-

ity may mount high, but it must go down and reverse the steps of its ascent. Its lofty altruism will die out under hard conditions; the struggle for existence will again resume its sway, and hungry hordes will fish in shallow seas, and roam in the blasted forests of a dying world, breathing a thin atmosphere under which man shrinks towards inevitable extinction. Science paints the picture, but reason disdains it as the probable outcome of humanity. The future of this world as the abode of humanity is a mystery, though not wholly an unlighted one; but under no possible conception can the world be regarded as the theater of the total history of the race.

A modification of this view is the theory that sets aside personality and asserts a return of the individual life into God. Mr. Emerson in his essay, the suggestive value of which is very great, says: "I confess that everything connected with our personality fails." It would be easy to quote Emerson against himself, but that were no gain. He wrote this sentence too early to have the advantage of recent science. In that play of nature on which he fixed his gaze years before Darwin, he saw indeed that "nature never spares the individual," but his prophetic soul did not reveal to him the things to be. The interpretation of science, as now given, tells us that when man is reached in the process of development nature does spare the individual, or, more properly, the person. It is the very thing nature has been aiming at all along, namely, to produce a person and then preserve him. The whole trend of the laws in social and intelligent humanity is toward securing a full personality, and a defense and perpetuity of it. Emerson apparently never caught sight of the fact that in humanity there is a reversal of those laws by which matter and brute-life led up to man. He looked at nature more closely than Plato dared, and was dazzled.

This altruism that assumes for itself a loftier morality in its willingness to part with personality and live on simply as influence and force, sweetening human life and deepening the blue of heaven,—a view that colors the pages of George Eliot and also some unfortunate pages of science,—is one of those theories that contains within itself its own refutation. It regards personality almost as an immorality: lose yourself in the general good; it is but selfish to claim existence for self. It may be, indeed, but not if personality has attained to the law of love and service. Personality may not only reverse the law of selfishness, but it is the only condition under which it can be wholly reversed. If I

can remain a person, I can love and serve,—I may be a perpetual generator of love and service; but if I cease to exist, I cease to create them, and leave a mere echo or trailing influence thinning out into an unmeaning universe. Such an altruism limits the use and force of character to the small opportunity of human life; it is so much and no more, however long it may continue to act; but the altruism of ideal and enduring personality continues to act forever, and possibly on an increasing scale. This altruism of benevolent annihilation cuts away the basis of its action. It pauperizes itself by one act of giving—breaks its bank in the generosity of its issue. It is one thing to see the difficulties in the way of immortality, but quite another thing to erect annihilation into morality; and it is simply a blunder in logic to claim for such morality a superiority over that of those who hope to live on, wearing the crown of personality that struggling nature has placed on their heads, and serving its Author for ever and ever. The simple desire to live is neither moral nor immoral, but the desire to live for service and love is the highest morality and the only true altruism.

I shall not follow the subject into those fields of human life and spiritual experience—it being a beaten path—where the assurances of immortality mount into clear vision, my aim having been to lessen the weight of the physical world as it hangs upon us in our upward flight. We cannot cut the bond that binds us to the world by pious assertion, nor cast it off by ecstatic struggles of the spirit, nor unbind it by any half-way processes of logic, nor by turning our back upon ascertained knowledge. We must have a clear path behind us if we would have a possible one before us.

There are three chief realities, no one of which can be left out in attempts to solve the problem of destiny: man, the world, and God. We must think of them in an orderly and consistent way. One reality cannot destroy nor lessen the force of another. If there has been apparent conflict in the past, it now seems to be drawing to a close; the world agrees with theism, and matter no longer denies spirit. If, at one time, matter threatened to possess the universe and include it under its laws, it has withdrawn its claim, and even finds itself driven to mind and to spirit as the larger factors of its own problems. Mind now has full liberty to think consistently of itself and of God, and, with such liberty, it finds itself driven to the conclusion of immortality by every consideration of its nature and by every fact of its condition,—its only refuge against hopeless mental confusion.

Not from consciousness only,—knowing ourselves to be what we are,—but out of the mystery of ourselves, may we draw this sublime hope; for we are correlated not only to the known, but to the unknown. The spirit transcends the visible, and by dream, by vision, by inextinguishable desire, by the un-

ceasing cry of the conscious creature for the Creator, by the aspiration after perfection, by the pressure of evil and by the weight of sorrow, penetrates the realms beyond, knowing there must be meaning and purpose and end for the mystery that it is.

T. T. Munger.

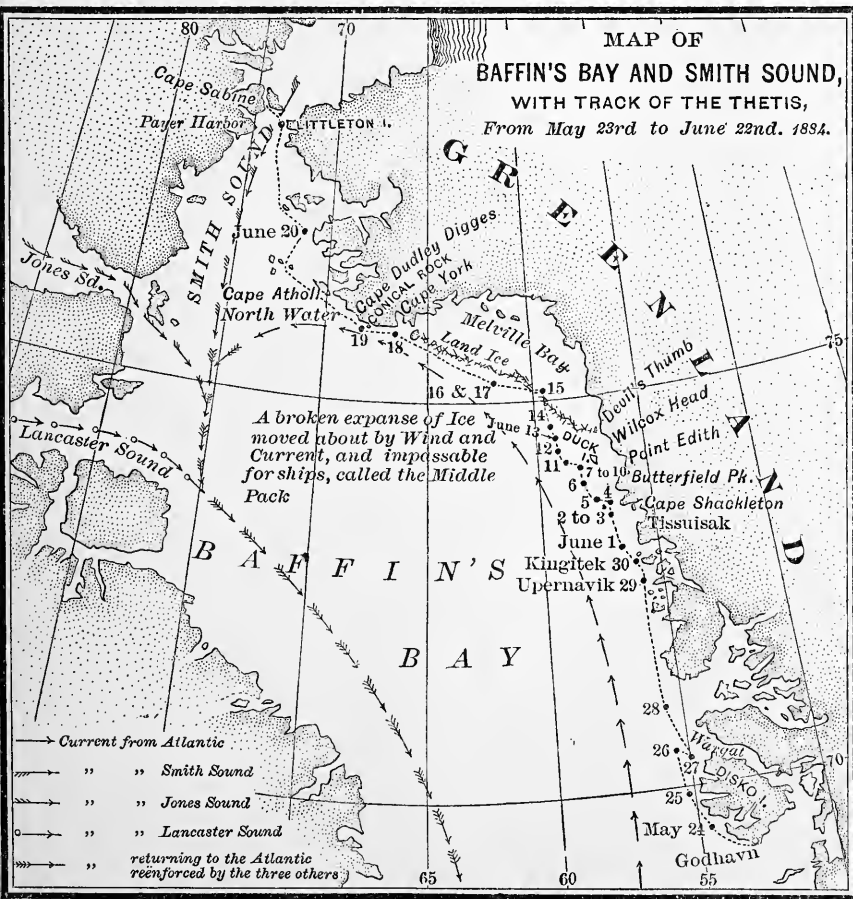

GREELY AT CAPE SABINE.

NOTES BY A MEMBER OF THE RELIEF EXPEDITION.

EARLY in the morning of June 18, 1884, the Greely Relief ships *Thetis* and *Bear*, in company with the whalers *Aurora* and *Wolf*, passed the last floe in Melville Bay and pushed into the "North Water" towards Cape York. From Godhavn to Hare Island, among the bergs off the Waigat, at Upernavik, through the island passages to Kingitek, in the pack, at the Duck Islands, slowly winding and twisting through the narrow leads, or racing at full speed through the broader channels, with many a shock and many a bruise, often repulsed by the ice, but always hopeful, we had struggled for twenty days against tremendous obstacles, and at last found ourselves within sight of the bold

headland called Cape York, which is only two hundred and fifty miles from Upernavik. A study of the diagram on which our course is marked will explain why it required so many days to traverse these few miles. In that part of Baffin's Bay which lies in the immediate vicinity of Cape York, the opposing forces of three strong currents meet, one setting to the southward through Smith Sound, and bringing with it immense fields of ice from the Polar Ocean and bergs from the northern glaciers; a second setting to the eastward through Jones Sound, while the third, starting on the eastern coast of Greenland, rounds Cape Farewell and forms a loop in Baffin's Bay. Repeated observations have

demonstrated that the right branch of this loop keeps close to the Greenland shores, sweeps round to the westward in Melville Bay, and meeting the Smith and Jones Sound currents, returns close by the Labrador coast. The eddy that forms where these three currents meet is generally free from ice, and is known among whalers as the North Water. The floating ice that these currents gather and carry with them is swirled about between the two branches of the loop and forms what is known as the "Middle Pack." It is almost impassable, as well as exceedingly dangerous. Now in all the tidal bays and fiords of the Arctic Seas a fringe of ice remains fast to the shore, like a shelf at low water, and joined to the floe, or traveling ice, at high water. It varies in width according

to the character of the shore and the thickness of the ice. The ebb and flood tides alternately clear and fill the bays with the detached floes, while the "ice-foot" remains fast and affords a path from place to place which the treacherous floe oftentimes forbids. This same phenomenon exists in the broader waters of Baffin's Bay. Clinging to the shores of Greenland is this fringe, known also as the Land Ice, and varying in width from one to fifty miles. The power of tide and current silently moves the Middle Pack from and towards this Land Ice, leaving a narrow strip of open water between them, known to Arctic cruisers as "a lead." At times the leads are a mile in width, oftener but a hundred yards, and, at times, barely as wide as the ship. It was through these narrow channels that the Relief Squadron had picked its way, using steam to push the ice aside and torpedoes to widen the path, when the leads were obstructed or narrowed.

The reward of twenty-five thousand dollars that Congress had offered for the first information of Greely had incited the whalers to take risks that they otherwise would have shunned. They had expressed a determination to strive for it, and were ever on the alert for a chance to creep northward. The Relief Squadron was determined, on its part, that the whalers should not secure the first information, and were equally zealous in pushing northward. It was this rivalry (a friendly one, for our relations with the whaling captains were of the pleasantest nature) that hurried us across Melville Bay and brought us together within sight of Cape York. It had been thought possible that Greely or an advance party might be there. In fact, a story was current, which a native from that place had told one of the whaling captains, of a white man who had come to him for food, offering a gun in exchange. On the remote chance of this being true, the Relief Squadron hoisted flags at each mast-head, in order that any party on shore might distinguish the United States ships from the others. Thus decorated, we raced across the North Water, each vessel straining every power to be the first at Cape York.

My morning watch called me to the "Crow's Nest." The officer whom I was to relieve met me at the cross-trees, and described the situation in a few words. "The ships cheered the North Water when they passed the floe," he said; "the *Bear* is racing the *Wolf* for the cape; a search party is to land at once and explore the coast. Good-morning." For the Crow's Nest, imagine a stoutly built barrel nearly six feet high and three feet in diameter, bound with heavy iron

hoops, a seat and two foot-rests on the inside, with an elliptical opening in the bottom large enough to admit your shoulders with a squeeze, and when you have passed in, closed with a hinged lid. A buggy-top arrangement opposes the wind and snow, and a light circular railing shouldered out from the upper edge affords a rest for the outer end of the long telescope. The outside is painted black, and it is secured with stout iron bands to the mast-head, one hundred and ten feet above the water's edge. Here the captain, pilot, or officer of the deck sits and directs the course of the ship by a system of signals to the man at the wheel. When stopped by the ice, a lookout spends his watch with an eye at the telescope, searching in all directions for a lead.

I mounted the last ladder and rapped on the lid. Captain Schley, by means of a small line, pulled up the lid, stepping on the two foot-rests to permit me to enter. I squeezed through, and closed the lid again. It was a tight fit for two persons, so I sat on the edge and leaned out on the railing for support. Before me lay Cape York, a rugged headland, seamed with white lines of snow and ice. Its contour, seen as we approached, was regular, as we were too far away to see the deep ravines that scarred its surface or to notice that shadows filled in the jagged outline. To the right was a bay, smooth and shining with its covering of white; high hills encircled it, their tops glistening with icy caps; here and there a glacier pushed its way through a ravine, and a heavy mist veiled the valleys. Farther to the right the hills faded in the gray of distant rock and ice. Stretching from the Cape to the left was a white thread that told of the floe edge; over it hung the hazy gray of the "ice-blink,"—the warning of what lay before us. Toward this floe edge, at the foot of Cape York, we were steaming, the *Bear* ahead, close behind her the whaling steamer *Wolf*, then her mate the *Aurora*, and finally our flag-ship, the *Thetis*. The distance from the *Bear* to the *Thetis* was perhaps a mile. Each vessel followed in the other's wake, and the forecastles were black with the crews excited by the race. In each cro' nest the figure of the captain might be seen leaning far out, and extending his arms in signal to the helmsman below him. We may learn something of Greely on those rocky shores.

"Good-morning, Captain," I said, on entering the cro' nest; "what are the prospects?"

"Good," he replied; "the *Bear* will be at the Cape first. Colwell (one of the watch-officers of the *Bear*) is to land with a dory and light sledge to visit the shore at once. If he hears of their being in the neighborhood, I shall start a sledging party immediately."

A sledge loaded with ten days' provisions for four men and six dogs was ready on deck for such an emergency. Details had been made for the party, and at a moment's notice they could have started.

In a few words Captain Schley gave me an inkling of his plans: "If the whalers show a disposition to push on, I'll send the *Bear* after them while I pick up Colwell and keep in to the land. If the whalers stay with us, we will go up the coast together."

A word in explanation: From Cape York to Littleton Island there are two routes, one close in shore, the other up the center of Smith Sound. The whalers could have slipped out of sight to the westward, bound apparently for Lancaster Sound, and then could have turned up this middle passage, and gone directly to Littleton Island while we were scanning the coast, which it was our bounden duty to do. It was a question with the whalers whether to try for the \$25,000 reward, or take advantage of their early arrival on the fishing-grounds. The reward was equivalent to several good whales, and might induce them to take the greater risks of Smith Sound.

Meanwhile we approached Cape York. The distances shortened. The *Bear* reached the floe; black objects appeared on the ice, which our strong glass told us to be Colwell and his party dragging their boat toward the open water immediately off the Cape. The *Wolf* simply touched her nose to the ice, as if saluting the headland, then turned, and was off to the westward. The *Bear* steamed out to the eastward and tried a narrow lead that promised to carry her closer in shore. The *Aurora*, to our surprise, lowered a boat, and her captain was rowed toward us. While he was pulling over to us, the captain and I descended from the cro' nest. I welcomed Captain Fairweather, a red-faced, honest-looking Scotchman, as he came over the side, and escorted him to Captain Schley. "There lies your path, Captain," the whaler said; "keep close to the land! Mine lies yonder," he added, pointing to the south-west. "Good luck to ye, and God grant that ye may find the poor fellows alive and well!" A word of thanks for his kind visit, a grasp of his hand, and he was off.

Then the question arose,— "What are the intentions of the whalers?" Their pretensions are for Lancaster Sound. In two hours they will be out of sight and able to turn toward Littleton Island. There seemed but one thing to do — follow them! Signaling to the *Bear* to come over to us, Captain Schley instructed them to "take the middle passage; leave records at Cape Parry, and wait for us

at Littleton Island." Captain Emory waved his "Aye! aye!" from his cro' nest, and turned to the westward in pursuit of the black smoke of the *Aurora*, that was already on the horizon.

We turned our attention to Colwell, who could not be seen from the deck; but the lookout in the cro' nest soon discovered him, and indicated the direction the ship should take to intercept him. He had not yet reached the shore. We steamed around and approached the group that had halted for some reason. The word came down from the nest: "There is a native with him!" All glasses were at once turned upon the party. We could see the dory hauled up on the floe, and the men gathered about a native, who stood beside his sled in a frightened, undecided attitude. In a few moments the *Thetis* was near them. Colwell reported that he had learned by signs that no white men were in the neighborhood. The native was questioned again, and fed; we loaded his sledge with a generous supply of salt meat and bread, and then allowed him to go. He snapped his whip to arouse his sleeping team of dogs, untangled their traces, started them off on a good gallop, then sprang upon his sledge and disappeared behind the hummocks.

We started northward again, having taken on Colwell and his party, and kept close to the shore. We reached Conical Rock at three in the afternoon, and deposited a record on its western end. Arctic postal arrangements require the correspondent to seal his letter in a bottle and then place it in a cone-shaped pile of rocks on some prominent cliff or peak. It is customary to plant a flag or a stick in the top of the cone, so as to attract the attention of passing ships. This is what is known as a *cairn*. When provisions are stored under a pile of rocks, it is called a *cache*.

An attempt to find a lead at midnight resulted in failure, and we put back to our old moorings. At noon of the 19th we tried again, and with great difficulty forced our way through the heavy but soft ice that lay off the Petowik Glacier and Cape Atholl. Midnight found us at Wolstenholme Island, where we left a record, and then visited Saunders' Island. There the natives knew nothing of white men, save a story, more or less legendary, that was supposed by us to refer to Captain Hall and the *Polaris*. Cape Parry was reached about noon of the 20th, and we left a cairn and record there. We had carefully scanned the coast for any traces of life, but nothing had been discovered. We passed Northumberland and Hakluyt islands at evening-time, and finally, on the morning of the 21st, reached Littleton Island and made fast to an iceberg within two hun-

dred yards of the shore. The *Bear* had not yet arrived. The Beebe cache of 1882 was visited and found intact; therefore, Greely must be somewhere between Cape Sabine and Fort Conger, and the prospects for his safety became a subject of grave comment. His orders required him to abandon his station at Fort Conger not later than September, 1883. Provisions had been promised him to fall back upon. But the utter failure of the *Proteus* to fulfill her mission made Greely's obedience to orders a retreat to death. Reflecting on these facts, we hoped that Greely had remained at Conger.

The above, as also what follows, is a condensation of the entries in my journal (written from day to day) of what I saw and of conversations had by me with members of the rescued party.

THE FIRST TIDINGS OF GREELY.

LITTLETON ISLAND is the largest of a group of islands that lie in a small indentation of Smith Sound, known as Life Boat Cove. It is simply a granite rock, about two miles in circumference and one hundred feet high. Its sides are precipitous; its top is flat. From its position at the junction of Smith Sound and Kane Basin, it has always been considered an important point in Arctic exploration. It is usual to cross over to the western shore from here; and a depot of provisions is generally deposited before any further advance is made. A channel half a mile wide separates its eastern side from the mainland; lying off its western and south-western side is a much smaller island, known as McGary Island. A channel of two hundred yards width separates the two. There is considerable rise and fall of tide, and the current in these channels runs very swiftly. When we were there, the report of a gun would start thousands of eider-ducks from their nests on McGary Island. The shooting was easy, except that we found it difficult to penetrate their thick shield of feathers and down with our small shot. They flew in pairs. The male black and white, with a greenish-gold patch over the ear; the female mottled brown. They make their nests among the rocks by scratching a hole in the gravel and lining it with the down from their breasts. They lay from one to four eggs, green in color. We tried the eggs both boiled and fried, and found them quite palatable. The ducks themselves, when skinned, were delicious.

The *Thetis* had been moored to a grounded iceberg just north of McGary Island, so that the view to the south was cut off from the deck. Nothing was to be learned of Greely

on this side of Smith Sound, and we were anxious to push on. The sound was nearly clear of ice, the wind favorable, though increasing in force. Hunting, nesting, and rambling had grown monotonous; but still the *Bear* did not come. A gale was threatening, so it was decided to run over to Cape Sabine. The time for starting was set at 1 P. M. Sunday, the 22d. A record was left on the top of McGary Island, directing the *Bear* to come over at once; the fires were spread, and the line that held us to the berg was singled; we were ready to start. Two men had obtained permission to pick up the bodies of some ducks that were seen on the ice-foot on Littleton Island. They were returning in the dory, sculling across the mouth of the narrow channel, when one of them suddenly shouted: "There's the *Bear*!" The excitement warranted a trip to the cro' nest, so I mounted as quickly as I could. Two or three minutes passed, and then the little black nest at the *Bear's* foremast-head slowly crept over the edge of the island; then her mainmast and mizzenmast heads, with the ensign and pennant flying, assured me beyond doubt that it was the *Bear*. She soon made fast. Captain Emory came on board, reported, and returned to his ship, and by 2:30 we were bound across Smith Sound under sail and steam, with a gale of wind behind us. We had occasionally to dodge a piece of floe, but on the whole the run across was uneventful. It is thirty-five miles to Payer Harbor; we reached it at 6:30, and made fast to the edge of the ice that filled the harbor from Brevoort Island to Cape Sabine. Payer Harbor is a little bay opening to the northward, two miles long by three wide in its widest part. It is bounded on the east by Brevoort Island, a conical mass of black rock about five hundred to six hundred feet high, and perhaps three miles in circumference at its base; a narrow strait, through which the tide ran sufficiently strong to keep it generally clear of ice, separated it from Stalknecht Island, a low-lying rock bounding the bay on the south; to the westward was a high range of hills, with occasional ravines filled with glaciers, the outcroppings of the ice-cap that covers their top. These hills terminated at their northern end in the point known as Cape Sabine.

There was a cairn on the top of Brevoort Island; we saw it as we approached; our ice-pilot had visited the harbor before in the *Neptune*, in 1882, and told us of another cairn on Stalknecht Island, describing its exact location and appearance. Mr. Taunt and I were sitting at the wardroom table hastily writing letters that were to be left here for the *Alert* to carry back with her, when the word

came down the hatch, "Mr. Taunt and Mr. Harlow, you are wanted for duty." We at once went on deck. Taunt was directed to take a party of men and visit the cairn on the top of Brevoort Island; I to visit Stalknecht Island. The rise and fall of the tide had broken up the floe badly, and the northerly winds had piled the ice up in all imaginable shapes. The whole bay was a net-work of tide-channels, over which we had frequently to ferry ourselves on cakes of ice. It was two miles to the island, and an hour's hard tramping. As we approached it, the cairn appeared with something projecting from its top, that struck me as little resembling the oar I was told had been left there. Reaching the ice-foot, we hurried across it and up the smooth sides of the island. In the place of the oar was a long rusty tin case—I knew that it must belong to Greely. My party hunted about the rocks, and soon discovered a bottle, which they brought to me. I broke it eagerly, only to find that it contained a record left by Captain Stephenson of the discovery in 1875, indorsed by Beebe in the *Neptune*, 1882, and by Garlington, 1883. Indorsing on it the visit of the expedition of 1884, I put it in a new bottle, and laid it in the crevice where it had been found. I then turned to the cairn. Removing a few stones from the top, I found several tin boxes, more or less rusted, with their contents scratched on them in rude letters; two wooden cases, a bundle of flags, and a leather sextant-case. Folded and tucked in the side of this case was a leaf from an ordinary note-book, on which was written in lead-pencil:

"October 23, 1883. This cairn contains the original records of the Lady Franklin Bay Expedition, the private journal of Lieutenant Lockwood, and a set of photograph negatives. The party are permanently encamped at a point midway between Cape Sabine and Cocked Hat Island. All well.

J. B. LOCKWOOD,
1st Lieutenant, 23d Infantry."

To unroll the bundle of flags, that contained an American Ensign, a British Jack, the flag of the *Gulnare*, and a masonic emblem, lash the ensign to a pike, run to the top of the hill and signal the news to the ship, was the work of a moment. Dispatching a man with a copy of Lockwood's note, with instructions to make all haste to the ship, I signaled, "Have found Greely records. Send news by man." It was understood, and I returned to the cairn. My observation from the hill-top showed that Stalknecht Island was a rock over which the floe-ice had frequently been forced by tide and gale. That such a place should have been selected for the valuable records seemed strange to me; yet Lockwood

had doubtless used the stones of the Beebe cairn where they were, rather than have the trouble and work of transporting them to a higher point. A few traces of moss and lichens were the only relief to the barren rock; a few papers containing tea, a canvas cover that had probably been on the record bottle, some pieces of the gunwale of a boat with fire-charred ends gave evidence of previous visitors to the spot. I dispatched my men with the smaller boxes, and then visited the hill again to watch the ship. The *Bear* was about to leave for the Greely camp, and the "general recall" was flying from the mast-head for me, so I left the remainder of the records and hurried back across the floe. Several times I fell in up to my waist; once up to my neck, and often jumped as the floe was sinking beneath me. It was an exciting time, but I was nerved with the prospects of the next few hours. I reached the ship, changed my clothes, and was on deck again just as the ship was rounding the Cape and standing up for the Greely camp. Lieutenant Sebree was on the bridge, and I joined him. I learned that Taunt had found a paper in his cairn, written by Greely himself, dated October 21, 1883, which read as follows: "My party is now permanently in camp on the west side of a small neck of land which connects the Wreck Cache Cove and the one to its west, distant about equally from Cape Sabine and Cocked Hat Island. All well." This he sent to Captain Schley by one of his men, who reached the ship about ten minutes before my message was signaled. Captain Schley at once went on board the *Bear*, leaving the *Thetis* to collect the detailed parties.

THE RESCUE.

AS SOON as the ships reached Payer Harbor, Lieutenant Colwell was directed to take the *Bear's* steam-launch and visit the Wreck Cache, left by the *Proteus* in July, 1883. He was one of the officers of the unfortunate *Proteus* expedition, and knew the exact location of the cache that was built before the retreat of its survivors. The launch had been supplied with provisions and water for the use of her crew, and had started for Cape Sabine, when a hail from the *Bear* recalled him. Taunt's messenger had arrived and told of the location of Greely's camp. Beef tea, milk, crackers, an alcohol stove, blankets, etc., were hastily thrown in the launch, and he started again, taking with him Chief Engineer Lowe and the two ice-pilots. He was instructed to find out the condition of the party, and tell them that relief was at hand. The *Bear* followed them in a few moments.

The launch whistled frequently as she steamed along, and we knew afterwards that the sound was heard by those who lay in the tent, which was partly blown down. Brainard and Long succeeded in creeping out from under its folds, and crawled to the top of a hill near by, from which was visible the coast towards Cape Sabine. At first nothing was seen by them; and Brainard returned to the tent, telling by the silent despair of his face that "there was no hope." The survivors discussed the probable cause of the noise, and decided that it was the wind blowing over the edge of a tin can. Meanwhile Long crept higher up the hill and watched attentively in the direction from which the sound had apparently come. A small black object met his gaze. It might be a rock, but none had been seen there before. A thin white cloud appeared above it; his ear caught the welcome sound, and the poor fellow knew that relief had come. In the ecstasy of his joy he raised the signal-flag, which the gale had blown down. It was a sad, pitiable object,—the back of a white flannel undershirt, the leg of a pair of drawers, and a piece of blue bunting tacked to an oar. The effort proved too much for him, and he sank exhausted on the rocks. It was enough for the relief party; they saw him, whistled again, and turned in for the shore with all possible speed. Long rose again, and fairly rolled down the hill in his eagerness to meet them. The launch touched the ice-foot, and the relief party hurried towards him. The ice-pilot of the *Bear* reached him first, spoke a word of cheer, and asked him where Greely was. He informed him of the location of the tent and the state of the party. They hurried in the direction indicated, and soon reached the tent, while Mr. Lowe took Long off to the *Bear*.

In reply to our ice-pilot's question, "Is that you, Greely?" a feeble voice responded, "Yes; cut the tent." The pilot whipped out his knife and cut the hind end of the tent open from as high as he could reach to the ground. Through this opening, Colwell entered. The light in the tent (it was 9 o'clock P. M.) was too dim to see plainly what lay before him, but he heard a voice in the farther corner warning him to be careful and not step on Ellison and Connell. He found Greely lying under the folds of the tent, with the fallen poles across his body. Biederbeck was standing; Ellison and Connell lay on either side of the opening, the latter apparently dead. Stepping carefully across their bodies, he dragged Greely out and sat him up. He was so weak that he could barely swallow the crumbs of hard-tack that Colwell gave to him

in the smallest pinches. It was said that Greely first asked the rescuers if we were Englishmen; and on being told that we were his own countrymen, he added, "and I am glad to see you."

Greely told Colwell that Ellison had both hands and feet frozen off, and that Connell was dying; and then began in a rambling way to tell the long tale of suffering and misery that had just ended. Colwell cheered him with the story of the friends who were waiting to carry him home; urged him to lie down and wait patiently; turned to the other poor fellows in the tent, sat them up in their bags, and fed them with cracker and pemmican. A small rubber bottle containing about a quarter of a gill of rum, probably reserved for medical purposes, had been kept hanging in the tent. When the first cheers of the relief party were heard, Biederbeck arose to take it down. He had it in his hand when Colwell entered. He reached over Connell, raised his head, and poured a few drops in his mouth, then divided the remainder equally among his comrades. Connell's last words would doubtless have been, "Let me alone; let me die in peace," had he not been revived by the influence of this rum. As he described his situation to me afterwards, he said he was dead to the waist, all feeling had left him, and he had but an hour or two more of life. "Death had me by the heels, sir, when you gentlemen came and hauled me out by the head" was his description of his plight. Colwell then directed his party to prop up as much of the tent as they could; he built a fire, and set pots of milk and beef tea to warming, carried Brainard and Biederbeck outside of the tent and wrapped clean blankets about them. A large party soon arrived from the *Bear*, Captains Schley and Emory and Doctor Ames among them. They busied themselves in doing all they could to relieve the sufferers. The doctor superintended the administering of the food, allowing only the smallest quantities to be given at a time. The sailors required to be watched. With their pockets full of bread and open cans of pemmican in their hands they would feed the poor fellows surreptitiously. Their hearts were larger than their judgment and experience. As soon as order and system were attained, Captain Schley directed Colwell to signal to the *Thetis* for the photographer, for Doctor Green, more men, blankets, food, etc.

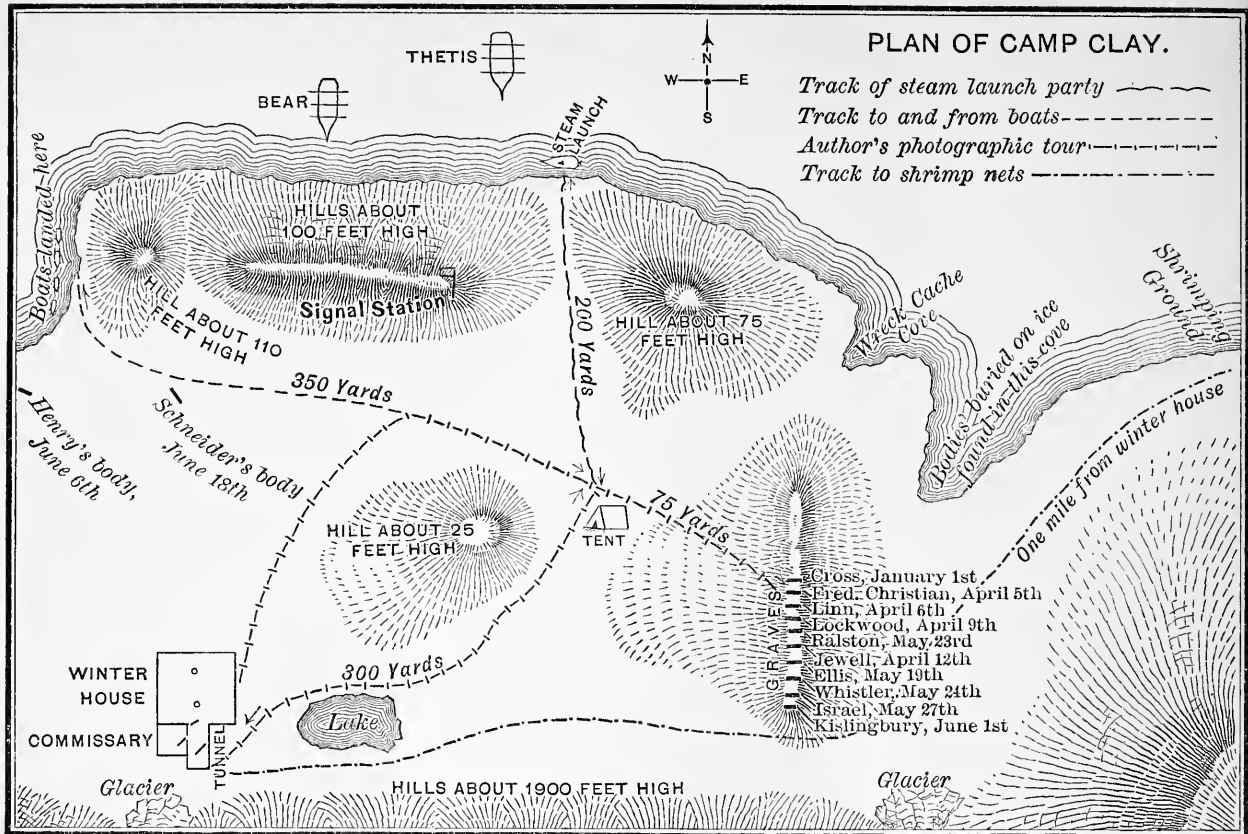

ON THE "THETIS."

SEBREE and I had speculated upon the possibilities of the next hour, but little

dreamed of the horrible tragedy that was to be revealed. Some one was seen on the ice-foot signaling. I ran forward to read it, but he had begun his message, and I only got the following: "*Harlow with photograph machine. Doctor with stretchers. Seven alive.*" When it came to the last two words, I had him repeat them. They might be D-E-A-D. But no! A-L-I-V-E waved plainly through the air, and the fate of the Greely party was known on board the *Thetis*. Two boats were lowered at once, and Taunt, Lemly, Melville, Doctor Green, and I started with strong crews for the shore. The wind had increased to a full gale, and was tearing over the hills in furious blasts. It was a *hard* pull; it seemed a long pull; but with water dashing over the bows at every lunge and rolling gunwales under in the short but heavy seas we finally reached the shore. The boats were secured to the ice-foot in the quiet of a little cove, and we landed at Camp Clay. Shouldering my camera, I started for the tent. A few steps farther and I met Fredericks, one of the survivors, who was strong enough to walk to the boats. A clean white blanket was thrown over his head and wrapped about his shoulders. A sailor supported him on either side. His face was black with dirt, and his eyes gleamed with the excitement of relief. What to say to him I did not know. The commonplace "How are you, old fellow?" elicited the reply, "Oh, I am all right"; and I passed on. Turning a little to the left, the tent came in view. To my right, stretched out on the snow-drift, lay one of the dead. His face was covered with a woolen hood, his body with dirty clothes. Hurrying on past a little fire, over which a pot of milk was warming, I came to the tent. One pole was standing, and about it the dirty canvas belied and flapped in the fierce gusts. Brainard and Biederbeck lay outside at the bottom of the tent and a little to the left of the opening, one with his face swollen and rheumy, so that he could barely show by his eyes the wild excitement that filled him; the other muttering in a voice that could scarcely be heard in the howling of the gale his hungry appeal for food. Reaching over, I wiped their faces with my handkerchief, spoke a word of encouragement to them, and then pushed aside the flap of the tent and entered. The view was appalling. Stretched out on the ground in their sleeping-bags lay Greely, Connell, and Ellison, their pinched and hungered faces, their glassy, sunken eyes, their scraggy beards and disheveled hair, their wistful appeals for food, making a picture not to be forgotten. I had time for a glance only; the photograph must be taken and the poor

fellows removed to the ships. Stepping over to Greely, whom I recognized by his glasses, I pressed his hand. A greeting to the other two, and I returned to my camera to take the plate I had so often pictured to myself: "The meeting with Greely!" How different it was from the ideal picture, only my own imagination can know.

Strewn about the ground were empty cans, a barometer case, chronometer boxes, a gun, old clothes, valuable meteorological instruments, showing the indifference they felt for anything that was not food or fuel. The difficulties in the way of a successful photograph at 11 P. M. in the twilight of an Arctic evening were innumerable, but there was no time to be lost; so I made the exposure with many misgivings as to its results. But four plates remained in my holders. Two of these I devoted to the tent, one to the winter-house, and one to the graves. While I was absent for these last two views, Greely and his men were wrapped in blankets, placed on stretchers, carried down to the little cove where the boats lay, and taken off to the ships—Greely, Connell, Brainard, and Biederbeck to the *Thetis*; Fredericks and Ellison to the *Bear*. The living having been attended to, our next duty lay with the dead. Placing my camera on the rocks near the tent, I joined Captain Emory and Colwell, who, with a party of men, had been directed to disinter the bodies. On a piece of canvas cut from the tent I drew a diagram of the graves, numbering each one from the right facing their heads. This precaution was necessary, in order to avoid any confusion in identifying the remains. With a memorandum of the order in which they had been buried, the name of each one could be appended to its number. By the aid of tin cans and dishes as implements, each body was then uncovered, wrapped in the tent canvas, or some of the new blankets that we had with us, lashed with the tent-cords, numbered according to its place on the diagram, and sent down to the boats on the shoulders of the men. This task finished, and the bodies divided between the boats, the next difficulty was to reach the ships. The gale had increased to a hurricane by this time, and the moment the boats got clear of the land oars became perfectly useless. The ships steamed up as close to us as they dare come; and by alternately drifting and struggling to keep the boats' head to wind, their bows deeply loaded with the dead bodies, shipping gallons of water until it swashed nearly to the thwarts, we finally got alongside. Meanwhile the survivors were under treatment, having their rags removed, and being bathed and fed.

When the dead had been placed on the deck and covered with a tarpaulin, we steamed back to Cape Sabine, and made fast to the floe about 3:30 in the morning. A little later I was dispatched to my cairn on Stalknecht Island, and brought back all the records I had left the night before. The *Bear* revisited Camp Clay and gathered up every vestige of the party that the closest scrutiny could detect. Greely lay in his bunk and talked fluently all through the night. The officers relieved one another in telling him of the events of the past three years, and trying to quiet him. He seemed to realize his nearness to death, and desired to tell all he could about his work, lest some part might be overlooked. His face was emaciated, his cheeks sunken and pale, his form wasted to a shadow. His hair was long, tangled, and unkempt. As he lay partly on his side with head resting on his left hand, his right hand moving restlessly about, one could not look at him unmoved. Had he kept silent, a single glance bespoke the days of misery that he had passed through; but to hear his low, weak voice telling the incidents of the dark days brought tears to the eyes of many of his listeners.

CAMP CLAY.

WHILE on my photographic tour I took careful note of the surroundings of the tent.

The site of the camp was on a small promontory, about four miles from Cape Sabine. Greely called it Camp Clay, in honor of a member of the party, a grandson of Henry Clay, who had come with them to Conger, and then returned. The high hills of Payer Harbor, extending around Cape Sabine, back of the camp, were nineteen hundred feet high. An ice cap covered their top, overhanging in many places. In each of the two ravines on either side of the promontory was a glacier. As you faced these hills from the ships, a ridge about one hundred to seventy-five feet high concealed the low level ground of the camp. There were three indentations in the coast: a deep one at the extreme eastern end, a smaller one a little to the west, in which the Wreck Cache was built, and then another at the extreme west; and in this last one the boats landed. To the west of the Wreck Cache Cove was a small round hill about seventy-five feet high. Between it and the ridge was a ravine, at the foot of which the steam-launch landed, and up which the first party ran. The signal-flag was planted on the eastern end of the ridge. On the west side and at the foot of the back hills was the winter house. Near it was the lake, a depression in the rocks that caught the thawings of the glaciers, and which supplied the camp with water, a hole in the ice being kept open for that purpose. The winter house was situated on the lowest ground of the promontory.

From it toward the east there was a gradual rise, terminating in a knoll that ran northward and joined the little hill at the Wreck Cache Cove. To the left it sloped down to the shores of the large cove. The tent was on a small plateau about three hundred yards east of the winter house, and one hundred yards from the knoll. West of it was a slight elevation, perhaps twenty-five feet in height, that sloped down to the lake on one side and towards the ridge on the other. It was up this valley, between this hill and the ridge, that the relief parties came and went to their boats. The graves were on the knoll to the east. The sight for the winter camp was selected because it was near the Wreck Cache, and because there were plenty of small rocks, the moraine of the glacier, with which to build their house.

The winter house was twenty-five feet long by seventeen feet wide, with broad walls made of stones each about six inches in thickness, piled to a height of three feet. Over the top was laid the *Neptune's* whale-boat, upside down, forming a ridge pole; and their canvas tent and sails were stretched across this for a roof. Through the roof were two pipes, which served as chimneys and ventilators. The whole structure was so low that, from the lake, its existence would not have been suspected, were it not for these chimneys; the snow had banked up against the walls and on the roof, so that it resembled a huge drift, more than the dwelling-place of twenty-five men. The entrance was toward the high hills. It was a tunnel after the manner of the Esquimaux, about three feet high, two and a half feet wide, and eighteen feet long, roofed over with canvas. Over its outer end a canvas flap was hung. About eight feet from the entrance was a door across the tunnel, dividing it into two compartments. Another door admitted you into the house. These compartments were necessary, to prevent the inrush of cold air when the door was opened. On entering, it was customary to remain a little while in each one before going farther. The outside corner made by the tunnel and the house proper was walled in and called the commissary. A door from the compartment of the tunnel nearest the house gave admittance to the commissary. There were no windows, and the only source of light was an Esquimaux blubber-lamp, which was lighted about an hour each day. Into this hovel the party moved on November 1, 1883.

Immediately after occurred events of which I learned the following: On June 28, five days after the rescue, Doctor Green was called over to the *Bear* to consult with Doctor Ames in regard to Ellison, who was no

longer expected to live. On the same day Fredericks described to me the scenes of Ellison's terrible suffering, and the narrow escape of the four who attempted to bring up the English meat from Cape Isabella, in November, 1883. The labor of building the winter house made such an inroad upon the few provisions that were left after their long and perilous retreat from Fort Conger, that when they moved in on November 1 they had barely one thousand rations left, and were by no means schooled to the reduced allowances, which were necessary. Under the circumstances, Greely saw his men gradually despairing, and becoming physically and mentally weaker, and he decided that something must be done at once or else abandon themselves to the horrible fate that stared them in the face. The English expedition of 1875-6, under the command of Captain Nares, had left a quantity of beef, several hundred rations, cached at Cape Isabella, about thirty-five miles distant from the camp. This it was determined must be secured. On November 2 Greely detailed Sergeants Rice and Linn and Privates Ellison and Fredericks to make the attempt. They took a sledge, with sleeping-bags and cooking utensils, alcohol, four ounces of meat, and eight ounces of bread for a daily ration, and a little tea. The weather was about thirty-five degrees below zero, the wind biting, and the road over broken floe and through soft snow-drifts. Traveling was slow, and it was three days before they reached the cache and found the meat. They had left their sleeping-bags and cooking utensils several miles back, and traveled the last day with only the sledge and a little tea, intending to eat some of the meat on finding it, and use the barrels for fuel. Loading their sledge, they started to return to their last encampment, full of hope for the future, in view of the glorious life-giving beef which had survived so many Arctic winters. Despite the entreaties of his comrades, Ellison insisted on eating snow. This wet his mittens, which soon froze stiff in the cold wind, and froze his hands also. They hurried along, however, Ellison growing weaker and weaker from the pain of his hands; and when they finally reached their sleeping-bags, his feet were found to be frozen also. They passed a frightful night, with a temperature at thirty degrees below zero, and a suffering comrade who required their unremitting attentions to prevent his freezing to death. They cut off his boots and rubbed his feet for hours, trying to restore the circulation. They had to hurry on with their increased load, Fredericks supporting Ellison, while Rice and Linn tugged away at the sledge. This could last but a little while, for their

strength soon gave out and another halt was necessary. The brave fellows devoted themselves again to their comrade, and when the time came for them to start anew, they had to choose between the life of Ellison or the provisions. Although he begged them to let him die and save their comrades at Camp Clay, brave, heroic man that he was, they decided on trying to get him to camp; so they cached the provisions, leaving one of their guns sticking up for a mark. With their lightened sledge, they struggled on, only to stop again and work on Ellison. Another fearful night. The untold suffering of those hours, who can imagine them? How vain it is for us to attempt to put ourselves in their places, we who shiver if a door is left open! cast down in the snow in that bitter piercing cold, their minds half-crazed with the thought of the future, suffering the pangs of hunger, and hearing the moans of their suffering companion! Tying Ellison to the back of the sledge, they struggled on until the failing of Linn warned them that death was certain for all unless they procured relief; so, creeping into their bags again, they sent Rice ahead alone to obtain help from Camp Clay. It was twenty-six hours before the relief came in the person of Brainard, who had a little tea, and made some warm soup, and a long time afterward that Lockwood and Pavy came up. They hauled Ellison into camp, and found that his feet were frozen beyond any possible hope of restoration, while his fingers and thumbs were gone entirely. Finally hands and feet went away by natural amputation. A spoon was bound to the stump of one of his arms so he could feed himself, and he was cared for all through the dark days with a devotion which bespoke their gratitude to one who had undergone terrible sufferings in their behalf. The care bestowed upon Ellison speaks volumes for the manhood of the party.

Rice's death occurred during an effort to recover the provisions which had been abandoned in order to save Ellison. The few stores with which the party commenced the winter were eked out in daily mouthfuls until April, when the last crumb was reached. Weak and exhausted as they were, what was to be done? There were the abandoned provisions of last November some fifteen miles from the camp, down toward Cape Isabella. Who would, who could, go after them? In the extremity Rice and Fredericks offered to attempt their recovery. It was a perilous feat, this venturing out into the cold with unsteady limbs and aching, stiffened joints, to tramp over miles of broken ice and attempt what four men had failed to accomplish when far stronger than they were. But they saw their

desperate condition, and felt that the lives of their friends in misery depended upon them; so they started out, strong in heart and will. Taking five days' provisions, a sledge, rifle, and hatchet, they bid adieu to their comrades, and for three days wandered about, unable to find any trace of the cache they had left not six months before. The snow had covered it up completely, and in their despairing tramps back and forth where they thought it ought to be, Rice was suddenly taken with a hemorrhage of the bowels, and died in his companion's arms. Poor Fredericks! alone with his dead companion, miles from his cheerless camp, with no hope of recovering the coveted meat, laid the body of Rice in an ice-made grave, and struggled again to find the meat. Finally he staggered into Camp Clay, to greet his anxious comrades with a report that could but add to their despair.

They remained in the winter house until May, 1884, when the thawing of the glacier above them compelled a move to higher ground, where they pitched the tent in which the survivors were found. One or two thicknesses of canvas were spread over the ground, and on this the sleeping-bags of the party were laid. These sleeping-bags were made to accommodate two men, and resembled a large moccasin with the hair on the inside. Could they have been shaken and aired each day, nothing better could be asked for to sleep in; but, as it was, the condensation of their breath and the precipitation of the moisture in the atmosphere froze them to the ground, and made them stiff and uncomfortable. During the day-time they would draw themselves out far enough to sit up, and the frost would gather in thick, white masses in the fur, and melt as soon as they slipped back again into the bags to sleep. There was no warmth save what they got from their bodies. They had nothing to read except the few well-thumbed, torn, and dirty books they had brought with them, and the scraps of newspapers that were wrapped about the stores in the Wreck Cache. From these scraps they learned of the death of President Garfield. Daylight had been growing shorter each day, and complete darkness shut them in early in December. In this condition they lay day after day, seeing their scanty store of provisions growing less and less, knowing that each mouthful was hastening the probabilities of their eventually starving to death. None of the party had washed for nearly eleven months. The dirt and soot had begrimed their features. When asked why they did not wash when they had a chance, they replied: "What was the use?" Greely said he en-

couraged the men to give long talks on the resources of their own countries and states, and to tell the stories of their lives in a simple, straightforward way, and to recount their adventures during the various sledging journeys from Fort Conger. Greely discoursed on all subjects — political, historical, religious, and scientific. The doctor explained the anatomy of the body, the principles of medicine, and gave talks on the nature and effects of poisons and their antidotes. A favorite amusement was to make out the bill of fare that they would order when home again. Tastes varied, and led to discussions; and so the hours and days crept away until, with returning daylight, they could again venture out for an effort to procure game and gather moss.

SERVING OUT THE PROVISIONS.

BRAINARD was the commissary of the party. Upon him devolved the task of weighing out the scanty allowances and guarding the stores. Canned food was issued weekly, while bread and pemmican was served out daily. The party was divided into two messes, each with its cook. It was the duty of the cooks to rise at six and prepare the morning meal. Their rising was a signal for all to sit up in their bags and hungrily watch this serving out, lest the temptation should be too great for the cooks to resist. The plates were set around, and the bread and meat equally divided on each. Experience soon taught them to gauge the plates with great accuracy, but dissensions arose, and it was finally arranged that the cooks should do the best they could, and then another man was detailed to hand them around without a chance to see any possible difference in the amount of food on them. Long was the best shot, and a successful hunter; so this duty devolved upon him. He tramped many miles during the spring, and added greatly to their supply of food. One of their most unfortunate accidents was the loss of their Esquimaux Jens Edwards, on April 30th. The assistance of this man was most valuable, for, with his kayak, or native boat, he could recover much of the game that fell in the water; besides, he had the native instinct for hunting the seal. His kayak was caught in the newly formed ice and crushed, and he was drowned. A bear was killed early in April, that required the entire strength of the party to drag to camp, the distance of a mile. They ate every particle of him save hair and bone. Of all the birds that they shot, nothing was wasted that was digestible. The entrails were chopped up for seasoning to the soup. Brainard was the shrimper. For seventy days during the spring he made a

journey past the graves, and a little beyond the large cove, a distance of a mile, to examine the shrimp-nets. These were gunny-sacks, with hoops in their mouths, baited and sunk to the bottom of the bay. As it took twelve to fifteen hundred of these to make a gill, they afforded but little sustenance, especially as they passed through the system undigested. For food, when all their stores had been eaten, they resorted to the moss and lichens that grew among the rocks, and to a broth made by boiling the sealskin, with which they made or repaired their boots. The former contained a small percentage of a gelatinous substance, of considerable nutritive quality. The latter was cut into small squares as large as a thumb-nail, and boiled more for the oil in them than for any nutriment in the skin itself.

In conversation with Greely one morning, I told him of the generous rations we had left at Littleton Island, and said: "Why, Major, when we were calculating on a ration of four pounds per man, you were doubtless figuring on ounces." Before I could qualify my remark, Greely exclaimed, in a voice full of feeling, "Ounces! ounces! we were reckoning on sixteenths of ounces. Scarcely a thing that was not divided in the ounce!" He then told me of the pair of steelyards that had been made out of a piece of wood, with a tin cup and cartridges for the balance. Oftentimes each man's allowance would barely cover the hollow of his hand. He dwelt on the faithfulness of Brainard, to whom he intrusted the stores, and who kept the account religiously to the smallest fraction. He related how each day's expenditure would be posted, and when the balance was struck at the end of the week, how the book would show less provisions on hand than they actually had in store; how he inferred, how he knew that the devoted Brainard would deny himself, rather than have his slender stock balance the other way. Such deeds as these, the sacrifices of Rice and Ellison, their care for their helpless companion, stand out in glowing contrast to the one black spot that Henry made on this record of heroes.

THE GRAVES.

WHEN the first man, Cross, died in January, the question arose as to the proper place to bury him. Many were in favor of sinking him in the lake, reasoning, first, that they would all probably die, and that it mattered little what became of them; and secondly, that if relief should come, the relief party would not care to carry back the dead bodies. In fact, Greely expressed a wish to Captain Schley that the remains of his men be

 G. W. Rice, Associate Editor
 C. B. Henry, City Editor
 Assisted by a complete staff.

The Arctic Moon is a semi-monthly newspaper devoted to the dissemination of literature, science and art, the record of events and the development of the material interests of Grinnell Land.

Its corps of contributors embraces the finest minds in the country. Its reporters are always "on the spot" ready to get the full particulars of every occurrence and to portray it in the most vivid and thrilling colors. All this is well illustrated in the success of the paper which, tho' but a few weeks old, has already the enormous number of 25,000 subscribers.

We thank the Public for their patronage in the past and now, at the beginning of a new year, respectfully solicit its continuance assuring our un-enlightened customers (un-enlightened except by the beams of the Arctic Moon) that no pains will be spared to make this journal by far superior to any other in this country.

Advertisements

We beg leave to announce to the public that we have made extensive improve-

ments in our establishment where we can furnish at the shortest notice bread, twists, rolls, cakes, pies and tarts and in fact, every thing in the Bakers line. Wedding cakes made a specialty. Ever thankful for past patronage, we respectfully ask its continuance in the future.

undisturbed. "They died beneath Arctic skies," he said. "Arctic desolations witnessed their sufferings, heard their cries of anguish. They are buried in Arctic soil; let them lie where they fell. Lockwood told me that he wanted to rest forever on the field of his work. Why disturb them — why not respect their wishes?"

But they decided, after much deliberation, to bury Cross on the knoll, where most of the bodies were found. This spot was chosen because the gravel afforded easy digging; being free from dirt and moisture, it did not freeze, and exposed to the easterly winds as it was, it was generally free of snow. Cross's body was neatly sewed in sacking, buried some distance below the surface, and the grave was outlined with small stones. The other victims received less and less attention, until finally they were scarcely covered. Brainard told me that he could always dis-

tinguish Lockwood's grave as he passed to and from the shrimping-ground. He had been buried in an officer's blouse. The buttons projected above the little mound, and the wind and gravel scoured them so that, as he passed, the sunlight on them would dazzle his eyes. "At first," he said, "it affected me deeply to think, as I passed, of the fate of Lockwood, the leader of our little party which carried the Stars and Stripes beyond the English Jack; but this feeling soon wore away. We had so many other horrible things to think of, I grew indifferent." Indifference to death was a characteristic of the entire party. Starvation blunted their feelings, and doubtless made death welcome to many of them. The first stages were painful; but there came a time when the suffering gave place to quiet, painless sinking away. Two men would be in the same sleeping-bag; one would die, and his comrade lie for hours, with the corpse

beside him, too weak to draw the dead out for burial. Some were carried to the ice-foot, and left there. Henry was shot (for taking provisions) and remained where he fell, a little to the left of the place where the boats landed. Two days before we arrived, Schneider's body had been carried to the place where we found it. Their strength gave out, and they could not get him to the ice-foot. Some were buried on the ice in the large cove behind the graves. On many of the bodies we found from eight to eleven suits of clothes. During the seven winter months they had added suit after suit, and when spring came they were too weak to take them off. Some had but two or three suits on; and it is explained by the fact that after a man died they took off his clothes, if in good condition, for the use of the living, burying him only in the suit next his body.

WHY GREELY DID NOT CROSS SMITH SOUND.

It seemed to some of us inexplicable that Greely should have remained at Cape Sabine when he had a boat to get across to Littleton Island, where there were two hundred and sixty rations, and game in abundance. Greely described Smith Sound as a rushing channel, filled with pieces of broken floe and berg; he waited for it to freeze over,—an event which did not happen that winter of all others. As a sailor, I could not help thinking his failure to get across was due to his being a soldier, and the fact that his party was made up of soldiers. Put a sailor in his place, thought I, and with the boat he would have ventured anywhere, so long as he had his shirt for a sail. Tell a sailor that food lay but thirty-five miles southeast of him, that a current set in that direction, and he would have paddled his way across on a cake of ice with a barrel-stave, before he would have remained where almost certain death awaited him; he would not have been deterred from making the attempt, even if it were a choice of deaths. A sailor would have frozen beneath the thwarts before destroying his boat for fuel. But since my return I have talked with Brainard on this subject, and see that my speculations were unjust. He told me of crushing floes, fierce gales of wind, scenes of the wildest description — all these, he admitted, could have been avoided; but the real danger lay in the fact that, as soon as the surface of the sound was still for any length of time, a thin scum of ice formed

over it, often an inch or two in thickness. Suddenly the whole field would break up into immense floe-pieces; if the sides of the boat were not cut through by the sharp edges of the ice, it would float about, entirely at the mercy of wind and current, while they would be utterly powerless to extricate themselves. The experiences of Lieutenant Greely in September, 1883, settle the question of the practicability of this navigation better than all theories can do. After abandoning their launch eleven miles from land, they were *nineteen* days reaching shore, with daylight to facilitate their movements. To attempt at their landing, October 1st, the crossing of this sound, after such an experience, would have been more than rash. The Arctic night was already on them, young ice was forming, and the moving pack, over which a couple of miles a day might be made, was being carried by a southerly current, miles every day, towards Baffin's Bay.

THE RETURN HOME.

By early morning of the 23d of June, which was Monday, we had started on our return, and at 8 o'clock revisited Littleton Island.

Ellison died on July 8, while we were at Disko Harbor. From the day of his removal to the ship (fifteen days before) the doctors had little hope of his recovery. The natural amputation was not immediately dangerous in his reduced and declining condition; but as soon as the blood began to flow, with the return of his digestion, mortification set in, and another amputation became necessary. He survived the operation three days. Since June 30 he had been threatened with congestion of the brain, and thereafter lost his mind.

While in Disko Harbor I was walking one day near the fore-castle, and saw Brainard leaning against the ladder and gazing most intently at the shute in which the galley scrapings are emptied. I asked him what he was gazing at. In a most serious manner he turned to me and said: "I have seen enough good food thrown away since I have stood here to have saved the lives of our nineteen dead." And so it was that, in the enjoyment of plenty and a fair run of luck, we reached St. Johns, Newfoundland, on Thursday, July 17, and started the news of the expedition flying over the telegraph-wires of the civilized world.

Ensign U. S. N.

THE PARTING OF ILMAR AND HAADIN.

Put out thy torch, O watcher by the dead,
Unto the darkness give its own ;
Silence and darkness — they alone
May minister about this breathless bed ;
Put out thy mocking torch, good watcher gray,
Thine old head cover ; come away.

And so I leave thee, Ilmar ! That queen brow
Where diamond light were pale as mist,
I yield it up to Death, unknissed.
He took thee from me ; thou'rt his only, now :
No, no — I cannot lay on that still hand
Mine own, and thou not understand.

Mine was no little wingèd fantasy —
Gnat-passion of a summer day,
I loved not in the common way ;
Therefore must I accept this misery,
Must hug it close, feed me upon its pain,
No more than thou to smile again.

The spider can restore each riven thread,
The bee refill its empty comb ;
Alas ! the heart's imperial home,
Once plundered, goes for aye untenanted.
Henceforth I wander, homeless, helpless, lone,
Only my bitterness mine own.

The haggard night, with wet, disheveled hair,
On her black path at large, shall be
My mate ; the gesturing specter-tree
Shall reach his arms to me through glitt'ring air ;
Friends will I make where, with despairing roar,
The baffled sea assaults the shore.

Wan as the bleachen kerchief smoothed around
Thy whiter neck, the realm of Death
Shall be my realm ; and my stopt breath
Shall be unheard as thine down in the ground.—
Mine own are deaf as that sweet sleeper's ears ;
Watcher, why speak when neither hears ? —

Thou art so meek ! Ah, why am I not so
Because thou art ? — It cannot be :
My tameless blood increasingly
Does heat me fierce as tiger crouchèd low,
Hard-spotted pard, that, glancing back the glare
Of sun-fire, dapples all the air.

Had I, O wind, your liberty, the sea
Should lift so wildly he must spray
The shining azure Death's own gray,
Put out the splutt'ring stars, to say for me
How black is all this world! — No, no;
I must be calm. Lo, she is so!

Quench thy poor torch, good watcher. Death sleeps sound:
A candle cannot cheat her night.
Do men strengthen with smiles the noon-sun's light?
And shall we weep but to make wet the ground?
Old man, the gaping grave — didst ever note
The swallowed coffin choke his throat?

I tell thee she is Death's — Death's only, now:
Let us be gone. Haadin's tear
Would be a rain-drop on that bier,
His breath but wind against that brow.
Put out thy torch — ay, thou hast done it. All
Is dark — how dark! — Ilmar! — I — fall!

John Vance Cheney.

INCIDENTS OF THE BATTLE OF MANASSAS.

RUINS OF THE HENRY HOUSE.
FROM A PHOTOGRAPH PROBABLY TAKEN IN MARCH, 1862.

The tree on the right was nearly cut in two, by shot and bullets. In the distance, to the right of the tree, is the Lewis house.

ON the last day but one of the march of General Joseph E. Johnston's army to join General Beauregard, an order reached me at Rectortown, through Brigadier-General Barnard E. Bee, to collect the four field-

batteries of Johnston's army into one column, and, as senior artillery captain, to march them by country roads that were unobstructed by infantry or trains as rapidly as possible to Manassas Junction, and to report my arrival at any hour, day or night, to General Bee, who was going forward by rail with his brigade. Having assembled the batteries in the night, I began the march at day-dawn of Saturday, July 20, the day before the battle. About eight in the morning we were passing through a village in Fauquier County — Salem, I think it was. The whole population turned out to greet us. Men, women, and children brought baskets, trays, and plates loaded with their own family breakfasts, snatched from the tables, coffee-pots and all, to treat the soldiers. With the improvidence of raw campaigners, we had already, the night before, finished our three days' cooked rations, and were hungry. I ordered a halt for thirty minutes to enjoy the feast. The Staunton Artillery* (my own battery) was at the

*The Staunton Artillery numbered 140 officers and men. Six of them were college graduates, and several of them had left college to enter the army. The majority were either young men of leisure or mercantile clerks. About forty were young mechanics, whose mechanical skill was of much service. I had provided them with red flannel shirts at Harper's Ferry, because our uniforms were too fine for camp life and for service in the field.—J. D. I.

head of the column, and being largely composed of young men of high social standing, was especially honored by the ladies of the village, conspicuous among whom were the young daughters of Colonel John A. Washington, late of Mount Vernon. I noticed that some of the young fellows of the battery, lingering around the baskets borne by these young ladies, who bade them die or conquer in the fight, seemed very miserable during the remainder of the march that day. No doubt many of them, during the battle, felt that it were better to die on the field than retreat and live to meet those enthusiastic girls again. I make special note of that breakfast because it was the last food any of us tasted till the first Bull Run had been fought and won, thirty-six hours later.

It was one o'clock that night when the head of my little column reached General Bee's headquarters, about one mile north-east of Manassas Junction, on the Centreville road, at a point where the latter was intersected by a road running northward, parallel to the Sudley road and crossing Bull Run near Stone Bridge. General Bee was established in a log-cabin, back to which he was brought when he was mortally wounded, and to which I shall again allude. General Bee ordered us to unharness the horses and bivouac in the fence corners, adding, "You will need all the rest you can get, for a great battle will begin in the morning."

A little after daybreak we were aroused by the sharp, ringing report of a great Parrott gun across Bull Run, two miles away, and the whizzing of a thirty-pounder elongated shell over the tree-tops, four or five hundred yards to our left. Instantly every man was on his feet, and in five minutes the horses were harnessed and hitched to the guns and caissons. General Bee beckoned to me to come up to the porch, where he was standing in his shirt sleeves, having also been aroused by the shot. He rapidly informed me of the disposition of our troops of Johnston's army so far as they had arrived at Manassas. His own brigade had been brought forward by rail the evening before. Above all, he was dissatisfied at the prospect of not participating prominently in the battle, saying he had been ordered to the Stone Bridge, three or four miles away on our extreme left, to cover the left flank of the army from any movement that might be made against it. And as he had been directed to take a battery with him, he had selected mine, and wished me to move at once. He gave me a guide, and said he would follow immediately with his infantry. When I told him we had been twenty-four hours without food

for men and horses, he said he would order supplies to follow, remarking, "You will have plenty of time to cook and eat, to the music of a battle in which we will probably take little or no part."

Away we went, retracing our steps to the Junction, and by a westerly detour striking into the Sudley road, at a point half-way between the Junction and the scene of the battle. After an hour or so we were ascending the hill to the Lewis house, or "Portici," where Brigadier-General St. George Cocke, of Virginia, was camped with a small brigade. Here a courier at full speed met us with news that the whole Federal army seemed to be marching north-westerly on the other side of Bull Run. Halting my men, I rode to the top of the hill, and had a full view of a long column of glittering bayonets moving up on the north side of the creek. Glancing down the valley, I saw Bee's brigade advancing, and galloped to meet him and report what I had seen. He divined the plans of McDowell, and, asking me to accompany him, rode rapidly past the Lewis house, across the hollow beyond it, and up the next hill through the pines, emerging on the summit immediately east of the Henry house, where the beautiful open landscape in front burst upon his vision.

He exclaimed with enthusiasm: "Here is the battle-field, and we are in for it! Bring up your guns, as quickly as possible, and I'll look round for a good position."

In less than twenty minutes I and my battery had passed the Lewis house, when I discovered Bee coming out of the pines. He stopped, and, placing his cap on his sword-point, waved it almost frantically as a signal to hurry forward. We went at a gallop, and were guided to a depression in the ground about one hundred yards to the north-east of the Henry house, where we unlimbered. With his keen military eye, General Bee had chosen the best possible position for a battery on all that battle-field. We were almost under cover by reason of a slight swell in the ground immediately in our front, and not fifty feet away. Our shot passed not six inches above the surface of the ground on this "swell," and the recoil ran the guns back to still lower ground, where only the heads of my men were visible to the enemy when loading.

We were none too soon in position; for, by the time we had unlimbered, Captain Ricketts, appearing on the crest of the opposite hill, came beautifully and gallantly into battery at a gallop, a short distance from the Matthews house on our side of the Sudley road, and about fifteen hundred yards to our front. I wanted to open on him whilst he was unlimbering, but General Bee objected till we

had received a fire, and had thus ascertained the character and caliber of the enemy's guns. Mine, six in number, were all smooth-bore six-pounders, brass.

The first round or two from the enemy went high over us. Seeing this, General Bee directed us to fire low and ricochet our shot and shrapnel on the hard, smooth, open field that sloped towards the Warrenton turnpike in the valley between us. The effect was very destructive to the enemy.

The rapid massing of troops in our front soon led to very heavy fighting. My little battery was under a pitiless fire for a long time. Two guns from an Alexandria battery — Latham's, I think — took part in the conflict on the north side of Young's Branch to our right and across the turnpike, so long as Bee, Bartow, Evans, and Wheat were on that side, we firing over their heads; and about eleven o'clock two brass twelve-pounder Napoleons from the New Orleans Washington Artillery unlimbered on our right, but only remained for a few rounds, and then retired.

We were hardly more than fairly engaged with Ricketts when Griffin's splendid battery appeared in our front, and took position full five hundred yards nearer to us, in a field on the left of the Sudley road, counting from our position on the right of that road. Ricketts had six Parrott guns, and Griffin had as many more, and, I think, two twelve-pounder howitzers besides. These last hurt us more than all the rifles of both batteries, since the shot and shell of the rifles, striking the ground at any angle over fifteen or twenty degrees, almost without exception bored their way in several feet and did no harm. It is no exaggeration to say that hundreds of shells from these fine rifle-guns exploded in front of and around my battery that day, but so deep in the ground that the fragments never came out. After the action the ground looked as though a drove of hogs had been rooting there for potatoes. I venture the opinion here, after a good deal of observation during four years, that in open ground at 1000 yards a six-pounder battery of smooth guns, or at 1500 to 1800 yards, a similar battery of twelve-pounder Napoleons, well handled, will in one hour whip double their number of the best rifles ever put in the field. A smooth-bore gun never buries its projectiles in the ground, as the rifle does invariably when fired against sloping ground. Of course, this advantage of the smooth-bore gun is limited to its shorter range, and to an open field fight, unprotected by defensive works.

For at least a half hour after our forces were driven across Young's Branch no Confederate soldier was visible from our position

near the Henry house. The Staunton Artillery, so far as we could see, was "alone in its glory." General Bee's order had been, "Stay here till you are ordered away." To my surprise, no orders had come, though, as I afterward learned, orders to withdraw had been sent three-quarters of an hour before through Major Howard, of Bee's staff. Howard fell, desperately wounded, on the way, and could not deliver the message.

Infantry was now massing near the Stone house on the turnpike, not 500 yards away, to charge and capture us. On making this discovery and learning from the sergeants of pieces that our ammunition was almost entirely exhausted, there remained but one way to save our guns, and that was to run them off the field. More than half of our horses had been killed, one or two, only, being left in several of my six-horse teams. The living animals were quickly divided amongst the guns and caissons, and we limbered up and fled. Then it was that the Henry house was riddled, and the old lady, Mrs. Henry, was mortally wounded; for our line of retreat was so chosen that for two or three hundred yards the house would conceal us from Griffin's battery, and, in a measure, shelter us from the dreaded fire of the infantry when they should reach the crest we had just abandoned. Several of Griffin's shot passed through the house, scattering shingles, boards, and splinters all around us. A rifle-shot from Ricketts broke the axle of one of our guns and dropped the gun in the field, but we saved the limber. The charging infantry gained the crest in front of the Henry house in time to give us one volley, but with no serious damage.

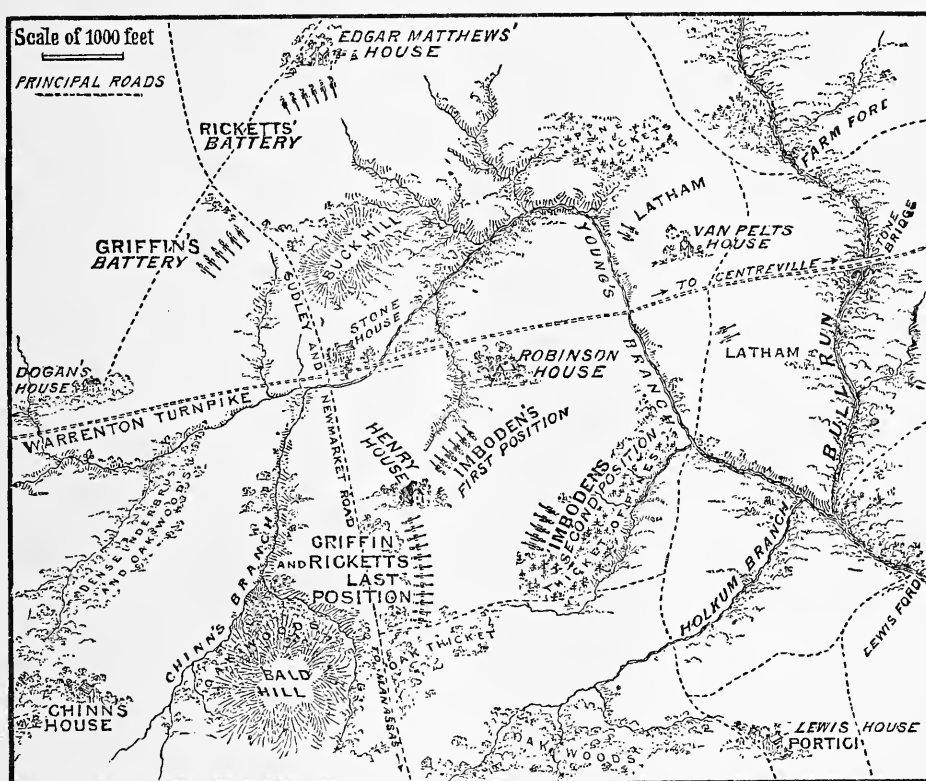

We crossed the summit at the edge of the pines, midway behind the Henry and Robinson houses, and there met "Stonewall" Jackson at the head of his brigade, marching by the flank at a double-quick. Johnston and Beauregard had arrived upon the field and were hurrying troops into position, but we had not yet seen them.

When I met Jackson I felt very angry at what I then regarded as bad treatment from General Bee, in leaving us so long exposed to capture, and I expressed myself with some profanity, which I could see was displeasing to Jackson. He remarked, "I'll support your battery. Unlimber right here." We did so, when a perfect lull in the conflict ensued for twenty or thirty minutes — at least in that part of the field.

It was at this time that McDowell committed, as I think, the fatal blunder of the day, by ordering both Ricketts' and Griffin's batteries to cease firing and move across the turnpike to the top of the Henry Hill,

taking position on the west side of the house. The short time required to effect the change enabled Beauregard to arrange his new line of battle on the highest crest of the hill, south-east of the Henry and Robinson houses, in the edge of the pines. If one of the Federal batteries had been left north of Young's Branch, it could have so swept the hill-top where we re-formed, that it would have greatly delayed, if it had not wholly prevented, us from occupying the position. And if we had been forced back to the next hill, on which stands the Lewis house, Sherman, who had crossed Bull Run not far above the Stone Bridge, would have had a fair swing at our right flank, to say nothing of the effect of artillery playing upon us from beyond Bull Run.

guns on a heavy column of the enemy, who were advancing towards us, in the direction of the Chinn house, but were still twelve to fifteen hundred yards away. Whilst we were thus engaged, General Jackson rode up and said that three or four batteries were approaching rapidly; and we might soon retire. I again asked permission to fire the three rounds of shrapnel left to us. He said: "Go ahead." I picked up a charge (the fuse was cut and ready) and rammed it home myself, remarking to Harman, "Tom, put in the primer and pull her off." I forgot to step back far enough from the muzzle, and, as I wanted to see the shell strike, I squatted to be under the smoke, and gave the word "Fire." Heavens! what a report! I thought the gun had burst,

PLAN OF THE BULL RUN BATTLE-FIELD.

Imboden's second position in the edge of the pines, is on the line of the Confederate front as formed by General Jackson. Finally the Confederate line reached from behind the Robinson house to the left along the edge of the pines, and (as reinforcements came up) made a concave arc to a point behind the Chinn house.

General Imboden counted twenty-six Confederate guns in the semi-circle east of the Sudley road, when Griffin and Ricketts had taken position near the Henry house. About 2 P. M. Bee and Bartow were shot in the charge upon these Union batteries and their supports.—ED.

When my retiring battery met Jackson, and he assumed command of us, I reported that I had left only three rounds of ammunition, for a single gun. I wanted to send the caissons to the rear for a supply. He said, "No, not now — wait till other guns get here, and then you can withdraw your battery, as it has been so torn to pieces, and let your men rest."

For a time thereafter everything was quiet in our front; my men were lying round, nearly dead for water and food, and black with powder, smoke, and dust. Lieutenant Harman and I had been amusing ourselves training one of the

and in a moment of consciousness felt as if my head was blown off. But it was only the pent-up gas, escaping sideways as the shot cleared the muzzle, that struck my side and head, and threw me full twenty feet away. I recovered in time to see the shell explode in the enemy's ranks at a spot where, the next day, we found five or six bodies badly mangled. The blood gushed out of my left ear, and from that day to this it has been totally deaf. The men fired the other two rounds, and limbered up and moved away, just as the Rockbridge artillery, under Lieutenant

Brockenbrough, came into position, and, a moment later, the Leesburg artillery, under Lieutenant Henry Heaton. Pendleton, captain of the first, and Rogers, of the second, were not with their batteries when they unlimbered, nor at any time afterwards, as long as I was with them, during the action. But Heaton and Brockenbrough were more than equal to the occasion. Heaton particularly, who had been under my command with his battery at the Point of Rocks, below Harper's Ferry, the previous May, was a brave and skillful young officer. Several other batteries soon came into line, so that by the time Griffin and Ricketts were in position near the Henry house, we had, as I now remember, twenty-six fresh guns ready for them.

The fighting was renewed, and was terrific. Jackson ordered me to go from battery to battery and see that the guns were properly aimed and the fuses cut the right length. This was the work of but a few minutes. On returning to the left of the line of guns, I stopped to ask General Jackson's permission to rejoin my battery. The fight was just then hot enough to make him feel well. His eyes fairly blazed. He had a way of throwing up his left hand with the open palm towards the person he was addressing. He threw up his hand as he told me to go. The air was full of flying missiles, and as he spoke he jerked down his hand, and I saw the blood was streaming from it. I exclaimed, "General, you are wounded." He replied, as he drew a handkerchief from his breast pocket, and began to bind it up, "Only a scratch — a mere scratch," and galloped away along his line.

To save my horse, I had hitched him to a persimmon tree in a little gully some fifty yards or more in the rear. I had become a little careful of the faithful beast on account of two narrow escapes. Whilst readjusting the teams at our first position, I had ridden to my left, nearly in front of the Henry house. Several of Griffin's guns appeared to be trained on me. A rifle shell burrowed under the horse, and, exploding in the ground, covered him with dirt, but did no damage. A fragment of another shell from overhead cut my canteen open, and wasted a pint of very good brandy, that would have been a boon a little later on. His other escape was during our flight after we got behind the Henry house. An unexploded rifle shell grazed his neck, taking off a little of the mane about a foot from his head, bringing him to his knees by the concussion.

To reach my horse after Jackson had given me permission to rejoin my battery, I had to pass the infantry of Hampton's Legion, who were lying down in supporting distance of

our artillery, then all in full play. (Colonel Wade Hampton's "Legion" at that time, as I remember, consisted of a regiment of infantry, a battalion of cavalry, and a four-gun battery of horse artillery.) Whilst untying my horse, a shell exploded in the midst of Hampton's infantry, killing several and stampeding fifteen or twenty nearest the spot. I tried to rally them; but one huge fellow, musket in hand with bayonet fixed, had started on a run. I threw myself in his front with drawn sword, and threatened to cut him down, whereupon he made a lunge at me. I threw up my left arm to ward off the blow, but the bayonet-point ran under the wristband of my red flannel shirt, and raked the skin of my arm from wrist to shoulder. The blow knocked me sprawling on the ground, and the fellow got away. I tore off the dangling shirt-sleeve, and was barearmed as to my left, the remainder of the fight.

I overtook my battery on the hill near the Lewis house (used as a hospital), in a field in front of which I saw General Johnston and staff grouped on their horses, and under fire from numerous shells that reached that hill. I rode up to General Johnston, reported our ammunition all gone, and requested to know where I could find the ordnance wagons and get a fresh supply. Observing the sorry plight of the battery and the condition of the surviving men and horses, he directed me to remove them farther to the rear to a place of perfect safety for men and horses, and return myself to the field, where I might be of some service. I took the battery back perhaps a mile, where we found a little stream of water, so welcome to men and horses. Being greatly exhausted, I rested for perhaps an hour, and returned to the front with Sergeant Thomas Shumate, a favorite in the battery, and always eager for action.

When we regained the crest of the Henry plateau, the enemy had been swept from it, and the retreat had begun all along the line. We gazed upon the scene for a time, and, hearing firing between the Lewis house and the Stone Bridge, we rode back to see what it meant. Captain Lindsay Walker had arrived from Fredericksburg with his six-Parrott-gun battery, and from a high hill was shelling the fugitives beyond Bull Run as they were fleeing in wild disorder to the shelter of the nearest woods. General J. E. B. Stuart, at the head of a body of yelling cavalry with drawn sabers, was sweeping round the base of the hill we were on, to cross the Run and fall upon the mob hurrying toward Centreville.

When Stuart disappeared in the distance, Sergeant Shumate and I rode slowly back

toward where I had left my battery. Nearing the Lewis house, we saw General Johnston and his staff coming toward us slowly, preceded a little by a solitary horseman some paces in advance, who was lifting his hat to every one he met. From the likeness I had seen of President Jefferson Davis, I instantly recognized him and told Shumate who it was. With the impulsiveness of his nature, Shumate dashed up to the President, seized his hand, and huzzahed at the top of his voice. I could see that Mr. Davis was greatly amused, and I was convulsed with laughter. When they came within twenty steps of me, where I had halted to let the group pass, Shumate exclaimed, to the great amusement of all who heard him: "Mr. President, there's my captain, and I want to introduce *you* to *him*."

The President eyed me for a moment, as if he thought I was an odd-looking captain. I had on a battered slouch hat, a red flannel shirt with only one sleeve, corduroy trousers, and heavy cavalry boots. I was begrimed with burnt powder, dust, and blood from my ear and arm, and must have been about as hard-looking a specimen of a captain as was ever seen. Nevertheless, the President grasped my hand with a cordial salutation, and after a few words passed on.

We found our battery refreshing themselves on fat bacon and bread. After a hasty meal, I threw myself on a bag of oats, and slept till broad daylight next morning, notwithstanding a drenching rain, which beat upon me during the night.

In fact, I was aroused in the morning by a messenger from ex-Governor Alston, of South Carolina, summoning me to the side of my gallant commander, Brigadier-General Bee, who had been mortally wounded near the Henry house, where Bartow was instantly killed almost at the same moment. When I reached General Bee, who had been carried back to the cabin where I had joined him the night before, he was unconscious, and died in a few minutes whilst I was holding his hand. Some one during the night had told him that I had reflected on him for so long leaving our battery exposed to capture; and, at his request, messengers had been for hours hunting me in the darkness, to bring me to him, that I might learn from his own lips that he had sent Major Howard to order me to withdraw, when he was driven back across Young's Branch and the turnpike. I was grieved deeply not to have seen him sooner. Possibly the failure of his order to reach me was providential. For full three-quarters of an hour we kept up a fire that delayed the enemy's movement across Young's Branch. But for that, they might

have gained the Henry plateau, before Jackson and Hampton came up, and before Bee and Bartow had rallied their disorganized troops. Minutes count as hours under such circumstances, and trifles often turn the scale in great battles.

General Jackson's wound, received under the circumstances I have described, became very serious when inflammation set in. On hearing, three days after the fight, that he was suffering with it, I rode to his quarters, in a little farm-house near Centreville. Although it was barely sunrise, he was out under the trees, bathing the hand with spring water. It was much swollen and very painful, but he bore himself stoically. His wife and baby had arrived the night before. His little daughter Julia was still in long dresses, and I remember tossing her, to her great delight, while breakfast was being made ready on a rude table under the trees. Of course, the battle was the only topic discussed at breakfast. I remarked, in Mrs. Jackson's hearing, "General, how is it that you can keep so cool, and appear so utterly insensible to danger in such a storm of shell and bullets as rained about you when your hand was hit?" He instantly became grave and reverential in his manner, and answered, in a low tone of great earnestness: "Captain, my religious belief teaches me to feel as safe in battle as in bed. God has fixed the time for my death. I do not concern myself about *that*, but to be always ready, no matter when it may overtake me." He added, after a pause, looking me full in the face: "Captain, that is the way all men should live, and then all would be equally brave."

I felt that this last remark was intended as a rebuke for my profanity, when I had complained to him on the field of the apparent abandonment of my battery to capture, and I apologized. He heard me, and simply said, "Nothing can justify profanity."

I never knew him to let profanity pass without a rebuke but once. The incident was reported to me by the chief actor in it, Major John A. Harman, who was Jackson's chief quartermaster, and a man of extraordinary qualifications. It happened at Edwards Ferry, on the Potomac, when our army was crossing into Maryland in the Antietam campaign. Major-General D. H. Hill's division was crossing, when Jackson rode up, and found the ford completely blocked with Hill's wagon-train. He spoke sharply to Hill (who was his brother-in-law, they having married sisters) for allowing such confusion. General Hill replied that *he* was not a quartermaster, or something that implied it was no part of his business to get tangled wagons out of the river. Jackson instantly put Hill in

arrest, and, turning to Major Harman, ordered him to clear the ford. Harman dashed in among the wagoners, kicking mules, and apparently inextricable mass of wagons, and, in the voice of a stentor, poured out a volume of oaths that would have excited the admiration of the most scientific mule-driver. The effect was electrical. The drivers were frightened and swore as best they could, but far below the Major's standard. The mules caught the inspiration from a chorus of familiar words, and all at once made a break for the Maryland shore, and in five minutes the ford was cleared. Jackson witnessed and heard it all. Harman rode back to join him, expecting a lecture, and, touching his hat, said: "The ford is clear, General! There's only one language that will make mules understand on a hot day that they must get out of the water." The General, smiling, said: "Thank you, Major," and dashed into the water at the head of his staff.

My aim in these few pages being only to describe some incidents of the battle which came under my own observation, I have not attempted to sketch the progress of the fight, nor to discuss the controversies growing out of it. The duties of the command were appropriately divided between General Johnston, the ranking officer, and General Beauregard, who was in the thickest of the fight, and displayed a heroism which inspired all around him. The battle was mainly fought by Johnston's troops from the Shenandoah. A large majority of the killed and wounded were his men and officers. Beauregard's troops were strung out for several miles down the valley of Bull Run, and did not get up to our aid till near the end of the day. General Beauregard himself came upon the field long before any of his troops arrived, except those he had posted under Evans to guard the Stone Bridge, and which, with Bee's troops, bore the brunt of the first attack.

The uninformed, North and South, have wondered why Johnston and Beauregard did not follow on to Washington. General Johnston, in his "Narrative," has clearly and conclusively answered that question. It was simply impossible. We had neither the food nor transportation at Manassas necessary to a forward movement. This subject was the cause of sharp irritation between our commanding generals at Manassas and Mr. Davis and his Secretary of War, Mr. Benjamin. There was a disposition in the quartermaster's and commissary departments at Richmond to deny the extent of the destitution of our army immediately after the battle. To

ascertain the exact facts of the case, General Johnston organized a board of officers to investigate and report the condition of the transportation and commissariat of the army at Manassas on the 21st of July, and their daily condition for two weeks thereafter. That Board was composed of Lieutenant-Colonel Robert B. Lee (a cousin of General R. E. Lee), representing the commissary department, Major (afterwards Major-General) W. L. Cabell, representing the quartermaster's department, and myself from the line. My associates on this Board were old United States army officers of acknowledged ability and large experience. We organized early in August, and made an exhaustive investigation and detailed report. I have a distinct recollection that we found that there was not at Manassas one full day's rations on the morning of the battle (July 21) for the combined armies of Johnston and Beauregard, and that on no single day for the succeeding two weeks was there as much as a three days' supply there. We found that there were not wagons and teams enough at any time to have transported three days' supplies for the troops if put in motion away from the railroad. We found that for weeks preceding the 21st of July General Beauregard had been urgent and almost importunate in his demands on the quartermaster and commissary generals at Richmond for adequate supplies. We found that Colonel Northrop, the commissary-general, had not only failed to send forward adequate supplies for such an emergency as arose when General Johnston brought his army from the valley, but that he had interfered with and interdicted the efforts of officers of the department, who were with General Beauregard, to collect supplies from the rich and abundant region lying between the hostile armies. After reporting the facts, we unanimously concurred in the opinion that they proved the impossibility of a successful and rapid pursuit of the defeated enemy to Washington. This report, elaborately written out and signed, was forwarded to Richmond, and in a few days was returned by Mr. Judah P. Benjamin, Secretary of War, with an indorsement to the effect that the Board had transcended its powers by expressing an opinion as to what the facts did or did not prove, and sharply ordering us to strike out all that part of the report, and send only the facts ascertained by us. We met and complied with this order, though indignant at the reprimand, and returned our amended report. That was the last I ever heard of it. It never saw daylight. Who suppressed it I do not know.

Jno. D. Imboden.

MANASSAS TO SEVEN PINES.

A REPLY TO JEFFERSON DAVIS,—INCLUDING DESCRIPTIONS OF THE BATTLES OF BULL RUN AND SEVEN PINES.

SUDLEY SPRINGS FORD, LOOKING SOUTH.

On the right, ruins of Sudley mineral springs. On the hill, Sudley Church—a hospital in the two battles of Bull Run. The wagon is on the Sudley and Manassas road. It is a mile from the ford to where Ricketts first planted his battery.—ED.

WHEN the State of Virginia seceded, being a citizen of that State, I resigned my office in the United States Army. And as I had seen a good deal of military service, in the Seminole and Mexican wars and in the West, the President of the Confederacy offered me a commission in the highest grade in his army. I accepted the offer because the invasion of the South was inevitable. But I soon incurred Mr. Davis's displeasure by protesting against an illegal act of his by which I was greatly wronged. Still he retained me in important positions, although his official letters were harsh. In 1864, however, he degraded me to the utmost of his power by summarily removing me from a high command. Believing that he was prompted to this act by animosity, and not by dispassionate opinion, I undertake to prove this animosity by many extracts from his "Rise and Fall of the Confederacy" (D. Appleton & Co.: 1881), and my comments thereon.

A QUESTION OF RANK.

MR. DAVIS recites (Vol. I., p. 307) the law securing to officers who might leave the United States Army to enter that of the Confederacy the same relative rank in the latter which they had in the former, provided their resignations had been offered in the six months next following the 14th of March, and then adds:

"The provisions hereof are in the view entertained, that the army was of the States, not of the Government, and was to secure to officers adhering to the

Confederate States the same relative rank which they had before those States had withdrawn from the Union. . . .

"How well the Government observed both the letter and spirit of the law will be seen by reference to its action in the matter of appointments."

Those of the five generals were the most prominent, of course. All had resigned within the time prescribed. Their relative rank in the United States Army just before secession was: 1st, J. E. Johnston, Brigadier-General; 2d, S. Cooper, Colonel; 3d, A. S. Johnston, Colonel; 4th, R. E. Lee, Lieutenant-Colonel; and 5th, G. T. Beauregard, Major. All of them but the 3d had previous appointments, when, on the 31st of August, the Government announced new ones: S. Cooper's being dated May 16, A. S. Johnston's May 28, R. E. Lee's June 14, J. E. Johnston's July 4, and G. T. Beauregard's July 21. So the law was violated, 1st, by disregarding existing commissions; 2d, by giving different instead of the same dates to commissions; and 3d, by not recognizing previous rank in the United States Army. The only effect of this triple violation of law was to reduce J. E. Johnston from the first to the fourth place, which, of course, must have been its object.

"It is a noteworthy fact [he continues] that the three highest officers in rank . . . were all so indifferent to any question of personal interest that they had received their appointment before they were aware it was to be conferred."

This implies that the conduct described was unusual. On the contrary, it was that of the body of officers who left the United States Army to enter that of the Confederacy. It is strange that the author should disparage so many honorable men. He states (page 309) that General Lee, when ordered from Richmond to the South for the first time, asked what rank he held in the army: "So wholly had his heart and his mind been consecrated to the public service that he had not remembered if he ever knew of his advancement."

As each grade has its duties, an officer cannot know his duty if ignorant of his rank. Therefore General Lee always knew his rank, for he never failed in his duty. Besides, his official correspondence at the time referred to shows that he knew that he was major-general of the Virginia forces until May 25, 1861, and a Confederate general after that date.

THE MOVEMENT FROM THE SHENANDOAH
TO MANASSAS.

DESCRIBING the events which immediately preceded the battle of Manassas, Mr. Davis says (page 340) :

"The forces there assembled [in Virginia] were divided into three armies, at positions the most important and threatened. One, under General J. E. Johnston, at Harper's Ferry, covering the valley of the Shenandoah. . . .

"Harper's Ferry was an important position both for military and political considerations. . . . The demonstrations of General Patterson, commanding the Federal army in that region, caused General Johnston earnestly to insist on being allowed to retire to a position nearer to Winchester."

Harper's Ferry is twenty-two miles east of the route into the Shenandoah Valley, and could be held only by an army strong enough to drive an enemy from the heights north and east of it. So it is anything but an important position. These objections were expressed to the Government two days after my arrival, and I suggested the being permitted to move the troops as might be necessary. All this before General Patterson had advanced from Chambersburg.

The assertion in the first sentence of General Cooper's letter (page 341)—"You had been heretofore instructed to exercise your discretion as to retiring from your position at Harper's Ferry"—is incorrect. No such instructions had been given. The last instructions on the subject received by me are in General Lee's letter of June 7. ("War Records," Vol. II. page 910.)

On page 341 Mr. Davis says: "The temporary occupation [of Harper's Ferry] was especially needful for the removal of the valuable machinery and material in the armory located there." The removal of the machinery was not an object referred to in General Cooper's letter. But the presence of our army anywhere in the Valley within a day's march of the position, would have protected that removal.

That letter (page 341) was received two days after the army left Harper's Ferry to meet General McClellan's troops, believed by intelligent people of Winchester to be approaching from the west.

On page 345 he says it was a difficult problem to know which army, whether Beauregard's at Manassas or Johnston's in the Valley, should be reënforced by the other, because these generals were "each asking reënforcements from the other." All that was written by me on the subject is in the letter (page 345) dated July 9: "I have not asked for reënforcements because I supposed that the War Department, informed of the state of

affairs everywhere, could best judge where the troops at its disposal are most required. . . . If it is proposed to strengthen us against the attack I suggest as soon to be made, it seems to me that General Beauregard might with *great expedition* furnish five or six thousand men for a few days."

Mr. Davis says, after quoting from this letter:

"As soon as I became satisfied that Manassas was the objective point of the enemy's movement, I wrote to General Johnston urging him to make preparations for a junction with General Beauregard."

There is abundant evidence that the Southern President never thought of transferring the troops in the "Valley" to Manassas until the proper time to do it came—that is, when McDowell was known to be advancing. This fact is shown by the anxiety he expressed to increase the number of those troops.* And General Lee, writing to Mr. Davis in November, 1861 ("War Records," Vol. II., p. 515), says in regard to General Beauregard's suggestion that he be reënforced from my army:

"You decided that the movements of the enemy in and about Alexandria were not sufficiently demonstrative to warrant the withdrawing of any of the troops from the Shenandoah Valley. A few days afterwards, however,—I think three or four,—the reports from General Beauregard showed so clearly the enemy's purpose, that you ordered General Johnston, with his effective force, to march at once to the support of General Beauregard."

This letter is in reply to one from Mr. Davis, to the effect that statements had been widely published to show that General Beauregard's forces had been held inactive by his (Mr. Davis's) rejection of plans for vigorous offensive operations proposed to him by the general, and desiring to know of General Lee what those plans were, and why they were rejected.

"On the 17th of July, 1861," says Mr. Davis (page 346), "the following telegram was sent by the adjutant-general" to General J. E. Johnston, Winchester, Va.:

"General Beauregard is attacked. To strike the enemy a decisive blow, a junction of all your effective force will be needed. If practicable, make the movement, sending your sick and baggage to Culpeper Court House, either by railroad or by Warrenton. In all the arrangements exercise your discretion. [Signed] S. COOPER, Adjutant and Inspector General."

Mr. Davis asserts that I claim that discretion was given me by the words "all the arrangements." I claimed it from what he terms the only positive part of the order, viz., "If practicable, make the movement, sending your sick to Culpeper Court House."

"The sending the sick to Culpeper Court House [Mr. Davis adds] might have been after or before the effective force had moved to the execution of the main and only positive part of the order."

* See "War Records," Vol. II., letters on pages 924, 935, 940, 973, 976, 977.

“Make the movement” would have been a positive order, but “if practicable” deprived it of that character, and gave the officer receiving it a certain discretion. But, as the movement desired was made promptly, it was surely idle to discuss, twenty years after, whether the officer could lawfully have done what he *did not do*. At the time the decision of such a question might have been necessary; but, as Mr. Davis will give no more orders to generals, and as the officer concerned will execute no more, such a discussion is idle now. The use of the wagons required in the march of the army would have been necessary to remove the sick to the railroad station at Strasburg, eighteen miles distant; so this removal could *not* have been made *after* the march. There being seventeen hundred sick, this part of their transportation would have required more time than the transfer of the troops to Manassas, which was the important thing. The sick were, therefore, properly and quickly provided for in Winchester. I was the only judge of the “practicable”; and “if practicable” refers to the whole sentence—as much to sending the sick to Culpeper as to “make the movement.” Still he says (page 347):

“His [my] letters of the 12th and 13th expressed his doubts about his power to retire from before the superior force of General Patterson. Therefore, the word ‘practicable’ was in that connection the equivalent of ‘possible.’”

It is immaterial whether “if practicable” or “if possible” was written. I was the only judge of the possibility or practicability; and, if General Patterson had not changed his position after the telegram was received, I might have thought it necessary to attack him, to “make the movement practicable.” But as to my power to retire. On the 15th General Patterson’s forces were half a day’s march from us, and on the 12th more than a day’s march; and, as Stuart’s cavalry did not permit the enemy to observe us, retreat would have been easy, and I could not possibly have written to the contrary.*

As to Mr. Davis’s telegram (page 348), and the anxiety in Mr. Davis’s mind lest there should be some unfortunate misunderstanding between General Beauregard and me,—my inquiry was intended and calculated to establish beyond dispute our relative positions. As a Confederate brigadier-general I had been junior to General Beauregard, but was cre-

ated general by act of Congress. But, as this had not been published to the army, it was not certain that it was known at Manassas. If it was not, the President’s telegram gave the information, and prevented what he seems to have apprehended.

THE BATTLE OF BULL RUN.†

ON page 349 to the end of the chapter, the President describes his visit to the field of battle near Manassas. “As we advanced,” he says, “the storm of battle was rolling westward.” But, in fact, the fighting ceased before he left Manassas. He then mentions meeting me on a hill which commanded a general view of the field, and proceeding farther west, where he saw a Federal “column,” which a Confederate squadron charged and put to flight. But the captain in command of this squadron says in his report that the column seen was a party of our troops. Mr. Davis also dilates on the suffering of our troops for want of supplies and camp equipage, and on his efforts to have them provided for. After the battle ended, officers were duly directed by me to have food brought to the ground where the troops were to pass the night.

I was not in the conference described by Mr. Davis (pages 353, 354, 355). Having left the field after ten o’clock, and ridden in the dark slowly, it was about half-past eleven when I found the President and General Beauregard together, in the latter’s quarters at Manassas. We three conversed an hour or more without referring to pursuit or an advance upon Washington. The “conference” described by him must have occurred before my arrival, and Mr. Davis may very well have forgotten that I was not present then.

But, when the President wrote, he had forgotten the subject of the conference he described; for the result, as he states it, was an order, not for pursuit by the army, but for the detail of two parties to collect wounded men and abandoned property near the field of battle. This order (pages 355, 356) is “to the same effect,” Mr. Davis says, as the one he wrote, and which he terms a direction to pursue the Federal army at early dawn.

It is asserted (page 354) that I left the command over both Confederate armies in General Beauregard’s hands during the engagement. Such conduct would have been as base as flight from the field in the heat of

* Mr. Davis has a few words of praise for General Johnston, which, in this connection, will be of interest to the reader: “It gives me pleasure to state that, from all the accounts received at the time, the plans of General Johnston for masking his withdrawal to form a junction with General Beauregard were conducted with marked skill” (page 347).—ED.

† For views of the field and pictorial incidents of the battle of Bull Run, see General Beauregard’s paper in *THE CENTURY* for November, 1884.

battle, and would have brought upon me the contempt of every honorable soldier. It is disproved by the fact that General Beauregard was willing to serve under me there, and again in North Carolina, near the close of the war; and associated with me. As this accusation is published by the Southern President, and indorsed by General Beauregard, it requires my contradiction.

Instead of leaving the command in General Beauregard's hands, I assumed it over both armies immediately after my arrival on the 20th, showing General Beauregard as my warrant the President's telegram defining my position. The usual order* assuming command was written and sent to General Beauregard's office for distribution. He was then told that as General Patterson would no doubt hasten to join General McDowell as soon as he discovered my movement, we must attack the Federal army next morning. General Beauregard then pointed out on a map of the neighborhood the roads leading to the enemy's camp at Centreville from the different parts of our line south of the stream, and the positions of the brigades near each road; and a simple order of march, by which our troops would unite near the Federal position, was sketched. Having had neither sleep nor recumbent rest since the morning of the 17th, I begged General Beauregard to put this order of march on paper, and have the necessary copies made and sent to me for inspection in a grove, near, where I expected to be resting; this in time for distribution before night. This distribution was to be by him, the immediate commander of most of the troops. Seeing that eight brigades were on the right of the line to Centreville, and but one to the left of it at a distance of four miles, I desired General Beauregard to have Bee's and Jackson's brigades placed in this interval near the detached brigade.

The papers were brought to me a little before sunrise next morning. They differed greatly from the order sketched the day before; but as they would put the troops in motion if distributed, it would be easy then to direct the course of each division. By the order sketched the day before, all our forces would have been concentrated near Centreville, to attack the Federal army. By that prepared by General Beauregard but four brigades were directed "to the attack of Centreville," of which one and a half had not yet arrived from the Valley, while six brigades were to move forward to the Union Mills and Centreville road, there to hold themselves in readi-

ness to support the attack on Centreville, or to move, two to Sangster's cross-roads, two to Fairfax Station, and two to Fairfax Court House. The two and a half brigades on the ground, even supported by the half brigade of the reserve also on the ground, in all probability would have been defeated by the whole Federal army before the three bodies of two brigades each could have come to their aid, over distances of from three to five miles. Then, if the enemy had providentially been defeated by one-sixth or one-eighth of their number, Sangster's cross-roads and Fairfax Station were out of their line of retreat.

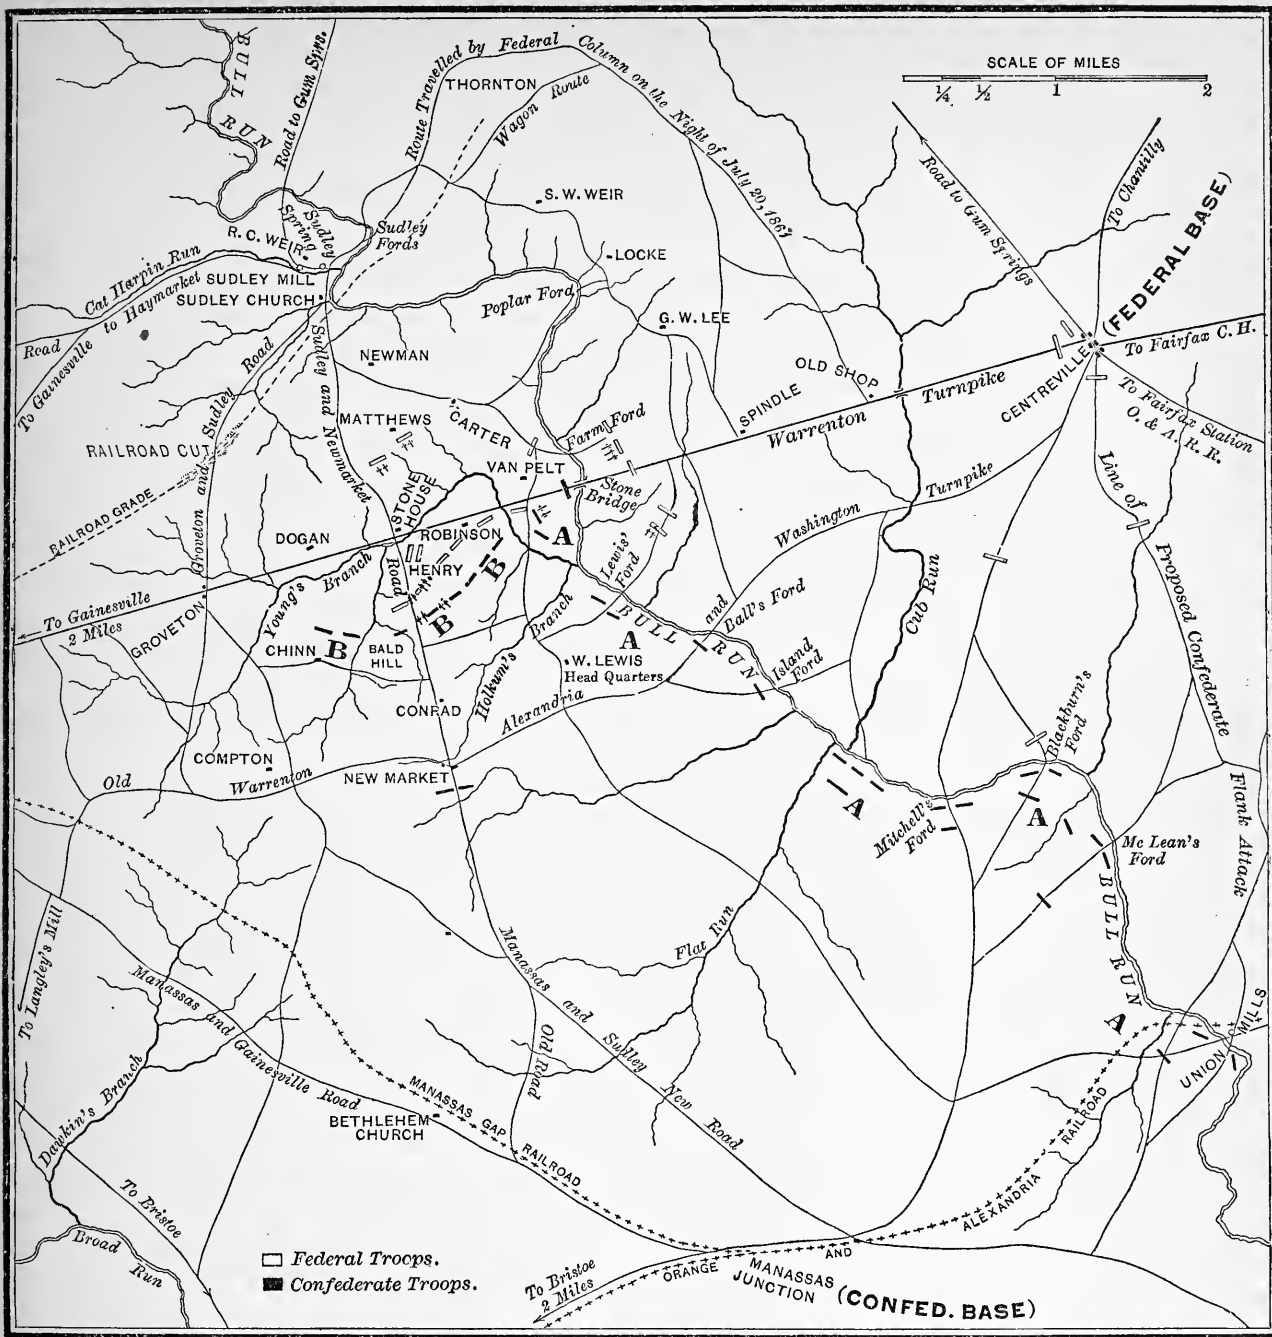

Soon after sunrise on the 21st, it was reported that a large body of Federal troops was approaching on the Warrenton Turnpike. This offensive movement of the enemy would have *frustrated our plan of the day before*, if the orders for it had been delivered to the troops. It appears from the reports of the commanders of the six brigades on the right that but one of them, General Longstreet, received it. Learning that Bee's and Jackson's brigades were still on the right, I again desired General Beauregard to transfer them to the left, which he did, giving the same orders to Hampton's Legion, just arrived. These, with Coker's brigade then near the turnpike, would necessarily receive the threatened attack.

General Beauregard then suggested that all our troops on the right should move rapidly to the left and assail the attacking Federal troops in flank. This suggestion was accepted; and together we joined those troops. Three of the four brigades of the first line, at Mitchell's, Blackburn's, and McLean's fords, reported strong bodies of United States troops on the wooded heights before them. This *frustrated the second plan*. Two Federal batteries—one in front of Bonham's brigade at Mitchell's ford, the other before Longstreet's at Blackburn's ford—were annoying us, although their firing was slow.

About 8 o'clock, after receiving such information as scouts could give, I left General Beauregard near Longstreet's position, and placed myself on Lookout Hill, in rear of Mitchell's ford, to await the development of the enemy's designs. About 9 o'clock the signal officer, Captain Alexander, reported that a column of Federal troops could be seen crossing the valley of Bull Run, two miles beyond our left.

General McDowell had been instructed by the general-in-chief to pass the Confederate right and seize the railroad in our rear. But, learning that the district to be passed

* General J. A. Early, in his narrative of these events, says: "During the 20th, General Johnston arrived at Manassas Junction by the railroad, and that day we received the order from him assuming command of the combined armies of General Beauregard and himself."—J. E. J.

GENERAL MAP OF THE BATTLE-FIELD OF MANASSAS.

(For full-page topographical map of the field, see THE CENTURY for November, 1884.)

through was rugged and covered with woods, and therefore unfavorable to a large army, he determined, after devoting three days to reconnoissance, to operate on the open and favorable ground to his right, and turn our left. He had another object in this second plan, and an important one—that this course would place his between the two Confederate armies, and prevent their junction; and if it had been made a day or two sooner, this manœuvre would have accomplished that object.

General McDowell marched from Centreville by the Warrenton turnpike with three divisions, sending a fourth division to deceive us by demonstrations in front of our main

body. Leaving the turnpike a half mile from the Stone Bridge, he made a long detour to Sudley ford, where he crossed Bull Run and turned towards Manassas. Colonel Evans, who commanded fourteen companies near the Stone Bridge, discovered this manœuvre, and moved with his little force along the base of the hill north of the turnpike, to place it before the enemy near the Sudley and Manassas road. Here he was assailed by greatly superior numbers, which he resisted obstinately.

General Beauregard had joined me on Lookout Hill, and we could distinctly hear the sounds and see the smoke of the fight. But they indicated no hostile force that Evans's troops and those of Bee, Hampton and Jackson,

which we could see hurrying towards the conflict in that order, were not adequate to resist.

On reaching the broad, level top of the hill south of the turnpike, Bee, appreciating the strength of the position, formed his troops (half of his own and half of Bartow's brigade) on that ground. But seeing Evans struggling against great odds, he crossed the valley and formed on the right and a little in advance of him. Here the five or six regiments, with six field-pieces, held their ground for an hour against 10,000 or 12,000 United States troops, when, finding they were overlapped on each flank by the continually arriving enemy, General Bee fell back to the position from which he had moved to rescue Evans—crossing the valley, closely pressed by the Federal army.

Hampton with his legion reached the valley as the retrograde movement began. Forming it promptly, he joined in the action, and contributed greatly to the orderly character of the retreat by his courage and admirable soldiery, seconded by the excellent conduct of the gentlemen composing his legion. Imboden and his battery did excellent service on this trying occasion. Bee met Jackson at the head of his brigade, on the position he had first taken, and he began to re-form and Jackson to deploy at the same time.

In the mean time I had been waiting with General Beauregard on Lookout Hill for evidence of General McDowell's design. The violence of the firing on the left indicated a battle, but the large bodies of troops reported by chosen scouts to be facing our right kept me in doubt. But near eleven o'clock reports that those troops were felling trees showed that they were standing on the defensive; and new clouds of dust on the left proved that a large body of Federal troops was arriving on the field. It thus appeared that the enemy's great effort was to be against our left. I expressed this to General Beauregard, and the necessity of reënforcing the brigades engaged, and desired him to send immediate orders to Early and Holmes, of the second line, to hasten to the conflict with their brigades. General Bonham, who was near me, was desired to send up two regiments and a battery. I then set off at a rapid gallop to the scene of action. General Beauregard joined me without a word. Passing on the way Colonel Pendleton with two batteries, I directed him to follow with them as fast as possible.

It now seemed that a battle was to be fought entirely different in place and circumstance from the two plans previously adopted, and abandoned as impracticable. Instead of taking the initiative and operating in front of our line, we were compelled to fight on the defensive more than a mile in rear of that line,

and at right angles to it, on a field selected by General Bee,—with no other plans than those suggested by the changing events of battle.

While we were riding forward General Beauregard suggested to me to assign him to the immediate command of the troops engaged, so that my supervision of the whole field might not be interrupted, to which I assented. So he commanded those troops under me; as elsewhere, lieutenant-generals commanded corps, and major-generals divisions, under me.

When we were near the ground where Bee was re-forming and Jackson deploying his brigade, I saw a regiment in line with ordered arms and facing to the front, but two or three hundred yards in rear of its proper place. On inquiry I learned that it had lost all its field-officers; so, riding on its left flank, I easily marched it to its place. It was the Fourth Alabama, an excellent regiment; and I mention this because the circumstance has been greatly exaggerated.

After the troops were in good battle order I turned to the supervision of the whole field. The enemy's great numerical superiority was discouraging. Yet, from strong faith in Beauregard's capacity and courage, and the high soldierly qualities of Bee and Jackson, I hoped that the fight would be maintained until I could bring adequate reënforcements to their aid. For this Holmes and Early were urged to hasten their march, and Ewell was ordered to follow them with his brigade with all speed. Broken troops were reorganized and led back into the fight with the help of my own and part of General Beauregard's staff. Cocke's brigade was held in rear of the right to observe a large body of Federal troops in a position from which Bee's right flank could have been struck in a few minutes.

After these additions had been made to our troops then engaged, we had nine regiments of infantry, five batteries, and three hundred cavalry of the Army of the Shenandoah, and about two regiments and a half of infantry, six companies of cavalry, and six field-pieces of the Army of the Potomac, holding at bay three divisions of the United States army. The Southern soldiers had, however, two great advantages in the contest: greater skill in the use of fire-arms, and the standing on the defensive, by which they escaped such disorder as advancing under fire produced in the ranks of their adversaries, undisciplined like themselves.

A report received about two o'clock from General Beauregard's office that another United States army was approaching from the north-west, and but a few miles from us, caused me to send orders to Bonham, Longstreet, and Jones to hold their brigades south of Bull Run, and ready to move.

When Bonham's two regiments appeared soon after, Cocke's brigade was ordered into action on our right. Fisher's North Carolina regiment coming up, Bonham's two regiments were directed against the Federal right, and Fisher's was afterwards sent in the same direction; for the enemy's strongest efforts seemed to be directed against our left, as if to separate us from Manassas Junction.

About half-past three o'clock, General E. K. Smith arrived with three regiments of Elzey's brigade, coming from Manassas Junction. He was instructed, through a staff officer sent forward to meet him, to form on the left of our line, his left thrown forward, and attack the enemy in flank. At his request I joined him, directed his course, and gave him these instructions. Before the formation was completed, he fell severely wounded, and while falling from his horse directed Colonel Elzey to take command. That officer appreciated the manœuvre and executed it gallantly and well. General Beauregard promptly seized the opportunity it afforded, and threw forward the whole line. The enemy was driven from the long-contested hill, and the tide of battle at length turned. But the first Federal line driven into the valley was there rallied on a second, the two united presenting a formidable aspect. In the mean time, however, Colonel Early had come upon the field with his brigade. He was instructed by me to make a detour to the left and assail the Federal right in flank. He reached the ground in time, accompanied by Stuart's cavalry and Beckham's battery, and made his attack with a skill and courage which routed the Federal right in a moment. General Beauregard, charging in front, made the rout complete. The Federal right fled in confusion toward the Sudley ford, and the center and left marched off rapidly by the turnpike.

Stuart pursued the fugitives on the Sudley road, and Colonel Radford, with two squadrons I had held in reserve near me during the day, was directed to cross Bull Run at Ball's ford, and strike the column on the turnpike in flank. The number of prisoners taken by these parties of cavalry greatly exceeded their own numbers. But they were too weak to make a serious impression on an army, although a defeated one.

At twenty minutes before five, when the retreat of the enemy toward Centreville began, I sent orders to Brigadier-General Bonham by Lieutenant-Colonel Lay, of his staff, who happened to be with me, to march with his own and Longstreet's brigade (which were nearest Bull Run and the Stone Bridge), by the quickest route, to the turnpike, and form them across it to intercept the retreat of the Federal troops.

But he found so little appearance of rout in those troops as to make the execution of his instructions seem impracticable; so the two brigades returned to their camps. When the retreat began, the body of United States troops that had passed the day on the Centreville side of Bull Run made a demonstration on the rear of our right; which was repelled by Holmes's brigade just arrived.

Soon after the firing ceased, General Ewell reported to me, saying that his brigade was about midway from its camp near Union Mills. He had ridden forward to see the part of the field on which he might be required to serve, to prepare himself to act intelligently.

The victory was as complete as one gained in an open country by infantry and artillery can be. Our cavalry pursued as far as they could effectively; but when they encountered the main column, after dispersing or capturing little parties and stragglers, they could make no impression.

General McDowell marched from the Potomac with 35,000 men in five divisions, three of which (three-fifths) were engaged (about 21,000).

On our side the Army of the Shenandoah had on the field 8000 men; that of the Potomac, as reported, 9477 men; total, 17,477.

| | <i>Killed.</i> | <i>Wound- ed.</i> | <i>Miss- ing.</i> |

| The Army of the Shenandoah lost | 282 | 1582 | 1 |
| “ “ “ Potomac “ | 105 | 519 | 12 |

General Beauregard's first plan of attack was delivered to me by his aide-de-camp, Colonel Chisolm, when I was thirty-four miles from Manassas. It was, that I should leave the railroad at Piedmont Station, thirty-six miles from the enemy at Centreville, and attack him in rear, and when our artillery announced that we had begun the fight, General Beauregard would move up from Bull Run and assail the enemy on that side. I rejected the plan, because such a one would enable an officer of ordinary sense and vigor to defeat our two armies one after the other. For McDowell, by his numerical superiority, could have disposed of my forces in less than two hours, that is to say, before Beauregard could have come up, when he also could have been defeated and the campaign ended.

An opinion seems to prevail with some persons who have written about the battle, that important plans of General Beauregard were executed by him. It is a mistake; the first intention, announced to General Beauregard by me when we met, was to attack the enemy at Centreville as early as possible on the twenty-first. This was anticipated by McDowell's early advance. The second, to attack the Federals in flank near the turnpike with

our main force, suggested by General Beauregard, was prevented by the enemy's occupation of the high ground in front of our right.

As fought, the battle was made by me; Bee's and Jackson's brigades were transferred to the left by me. I decided that the battle was to be there, and directed the measures necessary to maintain it; a most important one being the assignment of General Beauregard to the immediate command of this left which he held. In like manner the senior officer on the right would have commanded there, if the Federal left had attacked.

These facts in relation to the battle are my defense against the accusation indorsed by General Beauregard and published by Mr. Davis.

In an account of the battle published in the November number of *THE CENTURY*, General Beauregard mentions offensive operations he "had designed and ordered against his [adversary's] left flank and rear at Centreville," and censures my friend General R. S. Ewell for their failure. At the time referred to, three of the four Federal divisions were near Bull Run, above the turnpike, and the fourth facing our right, so that troops of ours, going to Centreville then, if not prevented by the Federal division facing them, would have found no enemy. And General Ewell was not, as he reports, "instructed in the plan of attack"; for he says in his official report: ". . . I first received orders to hold myself in readiness to advance at a moment's notice. I next received a copy of an order sent to me by General Jones, in which it was stated that I had been ordered to his support." Three other contradictory orders, he says, followed. As to the comparison with Desaix at Marengo, made by General Beauregard, the circumstances had no resemblance. Desaix was separated from the French army, heard the sounds of battle, knew that he was wanted there, and went there. General Ewell knew that a battle was raging; but knew, too, that all the unengaged brigades were between him and it, and his commander was near enough to give him orders. But he had no reason to suppose that his commander desired him to move to Centreville, where there was then no enemy. There could have been no greater mistake on General Ewell's part than making the movement to Centreville.

A brief passage in my official report of this battle displeased President Davis. In referring to his telegraphic order I gave its meaning very briefly, but accurately — "directing me, if practicable, to go to General Beauregard's assistance, after sending my sick to Culpeper Court House." Mr. Davis objected to the word *after*. Being informed of this by a friend, I cheerfully consented to his expunging the word, be-

cause that would not affect the meaning of the sentence. But the word is still in his harsh indorsement. He also had this passage stricken out: "The delay of sending the sick, nearly 1700 in number, to Culpeper, would have made it impossible to arrive at Manassas in time. They were therefore provided for in Winchester;" and substituted this: "Our sick, nearly 1700 in number, were provided for in Winchester." Being ordered to send the sick to Culpeper as well as to move to Manassas, it was necessary to account for disobedience, which my words did, and which his substitute for them did not.

Mr. Davis (page 359) expresses indignation that, as he says, "Among the articles abandoned by the enemy on the field of Manassas, were handcuffs, the fit appendage of a policeman, not of a soldier." I saw none, nor did I see any one who had seen them.

Mr. Davis states (page 359) that "On the night of the 22d, I held a second conference with Generals Johnston and Beauregard." I was in no conference like that of which account is given on page 360. And one that he had with me on that day proved conclusively that he had no thought of sending our army against Washington; for in it he offered me the command in West Virginia, promising to increase the forces there adequately from those around us.

He says (page 361):

"What discoveries would have been made, and what results would have ensued from the establishment of our guns upon the south bank of the river to open fire upon the capital, are speculative opinions upon which it would be useless to enter."

Mr. Davis seems to have forgotten what was as well known then as now — that our army was more disorganized by victory than that of the United States by defeat; that there were strong fortifications, well manned, to cover the approaches to Washington and prevent the establishment of our guns on the south bank of the river. He knew, too, that we had no means of cannonading the capital, nor a disposition to make barbarous war. He says (page 362):

"When the smoke of battle had lifted from the field . . . some . . . censoriously asked why the fruits of the victory had not been gathered by the capture of Washington City. . . . Then some indiscreet friends of the generals commanding in the battle . . . induced the allegation that the President had prevented the generals from making an immediate and vigorous pursuit of the routed enemy."

Mr. Davis has no ground for this assertion; the generals were attacked first and most severely. It was not until the press had exhausted itself upon them, that some of them turned upon him. On November 3 he wrote to me that reports were circulated to the effect

that he "prevented General Beauregard from pursuing the enemy after the battle of Manassas, and had subsequently restrained him from advancing upon Washington City. . . . I call upon you to say whether I obstructed the pursuit of the enemy after the victory at Manassas, or have ever objected to an advance, or other active operation, which it was feasible for the army to undertake."

I replied on the 10th, answering the first question in the negative, and added an explanation which put the responsibility on myself. I replied to the second question, that it had never been feasible for the army to advance farther toward Washington than it had done, and referred to a conference at Fairfax Court House (Oct. 1, 1861) in reference to leading the army into Maryland, in which he informed the three senior officers that he had not the means of giving the army the strength they considered necessary for offensive operations.

Mr. Davis was displeased by my second reply, because in his mind there was but one question in his letter. I maintain that there are two, namely: (1) Did he obstruct the pursuit of the enemy after the victory at Manassas? (2) Had he ever objected to an advance, or other active operation, which it was feasible for the army to undertake?

The second matter is utterly unconnected with the battle of Manassas, and as the question of advance or other active operation had been discussed nowhere by him, to my knowledge, but at the conference at Fairfax Court House, I supposed that he referred to it. He was dissatisfied with my silence in regard to the conferences he avers took place on July 21 and 22, the first knowledge of which I have derived from his book.

Near the foot of page 365 Mr. Davis represents me as reflecting upon him, in expressing in my report the belief that General Cooper's telegram of July 17 did not convey a positive order. As what he says, immediately following, has been reviewed before, it may be passed over now.

This passage appears on page 369: "The words 'if practicable' had reference to letters of General Johnston of the 12th and 15th of July. . . ." They had reference to "make the movement, sending the sick and baggage to Culpeper," and to those words only. I alone was to judge of the practicable.

THE WITHDRAWAL FROM CENTREVILLE TO THE PENINSULA.

MR. DAVIS refers (pages 444-5) to the instructions for the reorganization of the army given by him to the three general officers

he met in conference at Fairfax Court House on October 1, 1861. But the correspondence urging the carrying out of the orders was carried on with Generals Beauregard and G. W. Smith (my subordinates) in that same October. He neither conversed nor corresponded with me on the subject then, the letter to me being dated May 10, 1862. The original order was dated October 22, 1861, to be executed "as soon as, in the judgment of the commanding general, it can be safely done under present exigencies." As the enemy was then nearer to our center than that center to either flank of our army, and another advance upon us by the Federal army was not improbable on any day, it seemed to me unsafe to make the reorganization then. From May 10 to 26, when the President renewed the subject, we were in the immediate presence of the enemy, when reorganization would have been infinitely dangerous, as was duly represented by me. But, alluding to this conference at Fairfax Court House, he says (page 449): "When, at that time and place, I met General Johnston for conference, he called in the two generals next in rank to himself, Beauregard and G. W. Smith." These officers were with Mr. Davis in the quarters of General Beauregard, whose guest he was, when I was summoned to him. I had not power to bring any officer into the conference. If such authority had belonged to my office, the personal relations lately established between us by the President would not have permitted me to use it.

He says (page 448): "I will now proceed to notice the allegation that I was responsible for the inaction of the army in the latter part of 1861 and early part of 1862."

I think Mr. Davis is here fighting a shadow. I have never seen or heard of the "allegation" referred to; I believe that that conference attracted no public attention and brought criticism upon no one. I have seen no notice of it in print, except the merely historical one in a publication made by me in 1874,* without criticism or comment. Mr. Davis expresses surprise at the weakness of the army. He has forgotten that in Richmond he was well informed of the strength of the army by periodical reports, which showed him the prevalence of epidemics which, in August and part of September, kept almost thirty per cent. of our number sick. He must have forgotten, too, his anxiety on this subject, which induced him to send a very able physician, Dr. Cartwright, to find some remedy or preventive.

He asserts also that "the generals" had made previous suggestions of a "purpose to advance into Maryland." There had been no

* See "Johnston's Narrative," pages 78, 79.

such purpose. On the contrary, in my letter to the Secretary of War, suggesting the conference, I wrote: "Thus far the numbers and condition of this army have at no time justified our assuming the offensive. . . . The difficulty of obtaining the means of establishing a battery near Evansport . . . has given me the impression that you cannot at present put this army in condition to assume the offensive. If I am mistaken in this, and you can furnish those means, I think it important that either his Excellency the President, yourself, or some one representing you, should here upon the ground confer with me on this all-important question." In a letter dated September 29, the Secretary wrote that the President would reach my camp in a day or two for conference. He came for that object September 30, and the next evening, *by his appointment*, he was waited on by Generals Beauregard, Smith, and myself. In discussing the question of giving our army strength enough to assume the offensive in Maryland, it was proposed to bring to it from the South troops enough to raise it to the required strength. The President asked what was that strength. General Smith thought 50,000 men, General Beauregard 60,000, and I 60,000, all of us specifying soldiers like those around us. The President replied that such reënforcements could not be furnished; he could give only as many recruits as we could arm. This decided the question. Mr. Davis then proposed an expedition against Hooker's division, consisting, we believed, of 10,000 men. It was posted on the Maryland shore of the Potomac opposite Dumfries (see map, page 113.—ED.) But I objected that we had no means of ferrying an equal number of men across the river in a day, even if undisturbed by ships of war, which controlled the river; so that, even if we should succeed in landing, those vessels of war would inevitably destroy or capture our party returning. This terminated the conference. Mr. Davis says, in regard to the reënforcements asked for (page 449): "I had no power to make such an addition to that army without a total disregard of the safety of other threatened positions." We had no threatened positions; and we could always discover promptly the fitting out of naval expeditions against us. And he adds (page 452), with reference to my request for a conference in regard to reënforcements:

"Very little experience, or a fair amount of modesty without experience, would serve to prevent one from announcing his conclusion that troops could be withdrawn from a place or places without knowing how many were there, and what was the necessity for their presence."

The refutation of this is in General G. W. Smith's memorandum of the discussion:

"General Johnston said that he did not feel at liberty to express an opinion of the practicability of reducing the strength of our forces at points not within the limits of his command." On the same page (452) Mr. Davis says:

". . . and particularly indicated the lower part of Maryland, where a small force was said to be ravaging the country."

He suggested nothing so impossible. Troops of ours could not have been ferried across the broad Potomac then. We had no steamer on that river, nor could we have used one.

Mr. Davis says (page 452):

". . . Previously, General Johnston's attention had been called to possibilities in the valley of the Shenandoah, and that these, and other like things, were not done, was surely due to other causes than the policy of the Administration . . . [Then in a letter to me, dated Aug. 1, 1861, which follows the above.] . . . The movement of Banks will require your attention. It may be a *ruse*, but if a real movement, when your army has the requisite strength and mobility, you will probably find an opportunity, by a rapid movement through the passes, to strike him in rear or flank."

It is matter of public notoriety that no incursion into the "Valley," worth the notice of a Confederate company, was made until March, 1862. That the Confederate President should be ignorant of this is inconceivable.

Mr. Davis says (page 462):

". . . I received from General Johnston notice that his position [at Centreville] was considered unsafe. Many of his letters to me have been lost, and I have thus far not been able to find the one giving the notice referred to, but the reply which is annexed clearly indicates the substance of the letter which was answered: 'General J. E. Johnston: . . . Your opinion that your position may be turned whenever the enemy chooses to advance,' etc."

The sentence omitted by him after my name in his letter from which he quotes as above contains the dates of three letters of mine, in neither of which is there allusion to the safety, or reverse, of the position. They are dated, 22d, 23d, and 25th of February, and contain complaints on my part of the dreadful condition of the country, and vast accumulation by the Government of superfluous stores at Manassas. There is another omission in the President's letter quoted, and the omission is this:

". . . With your present force, you cannot secure your communications from the enemy, and may at any time, when he can pass to your rear, be compelled to retreat at the sacrifice of your siege train and army stores. . . . Threatened as we are by a large force on the south-east, you must see the hazard of your position, by its liability to isolation and attack in rear."

By a singular freak of the President's memory, it transferred the substance of these passages from his letter to my three. Referring again to the conference at Fairfax Court House, Mr. Davis says (page 464):

"Soon thereafter, the army withdrew to Centreville, a better position for defense, but not for attack, and thereby suggestive of the abandonment of an intention to advance."

The President forgets that in that conference the intention to advance was abandoned by him first. He says on the same page :

"On the 10th of March I telegraphed to General Johnston : 'Further assurance given to me this day that you shall be promptly and adequately reënforced, so as to enable you to maintain your position, and resume first policy, when the roads will permit.' The first policy was to carry the war beyond our own border."

The roads then permitted the marching of armies, so we had just left Manassas.

On the 20th of February, after a discussion in Richmond, his Cabinet being present, the President directed me to prepare to fall back from Manassas, and do so as soon as the condition of the country should make the marching of troops practicable. I returned to Manassas on February 21, and on the 22d ordered the proper officers to remove the public property, which was begun on the 23d, the superintendent of the railroad devoting himself to the work under the direction of its president, the Hon. John S. Barbour. The Government had collected three million and a quarter pounds of provisions there, I insisting on a supply of but a million and a half. It also had two million pounds in a meat-curing establishment near at hand, and herds of live stock besides. On the 9th of March, when the ground had become firm enough for military operations, I ordered the army to march that night, thinking then, as I do now, that the space of fifteen days was time enough in which to subordinate an army to the Commissary Department. About one million pounds of this provision were abandoned, besides half as much more spoiled for want of shelter. This loss is represented (page 468) as so great as to embarrass us to the end of the war, although it was only a six days' supply for the troops then in Virginia. Ten times as much was in railroad stations of North Carolina at the end of the war.

Mr. Davis says (page 467) :

"It was regretted that earlier and more effective means were not employed for the mobilization of the army, . . . or at least that the withdrawal was not so deliberate as to secure the removal of our ordnance, subsistence, and quartermaster's stores."

The quartermaster's and ordnance stores were brought off; and as to subsistence, the Government, which collected immediately on the frontier five times the quantity of provisions wanted, is responsible for the losses. The President suggested the time of the withdrawal himself, in the interview in his office that has been mentioned. The means taken, was the only one available,—the Virginia Midland Railroad.

Mr. Davis says (page 465) :

"To further inquiry by General Johnston as to where he should take position, I replied that I would go to his headquarters in the field, and found him on the south bank of the river to which he had retired, in a position possessing great natural advantages."

There was no correspondence in relation to selecting a defensive position. I was not seeking one; but, instead, convenient camping-grounds, from which my troops could certainly unite with other Confederate forces to meet McClellan's invasion. I had found and was occupying such grounds, one division being north of Orange Court House, another a mile or two south of it, and two others some six miles east of that place; a division on the south bank of the Rappahannock, and the cavalry beyond the river, and about 13,000 troops in the vicinity of Fredericksburg. Mr. Davis's narrative that follows is disposed of by the proof that, after the army left Manassas, the President did not visit it until about the 14th of May. But such a visit, if made, could not have brought him to the conclusion that the weakness of Fredericksburg as a military position made it unnecessary to find a strong one for the army. That he did not make such a visit is proved by Major J. B. Washington, aide-de-camp, now president of the Baltimore and Philadelphia Railroad, who wrote me, under date of January 17, 1885: "In answer to your question, I have to say that the President did not visit the Army of Northern Virginia between the 10th of March, 1862, when it left Manassas, and about May 14 following, when it was between Baltimore Cross Roads and the Long Bridge over the Chickahominy. That army was at no time united after leaving Manassas, before going to Yorktown, neither on the elevated bank of a river nor elsewhere."

To the question, "After the army left Manassas in March, 1862, was it visited by the President at any time before being ordered to Yorktown?" Dr. A. M. Fauntleroy, of Staunton (then surgeon on my staff), answered: "No; I feel quite sure that the army was not visited by the President during the period specified." To the question, "Was the army, after leaving Manassas, ever united before the retreat from Yorktown?" he answered: "Emphatically no. According to a pretty clear recollection of the location and movements of the several divisions of the army, I can recall the fact that Generals Early and Ewell halted on the south bank of the Rappahannock about the 11th of March, and G. W. Smith and Longstreet near Culpeper; and, after crossing the Rapidan, G. W. Smith and Longstreet encamped near Orange Court House, and Early and Hill not more than

three miles from the Rapidan bridge, in the direction of Fredericksburg, Ewell remaining on the Rappahannock River."

Colonel E. J. Harvie writes (January 28, 1885): "In reply to your question, 'Did the President visit the army at any time between March 9, 1862, when it left Manassas, and about May 14, when it was between Baltimore Cross Roads and Long Bridge?' I answer: Unless my memory fails me more than it has ever done before, I am positive he did not. I was with you all the time as your staff officer, and no visit of this character could have been made to the army without my knowing it."

Mr. Davis (Vol. II., p. 81) credits me with expecting an attack, which he shows General McClellan never had in his mind:

"In a previous chapter, the retreat of the army from Centreville has been described, and reference has been made to the anticipation of the commanding general, J. E. Johnston, that the enemy would advance to attack that position."

This refers, I suppose, to a previous assertion (Vol. I., p. 462), my comments upon which prove that this "anticipation" was expressed in the President's letter to me, dated February 28. He says (Vol. II., p. 83):

"The withdrawal of our forces across the Rappahannock was fatal to the [Federal] programme of landing on that river and marching to Richmond before our forces could be in position to resist an attack on the capital."

This withdrawal was expressly to enable the army to unite with other Confederate troops to oppose the expected invasion. I supposed that General McClellan would march down the Potomac on the Maryland side, cross it near the mouth of Acquia Creek, and take the Fredericksburg route to Richmond. The position of Hooker's division, about midway between Washington and this crossing-place, might well have suggested that he had this intention.

Mr. Davis says (Vol. II., p. 84): "Early in April General McClellan had landed about 100,000 at or near Fortress Monroe." According to John Tucker, Assistant Secretary of War, 121,000 Federal troops landed before the 5th of April.

And (page 84): "At this time General Magruder occupied the lower Peninsula with his force of seven or eight thousand men." General Magruder reported that he had eleven thousand men.

Mr. Davis says (page 85): "After the first advance of the enemy, General Magruder was reënforced by some troops from the south side of James River, and General Wilcox's brigade, which had been previously detached from the army under General Johnston." These reënforcements, together, made about 5000 men.

He says, on the same page:

"On the 9th of April General Magruder's army, thus reënforced, amounted to about 12,000. On that day General Early joined with his division from the Army of Northern Virginia. This division had about 8000 officers and men for duty. General Magruder's force was thus increased to about 20,000."

The same order detached Early's, D. R. Jones's, and D. H. Hill's divisions from the Army of Northern Virginia, and they were transported as fast as the railroad trains could carry them. The two latter divisions had together about 10,000 men, so that Magruder's army was raised to about 33,000 men, instead of 20,000, as Mr. Davis said.

THE WITHDRAWAL FROM YORKTOWN.

MR. DAVIS says (Vol. II., p. 86):

"As soon as it was definitely ascertained that General McClellan, with his main army, was on the Peninsula, General J. E. Johnston* was assigned to the command of the department of the Peninsula and Norfolk, and directed to proceed thither to examine the condition of affairs there. After spending a day on General Magruder's defensive line, he returned to Richmond and recommended the abandonment of the Peninsula, and that we should take a defensive position nearer to Richmond."

The President has forgotten my recommendation, or misunderstood it at the time. I represented to him that General McClellan's design was, almost certainly, to demolish our batteries with his greatly superior artillery, and turn us by the river, either landing in our rear or moving directly to Richmond; so that our attempting to hold Yorktown could only delay the enemy two or three weeks. Instead of that, I proposed that all our available forces should be united near Richmond, Magruder's troops to be among the last to arrive; the great army thus formed about Richmond not to be in a defensive position, as Mr. Davis supposes, but to fall with its whole force upon McClellan when the Federal army was expecting to besiege only the troops it had followed from Yorktown. If the Federal army should be defeated a hundred miles away from its place of refuge, Fort Monroe, it could not escape destruction. This was undoubtedly our best hope.

In the conference that followed, the President took no part. But the Secretary of War, once a naval officer, opposed the abandonment of the valuable property in the Norfolk Navy Yard; and General Lee opposed the plan proposed, because it would expose Charleston and Savannah to capture. I maintained that if those places should be captured, the defeat of the principal Federal army would enable us to recover them; and that, unless that army should be defeated, we should lose those sea-ports in spite of their garrisons.

* That assignment was made after "the conference."

Mr. Davis says (Vol. II., p. 87):

"After hearing fully the views of the several officers named, I decided to resist the enemy on the Peninsula. . . . Though General Johnston did not agree with this decision, he did not ask to be relieved. . . ."

Not being in command, I could not be relieved. My assignment was included in the order to oppose McClellan at Yorktown; that order added to my then command the departments of Norfolk and the Peninsula. It is not easy to reconcile this increase of my command by the President, with his very numerous disparaging notices of me.

General Keyes, before the Committee on the Conduct of the War, confirmed my opinion in saying that "Gloucester must have fallen upon our getting possession of Yorktown, and the York River would then have been open."

Mr. Davis expresses the opinion (Vol. II., p. 90) that "General McClellan might certainly have sent a detachment from his army, which, after crossing York River, could have turned the position at Gloucester Point." It was needless; the driving us from Yorktown would have compelled us to abandon Gloucester Point. Then (Vol. II., p. 91) he says:

"Whether General McClellan . . . would have made an early assault . . . or have waited to batter our earth-works in breach . . . is questionable."

We did not apprehend "battering in breach," but believed that the heavy sea-coast rifles to be mounted in the batteries, about completed, would demolish our water batteries, drive us from the intrenchments at Yorktown, and enable the enemy to turn us by the river. Mr. Davis quotes from one of his dispatches to me (Vol. II., p. 92):

"Your announcement to-day [May 1] that you would withdraw to-morrow night takes us by surprise, and must involve enormous losses, including unfinished gun-boats. Will the safety of your army allow more time?"

My own announcement was made April 27, not May 1, and reached Richmond in ten hours; so the President had abundant time to prevent the withdrawal. The appearance of the enemy's works indicated that fire from them might open upon us the next morning. The withdrawal just then was to avoid waste of life.

He says (Vol. II., p. 94):

"The loss of public property, as was anticipated, was great, the steamboats expected for its transportation not having arrived before the evacuation was made. From a narrative by General Early I make the following extract: 'A very valuable part of the property lost consisted of a very large number of picks and spades. . . . All of our heavy guns, including some recently arrived and not mounted, together with a good deal of ammunition piled upon the wharfs, had to be left behind.'"

The steamboats he mentions were controlled in Richmond. As to the loss of very

valuable picks and spades, Colonel Douglas, chief engineer there, wrote to me May 12th, 1883: "I was at Yorktown the evening before the evacuation commenced. I did not see any quantity of picks and shovels there, and cannot understand how they could have accumulated there when they were needed so much from Redoubt Number Five to Lee's Mills — that is, on the extreme right of our line." General D. H. Hill, who commanded in and near Yorktown, said, in his official report: "We lost very little by the retreat, save some medical stores which Surgeon Coffin deserted in his flight, May 1. The heavy guns were all of the old navy pattern." We had very little ammunition on hand at the time. The heavy guns could have been saved only by holding the place, which was impossible.

Mr. Davis says (Vol. II., p. 94) that General Magruder's "absence at this moment was the more to be regretted, as it appears that the positions of the redoubts he constructed (before Williamsburg) were not all known to the commanding general." The positions of the redoubts were "all known." But to a body of troops serving merely as a rear-guard, it was necessary to occupy only those nearest the road. A rear-guard distributed in all the redoubts intended for an army could have held none of them. The event showed that the proper redoubts were occupied. It is singular that Mr. Davis's only notice of the conflict at Williamsburg, in which our troops behaved admirably, relates to a detached affair, unimportant, because it had, and could have, no influence upon the real event. Mr. Davis says of General Early's account of his attack upon Hancock at Williamsburg (Vol. II., p. 96):

"He [Early] confidently expresses the opinion that had his attack been supported promptly and vigorously, the enemy's force there engaged must have been captured."

General Early sent an officer to report that there was a battery in front of him which he could take, and asked authority to do so. The message was delivered to General Longstreet, who referred the messenger to me, we being together. I authorized the attempt, but desired the general to look carefully first. Under the circumstances he could not have expected support, for he moved out of reach of it.

Mr. Davis speaks (Vol. II., p. 97) of the employment of sub-terra shells to check a marching column, and quotes from General Rains as follows:

"Fortunately we found in a mud hole a broken ammunition wagon containing five loaded shells. Four of these, armed with a sensitive fuse-primer, were planted in our rear, near some trees cut down as obstructions to the road. A body of the enemy's cavalry came upon these sub-terra shells, and they exploded with terrific effect."

This event was not mentioned in General D. H. Hill's report, although General Rains belonged to his division, nor was it mentioned by our cavalry which followed Hill's division. Such an occurrence would have been known to the whole army, but it was not; so it must have been a dream of the writer.

Mr. Davis says (Vol. II., p. 98): "The next morning after the battle of the 5th, at Williamsburg, Longstreet's and D. H. Hill's divisions being those then engaged," etc. But one regiment of Hill's division was engaged.

In the Federal reports of this action, it is treated as a battle in which the whole Confederate army was engaged. It was an affair with our rear-guard, the object of which was to secure our baggage trains. For that, it was necessary to detain the Federal army a day, which was accomplished by the rear-guard. In those Federal reports a victory is claimed. The proofs against that are: (1) That what deserves to be called fighting ceased at least two hours before dark, yet the Confederates held the ground until the next morning, having slept on the field, and then resumed their march; (2) that they fought only to protect their trains, and accomplished the object; (3) that although they marched but twelve miles the day after the affair, they saw no indications of pursuit, unless the seeing a scouting party once can be so called; (4) that they inflicted a loss much greater than that they suffered; (5) and that in the ten days following the fight, they marched but thirty-seven miles. They left four hundred wounded in Williamsburg, because they had no means of transporting them. But they captured five cannon and destroyed the carriages of five more, and took four hundred prisoners and several colors.

Mr. Davis says (Vol. II., p. 98):

"In the mean time, Franklin's division had gone up the York River [McClellan wrote that the divisions of Franklin, Sedgwick, Porter, and Richardson were sent from Yorktown by water to the right bank of the Pamunkey near West Point.—J. E. J.], and landed a short distance below West Point, on the south side of York River, and moved into a thick wood in the direction of the New Kent road, thus threatening the flank of our line of march. Two brigades of General G. W. Smith's division, Hampton's and Hood's, were detached under the command of General Whiting to dislodge the enemy, which they did after a short conflict, driving him to the protection of his gun-boats in York River."

The Federal force engaged was very much less than a division.

Mr. Davis says, lower down: "The loss of the enemy [in the battle of Williamsburg] greatly exceeded our own, which was 1200." He means exclusive of General Early's loss. According to General McClellan's report his loss was 2228. General Hooker stated under oath that his was 1700. But Kearny's

Couch's, and two-thirds of Smith's division, and Peck's brigade were engaged also. A loss of 528 is very small among so many.

Mr. Davis says (Vol. II., p. 101):

"Soon after General Johnston took position on the north of the Chickahominy, accompanied by General Lee, I rode out to his headquarters. . . . A long conversation followed, which was so inconclusive that it lasted until late in the night, so late that we remained until the next morning. As we rode back to Richmond, . . . General Lee confessed himself, as I was, unable to draw from it any more definite purpose than that the policy was to . . . improve his [Johnston's] position as far as practicable, and wait for the enemy to leave his gun-boats, so that an opportunity might be offered to meet him on land."

I explained that I had fallen back that far to clear my left flank of the navigable water, and so avoid having it turned; that as we were too weak to assume the offensive, and as the position I then held was an excellent one, I intended to await the Federal attack there. These explanations covered the whole ground, so that the President had no cause to complain, especially as he suggested nothing better. And he was satisfied then; for, three days later, he wrote to me by Colonel G. W. C. Lee: ". . . If the enemy proceed as heretofore indicated, your position and policy, as you stated it in our last interview, seems to me to require no modification." This is the interview called "inconclusive."

Mr. Davis says (Vol. II., p. 103):

"After the repulse of the enemy's gunboats at Drewry's Bluff, I wrote to General Johnston a letter to be handed to him by my aide, Colonel G. W. C. Lee. ". . . I soon thereafter rode out to visit General Johnston at his headquarters, and was surprised in the suburbs of Richmond . . . to meet a portion of the light artillery, and to learn that the whole army had crossed the Chickahominy."

The army crossed the Chickahominy immediately after the affair of Drewry's Bluff. So that if Colonel Lee delivered a letter to me then, he of course reported to the President that I had crossed the river. And as the army's nearest approach to Richmond was on the 17th, his meeting with the light artillery must have occurred that day. So one cannot understand his surprise.

He says on the same page:

"General Johnston's explanation of this (to me) unexpected movement was, that he thought the water of the Chickahominy unhealthy. . . . He also adverted to the advantage of having the river in front rather than in the rear of him."

The army crossed the Chickahominy because the possession of James River by the enemy suggested the probability of a change of base to that river. And it was necessary that we should be so placed as to be able to meet the United States army approaching either from York River or along the James.

MAP OF THE VIRGINIA CAMPAIGNS.

Water was not considered, for we did not use that of the Chickahominy; nor the position of the little stream behind us, for we had four bridges over it. The position of Seven Pines was chosen for the center, the right somewhat thrown back. But the scarcity of water induced me to draw nearer to Richmond, which was done on the 17th.

Mr. Davis makes statements (Vol. II., p. 106) regarding the strength of the Army of Northern Virginia on the 21st and 31st of May; but as he treats the subject more minutely farther on, we will examine what he says (p. 153):

“ In the Archives Office of the War Department in Washington, there are on file some of the field and monthly returns of the Army of Northern Virginia. . . . The following statements have been taken from those papers by Major Walter H. Taylor, of the staff of General Lee. . . .

“ A statement of the strength of the troops under General Johnston shows that on May 21st, 1862, he had present for duty: Smith’s division 10,592; Longstreet’s division, 13,816; Magruder’s division, 15,680, [240 too little]; D. H. Hill’s division, 11,151; cavalry brigade, 1289; reserve artillery, 1160; total 53,688.”

The above is from Major Taylor’s memorandum given the President, made from estimates of brigades, not from returns. Without

MAJOR-GENERAL JOHN B. MAGRUDER.

being accurate, it is not far from the truth. In the memorandum Magruder is given 15,920 men. Mr. Davis continues:

“Major Taylor in his work (*‘Four Years with General Lee’*) states: ‘In addition to the troops above enumerated, there were two brigades subject to his orders, then stationed in the vicinity of Hanover Junction, one under the command of General J. R. Anderson, and the other under the command of General Branch. They were subsequently incorporated into the division of General A. P. Hill.’ [Mr. Davis continues:] . . . He estimates the strength of the two at 4000 effective.

“. . . Previous to the battle of Seven Pines, General Johnston was reënforced by General Huger’s division of three brigades. The total strength of these three, according to the *‘Reports of the Operations of the Army of Northern Virginia,’* was 5008 effectives. Taylor says: ‘If the strength of these five be added to the return of May 21, we shall have 62,696 as the effective strength of the army under General Johnston on May 31, 1862.’”

But according to General Huger’s report to me, there were 7000 men (instead of 5008) in his three brigades, which does not exceed the ordinary strength of brigades then (that is to say, three average brigades would have had not less than 7000 men); and what Mr. Davis calls two brigades of “4000 effective” were, in fact, Anderson’s division sent to observe McDowell’s corps at Fredericksburg, and so large that General Lee called it the army of the North, and estimated it as 10,000 men;* and the second, Branch’s brigade, greatly strengthened to protect the railroad at Gordonsville, and estimated by General Lee as

* “I advised you, April 23d, of certain troops ordered to report to General Field, viz.: two regiments from Richmond, two light batteries, a brigade from South Carolina, and one from North Carolina (Anderson’s), in all 8000, in addition to those [2500.—J. E. J.] previously there.”—General Lee’s letter, May 8—*“War Records,”* series I., vol. XI., part III., pages 500-1.

† “Two brigades, one from North Carolina (Branch’s) and one from Norfolk, have been ordered to Gordonsville to reënforce that line.”—General Lee’s letter, as above.

5000 men.† When these troops were united on the Chickahominy, General Anderson’s estimate of their numbers was, of the first, 9000, and of the other, 4000; 20,000 then, and not 9008, is the number to be added to the return of May 21, 1862, to show the effective strength of that army May 31, viz.: 73,928, including the correction of the number in Magruder’s division.

Referring to our withdrawal from the north side of the Chickahominy to the vicinity of Richmond, Mr. Davis says (Vol. II., p. 120):

“Remembering a remark of General Johnston’s that the Spaniards were the only people who now undertook to hold fortified towns, I had written to him that he knew the defense of Richmond must be made at a distance from it.”

Mr. Davis is mistaken. No such letter was sent to me then. We communicated with each other only orally, excepting a note he sent me to point out that I had been absent from a skirmish the day before. He knew that the fact that the enemy was then able to approach Richmond either from York River or by the James compelled me to prepare for either event, by placing the army near the city. A short time before, he wrote: “To you it is needless to say that the defense must be made outside of the city.” His next sentence, approving the course I was pursuing, has been quoted in connection with what the President said of an “inconclusive” conversation with me.

Mr. Davis continues, a little farther down:

“It had not occurred to me that he [Johnston] meditated a retreat which would uncover the capital, nor was it ever suspected until, in reading General Hood’s book, published in 1880, the evidence was found that General Johnston when retreating from Yorktown, told his volunteer aide, Mr. McFarland, that ‘he expected or intended to give up Richmond.’”

This story of Mr. McFarland is incredible. He, a very rich, fat old man, could not have been an aide-de-camp. As I did not know him at all until four years later, and then barely, he could not have been my aide-de-camp. And lastly, I had no volunteer aide. Besides, the Confederate President had abundant evidence that I had no such expectation, in the fact that, so far from giving up Richmond, I stood between it and the Federal army for three weeks, until I was disabled by desperate wounds received in its defense. Under such circumstances his accusation is, to say the least, very discreditable. E. J. Harvie, late Colonel and Assistant Inspector-General C. S. A., now in the War Records Office, Washington, in answer to my question, “Had I ever a volunteer

aide-de-camp named McFarland, or any volunteer aide-de-camp after leaving Manassas, while serving in Virginia?" wrote me, under date of January 28, 1885, as follows: "To my knowledge, you certainly had not. My position as your staff officer justifies me in saying that Mr. McFarland was not with you in any capacity."

Surgeon A. M. Fauntleroy, in answer to my question, "Had I a volunteer aide-de-camp in May, 1862, especially when the army was moving from Yorktown towards Richmond? Or did you ever in that time see an old gentleman of Richmond, named McFarland, about my headquarters?" writes: "I never did. I cannot well see how such a person could have escaped my observation, if he was there at any time."

And J. B. Washington, president of the Baltimore and Philadelphia Railway, writes me as follows:

"You had not on your staff after leaving Manassas a volunteer aide-de-camp, especially during May, 1862, when the army was between Yorktown and Richmond. I was personally acquainted with Mr. McFarland of Richmond, but never saw him at our headquarters, nor heard of his ever having been there."

"Having served as aide-de-camp on your staff from May, 1861, to February, 1864, I was in a position to know of the circumstances of which I have written."

Mr. Davis says (Vol. II., p. 120):

"Seeing no preparation to keep the enemy at a distance, . . . I sent for General Lee . . . and told him how I was dissatisfied with the condition of affairs. He asked me what I thought it was proper to do. . . . I answered that McClellan should be attacked on the other side of the Chickahominy, before he matured his preparations for a siege of Richmond. To this he promptly assented. . . . He then said: 'General Johnston should, of course, advise you of what he proposes to do. Let me go and see him.' . . . When General Lee came back, he told me that General Johnston proposed, on the next Thursday, to move against the enemy, as follows: General A. P. Hill was to move down on the right flank and rear of the enemy. General G. W. Smith, as soon as Hill's guns opened, was to cross the Chickahominy at the Meadow Bridge, attack the enemy in flank, and, by the conjunction of the two, it was expected to double him up. Then Longstreet was to cross on the Mechanicsville bridge and attack him in front. From this plan the best results were hoped by both of us."

It is certain that General Lee could have had no such hopes from this plan, nor have been a party to it; for it would not only have sent our army where there was no enemy, but left open the way to Richmond. For the Meadow Bridge is two and a half miles from Mechanicsville, and that place about six miles above the Federal right. So, after two-thirds of our troops had crossed the Chickahominy, the Federal army could have marched straight to Richmond, opposed by not more than one-fifth of its number in Magruder's and D. H. Hill's divisions. This plan is probably the wildest on record.

As to what is described (Vol. II., p. 121),

G. W. Smith's division was never in the place indicated, and General Longstreet's was never on the Mechanicsville road near the bridge, before General Lee crossed the Chickahominy to fight at Gaines's Mills.

A glance at the map will show how singularly incorrect is Mr. Davis's description (Vol. II., pp. 122-3) of the vicinity of Seven Pines and of the disposition of the Federal troops.

THE BATTLE OF SEVEN PINES.

ON the 23d of May Keyes's Federal corps crossed to the south side of the Chickahominy, and a detachment attacked Hatton's Confederate brigade, which was in observation near Savage's Station. The detachment was driven back, and, Hatton's object having been accomplished (learning that the enemy had

MAJOR-GENERAL BENJAMIN HUGER.
(AFTER A PHOTOGRAPH BY BRADY.)

crossed the stream), he was recalled. I was advised to hold that position with the army, but preferred to let the enemy advance, which would increase the interval between his left and the right, which was beyond the Chickahominy. McDowell's corps of 40,000 men was then at Fredericksburg, observed by a division under Brigadier-General J. R. Anderson; and a large Confederate brigade, under Brigadier-General Branch, was at Gordonsville.

On the 24th our cavalry was driven across the Chickahominy, principally at Mechanicsville. This extension of the right wing of the enemy to the west made me apprehend that the two detachments (Anderson and Branch) above mentioned might be cut off.

MAJOR-GENERAL GUSTAVUS W. SMITH.
(FROM A PHOTOGRAPH BY GURNEY & SON.)

They were therefore ordered to fall back to the Chickahominy. Near Hanover Court House the brigade was attacked by Porter's corps and driven off, escaping with a loss of sixty-six killed and one hundred and seventy-seven wounded, as General Branch reported. A division was formed of Anderson's and Branch's troops, to the command of which Major-General A. P. Hill was assigned.

That evening General Anderson sent word that his scouts left near Fredericksburg reported that McDowell's troops were marching southward. As the object of this march was evidently the junction of this corps with the main army, I determined to attack McClellan before McDowell could join him; and the major-generals were desired to hold their troops ready to move. But at night, when those officers were with me to receive instructions for the expected battle, General J. E. B. Stuart, who also had a detachment of cavalry observing McDowell's corps, reported that it had returned to Fredericksburg. As my object was to bring on the inevitable battle before McClellan should receive an addition of 40,000 men to his forces, this intelligence made me return to my first design—that of attacking McClellan's left wing on the Williamsburg road as soon as, by advancing, it had sufficiently increased its distance from his right, north of the Chickahominy.

The morning of the 30th, armed reconnaissances were made under General D. H. Hill's direction—on the Charles City road by Brigadier-General Rodes, and on the Williamsburg road by Brigadier-General Garland. The lat-

ter found Federal outposts five miles from Richmond—or two miles west of Seven Pines—in such strength as indicated that a corps was near. On receiving this information from General Hill, I informed him that he would lead an attack on the enemy next morning. Orders were given for the concentration of twenty-two of our twenty-eight brigades against McClellan's left wing, about two-fifths of his army. Our six other brigades were guarding the river from New Bridge to Meadow Bridge, on our extreme left. Longstreet and Huger were directed to conduct their divisions to D. H. Hill's position on the Williamsburg road, and G. W. Smith to march with his to the junction of the Nine-mile road with the New Bridge road, where Magruder was with four brigades.

Longstreet, as ranking officer of the troops on the Williamsburg road, was instructed verbally to form D. H. Hill's division as first line, and his own as second, across the road at right angles, and to advance in that order to attack the enemy; while Huger's division should march by the right flank along the Charles City road, to fall upon the enemy's flank when our troops were engaged with him in front. Federal earthworks and abattis that might be found were to be turned. G. W. Smith was to protect the troops under Longstreet from attack by those of the Federal right wing across the Chickahominy; and, if such transfer should not be threatened, he was to fall upon the enemy on the Williamsburg road. Those troops were formed in four lines, each being a division. Casey's was a mile west of Seven Pines, with a line of

MAJOR-GENERAL DANIEL H. HILL.
(FROM A PHOTOGRAPH BY COOK.)

skirmishers a half mile in advance; Couch's was at Seven Pines and Fair Oaks — the two forming Keyes's corps. Kearny's division was near Savage's Station, and Hooker's two miles west of Bottom's Bridge — the two forming Heintzelman's corps.

Longstreet's command of the right was to end when the troops approached Seven Pines, and I should be present to direct the movements, after which each major-general would command his own division. The rain began to fall violently in the afternoon of the 30th, and continued all night. In the morning the little streams near our camps were so much swollen as to make it probable that the Chickahominy was overflowing its banks and cutting the communication between the wings of the Federal army. Being confident that Longstreet and D. H. Hill, with their forces united, would be successful in the earlier part of the action against adversaries formed in several lines, with wide intervals between them, I left the immediate control on the Williamsburg road to them, under general instructions, and placed myself on the left, where I could soonest learn of the approach of Federal reënforcements from their right. For this scouts were sent forward to discover all movements that might be made by the enemy.

The condition of the ground and little streams delayed the troops in marching; yet those of Smith, Longstreet, and Hill were in position quite early enough. But the soldiers from Norfolk, who had seen garrison service only, were unnecessarily stopped in their march by a swollen rivulet. This unexpected delay led to interchange of messages for several hours between General Longstreet and myself, I urging Longstreet to begin the fight, he replying. But, near two o'clock, that officer was requested to go forward to the attack; the hands of my watch marked three o'clock at the report of the first field-piece. The Federal advanced line — a long line of skirmishers, supported by several regiments — was encountered at three o'clock. The greatly superior numbers of the Confederates soon drove them back to the main position of Casey's division. It occupied a line of rifle-pits, strengthened by a redoubt and abattis. Here the resistance was very obstinate; for the Federals, commanded by an officer of skill and tried courage, fought as soldiers generally do under good leaders; and time and vigorous efforts of superior numbers were required to drive them from their ground. But the resolution of Garland's and G. B. Anderson's brigades, that pressed forward on our left through an open field, under a destructive fire, the admirable service of Carter's and Bondurant's batteries, and a skillfully

combined attack upon the Federal left, under General Hill's direction, by Rodes's brigade in front and that of Rains in flank, were at last successful, and the enemy abandoned their intrenchments. Just then reënforcements from Couch's division came up, and an effort was made to recover the position. But it was to no purpose; for R. H. Anderson's brigade

MAJOR-GENERAL DARIUS N. COUCH.
(FROM A PHOTOGRAPH BY BRADY.)

reënforced Hill's troops, and the Federals were driven back to Seven Pines.

Keyes's Corps (Casey's and Couch's divisions) was united at Seven Pines and reënforced by Kearny's division, coming from Savage's Station. But the three divisions were so vigorously attacked by Hill that they were broken and driven from their intrenchments, the greater part along the Williamsburg road to the intrenched line at Savage's Station. Two brigades of their left, however, fled to White Oak Swamp.

General Hill pursued the enemy a mile; then, night being near, he re-formed his troops, facing towards the Federals. Longstreet's and Huger's divisions, coming up, were formed between Hill's line and Fair Oaks.

For some cause the disposition on the Charles City road was modified. Two of General Huger's brigades were ordered to advance along that road, with three of Longstreet's under Brigadier-General Wilcox. After following that road some miles, General Wilcox received orders to conduct his troops to the Williamsburg road. On entering it, he was ordered to the front, and joined Hill's troops near and approaching Seven Pines with his own brigade, and aided in the defeat of the three divisions struggling to hold the intrenchments there.

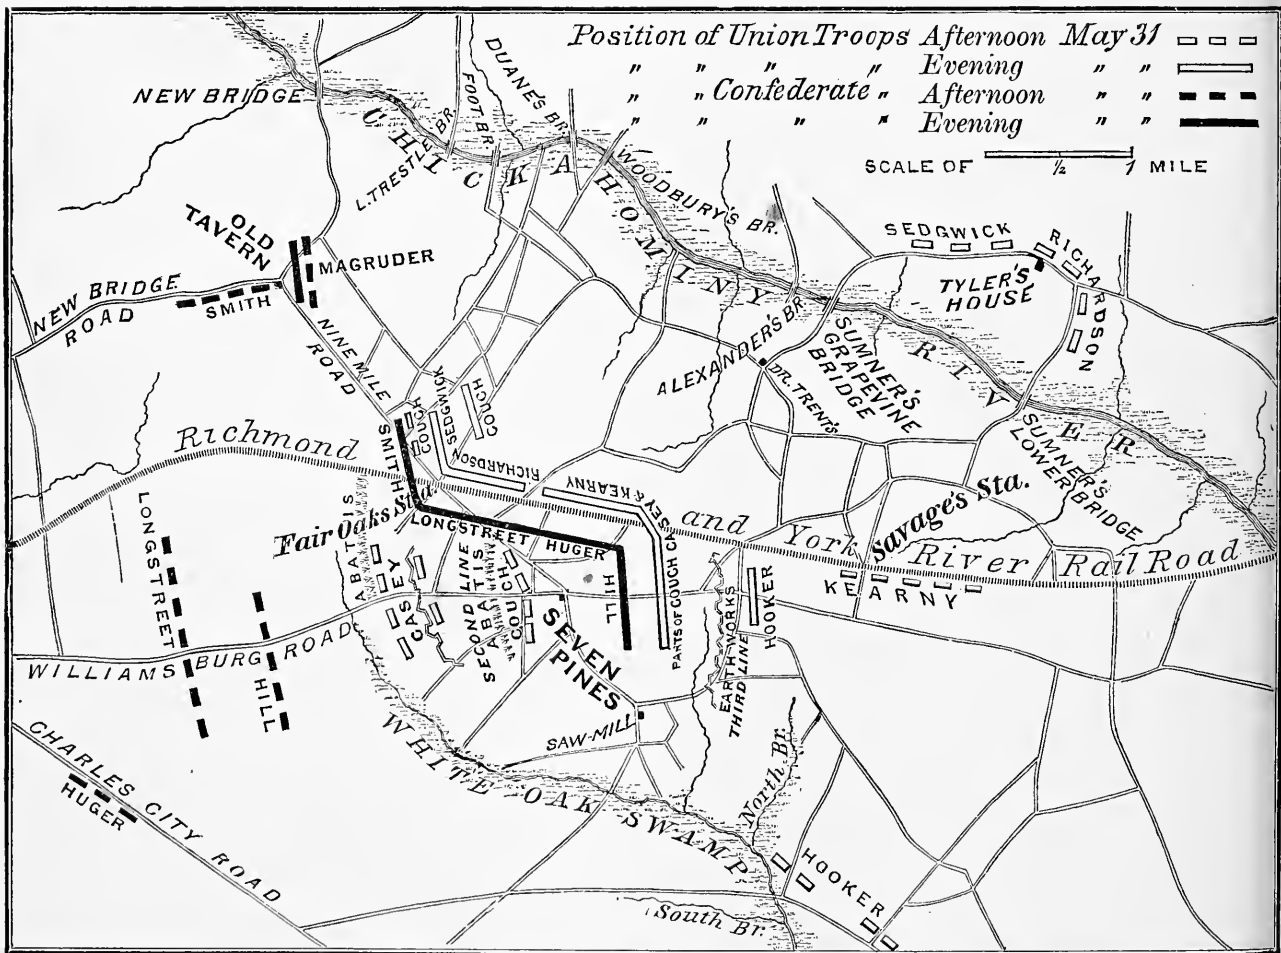

MAJOR-GENERAL EDWIN V. SUMNER.
(FROM A PHOTOGRAPH BY BRADY.)

the Nine-mile road, from the unfavorable condition of the air; and I supposed for some time that we were hearing only an artillery duel. But a staff officer was sent to ascertain the facts. He returned at four o'clock with intelligence that our infantry as well as artillery had been engaged an hour, and all were pressing on vigorously. As no approach of troops from beyond the Chickahominy had been discovered, I hoped that the enemy's bridges were impassable, and therefore desired General Smith to move towards Seven Pines, to be ready to coöperate with our right. He moved promptly along the Nine-mile road, and his leading regiment soon became engaged with the Federal skirmishers and their reserves, and in a few minutes drove them off.

When the action just described began, the musketry was not heard at my position on

On my way to Longstreet's left, to combine the action of the two bodies of troops, I passed the head of General Smith's column near Fair Oaks, and saw the camps of about a brigade in the angle between the Nine-mile road and the York River Railroad, and the rear of a column of infantry moving in quick time

RELATIVE POSITIONS AT THE BEGINNING OF THE ATTACK, AND AFTER DARK ON MAY 31.

[During the morning of May 31, Huger's division was on the railroad a mile out of Richmond. About the same time Longstreet's division was at the fork of the Williamsburg and Charles City roads; Hill's division on the Williamsburg road half a mile in advance of Longstreet; and Magruder's and G. W. Smith's divisions near Old Tavern. When the attack was made on the Union forces, Casey's division was three-quarters of a mile in advance of Seven Pines. He was supported on his right by Abercrombie's brigade (of Couch's division) at Fair Oaks Station, and behind him by the remainder of Couch's division at Seven Pines and on the Nine-mile road. These two divisions of Keyes's corps were reinforced late in the afternoon, near Seven Pines, by Kearny's division, which, at the time of the attack, was near Savage's Station;— Couch's troops at Fair Oaks fell back a short distance to meet Sedgwick's division approaching from the "Grapevine" bridge, and before dark recovered a part of the ground lost at the Station. Huger's (Confederate) division and Richardson's and Hooker's divisions did not get into position near the line of fighting until after dark. A part of Hooker's troops were at the White Oak bridge (not indicated in the map), to the left of his other positions. On the Union side, Richardson and Hooker did most of the fighting on the second day.— ED.]

from that point towards the Chickahominy, by the road to the Grapevine ford. A few minutes after this, a battery near the point where this infantry had disappeared commenced firing upon the head of the Confederate column. A regiment sent against it was received with a volley of musketry, as well as canister, and recoiled. The leading brigade, commanded by Colonel Law, then advanced, and so much strength was developed by the enemy that General Smith brought his other brigades into action on the left of Law's. An obstinate contest began, and was maintained on equal terms, although we engaged superior numbers on ground of their own choosing.

I had passed the railroad a few hundred yards with Hood's brigade when the firing commenced, and stopped to see it terminated. But being confident that the enemy opposing us were those whose camp I had just seen, and therefore only a brigade, I did not doubt that General Smith was more than strong enough to cope with them. Therefore General Hood was directed to go on in such a direction as to connect his right with Longstreet's left and take his antagonists in flank. The direction of that firing was then nearly south-west from Fair Oaks. It was then about 5 o'clock.

In that position my intercourse with Longstreet was maintained through staff officers, who were assisted by General Stuart of the cavalry, which was then unemployed; their reports were all of steady progress.

At Fair Oaks, however, no advantage was gained on either side, and the contest was continued with unflinching courage. It was near half-past six o'clock before I admitted to myself that Smith was engaged, not with a brigade, as I had obstinately thought, but with more than a division; but I thought that it would be injudicious to engage Magruder's division, our only reserve, so late in the day.

The firing was then violent at Seven Pines, and within a half hour the three Federal divisions were broken and driven from their position in confusion. It was then evident, however, from the obstinacy of our adversaries at Fair Oaks, that the battle would not be decided that day. I said so to the staff officers near me, and told them that each regiment must sleep where it might be standing when the firing ceased for the night, to be ready to renew it at dawn next morning.

About half-past seven o'clock I received a musket-shot in the shoulder, and was unhorsed soon after by a heavy fragment of shell which struck my breast.

I was borne from the field—first to a house on the roadside, thence to Richmond. The firing ceased before I had been carried a

mile from it. The conflict at Fair Oaks was terminated by darkness only.

Mr. Davis's account of what he saw and did at Fair Oaks (Vol. II., p. 123) indicates singular ignorance of the topography of the vicinity, as well as of what was occurring. He says that the enemy's line was on the bank of the river. It was at right angles to and some three miles from it. He says that soon after his arrival I was brought from the right

MAJOR-GENERAL ERASMUS D. KEYES.
(FROM A PHOTOGRAPH BY BRADY.)

wounded. This proves that his "arrival" was near sunset. He also describes the moving of reënforcements from the left to the right. This was not being done. The right was abundantly strong. He says that he made a reconnaissance—then sent three couriers one after the other, with an order to Magruder "to send a force" by the wooded path under the bluff, to attack the enemy in flank and reverse. If the first courier had been dispatched before the reconnaissance, and delivered the order to Magruder promptly, his "force" marching little more than a mile by the straight Nine-mile road could scarcely have come up before dark. The route described would have been (if found) five or six miles long.

The only thing he ought to have done, or had time to do, was postponed almost twenty hours—the putting General Lee, who was near, in command of the army.

The operations of the Confederate troops in this battle were very much retarded by the broad ponds of rain-water,—in many places more than knee-deep,—by the deep mud, and by the dense woods and thickets that covered the ground.

G. W. Smith's division lost 1283 in killed, wounded, and missing. Brigadier-General

MAJOR-GENERAL SAMUEL F. HEINTZELMAN.

Hatton was among the killed, and Brigadier-Generals Pettigrew and Hampton were severely wounded. The latter kept his saddle, and served to the end of the action. General Longstreet reported that the loss of the troops on the Williamsburg road in killed, wounded, and missing was about 3000, of which 2700 was in Hill's division. Among the killed were Colonels Moore, of Alabama, Jones, and Lomax. These reports refer to the battle of Seven Pines, which was fought and ended on the 31st of May.

The Federal loss, including that on June 1st, according to General McClellan's "Report on . . . The Army of the Potomac," page 227, was 7000.*

Prisoners to the number of 350, 10 pieces of artillery, 6700 muskets and rifles in excellent condition, a garrison flag and 4 regimental colors, medical, commissary, quartermaster and ordnance stores, tents and sutler's property, were captured and secured.

The troops on the ground at nightfall were: on the Confederate side, twenty-two brigades, more than half of which had not been in action; and on the Federal side six divisions in three corps, two-thirds of which had fought, and half of which had been totally defeated. Two Federal divisions were at Fair Oaks, and three and a half at Savage's, three miles off, and half a one two miles nearer Bottom's Bridge. The Southern troops were united, and in a position to overwhelm either fraction of the Northern army, while holding the other in check.

Officers of the Federal army have claimed a victory at Seven Pines. The Confederates had such evidences of victory as cannon, captured intrenchments, and not only sleeping on the field, but passing the following day

there, so little disturbed by the Federal troops as to gather, in woods, thickets, mud, and water, 6700 muskets and rifles. Besides, the Federal army had been advancing steadily until the day of this battle; after it they made not another step forward, but employed themselves industriously in intrenching.

In a publication of mine made in 1874, I attempted to show that General Lee did not attack the enemy until June 26, because he was engaged from June 1 until then in forming a great army, bringing to that which I had commanded 15,000 men from North Carolina under General Holmes, 22,000 from South Carolina and Georgia, and above 16,000 in the divisions of Jackson and Ewell.

My authority for the 15,000 was General Holmes's statement, May 31, that he had that number waiting the President's order to join me. When their arrival was announced, I supposed that theirs was as stated.

General Ripley, their best-informed and senior officer, was my authority for the 22,000 from South Carolina and Georgia. I thought, as a matter of course, that all of these troops had been brought up for the great crisis. Mr. Davis is eager to prove that but two of the four bodies of them came to Richmond in time. One who had opportunity to observe that Mr. Davis was almost invariably too late in reënforcing threatened from unthreatened points, has no apology for the assumption that this was an exception.

General Ripley reported officially that he brought 5000 from Charleston, and explained in writing that, arriving before them, he was assigned to the command of the brigade of 2366, his 5000 being distributed in the army as they arrived in detachments.

General Lawton stated in writing that he brought about 6000 men from Georgia to the Valley; but as they had never marched before, they were incapable of moving at Jackson's rate, and he estimated that 2500 had been unable to keep their places when they arrived on the field of Gaines's Mills. Hence his statement that he had 3500 in line in that battle. But the lagbards rejoined him in two or three days.

I estimated Jackson's and Ewell's forces at 16,000, because Ewell told me that his was 8000, and Jackson's had been usually about twenty-five per cent. larger. Mr. Davis puts the joint force at 8000. His authority has stated it also at 12,000 (see "Personal Reminiscences of General Lee," p. 6), and this is far below the fact.

My object in this is to show that I consulted respectable authorities. Mr. Davis proves that his forces were not well employed.

J. E. Johnston.

* From a dispatch of June 4. Earlier the same day, McClellan reported that the loss would exceed 5000, but said he had not yet full returns. On June 6 he sent to the Secretary of War a statement of losses of each corps—total 5739. The official revised returns make the total 5931.—EDITOR C. M.

Robert E. Lee J. E. Johnston

(FROM A PHOTOGRAPH TAKEN AFTER THE WAR.)

THE SECOND DAY AT SEVEN PINES.

JUNE 1, 1862.

THE SEVEN PINES, LOOKING EAST.
(AFTER A ROUGH SKETCH MADE DURING THE WAR.)

When it had grown quite dark on Saturday, the 31st, and just after I had ordered the troops in the woods to reform in the open field behind the line they had held in close contact with the Federals, I left the extreme front and proceeded toward the Nine-mile road. On reaching the open field, I met an aide-de-camp who informed me that General Johnston had been seriously if not fatally wounded, and carried from the field about an hour before. I was second in rank in that army, and the casualty to General Johnston placed me in command. Within three minutes after receiving this information, I met President Davis and General Lee. They were on the Nine-mile road about three hundred yards west of Fair Oaks Station, near the eastern edge of the large wood.

In order to convey a fair idea of the circumstances which resulted in the condition of affairs on the field when the command of the army devolved upon me, brief allusion will be made here to preliminary operations.

On the 27th of May General Johnston received information that General McDowell was advancing from Fredericksburg to form a junction with General McClellan in front of Richmond. That afternoon my division was placed under the command of General Whiting, and he was ordered to move it from the ground then occupied, guarding the Williamsburg road east of Richmond, and take position north of the city, in the vicinity of Meadow Bridges. I was assigned to command the left wing of the army, of which my division, under Whiting, would form a part; and at my urgent solicitation I was relieved from commanding General Magruder. Early in the morning of the 31st of May General

Whiting received an order direct from General Johnston, to move the division under his command to the point on the Nine-mile road where the road to New Bridge turns off. This order was also sent to me by General Johnston. On its receipt I turned over the command of the left wing temporarily to General A. P. Hill, and proceeded to General Johnston's headquarters, near the Nine-mile road, in the north-east suburb of Richmond. I reached there before sunrise, informed him of the order I had given A. P. Hill, and stated that, in leaving the left wing, I did not purpose taking from General Whiting the command of my division, but desired to see how they would acquit themselves in case they went into action, and would assume command at any time or place in case it should be necessary. In leaving General A. P. Hill I had informed him that I would at once return rapidly to the left wing and resume command there if a movement by the enemy should be attempted in that direction.

About 6 A. M. the head of my division, under Whiting, arrived in the vicinity of General Johnston's headquarters, but was prevented from reaching the Nine-mile road by troops of Longstreet's division, who were across Whiting's line of march. Having waited in vain for Longstreet's troops to clear the road for Whiting, about 8 A. M. I directed my aide-de-camp, Lieutenant R. F. Beckham, to report this state of things to General Longstreet, and ask that it be corrected as soon as possible. Lieutenant Beckham asked me where he would find General Longstreet. I referred him to General Johnston, who was present. General Johnston said General Longstreet's division was moving on the Nine-mile road, and he supposed General Longstreet was with it; if not, he would probably be found with General D. H. Hill's division on the Williamsburg road. About 9 A. M. I received a note from Lieutenant Beckham stating that Longstreet's division was not on the Nine-mile road, and that he (Beckham) would cross over to the Williamsburg road in search of General Longstreet. I showed the note to General Johnston at once. It was difficult to convince him that Lieutenant Beckham was not mistaken. But when I called his attention to the fact that Beckham was one of the best staff-officers in the army, and there could be no doubt of the correctness of the information, General Johnston sent one of his aides, Lieutenant

Washington, to General Longstreet, directing him to send at least three brigades of his division back to the Nine-mile road, if this would not cause serious loss of time. Lieutenant Washington, in execution of this order, went rapidly on the Nine-mile road in search of General Longstreet, passed the Confederate pickets, in advance of the New Bridge fork of that road, at full speed, and soon found himself within the Federal lines—a prisoner.

About 11 A. M. Lieutenant Beckham reported to me, at General Johnston's headquarters, that he had found General Longstreet's division on the Williamsburg road halted for the purpose of allowing General D. H. Hill's troops to file by; and that General Longstreet was making dispositions

the road to New Bridge turns off, and remained there several hours, awaiting some indication or information that the attack had been commenced by the troops under General Longstreet on the Williamsburg road.

Returning now to my meeting with President Davis and General Lee on the Nine-mile road, just after the command of the army had devolved upon me, at dark on the 31st: I at once, in answer to inquiries made by the

TWO VIEWS OF FAIR OAKS STATION.
(FROM PHOTOGRAPHS.)

The upper picture shows the east front of the station. Four hundred dead were buried in the foreground. The railway passed between the buildings.

The lower picture shows the south side of the station and earthworks which on this side extended to the Williamsburg road.—ED.

President, explained fully what I knew of General Johnston's intentions and expectations at sunrise that morning, viz.: That Longstreet's division should move by the Nine-mile road, which it was already on and near; that D. H. Hill's division should move by the Williamsburg road and Huger's by the Charles City road. These three divisions constituted the right wing, which was under General Longstreet's command. General Johnston expected

to attack the enemy on that road, with D. H. Hill's division and his own. Lieutenant Beckham said, in reference to the troops of Longstreet's division, that he saw halted: What surprised me most was that they were "accompanied by wagons loaded with baggage and camp equipage."

In the mean time the head of the division under Whiting had remained near General Johnston's headquarters from 6 A. M. until about 11 A. M. It then moved forward on the Nine-mile road, accompanied by General Johnston, and halted near the point at which

that the three divisions under Longstreet would make a determined attack before 8 A. M. I explained the delays that had been caused by General Longstreet's misunderstanding in regard to the direction of his own division, and its consequent movement from the Nine-mile road to the Williamsburg road; and spoke of General Johnston's disappointment and anxiety because of the still further prolonged delay after Longstreet's division was transferred to the latter road. I told the President of the note received by General Johnston from General Longstreet at 4 P. M.,

asking for help; of the hurried movement of my division, under General Whiting, conducted by General Johnston in person, to the aid of Longstreet; and the sudden appearance of the enemy from the north side of the Chickahominy, which interrupted the movement in aid of Longstreet, and resulted in the contest north of Fair Oaks. I described the contest that had taken place on that part of the field, and then asked him, and others near, if anything had been heard on the Nine-mile road from the 30,000 men under Longstreet on the Williamsburg road, later than the note received by General Johnston about four o'clock P. M.

Nothing further had been heard, and the President then asked me what were my plans. I told him that I could not understandingly determine what was best to be done, until something was known of the condition of affairs in the right wing of the army, and some data obtained in regard to the position and strength of the enemy on that side; and added, it might be found expedient to withdraw to better ground covering Richmond, or it might not; all depended on what had occurred in the right wing. The President suggested that, if we remained, the enemy might withdraw during the night, which would give us the moral effect of a victory. I replied that I would not withdraw without good reason; all would depend upon the state of affairs on the Williamsburg road. Nothing had happened on our side to make it necessary to retire.

All I then knew of the actual battle was what had occurred north of Fair Oaks Station, where four brigades of my own division, which was commanded by General Whiting, and directed by General Johnston in person until he was wounded, engaged a strong Federal reënforcement from the north side of the river (which proved to be Sedgwick's division of Sumner's corps). Judging from the note received by General Johnston from General Longstreet at 4 P. M., there was good reason to believe that the delay of the latter in bringing on the attack had given time for Federal reënforcements to reach the field from the direction of Bottom's Bridge; and there was reason, too, for the belief that General Longstreet's troops were nearly, if not quite, all in action when he called for help. It was very clear that the sudden and, if possible, crushing blow which General Johnston expected to have made early in the morning by the right wing of the army against the Federal forces isolated in the vicinity of Seven Pines, had failed. Night found two-thirds of the Confederate army in the swamps eight miles east of Richmond, at the end of a bloody and indecisive engagement begun about the middle

of the afternoon, whilst the right of the Federal army was in the vicinity of Mechanicsville, a good deal nearer Richmond than we were. I had no reason to believe that all the bridges over the Chickahominy were broken and that stream impassable. In short, the condition of affairs was not altogether rose-colored, in my view, when the command of the army devolved upon me. But I could determine nothing understandingly until information was received from the right wing.

About half an hour after dark the President and General Lee rode away. General J. E. B. Stuart, who had been, during the day, on the extreme right with a portion of the cavalry, picketing the Charles City road and the White Oak Swamp, reached the field near Fair Oaks at nearly the same time, and reported to me that the enemy had not advanced from their position at White Oak Bridge; that our troops had carried the intrenched position at Seven Pines some time before sunset, and had advanced on the Williamsburg road beyond that point, but he did not know how far. He had good guides with him, and he offered to go in person to General Longstreet, and have him piloted to the headquarters on the Nine-mile road. Several parties had been previously sent to communicate with General Longstreet and request him to come over to the Nine-mile road for conference and instructions.

A short time before midnight, after I had made my headquarters at Old Tavern, I received a note from General Stuart stating that at 10:30 P. M. he had failed to find General Longstreet. At 12:40 Sunday morning (June 1), having heard nothing from General Longstreet, I addressed him a note asking the position of his command at dark, the condition of his men, and requesting his views in regard to the operations to be undertaken in his front that morning. Soon after that note was written, General Longstreet, without having received it, arrived at my headquarters, having been found about midnight by one of the staff-officers sent to communicate with him. General Longstreet reported that only a portion of his own division had been seriously engaged in close action, and that Huger's division had scarcely been engaged at all; the principal fighting having been done by D. H. Hill's division; that the enemy's works at Seven Pines had been carried late in the afternoon; the Federals had been pressed back about a mile beyond that point, and the fighting had been continued until dark. On receipt of this information, I directed General Longstreet to send one brigade of Huger's division to support the troops on the Nine-mile road, and renew the fighting with

the remainder of the right wing as early as possible after daylight, directing his efforts north instead of any farther east, pivoting this movement on the position of Whiting, near Fair Oaks Station. General Longstreet was assured that when a determined attack by the right wing was well developed, it should be favored by a strong demonstration, and, if necessary, by a real attack, by Whiting's command, and other troops to be brought up on the Nine-mile road. Long-

front each, and four batteries. These two divisions constituted Sumner's corps. On the left, Keyes's corps [part of Couch's and Casey's divisions] held the strong works south of the Williamsburg road, called "the third line of defense," protected by sixty pieces of artillery. The interval between Keyes and Sumner was a little more than a mile, and was held by Heintzelman's corps [Hooker, during the night, being in bivouac near the intrenchments on the Williamsburg road], consisting on the ground of Kearny's

street objected to renewing the attack with the right wing of the army, and said it ought to be made by my division, which he thought had done little fighting on the 31st. After hearing all he chose to say on that subject, I gave the positive order, as above, and General Longstreet returned to the Williamsburg road.*

I then wrote to General Lee,—who was in general charge in Richmond of all Confederate army operations,—telling him what had been determined on, what orders had been given, and asking that such reënforcements as were within reach should be sent. General Lee's reply is dated Richmond, 5 A. M. He says: "Ripley will be ordered, and such forces from General Holmes as can be got up will be sent. Your movements are judicious, and determination to strike the enemy right."

The following statement of the position of the Federal forces at daylight on the 1st of June is the substance of an account by General George W. Mindil, aide-de-camp to General Phil. Kearny. Sedgwick's division and the detachment from Couch's, and five batteries, were on the extreme right, facing west-north-west. On the left of Sedgwick, at nearly a right angle, and parallel with the railroad, was Richardson's division, in three lines of a brigade

division and about half of Hooker's division, with every practicable approach commanded by a numerous artillery. The troops outside the strong works south of the Williamsburg road were partly protected, a line of rifle-pits having been thrown up during the night. The pickets of the three corps were in communication throughout. General Mindil placed the outposts forming the connection between Sumner and Heintzelman.

On the Confederate side the troops under Longstreet had all been brought to the front. His extreme right was on the Williamsburg road, about half a mile east of Seven Pines; his left near two wood roads, about half a mile east of Fair Oaks Station. The troops forming his right faced east, those of his left faced north. Nearly if not all of his command was in the wood east of the Nine-mile road, and between the Williamsburg road and the railroad. My division under Whiting was on the Nine-mile road, a little west of Fair Oaks Station, near the ground on which it had fought the previous afternoon.

General Mindil says: "About five o'clock on Sunday morning [June 1], in the gray of dawn, the Confederate skirmishers in front of Richardson opened fire." These were Hood's

* It appears that, "At 2 A. M., June 1st, a Federal council of war was held in General Sumner's tent, and it was resolved to attack the enemy as soon as disposition for that purpose could be made." See "The Peninsula," by General A. S. Webb, p. 114.—ED.

enterprising Texans, near Fair Oaks Station, who were seeking the enemy in front of the gap between Whiting's right and Longstreet's left. They were immediately recalled, because it was intended that the attack should be made by the right wing under Longstreet.

Again, General Mindil says:

"At half-past six o'clock a determined assault was made against General French's line (of Richardson's division), the enemy pushing forward along the two wood roads that crossed this line heavy columns of attack, supporting them on both flanks by battalions of infantry in deployed line. The firing commenced within half-musket shot, and was maintained at closer quarters for nearly an hour and a half before the enemy's [the Confederate] column wavered and broke."

In a note, dated 6:30 A. M., General Whiting reported to me, "Heavy firing in advance of us." It now seemed that the right wing under Longstreet was beginning the movement ordered. Some time later, perhaps an hour, General Whiting wrote: "I am going to try a diversion for Longstreet; . . . the musketry firing in advance is tremendous." On the far side of the gap between Whiting's right and Longstreet's left our troops were falling back. The firing had been at times quite heavy; but nothing had been observed from the Nine-mile road indicating that any large portion of the Confederate right wing had begun in earnest the movement in which Whiting was ordered to cooperate.

"Hardly had fresh Federal regiments taken the places of those which had exhausted their ammunition in repulsing the Confederate attack at 8 A. M. [says General Mindil], when the enemy's [Confederate] column, strongly reinforced, gave a general yell, and again dashed forward to the attack. This renewed fight was of the most desperate and sanguinary character, lasting more than an hour, when the enemy were again driven back, without gaining a single point of the Union line. . . . So fierce was the fighting in Richardson's front that he sustained a loss of nearly 800 men in a division much smaller in numbers than Sedgwick's, and his men were partly protected by the railroad embankment. . . . As Hooker neared the clearing on Hyer's farm, he ordered his four regiments to charge; this cleared the woods, and the enemy were entirely broken. . . . Hooker was now on the right flank and rear of the forces engaged with Richardson, and he was not slow to improve his opportunity."

A few moments after 9 A. M., General Whiting wrote to me: "Some of Griffith's regiments might be sent down to the railroad in rear of the position occupied by Hood, which, with a heavy enemy's battery in his rear, has be-

come untenable." The Federals in pursuit of Longstreet's forces — that had probably withdrawn along the two wood roads previously mentioned — were getting nearly upon the prolongation of Hood's line, but not as yet in rear of it.

About 10:30 A. M. I received a note from General Longstreet, stating, "The brigade cannot be spared. Every man except a brigade is in action. . . . I am not able to do without it." A little later a note, dated 10 A. M., was received from General Longstreet, in which he says: "General, can you reinforce me? The entire [Federal] army seems to be opposed to me. . . . If I can't get help, I fear I must fall back."

On receipt of this note, I ordered five thousand men from the crest of the Chickahominy Bluffs, between the New Bridge and Mechanicsville roads, to move as soon as possible to the support of General Longstreet; and Ripley's brigade, which was expected to arrive by the Nine-mile road, was ordered to move to the front on the Williamsburg road as soon as it reached Richmond. General McLaws was sent to General Longstreet to inform him of the reinforcements that had been ordered to his support; to assure him that the whole of McClellan's army was not in his front; and to tell him that he must not fall back any farther, but must, if possible, regain the ground he had already lost. About 1 P. M. I received a note from General McLaws stating, "Longstreet says he can hold his position with five thousand more men. He has the same ground the enemy held yesterday."

In the mean time the right of Whiting's line had been drawn back because of the advance of the Federals, who were following up our withdrawing forces on the far side of the gap which existed between Longstreet's left and Whiting's right.

"After Richardson's and Hooker's divisions and Birney's brigade had driven the Confederates well back from the railroad in front of the position held by Richardson during the night, Sickles's brigade united with these forces [says General Mindil], and a general advance was made. No serious opposition was encountered, and Casey's camp was reoccupied before two o'clock P. M., the ground being covered with the rebel dead and wounded as well as our own."*

About 1:30 P. M. President Davis rode up to my headquarters, and asked for General Lee. Upon being told that General Lee was

* Those who think there was little fighting on the second day at Seven Pines, should compare the official revised returns of the Union losses of killed, wounded, and missing, on the first day, with those of the second day (see "War Records": series I., vol. XI.; part I., pages 757 to 762). These show that the losses of the troops which were engaged only in the second day's fight aggregate 1199, viz.: Richardson's three brigades (loss, 838), Birney's four regiments of Kearny's division (207), Hooker's division (Sickles' brigade, and two regiments of Starr's brigade) (154). The losses of the troops engaged the first day, aggregate 3832, viz.: Casey (1429), Couch (1168), Sedgwick (347), two brigades of Kearny's division (884), and the unattached artillery (4). But some of the troops engaged the first day were also engaged the second day; it is impossible, however, to estimate their losses on the second day. As much as we positively know, therefore, is that the Union losses on the second day were, at least, 1199, or about one-fourth of the total loss in the two days' battle, which was 5031.

General Johnston (see pages 119-20, herewith) estimates the losses of Longstreet and Hill at about 3000; and G. W. Smith's at 1283—total, 4283. — ED.

not there, he expressed so much surprise as to induce me to ask him if he had any special reason for supposing General Lee would be there at that time. To this he replied, Yes; and added he had early that morning directed General Lee to take command of the army at once. This was the first and only intimation I received in regard to the assignment of General Lee to the command. It was enough, however. The President chatted upon a variety of commonplace subjects, but made no allusion to anything pertaining to the state of affairs on the field.

General Lee came in about 2 P. M., and I at once turned over to him the command of the Army of Northern Virginia, and commenced explaining to him what had occurred during the day. To these explanations President Davis seemed to give some attention, particularly to General Longstreet's notes asking for help. Whilst I was still speaking to General Lee of the state of affairs upon the field of battle, I received a note from General Longstreet, dated 1:30 P. M., in which he said: "The next attack will be from Sumner's division. I think that if we can whip it we shall be comparatively safe from the advance of McClellan's army. I hope that those who were whipped yesterday will not appear again. The attack this morning was made at an unfortunate time. We had but little ammunition, but we have since replenished our supply, and I sincerely hope that we may succeed against them in their next effort. Oh that I had ten thousand men more!"

After reading General Longstreet's note, I handed it to General Lee, and requested him to read and hand it to the President. General Lee looked very serious whilst reading; and after the President had read it, the latter seemed to take a little more interest in what was going on, but said nothing.

I informed General Lee that Longstreet was mistaken in regard to the state of things; that the two corps of the Federal army on the north bank of the river that morning had not yet crossed to our side; that the force attacked north of Fair Oaks the previous afternoon still held that position; that 5000 men ordered from the Chickahominy Bluffs were already closely approaching Longstreet's position on the Williamsburg road; that Ripley's brigade, which was expected, had been ordered to move on that road; that this would still leave Longstreet more than 30,000 men, even if his losses had already reached 5000; that the ground he now occupied was favorable to us; and that the danger to Richmond, if any, was not then on the Williamsburg road.

Near 3 P. M. the President rode off, leaving

General Lee and myself in conference alone. General Lee made no adverse comment upon my management of the army, and gave no orders.

At 4 P. M. General Lee and I, with a courier as a guide, went over to the Williamsburg road, where we found the President and several members of his Cabinet talking with General Longstreet. They were at a point about half a mile nearer Richmond than the unfinished pentangular redoubt where our troops first struck the Federal main line the previous day. Everything was quiet; the re-enforcements from the Chickahominy had reached Longstreet's position on the Williamsburg road. There were no further operations that day; the battle was ended.

At daylight on the 1st of June there were three Federal corps on the battle-field in the vicinity of Seven Pines and Fair Oaks. On the morning of the 31st of May there was but one Federal corps on that ground. The Confederate troops on the field on the 1st of June were those that General Johnston had ordered, on the 30th of May, to move forward as soon as possible after daylight on the 31st. The result of the action on June 1st is sufficiently indicated in the foregoing battle-field notes of General Longstreet.

Conflicting accounts of Confederate operations in this battle call for further allusion to General Johnston's original plan, as well as to the occurrences of the 1st of June. In 1874 General Longstreet wrote two letters to General G. W. Mindil, in reference to the battle of Seven Pines. These letters were shown to me by General Mindil a few months since; and he authorized me to make any use I chose of the statements made by General Longstreet. It is believed that these letters have not heretofore been published. The first is dated July 17, 1874. In this General Longstreet, speaking of the movements on the 31st of May, says:

"It is proper to explain now the plan of battle, as I can speak from accurate knowledge. The plan was to turn your [the Federal] left at daylight, by throwing Huger's division, by a passable route for infantry, to your left and rear. As the head of his column passed the swamp, D. H. Hill was to be ready, and I was to advise him to make the attack vigorously. Huger did not reach the field. At one o'clock D. H. Hill proposed to bring on the battle, and it was agreed to under the impression that Huger would be there surely by the time we were warmed up into actual battle. The entire strength of the plan was in his movement."

On the 2d of December, 1874, General Longstreet wrote to General Mindil, saying:

"Our plan was, as you stated, to turn your left by moving Huger's command across the head of White Oak Swamp; that to be followed by the attack of General D. H. Hill, on the Williamsburg road, which

BURYING THE DEAD, AND BURNING HORSES AT FAIR OAKS STATION AFTER THE SECOND DAY'S FIGHT. (AFTER A SKETCH MADE AT THE TIME.)

was to be supported, if need be, by my command; the command on the Nine-mile road following Hill's movements. As you say in your article, Johnston's plan was faultless, and in my judgment at the time was the only plan that could be approved by a military mind. . . . Huger had to move over the same ground pretty much that I did. He was to precede me, and I believe that he did so over part of the route. My opinion is that he moved before me. That I waited until sunrise, so as to give him time to clear the road as far as the Charles City fork, and if my memory is correct I passed a part of his command resting on the side of the road. . . . The only reports that I remember to have heard from him were that he was moving on, and would soon be in position. General Johnston was on the Nine-mile road. This left me the senior—or at least nominally the senior—officer on the Williamsburg road, and exercising more or less command of Hill's and Huger's as well as of my own division. . . . Once the action was opened, we were drawn gradually into it, and of course the combat became more and more vigorous until night. . . . I was to support Hill, and being his senior, could have taken command on the Williamsburg road; but it would have been inexcusable had I done so, inasmuch as he had led his troops well and had been successful. I could not, therefore, do anything more than support and aid his able efforts."

Judging from the general character of what he writes to General Mindil, it appears that General Longstreet was not fully alive to the fact—then or later—that he was in command of one-half of General Johnston's army on that day. Much less does it seem that he realized the importance of prompt and decisive action. In view of what occurred late in the afternoon of the 31st, after time had been given for two Federal divisions to come to the assistance of the isolated corps in the vicinity of Seven Pines, it is not difficult to infer what would probably have been the result had Longstreet's own division, 14,000 strong, moved at daylight on the Nine-mile road, striking, on the right flank, the lines that D. H. Hill's division carried by assault in the afternoon.

In a letter addressed to me, General Johnston says:

"I refer to the mention of the misunderstanding between Longstreet and myself, in regard to the direction of his division. . . . I received information of Longstreet's misunderstanding—which may be my fault, as I told you at the time—whilst his troops were moving to the Williamsburg road, and sent to Longstreet to send three brigades by the Nine-mile road, if they had not marched so far as to make the change involve a serious loss of time."

The date of this letter, June 28, 1862, the circumstances under which it was written, and General Johnston's specific statements show not only that General Longstreet did misunderstand the direction in which Johnston intended Longstreet's division should move against the enemy, but make it certain that Johnston attempted, at least in part, to rectify Longstreet's mistake in regard to this matter. There is other positive evidence, not

necessary to be repeated here, which establishes the same facts. But it appears now that General Johnston, in his "Narrative" published in 1874, has conceded that it was his fault that caused the misunderstanding on the part of Longstreet, in regard to the movement of the division in question. It is believed, however, that he has not conceded—and never will concede—that it was his plan to keep D. H. Hill's, Longstreet's, and G. W. Smith's divisions out of action until Huger's division could get into position on the left flank and rear of the enemy. This would have required that the 35,500 men in the divisions of Hill, Longstreet, and Smith—men inured to marching and fighting—should be held back until Huger's 5000 inexperienced troops could, by a circuitous route across a difficult swamp, get into position where they were not needed; and this, too, when prompt action was essential to success, and delay was dangerous.

Neither is it believed that General Johnston will concede that his plan was that my division, under Whiting, on the Nine-mile road, placed there to guard against Federal reinforcements coming from the north side of the Chickahominy, should be put in action on Hill's left, whilst the 14,000 men in Longstreet's division were held back on the Williamsburg road only to support Hill "if need be." But all this must be conceded in order to make up "the faultless plan," which was, in General Longstreet's judgment at the time, "the only plan that could be approved by a military mind."

In reference to operations on the 1st of June, General Longstreet writes to General Mindil in part as follows:

"I do not remember to have heard of any fighting on the second day except a sharp skirmish reported by General Pickett as he was retiring, under the orders of General Lee, to resume our former position. . . . Attack was not renewed on the 1st of June, because Johnston had been wounded and had been obliged to leave the field. Smith, the next in rank, had been taken quite sick, but would not give up. He was therefore slow in organizing for renewed attack, and before he did so arrange General Lee was announced as the commander of the army. As he had not been with the army the previous day, he was not prepared to conduct the continuance of the battle; so the troops were withdrawn to their original positions in the afternoon and evening. . . . About 10 A. M. General Lee was assigned to command, and rode out on the Nine-mile road, saw General Smith, took command, and came with General Smith across to the Williamsburg road. There we discussed the matter of renewed attack. I favored another effort to turn your [Federal] left. Smith opposed it, and gave as his reason the strength of your lines, which he claimed to have examined, and I was forced to yield my opinions, in consequence of his knowledge of superior position on your side."

The foregoing extracts are some of General Longstreet's contributions to the "history" of

the battle of Seven Pines, furnished by him to General Mindil, "in hopes of making the Confederate side a little clearer."

As to my being "taken quite sick," I was not seriously ill until the 2d of June. General Longstreet's statement that General Smith was slow in organizing for renewed attack because he was taken sick is, therefore, a mistake. In fact, at that time there was no organizing requisite, except, perhaps, in the right wing under Longstreet, and this was intrusted to him. I turned the command of the army over to General Lee about 2 P. M. He certainly gave no orders to General Longstreet, or to any part of the army, before 4 P. M. General Longstreet seems to have forgotten his notes of that morning, as well as that dated 1:30 P. M., ending with the exclamation, "Oh that I had 10,000 men more!"

When General Lee and General Smith joined General Longstreet on the Williamsburg road, Longstreet had lost on the 1st of June much of the ground he had gained on the 31st of May. I have no knowledge of any proposition having been made by General Longstreet to General Lee for renewing the attack. I

had never seen the works in General Longstreet's front, over which the troops of the latter had fought forward on the 31st of May and back during the morning of the 1st of June. General Longstreet is in error when he says that he was forced to yield his opinions because of my superior knowledge of the position in his front.

During the night of the 1st of June the troops under Longstreet quietly fell back to resume their former positions in front of Richmond. The division under Whiting, on the Nine-mile road, remained for several days confronting the Federal position it had attacked, north of Fair Oaks Station.

The limited space allotted to this article would prevent much further comment on my part in reference to the incidents and previously published accounts of this battle, even if I felt disposed at this time to say more. I will therefore only add that in my opinion, then and since, General Johnston's "original plan" was entirely correct in principle, and promised assured success if carried into effect as he, at sunrise on the morning of the 31st of May, intended and expected.

Gustavus W. Smith.

RECOLLECTIONS OF A PRIVATE.—IV.*

TO THE CHICKAHOMINY.—THE BATTLE OF SEVEN PINES.

CONFEDERATE SHARP-SHOOTER.

THE roads were narrow and very muddy between the White House and the Chickahominy, and it was with great trouble that

our trains were moved over them. A few miles west of the Pamunkey we found the country beautiful and undulating, with graceful, round-topped hills, here and there crowned with trees and clothed in the varied tints of early summer.

On our entire march up the Peninsula, we did not see a dozen white men left upon the soil. At last, on the twenty-third of May, we arrived upon the banks of the sluggish Chickahominy,—a small mill-stream, forty or fifty feet wide, with swampy lowland bordering on either side; the tops of the trees growing in the swamp being about on a level with the crests of the bluffs just beyond, on the Richmond side. Our first camp was pitched on the hills in the vicinity of Gaines's Farm.

The engineers soon began the construction of bridges for the passage of the troops, as it was very important to gain a foothold on the west bank, preparatory to our advance. While Duane's bridge was being constructed, we were ordered on duty along the banks; and upon approaching the river we found, in the thickets near it, one of our dead cavalymen lying in the water, evidently having been killed while watering his horse. The bridges were thrown out with marvelous quickness, and the corduroy approaches were soon constructed. A small force was ordered to cross, to reconnoiter and to observe the condition of

WHITE HOUSE, THE HOME OF GENERAL W. H. F. LEE, MCCLELLAN'S BASE OF SUPPLIES ON THE PAMUNKEY.—RUINS OF THE WHITE HOUSE. (FROM SKETCHES MADE AT THE TIME.)

the roads with respect to the passage of artillery. I happened to be one of that squad. With orders not to return the fire if assailed, we advanced across the bridge and through the woods, a quarter of a mile; and, seeing the sloughy condition of the roads, were returning, when the crack of a rifle told us the enemy were upon us. At the first fire one of our men fell. He entreated us to leave him and save ourselves; while we were carrying him, the enemy wounded two more of our men, but not seriously. On each side of the narrow defile were woods with but little screening underbrush, and it was through this we were advancing when attacked. We could not see the enemy, who were secreted in the tree-tops around us, but the *zip, zip* of their bullets pursued us as we retreated.

The comrade who had been shot, apparently through the lungs, was examined by our surgeon, who at first thought the case fatal, as the bullet came out of the chest on the side opposite to which it entered; but it was found that the bullet had been deflected by a rib, and glanced round, beneath the skin, only causing a painful flesh-wound. In three weeks our comrade was on light duty about camp. Before seeing very much service we discovered that a man may be hit with bullets in a great many places without killing him. Later I saw a man who had both his eyes destroyed by a bullet, without injuring the bridge of his nose, or otherwise marking his face.

In the barn at Gaines's Farm there were a number of Confederate sick and wounded,—men captured in some skirmish during our advance; and while taking a peep at them through a crack, I saw a North Carolina lieutenant whom I recognized as a former school-acquaintance. I obtained permission to speak to him, but they told me he was violent and bitter in his language. On approaching him, and inquiring if he knew me, something like a smile of recognition lighted up his face; hesitating a moment, he finally extended his hand. We talked for fifteen or twenty minutes about our school-fellows and early days, but not one word about the war. In two days I visited the barn again, and upon inquiring for him was told by one of the men in charge, "That cock is done crowing." I asked where he was buried. "He isn't buried; they have carried him out!" I stepped into the barnyard and found him thrown upon a heap of dirt. It was impossible to express all the indignation I felt; I emphatically said that none but cowards would have been guilty of such an act. I was ordered off for thus expressing my mind. Undoubtedly he had been very bitter, but that was no excuse. I mention this as the only instance I ever knew where a dead

enemy, or even a prisoner, was insulted by our soldiers. No *soldier* would have committed such a foul act. It was reserved for some miserable "skulker" who, to avoid the active duties of a soldier, had taken refuge in a hospital.

Considerable foraging was done, on the sly, about the neighboring plantations, but

water was waist-deep throughout the greater part of the swamp.

THE BATTLE OF SEVEN PINES (FAIR OAKS).

We were ordered on duty with Sumner's corps, which was stationed at Tyler's house,

SUMNER'S MARCH TO REËNFORCE COUCH AT FAIR OAKS STATION.

Lieutenant Edmund Kirby, Battery I, First U. S. Artillery, says in his official report: "The roads were almost impassable for artillery, and I experienced great difficulty in getting my guns along. I was obliged at times to unlimber and use the prolonge, the cannoneers being up to their waists in water. About 4:30 P. M. I was within three-quarters of a mile of Fair Oaks Station, with three pieces [Napoleon twelve-pounders] and one caisson, the remainder of the battery being in the rear, and coming up as fast as circumstances would permit."

as a rule foraging was severely condemned by our commanders. There was much tobacco raised in this section of country, and we found the barns filled with the best quality of tobacco in leaf; this we appropriated without objection on the part of our officers. As all trades were represented in our ranks, that of cigar-maker was included, and the army rioted in cigars without enriching the sutlers.

By the lower bridges two of the army corps were sent across to take position near Seven Pines. Some of the bridges were of boats, with corduroy approaches. While they were in process of finishing, on the night of May 30, a terrible storm occurred; the rain-fall was immense, and the thunder the most terrific I ever heard, its sharp, crackling rattle at times sounding like the cannonading of an engagement. When morning dawned, our boat bridges were found dangling midway in a stream which covered the whole swampy and bottom land on both sides the original channel, and the

and held the center of the general line of the army. Not long after noon of the 31st we heard the dull reverberation of cannonading in the direction of Seven Pines, and the companies and regiments fell into line, ready to march at a moment's notice. About two in the afternoon the march was begun to the approaches of Sumner's upper bridge, also called the "Grapevine" bridge, which had been built of logs over the swampy bottom, and which was sustained in place by ropes tied to stumps on the up-stream side. At first it seemed impossible to cross, so swollen was the stream by the overflow; but when the troops were well on the bridge, it was held in place by the moving weight and rendered passable, although covered with water and swaying in the rushing torrent, which every moment threatened to float it away piecemeal. The men grumbled some, after the manner of soldiers. "If this bridge goes down I can't swim a stroke," said one. "Well," said

“Little” Day, always making the best of everything, “there will be, in that case, plenty of logs for you to float on.” If we had gone down with all our marching-equipments, there would have been but little chance even for a good swimmer. Kirby’s battery of Napoleon guns preceded us; we found them mired on the west shore. They were unlimbered, and the men of different regiments tugged and lifted at them, knee-deep in the mire, until they were extricated, and finally almost carried them to dry land, or rather firm land, as by no stretch of courtesy could anything in the vicinity be called dry.

Sedgwick’s division, being nearer the Grapevine bridge, took the lead at that crossing, while Richardson’s division moved toward Sumner’s lower bridge. There French’s brigade crossed by wading to the waist, the other brigades being ordered to turn back and follow Sedgwick. It was this delay which kept Richardson out of the first day’s fight.

A private of the Fifteenth Massachusetts (Gorman’s brigade) afterward gave me his recollections of that forced march through water and mud. “Most of our artillery,” he said, “became so badly mired that we were obliged to proceed without it, but the little battery of twelve-pound Napoleon guns, commanded by an energetic regular officer (Lieutenant Kirby), notwithstanding it was continu-

ally mired to its axles, was pluckily dragged along by horses and men. Despite the mire, we cracked jokes at each other, shouted and sang in high spirits, and toiled through the morass in the direction of the heavy firing.”

About 3:30 P. M. we began to meet stragglers from the front. They all told in substance the same story: “Our companies and regiments are all cut to pieces!” One straggler had a strapping Confederate prisoner in charge. He inquired for a Pennsylvania regiment, saying that during the fight in the woods he lost his company, and while trying to find his way out came across the “reb,” and was trying to “take him in.” “Stranger,” said the prisoner, “yer wouldn’t have taken me in if I’d known yer war lost.”

“Meanwhile the thunder of the conflict grew louder and louder, and about five o’clock we came upon fragments of regiments of that part of Couch’s command which had become isolated at Fair Oaks Station; they had fallen back half a mile or so, and when we joined them beyond the Courtney house, they were hotly engaged with the enemy, who were in overwhelming numbers.

“As we came up through a stumpy field we were greeted with the quick *crack, crack* of the infantry in our front. The smoke of battle hung in clouds over the field, and through it could be seen the flashes of the

SUMNER'S CORPS CROSSING THE OVERFLOWED "GRAPEVINE" BRIDGE. (FROM A SKETCH MADE AT THE TIME.)

AFTER THE BATTLE OF FAIR OAKS—PUTTING THE WOUNDED ABOARD THE CARS. (FROM A SKETCH MADE AT THE TIME.)

artillery. The *ping, zip, zip* of bullets, and the wounded men limping from the front or carried by comrades, were a prelude to the storm to come. We formed on the left of Abercrombie's shattered brigade, near the Adams house, and were welcomed with hearty cheers. Presently there was a terrible explosion of musketry, and the bullets pattered around us, causing many to drop; a line of smoke ahead showed where this destructive fire came from. Kirby's five Napoleon guns came up, and in the angle of the woods opened with splendid precision upon the Confederate columns. The recoil of the pieces was often so great as to bury the wheels nearly to the hub in mud. Soon the "rebel yell" was heard as they charged on the right of Kirby's battery, which changed front to the right, and delivered a destructive fire of canister. This caused the enemy to break in confusion, and retreat to the cover of the woods. Shortly afterward the enemy developed in greater force in our front, and the hum of shot and shell was almost incessant; but in a few minutes the fire slackened, and the Confederate lines came dashing upon us with their shrill yells. We received them with a volley from our rifles, and the battery gave them its compliments. The gray masses of the enemy were seen dimly through the smoke, scattering to cover. Presently the order ran

down the line, "Fix bayonets!" While waiting the moment for the final order, John Milan said: "It's light infantry we are, boys, and they expect us to fly over them criss-cross fences." Then the final order came: "Guide right—Double-quick—Charge!" Our whole line went off at double-quick, shouting as we ran. Some scattering shots were fired by the enemy as we struggled over the fences, and then their line broke and dissolved from view.

"That night we lay under the stars, thinking of the events of the day and the expected conflict of the morrow. Until dawn of Sunday (June 1) our officers were busy gathering together the scattered and separated forces. About five o'clock next morning we heard firing on our left flank, which was covered by Richardson's division of Sumner's corps. It was a line of Confederate pickets deploying in an open field on the south side of Fair Oaks Station. Shortly after six o'clock there was a furious fire of musketry on our left, which continued for an hour.

"During the day I went over a portion of the battle-field in the road through the woods, where the Confederates had made the unsuccessful charge upon Kirby's battery. Here the dead lay very thick, and a number of their wounded were hidden in the thickets. They had fallen in many instances on their faces in the headlong charge; some with their legs torn

off, some with shattered arms, and others with ghastly wounds in the head.

"On the 2d of June the whole line moved forward, and from Fair Oaks to the Williamsburg road occupied the positions which had been held previous to the battle. About that time I went over the battle-ground in front of Casey's position where the battle began. Many of the dead remained unburied. Some of the men who first took possession of the works informed me that they found large quantities of Confederate arms; also a number of the enemy who had become intoxicated on Yankee whisky. The camp had been well plundered, and the enemy had adopted a system of exchange in dress, throwing aside their ragged uniforms, and clothing themselves in the more comfortable and cleanly garments of the Federal soldiers. I saw a Sibley tent in which I counted over two hundred bullet-holes."

A comrade who visited the scene of the charge made by Sedgwick's men said that in the woods beyond, where the Confederate lines had been formed, a number had been killed while in the act of getting over the fence, and were suspended in the positions in which they had been shot. In the woods just beyond this fence were some swampy pools, to which a number of the enemy's wounded had crept for water and died during the night. There were two or three of these pools of stagnant water, around which were clusters of wounded and dead men.

When my company reached the vicinity of Fair Oaks, about a week after the battle, I was surprised to find how many limbs of

trees had been cut away by bullets and shot. At one place a cannon-ball had apparently passed entirely through the stem of a large tree, splitting it for some distance; but the springy wood had closed together again so closely that the point of a bayonet could not be inserted in its track. The forests in the rear were marked in such a manner by bullets as to indicate that the enemy must have shot at times a long way over their intended mark.

In the advance, where Naglee's brigade made its struggle until overwhelmed by the enemy, graves were plenty in every direction, and some of the enemy's dead were found standing, in the swamp near by, in the position in which they were shot. They had decomposed so rapidly that the flesh had partly dropped from the bones.

Many of Casey's men had lost their knapsacks, blankets, and clothing, as well as their tents, and were in a sad plight for soldiering.

Thereafter our lines were constantly engaged in skirmishing, and we were kept in position for battle day after day, expecting an attack. Often the bugler at brigade headquarters sounded the alarm to "fall in," on one day sounding it ten times. During one of the frequent thunder-storms the Confederates made reconnaissance, and fired volleys so timed that they might be mistaken for thunder; but our men were not deceived and stood to their arms, expecting an attack. At one time the men in our rear were practicing the drill with blank cartridges, and were mistaken for the enemy. Thus the alarms of war kept our attention occupied.

Warren Lee Goss.

LINE OF BATTLE OF GENERAL DEVENS'S BRIGADE, COUCH'S DIVISION, WHERE GENERAL DEVENS WAS WOUNDED.

THE PENINSULAR CAMPAIGN.

MAY AND JUNE, 1862.

IN the following pages I purpose to give a brief sketch of the Peninsular campaign of 1862. As it is impossible, within the limits available, to describe even the most important battles, I shall confine myself to strategic considerations. But even this requires a rapid review of the circumstances under which, from a small assemblage of unorganized citizens, utterly ignorant of war and almost of the use of arms, was evolved that mighty Army of the Potomac, which, unshaken alike in victory and defeat, during a long series of arduous campaigns against an army most ably commanded and the equal in heroism of any that ever met the shock of battle, proved itself worthy to bear on its bayonets the honor and fate of the nation.

In July, 1861, after having secured solidly for the Union that part of western Virginia north of the Kanawha and west of the mountains, I was suddenly called to Washington on the day succeeding the first battle of Bull Run. Reaching the capital on the 26th, I found myself assigned to the command of that city and the troops gathered around it.

All was chaos and despondency; the city was filled with intoxicated stragglers, and an attack was expected. The troops numbered less than fifty thousand, many of whom were so demoralized and undisciplined that they could not be relied upon even for defensive purposes. Moreover, the term of service of a large part had already expired, or was on the point of doing so. On the Maryland side of the Potomac no troops were posted on the roads leading into the city, nor were there

any intrenchments. On the Virginia side the condition of affairs was better in these respects, but far from satisfactory. Sufficient and fit material of war did not exist. The situation was difficult and fraught with danger.

The first and most pressing demand was the immediate safety of the capital and the Government. This was secured by enforcing the most rigid discipline, by organizing permanent brigades under regular officers, and by placing the troops in good defensive positions, far enough to the front to afford room for manœuvring and to enable the brigades to support each other.

The contingency of the enemy's crossing the Potomac above the city was foreseen and promptly provided for. Had he attempted this "about three months after the battle of Manassas," he would, upon reaching "the rear of Washington," have found it covered by respectable works, amply garrisoned, with a sufficient disposable force to move upon his rear and force him to "a decisive engagement under circumstances wholly unfavorable to him."* It would have been the greatest possible good fortune for us if he had made this movement at the time in question, or even some weeks earlier. It was only for a very few days after the battle of Bull Run that the movement was practicable, and every day added to its difficulty.

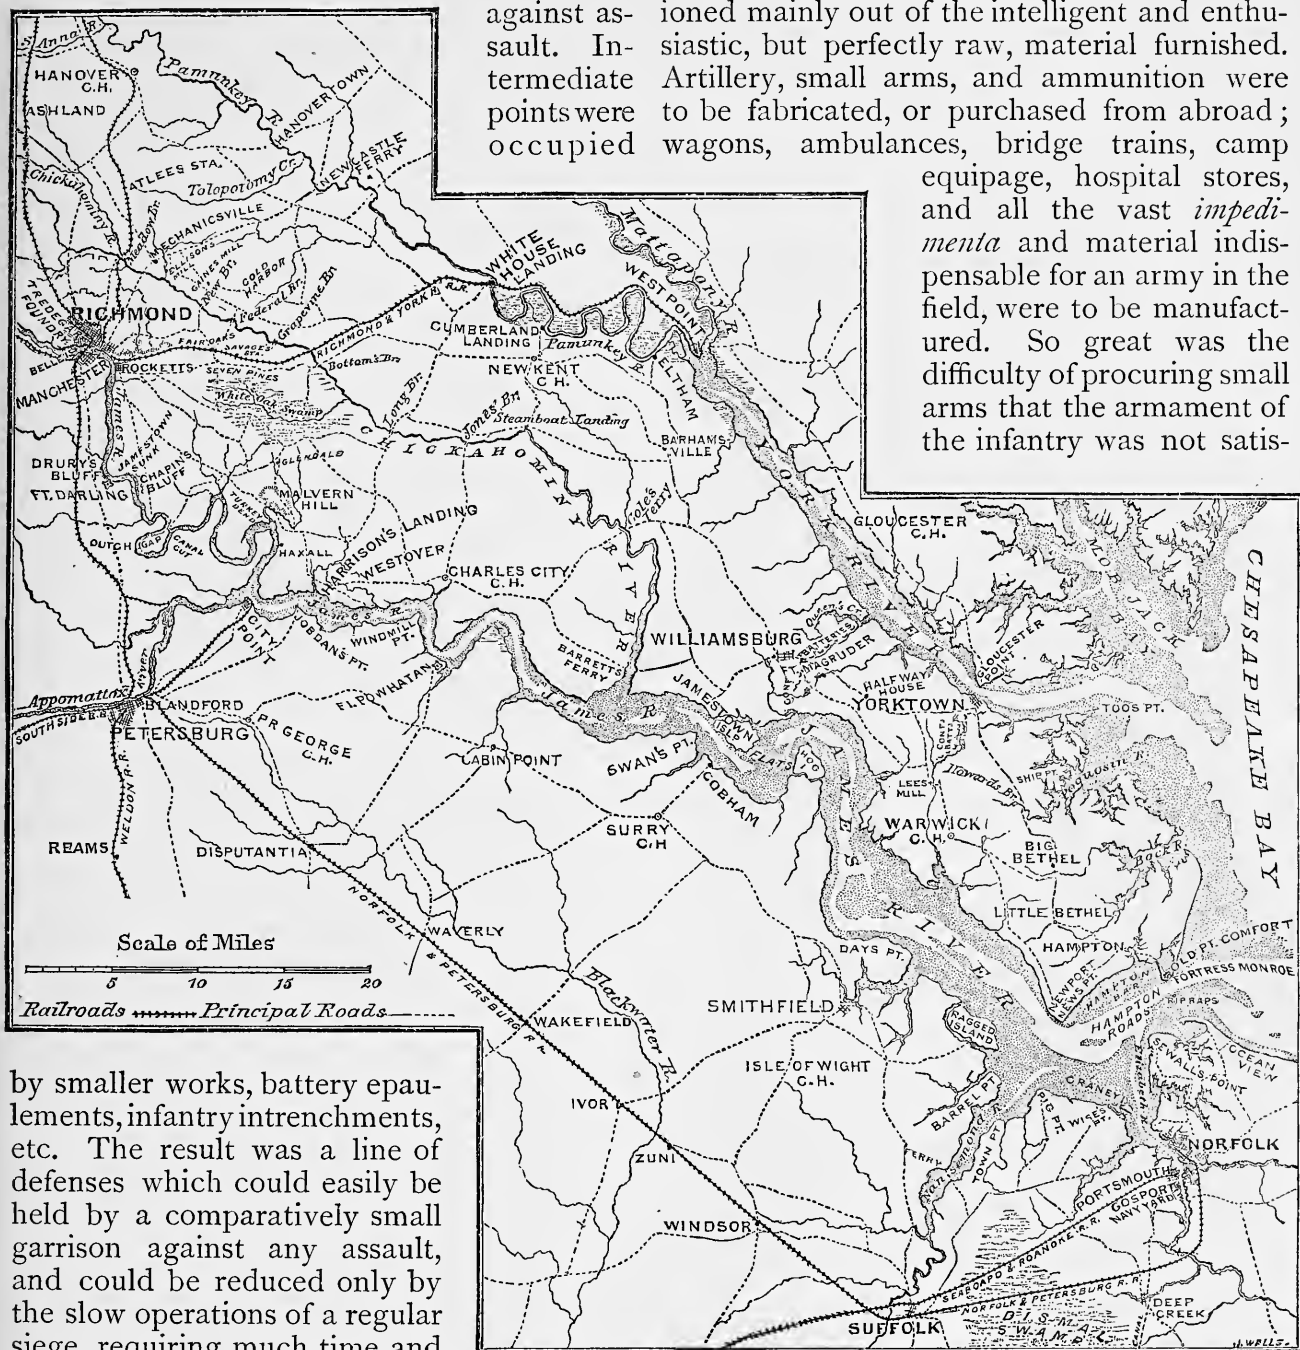

Two things were at once clear: first, that a large and thoroughly organized army was necessary to bring the war to a successful conclusion; second, that Washington must be so strongly fortified as to set at rest any reasonable apprehensions of its being carried by a sudden attack, in order that the active army might be free to move with the maximum strength and on any line of operations without regard to the safety of the capital.

These two herculean tasks were entered upon without delay or hesitation. They were carried to a successful conclusion, without regard to that impatient and unceasing clamor — inevitable among a people unaccustomed to war — which finally forced the hand of the general charged with their execution. He regarded their completion as essential to the salvation of his country, and determined to accomplish them, even if sacrificed in the en-

deavor. Nor has he, even at this distant day, and after much bitter experience, any regret that he persisted in his determination. Washington was surrounded by a line of strong detached works, armed with garrison artillery, and secure against assault. Intermediate points were occupied

foundation. Raw men and officers were to be disciplined and instructed. The regular army was too small to furnish more than a portion of the general officers, and a very small portion of the staff, so that the staff departments and staff officers were to be fashioned mainly out of the intelligent and enthusiastic, but perfectly raw, material furnished. Artillery, small arms, and ammunition were to be fabricated, or purchased from abroad; wagons, ambulances, bridge trains, camp equipage, hospital stores, and all the vast *impedimenta* and material indispensable for an army in the field, were to be manufactured. So great was the difficulty of procuring small arms that the armament of the infantry was not satis-

MAP OF THE PENINSULAR CAMPAIGN.

by smaller works, battery epaulements, infantry intrenchments, etc. The result was a line of defenses which could easily be held by a comparatively small garrison against any assault, and could be reduced only by the slow operations of a regular siege, requiring much time and material, and affording full opportunity to bring all the resources of the country to its relief. At no time during the war were the enemy able to undertake the siege of Washington, nor, if respectably garrisoned, could it ever have been in danger from an assault. The maximum garrison necessary to hold the place against a siege from any and every quarter was thirty-four thousand troops, with forty field-guns; this included the requisite reserves.

With regard to the formation of the Army of the Potomac, it must suffice to say that everything was to be created from the very

factorily completed until the winter, and a large part of the field batteries were not ready for service until the spring of 1862. As soon as possible divisions were organized, the formation being essentially completed in November.

On the 1st of November, upon the retirement of General Winfield Scott, I succeeded to the command of all the armies, except the department of Virginia, which comprised the country within sixty miles of Fort Monroe. Upon assuming the general command, I found that

SECTION OF THE ENCAMPMENT OF THE ARMY OF THE POTOMAC NEAR WHITE HOUSE, VA. (PROCESS REPRODUCTION OF A PHOTOGRAPH.)

"We were now [middle of May] encamped [near White House] on the old Custis place, at present owned by General Fitzhugh Lee of the Rebel cavalry service. On every side of us were immense fields of wheat which, but for the presence of armies, promised an abundant harvest. . . . It was marvelous that such quiet could exist where a hundred thousand men were crowded together, yet almost absolute stillness reigned throughout the vast camp during the whole of this pleasant Sabbath."—From George T. Stevens's "Three Years in the Sixth Corps." The picture represents the space occupied by about one brigade.—ED.

the West was far behind the East in its state of preparation, and much of my time and large quantities of material were consumed in pushing the organization of the Western armies. Meanwhile the various coast expeditions were employed in seizing important points of the enemy's seaboard, to facilitate the prevention of blockade-running, and to cut or threaten the lines of communication near the coast, with reference to subsequent operations.

The plan of campaign which I adopted for the spring of 1862 was to push forward the armies of Generals Halleck and Buell to occupy Memphis, Nashville, and Knoxville, and the line of the Memphis and Danville Railroad, so as to deprive the enemy of that important line, and force him to adopt the circuitous routes by Augusta, Branchville, and Charleston. It was also intended to seize Wilmington, North Carolina, at the earliest practicable moment, and to open the Mississippi by effecting a junction between Generals Halleck and Butler. This movement of the Western armies was to be followed by that of the Army of the Potomac from Urbanna on the Lower Rappahannock, to West Point and Richmond, intending, if we failed to gain Richmond by a rapid march, to cross the James and attack the city in rear, with the James as a line of supply.

So long as Mr. Cameron was Secretary of War I received the cordial support of that department; but when he resigned, the whole state of affairs changed. I had never met Mr. Stanton before reaching Washington, in 1861. He at once sought me and professed the utmost personal affection, the expression of which was exceeded only by the bitterness of his denunciation of the Government and its policy. I was unaware of his appointment as Secretary of War until after it had been made, whereupon he called to ascertain whether I desired him to accept, saying that to do so would involve a total sacrifice of his personal interests, and that the only inducement would be the desire to assist me in my work. Having no reason to doubt his sincerity, I desired him to accept, whereupon he consented, and with great effusion exclaimed: "Now we two will save the country."

On the next day the President came to my house to explain why he had appointed Mr. Stanton without consulting me; his reason being that he supposed Stanton to be a great friend of mine, and that the appointment would naturally be satisfactory, and that he feared that if I had known it beforehand it would be said that I had dragooned him into it.

The more serious difficulties of my position began with Mr. Stanton's accession to the War

Office. It at once became very difficult to approach him, even for the transaction of ordinary current business, and our personal relations at once ceased. The impatience of the Executive immediately became extreme, and I can attribute it only to the influence of the new secretary, who did many things to break up the free and confidential intercourse that had heretofore existed between the President and myself. The Government soon manifested great impatience in regard to the opening of the Baltimore and Ohio Railroad and the destruction of the Confederate batteries on the Potomac. The first object could be permanently attained only by occupying the Shenandoah Valley with a force strong enough to resist any attack by the Confederate army then at Manassas; the second only by a general advance of the Army of the Potomac, driving the enemy back of the Rapidan. My own view was that the movement of the Army of the Potomac from Urbanna would accomplish both of these objects, by forcing the enemy to abandon all his positions and fall back on Richmond. I was therefore unwilling to interfere with this plan by a premature advance, the effect of which must be either to commit us to the overland route, or to minimize the advantages of the Urbanna movement. I wished to hold the enemy at Manassas to the last moment — if possible until the advance from Urbanna had actually commenced, for neither the reopening of the railroad nor the destruction of the batteries was worth the danger involved.

The positive order of the President, probably issued under the pressure of the Secretary of War, forced me to undertake the opening of the railway. For this purpose I went to Harper's Ferry in February, intending to throw over a force sufficient to occupy Winchester. To do this it was necessary to have a reliable bridge across the Potomac — to ensure supplies and prompt reënforcements. The pontoon bridge, thrown as a preliminary, could not be absolutely trusted on a river so liable to heavy freshets; therefore it was determined to construct a canal-boat bridge. It was discovered, however, when the attempt was made, that the lift-lock from the canal to the river was too narrow for the boats by some four or five inches, and I therefore decided to rebuild the railroad bridge, and content myself with occupying Charlestown until its completion, postponing to the same time the advance to Winchester. I had fully explained my intentions to the President and Secretary before leaving Washington, providing for precisely such a contingency. While at Harper's Ferry I learned that the President was dissatisfied with my action, and on

THE FRENCH OFFICERS AT DINNER. (FROM A PHOTOGRAPH.)

The Comte de Paris and the Duc de Chartres were aides on General McClellan's staff. The Prince de Joinville was at headquarters unattached. Captain Le Clerc and Captain Mohain were in the suite of the princes.

reaching Washington I laid a full explanation before the Secretary, with which he expressed himself entirely satisfied, and told me that the President was already so, and that it was unnecessary for me to communicate with him on the subject. I then proceeded with the preparations necessary to force the evacuation of the Potomac batteries. On the very day appointed for the division commanders to come to headquarters to receive their final orders, the President sent for me. I then learned that he had received no explanation of the Harper's Ferry affair, and that the Secretary was not authorized to make the statement already referred to; but after

my repetition of it, the President became fully satisfied with my course. He then, however, said that there was another "very ugly matter" which he desired to talk about, and that was the movement by the lower Chesapeake. He said that it had been suggested that I proposed this movement with the "traitorous" purpose of leaving Washington uncovered and exposed to attack. I very promptly objected to the coupling of any such adjective with my purposes, whereon he disclaimed any intention of conveying the idea that he expressed his own opinion, as he merely repeated the suggestions of others. I then explained the purpose and effect of fortifying Washing-

ton, and, as I thought, removed his apprehensions, but informed him that the division commanders were to be at headquarters that morning, and suggested that my plans should be laid before them, that they might give their opinion as to whether the capital would be endangered; I also said that in order to leave them perfectly untrammelled I would not attend the meeting. Accordingly they met on the 8th of March and approved my plans.

On the same day was issued, without my knowledge, the order forming army corps and assigning the senior general officers to their command.* My own views were that, as the command of army corps involved great responsibility and demanded ability of a high order, it was safer to postpone their formation until trial in the field had shown which general officers could best perform those vital functions. An incompetent division commander could not often jeopardize the safety of an army; while an unfit corps commander could easily lose a battle and frustrate the best-conceived plan of campaign. Of the four corps commanders, one only had commanded so much as a regiment in the field prior to the Bull Run campaign. On the next day intelligence arrived that the enemy was abandoning his positions. I crossed to the Virginia side to receive information more promptly and decide upon what should be done. During the night I determined to advance the whole army, to take advantage of any opportunity to strike the enemy, to break up the permanent camps, give the troops a little experience on the march and in bivouac, get rid of extra baggage, and test the working of the staff departments. If this were done at all, it must be done promptly and by moving the troops by divisions, without waiting to form the army corps. Accordingly, I telegraphed to the Secretary, explaining the state of the case and asking authority to postpone the army corps formation until the completion of the movement. The reply was an abrupt and unreasonable refusal. I again telegraphed, explaining the situation and throwing the responsibility upon the Secretary, whereupon he gave way.

Meanwhile, as far back as the 27th of February, orders had been given for collecting the transportation necessary to carry out the Urbanna movement. This conclusion had been reached after full discussion. On the 27th of January had been issued the President's General War Order No. 1, directing a general

movement of the land and naval forces against the enemy on the 22d of February. On the 31st of January was issued the President's Special War Order No. 1, directing the Army of the Potomac to advance to the attack of Manassas on the 22d of February. The President, however, permitted me to state my objections to this order, which I did, at length, in a letter of February 3 to the Secretary of War. As the President's order was not insisted upon, although never formally revoked, it is to be assumed that my letter produced, for a time at least, the desired effect. When Manassas was abandoned and the enemy was behind the Rapidan, the Urbanna movement lost much of its promise, as the enemy were now in position to reach Richmond before we could do so. The alternative remained of making Fortress Monroe and its vicinity the base of operations.

The plan first adopted was to commence the movement with the First Corps as a unit, to land north of Gloucester and move thence on West Point; or, should circumstances render it advisable, to land a little below Yorktown to turn the defenses between that place and Fortress Monroe. The Navy Department were confident that we could rely upon their vessels to neutralize the *Merrimac* and aid materially in reducing the batteries on the York River, either by joining in the attack or by running by them and gaining their rear. As transports arrived very slowly, especially those for horses, and the great impatience of the Government grew apace, it became necessary to embark divisions as fast as vessels arrived, and I decided to land them at Fortress Monroe, holding the First Corps to the last, still intending to move it in mass to turn Gloucester. On the 17th of March the leading division embarked at Alexandria. The campaign was undertaken with the intention of taking some 145,000 troops, to be increased by a division of 10,000 drawn from the troops in the vicinity of Fortress Monroe, giving a total of 155,000. Strenuous efforts were made to induce the President to take away Blenker's German division of 10,000 men. Of his own volition he at first declined, but, the day before I left Washington, he yielded to the non-military pressure and reluctantly gave the order, thus reducing the expected force to 145,000.

While at Fairfax Court House, on the 12th of March, I learned that there had appeared in the daily papers the order relieving me

* The organization of the army at this time was: First Corps, McDowell—Divisions: Franklin, McCall, and King; Second Corps, Sumner—Divisions: Richardson, Blenker, and Sedgwick; Third Corps, Heintzelman—Divisions: Porter, Hooker, and Hamilton; Fourth Corps, Keyes—Divisions: Couch, Smith, and Casey. The reserve artillery (Hunt), the regular infantry (Sykes), and regular cavalry (Cooke) and engineer troops, were attached to headquarters.

from the general command of all the armies and confining my authority to the Department of the Potomac. I had received no previous intimation of the intention of the Government in this respect. Thus, when I embarked for Fortress Monroe on the 1st of April, my command extended from Philadelphia to Richmond, from the Alleghanies, including the Shenandoah, to the Atlantic; for an order had been issued a few days previously placing Fortress Monroe and the Department of Virginia under my command, and authorizing me to withdraw from the troops therein 10,000 to form a division to be added to the First Corps.

The fortifications of Washington were at this time completed and armed. I had already given instructions for the refortification of Manassas, the reopening of the Manassas Gap Railroad, the protection of its bridges by block-houses, the intrenchment of a position for a brigade at or near the railroad crossing of the Shenandoah, and an intrenched post at Chester Gap. I left about 42,000 troops for the immediate defense of Washington, and more than 35,000 for the Shenandoah Valley—an abundance to insure the safety of Washington and to check any attempt to recover the lower Shenandoah and threaten Maryland. Beyond this force, the reserves of the Northern States were all available.

On my arrival at Fortress Monroe on the 2d of April, I found five divisions of infantry, Sykes's brigade of regulars, two regiments of cavalry, and a portion of the reserve artillery disembarked. Another cavalry regiment and a part of a fourth had arrived but were still on shipboard; comparatively few wagons had come. On the same day came a telegram stating that the Department of Virginia was withdrawn from my control, and forbidding me to form the division of 10,000 men without General Wool's sanction. I was thus deprived of the command of the base of operations, and the ultimate strength of the army was reduced to 135,000, another serious departure from the plan of campaign. Of the troops disembarked, only four divisions, the regulars, the majority of the reserve artillery, and a part of the cavalry could be moved, in consequence of the lack of transportation. Casey's division was unable to leave Newport News until the 16th, from the impossibility of supplying it with wagons.

The best information obtainable represented the Confederate troops around Yorktown as numbering at least 15,000, with about an equal force at Norfolk; and it was clear that the army lately at Manassas, now mostly near Gordonsville, was in position to be thrown promptly to the Peninsula. It was represented

that Yorktown was surrounded by strong earthworks, and that the Warwick River, instead of stretching across the Peninsula to Yorktown,—as proved to be the case,—came down to Lee's Mills from the north, running parallel with and not crossing the road from Newport News to Williamsburg. It was also known that there were intrenched positions of more or less strength at Young's Mills, on the Newport News road, and at Big Bethel, Howard's Bridge, and Ship's Point, on or near the Hampton and Yorktown road, and at Williamsburg.

On my arrival at Fortress Monroe, I learned, in an interview with Flag-Officer Goldsborough, that he could not protect the James as a line of supply, and that he could furnish no vessels to take an active part in the reduction of the batteries at York and Gloucester or to run by and gain their rear. He could only aid in the final attack after our land batteries had essentially silenced their fire.

I thus found myself, with 53,000 men in condition to move, faced by the conditions of the problem just stated. Information was received that Yorktown was already being reënforced from Norfolk, and it was apprehended that the main Confederate army would promptly follow the same course. I therefore determined to move at once with the force in hand, and endeavor to seize a point—near the Halfway House—between Yorktown and Williamsburg, where the Peninsula is reduced to a narrow neck, and thus cut off the retreat of the Yorktown garrison and prevent the arrival of reënforcements. The advance commenced on the morning of the 4th of April, and was arranged to turn successively the intrenchments on the two roads; the result being that, on the afternoon of the 5th, the Third Corps was engaged with the enemy's outposts in front of Yorktown and under the artillery fire of the place. The Fourth Corps came upon Lee's Mills and found it covered by the unfordable line of the Warwick, and reported the position so strong as to render it impossible to execute its orders to assault. Thus, all things were brought to a stand-still, and the intended movement on the Halfway House could not be carried out. Just at this moment came a telegram, dated the 4th, informing me that the First Corps was withdrawn from my command. Thus, when too deeply committed to recede, I found that another reduction of about 43,000, including several cavalry regiments withheld from me, diminished my paper force to 92,000, instead of the 155,000 on which the plans of the campaign had been founded and with which it was intended to operate. The number of men left behind, sick and from other causes inci-

dent to such a movement, reduced the total for duty to some 85,000, from which must be deducted all camp, depot, and train guards, escorts, and non-combatants, such as cooks, servants, orderlies, and extra-duty men in the various staff departments, which reduced the numbers actually available for battle to some 67,000 or 68,000.

The order withdrawing the First Corps also broke up the Department of the Potomac, forming out of it the Department of the Shenandoah, under General Banks, and the Department of Northern Virginia, under General McDowell, the latter including Washington. I thus lost all control of the depots at Washington, as I had already been deprived of the control of the base at Fortress Monroe and of the ground subsequently occupied by the depot at White House. The only territory remaining under my command was the paltry triangle between the Departments of northern Virginia and Virginia; even that was yet to be won from the enemy. I was thus relieved from the duty of providing for the safety of Washington, and deprived of all control over the troops in that vicinity. Instead of one directing head controlling operations which should have been inseparable, the region from the Alleghanies to the sea was parceled out among four independent commanders.

On the 3d of April, at the very moment of all others when it was most necessary to push recruiting most vigorously, to make good the inevitable losses in battle and by disease, an order was issued from the War Department discontinuing all recruiting for the volunteers and breaking up all their recruiting stations. Instead of a regular and permanent system of recruiting, whether by voluntary enlistment or by draft, a spasmodic system of large drafts was thereafter resorted to, and, to a great extent, the system of forming new regiments. The results were wasteful and pernicious. There were enough, or nearly enough, organizations in the field, if they had been constantly maintained at the full strength by a regular and constant influx of recruits, who, by association with their veteran comrades, would soon have become efficient. The new regiments required much time to become useful, and endured very heavy and unnecessary losses from disease and in battle owing to the inexperience of the officers and men. A course more in accordance with the best-established military principles and the uniform experience of war would have saved the country many millions of treasure and many thousands of valuable lives.

Then, on the 5th of April, I found myself with 53,000 men in hand, giving less than 42,000 for battle, after deducting extra-duty

men and other non-combatants. In our front was an intrenched line, apparently too strong for assault, and which I had now no means of turning, either by land or water. I now learned that 85,000 would be the maximum force at my disposal, giving only some 67,000 for battle. Of the three divisions yet to join, Casey's reached the front only on the 17th, Richardson's on the 16th, and Hooker's commenced arriving at Ship Point on the 10th. Whatever may have been said afterwards, no one at the time — so far as my knowledge extended — thought an assault practicable without certain preliminary siege operations. At all events, my personal experience in this kind of work was greater than that of any officer under my command; and after personal reconnaissances more appropriate to a lieutenant of engineers than to the commanding general, I could neither discover nor hear of any point where an assault promised any chance of success. We were thus obliged to resort to siege operations in order to silence the enemy's artillery fire and open the way to an assault. All the batteries would have been ready to open fire on the 5th, or, at latest, on the morning of the 6th of May, and it was determined to assault at various points the moment the heavy batteries had performed their allotted task; the navy were prepared to participate in the attack as soon as the main batteries were silenced; the *Galena*, under that most gallant and able officer, John Rodgers, was to take part in the attack, and would undoubtedly have run the batteries at the earliest possible moment; but during the night of the 3d and 4th of May the enemy evacuated his positions, regarding them as untenable under the impending storm of heavy projectiles.

Meanwhile, on the 22d of April, Franklin's division of McDowell's Corps had joined me by water, in consequence of my urgent calls for reënforcements.

The moment the evacuation of Yorktown was known, the order was given for the advance of all the disposable cavalry and horse batteries, supported by infantry divisions, and every possible effort was made to expedite the movement of a column by water upon West Point, to force the evacuation of the lines at Williamsburg, and, if possible, cut off a portion of the enemy's force and trains.

The heavy storms which had prevailed recommenced on the afternoon of the 4th, and not only impeded the advance of troops by land, but delayed the movement by water so much that it was not until the morning of the 7th that the leading division — Franklin's — disembarked near West Point and took up a suitable position to hold its own and cover the

landing of reënforcements. This division was attacked not long after it landed, but easily repulsed the enemy.

Meanwhile the enemy's rear-guard held the Williamsburg lines against our advance, except where Hancock broke through, until the night of the 6th, when they retired.

The army was now divided; a part at the mouth of the Pamunkey, a part at Williamsburg, and a part at Yorktown, prepared to ascend the York River. The problem was to reunite them without giving the enemy the opportunity of striking either fraction with his whole force. This was accomplished on the 10th, when all the divisions were in communication, and the movement of concentration continued as rapidly as circumstances permitted, so that on the 15th the headquarters and the divisions of Franklin, Porter, Sykes, and Smith reached Cumberland; Couch and Casey being near New Kent Court House, Hooker and Kearny near Roper's Church, and Richardson and Sedgwick near Eltham. On the 15th and 16th, in the face of dreadful weather and terrible roads, the divisions of Franklin, Porter, and Smith were advanced to White House, and a depot established. On the 18th the Fifth and Sixth Corps were formed, so that the organization of the Army of the Potomac was now as follows: Second Corps, Sumner — Divisions, Sedgwick and Richardson; Third Corps, Heintzelman — Divisions, Kearny and Hooker; Fourth Corps, Keyes — Divisions, Couch and Casey; Fifth Corps, F. J. Porter — Divisions, Morell and Sykes and the Reserve Artillery; Sixth Corps, Franklin — Divisions, Smith and Slocum.

The cavalry organization remained unchanged, and we were sadly deficient in that important arm, as many of the regiments belonging to the Army of the Potomac were among those which had been retained near Washington.

The question now arose as to the line of operations to be followed: that of the James on the one hand, and, on the other, the line from White House as a base, crossing the upper Chickahominy.

The army was admirably placed for adopting either, and my decision was to take that of the James, operating on either bank as might prove advisable, but always preferring the southern. I had urgently asked for reënforcements to come by water, as they would thus be equally available for either line of operations. The destruction of the *Merrimac* on the 11th of May had opened the James River to us, and it was only after that date that it became available. My plan, however, was changed by orders from Washington. A telegram of the 18th from the Secretary

of War informed me that McDowell would advance from Fredericksburg, and directed me to extend the right of the Army of the Potomac to the north of Richmond, in order to establish communication with him. The same order required me to supply his troops from our depots at White House. Herein lay the failure of the campaign, as it necessitated the division of the army by the Chickahominy, and caused great delay in constructing practicable bridges across that stream; while if I had been able to cross to the James, reënforcements would have reached me by water rapidly and safely, the army would have been united and in no danger of having its flank turned, or its line of supply interrupted, and the attack could have been much more rapidly pushed.

I now proceeded to do all in my power to insure success on the new line of operations thus imposed upon me. On the 20th of May our light troops reached the Chickahominy at Bottom's Bridge, which they found destroyed. I at once ordered Casey's division to ford the stream and occupy the heights beyond, thus securing a lodgment on the right bank. Heintzelman was moved up in support of Keyes. By the 24th Mechanicsville was carried so that the enemy was now all together on the other side of the river. Sumner was near the railroad, on the left bank of the stream; Porter and Franklin on the same bank near Mechanicsville.

It is now time to give a brief description of the Chickahominy. This river rises some fifteen miles north-westward of Richmond, and unites with the James about forty miles below that city. Our operations were on the part between Meadow and Bottom's bridges, covering the approaches to Richmond from the east. Here the river at its ordinary stage is some forty feet wide, fringed with a dense growth of heavy forest trees, and bordered by low marshy lands, varying from half a mile to a mile in width. Within the limits above mentioned the firm ground, above high-water mark, seldom approaches the river on either bank, and in no place did the high ground come near the stream on both banks. It was subject to frequent sudden and great variations in the volume of water, and a single violent storm of brief duration sufficed to cause an overflow of the bottom-lands for many days, rendering the river absolutely impassable without long and strong bridges. When we reached the river it was found that all the bridges, except that at Mechanicsville, had been destroyed. The right bank, opposite New, Mechanicsville, and Meadow bridges, was bordered by high bluffs, affording the enemy commanding positions for his batteries,

enfilading the approaches, and preventing the rebuilding of important bridges. We were thus obliged to select other less exposed points for our crossings. Should McDowell effect the promised junction, we could turn the head-waters of the Chickahominy, and attack Richmond from the north and northwest, still preserving our line of supply from White House. But with the force actually available such an attempt would expose the army to the loss of its communications and to destruction in detail; for we had an able and active antagonist, prompt to take advantage of any error on our part. The country furnished no supplies, so that we could not afford the separation from our depots. All the information obtained showed that Richmond was entrenched, that the enemy occupied in force all the approaches from the east, that he intended to dispute every step of our advance, and that his army was numerically superior. Early on the 24th of May I received a telegram from the President, informing me that McDowell would certainly march on the 26th, suggesting that I should detach a force to the right to cut off the retreat of the Confederate force in front of Fredericksburg, and desiring me to march cautiously and safely. On the same day another dispatch came, informing me that, in consequence of Stonewall Jackson's advance down the Shenandoah, the movement of McDowell was suspended. Next day the President again telegraphed that the movement against General Banks seemed so general and connected as to show that the enemy could not intend a very desperate defense of Richmond; that he thought the time was near when I "must either attack Richmond or give up the job, and come back to the defense of Washington." I replied that all my information agreed that the mass of the enemy was still in the immediate vicinity of Richmond, ready to defend it, and that the object of Jackson's movement was probably to prevent reënforcements being sent to me. On the 26th General Stoneman, with my advanced guard, cut the Virginia Central Railroad in three places. On the same day I learned that a very considerable force of the enemy was in the vicinity of Hanover Court House, to our right and rear, threatening our communications, and in position to reënforce Jackson or oppose McDowell, whose advance was then eight miles south of Fredericksburg. I ordered General F. J. Porter to move next morning to dislodge them. He took with him his own old division, Warren's provisional brigade and Emory's cavalry brigade. His operations in the vicinity of Hanover Court House were entirely successful,

and resulted in completely clearing our flank, cutting the railroads in several places, destroying bridges, inflicting a severe loss upon the enemy, and fully opening the way for the advance of McDowell. As there was no indication of its immediate approach, and the position at Hanover Court House was too much exposed to be permanently held, General Porter's command was withdrawn on the evening of the 29th, and returned to its old position with the main army. The campaign had taken its present position in consequence of the assured junction of McDowell's corps. As it was now clear that I could not count with certainty upon that force, I had to do the best I could with the means at hand.

The first necessity was to establish secure communications between the two parts of the army, necessarily separated by the Chickahominy. Richmond could be attacked only by troops on the right bank. As the expectation of the advance of McDowell was still held out, and that only by the land route, I could not yet transfer the base to the James, but was obliged to retain it on the Pamunkey, and therefore to keep on the left bank a force sufficient to protect our communications and cover the junction of McDowell. It was still permissible to believe that sufficient attention would be paid to the simplest principle of war to push McDowell rapidly on Jackson's heels, when he made his inevitable return march to join the main Confederate army and attack our right flank. The failure of McDowell to reach me at or before the critical moment, was due to the orders he received from Washington. The bridges over the Chickahominy first built were swept away by the floods, and it became necessary to construct others more solid and with long log approaches, a slow and difficult task, generally carried on by men working in the water and under fire. The work was pushed as rapidly as possible, and on the 30th of May, the corps of Heintzelman and Keyes were on the right bank of the Chickahominy, the most advanced positions being somewhat strengthened by entrenchments; Sumner's corps was on the left bank, some six miles above Bottom's Bridge; Porter's and Franklin's corps were on the left bank opposite the enemy's left. During the day and night of the 30th torrents of rain fell, inundating the whole country and threatening the destruction of our bridges.

Well aware of our difficulties, our active enemy, on the 31st of May, made a violent attack upon Casey's division, followed by an equally formidable one on Couch, thus commencing the battle of Fair Oaks.* Heintzel-

* The Confederates call this battle Seven Pines. For plan of battle see map on p. 118.—ED.

man came up in support, and during the afternoon Sumner crossed the river with great difficulty, and rendered such efficient service that the enemy was checked. In the morning his renewed attacks were easily repulsed, and the ground occupied at the beginning of the battle was more than recovered; he had failed in the purpose of the attack. The ground was now so thoroughly soaked by the rain, and the bridges were so much injured, that it was impracticable to pursue the enemy or to move either Porter or Franklin to the support of the other corps on the south bank. Our efforts were at once concentrated upon the restoration of the old and the building of new bridges.

On the 1st of June the Department of Virginia, including Fortress Monroe, was placed under my command.

On the 2d the Secretary telegraphed that as soon as Jackson was disposed of in the Shenandoah, another large body of troops would be at my service; on the 5th, that he intended sending a part of General McDowell's force as soon as it could return from Front Royal (in the Shenandoah Valley, near Manassas Gap, and about one hundred and fifteen miles north-west of Richmond), probably as many as I wanted; on the 11th, that McCall's force had embarked to join me on the day preceding, and that it was intended to send the residue of General McDowell's force to join me as speedily as possible, and that it was clear that a strong force was operating with Jackson for the purpose of preventing the forces there from joining me.

On the 26th the Secretary telegraphed that the forces of McDowell, Banks, and Frémont would be consolidated as the Army of Virginia, and would operate promptly in my aid by land.

Fortunately for the Army of the Potomac, however, I entertained serious doubts of the aid promised by the land route, so that, on the 18th, I ordered a number of transports, with supplies of all kinds, to be sent up the James, under convoy of the gun-boats, so that I might be free to cut loose from the Pamunkey and move over to the James, should circumstances enable me or render it desirable to do so.

The battle of Fair Oaks was followed by storms of great severity, continuing until the 20th of June, and adding vastly to the difficulties of our position, greatly retarding the construction of the bridges and of the defensive works regarded as necessary to cover us in the event of a repulse, and making the ground too difficult for the free movements of troops.

On the 19th Franklin's corps was transferred to the south side of the Chickahominy,

Porter's corps, reënforced by McCall's division (which, with a few additional regiments, had arrived on the 12th and 13th), being left alone on the north side.

This dangerous distribution was necessary in order to concentrate sufficient force on the south side to attack Richmond with any hope of success; and, as I was still told that McDowell would arrive by the overland route, I could not yet change the base to the James.

It was not until the 25th that the condition of the ground and the completion of the bridges and intrenchments left me free to attack. On that day the first step was taken, in throwing forward the left of our picket-line, in face of a strong opposition, to gain ground enough to enable Sumner and Heintzelman to support the attack to be made next day by Franklin on the rear of Old Tavern. [See map.] The successful issue of this attack would, it was supposed, drive the enemy from his positions on the heights overlooking Mechanicsville, and probably enable us to force him back into his main line of works. We would then be in position to reconnoiter the lines carefully, determine the points of attack, and take up a new base and line of supply if expedient.

During the night of the 24th information arrived confirming the anticipation that Jackson was moving to attack our right and rear, but I persisted in the operation intended for the 25th, partly to develop the strength of the enemy opposite our left and center, and with the design of attacking Old Tavern on the 26th, if Jackson's advance was so much delayed that Porter's corps would not be endangered.

Late in the afternoon of the 25th Jackson's advance was confirmed, and it was rendered probable that he would attack next day. All hope of the advance of McDowell's corps in season to be of any service had disappeared; the dangerous position of the army had been faithfully held to the last moment. After deducting the garrisons in rear, the railroad guards, non-combatants, and extra-duty men, there were not more than 75,000 men for battle. The enemy, with a force larger than this, the strong defenses of Richmond close at hand in his rear, was free to strike on either flank. I decided then to carry into effect the long-considered plan of abandoning the Pamunkey and taking up the line of the James.

The necessary orders were given for the defense of the depots at the White House to the last moment and its final destruction and abandonment; it was also ordered that all possible stores should be pushed to the front while communications were open.

The ground to the James had already been

reconnoitered with reference to this movement.

During the night of the 26th Porter's siege-guns and wagon-trains were brought over to the south side of the Chickahominy. During the afternoon of that day his corps had been attacked in its position on Beaver Dam Creek, near Mechanicsville, and the enemy repulsed with heavy losses on their part. It was now clear that Jackson's corps had taken little or no part in this attack, and that his blow would fall farther to the rear. I therefore ordered the Fifth Corps to fall back and take position nearer the bridges, where the flanks would be more secure. This was skillfully effected early on the 27th, and it was decided that this corps should hold its position until night. All the corps commanders on the south side were on the 26th directed to be prepared to send as many troops as they could spare in support of Porter on the next day. All of them thought the enemy so strong in their respective fronts as to require all their force to hold their positions.

Shortly after noon on the 27th the attack commenced upon Porter's corps, in its new position near Gaines's Mill, and the contest continued all day with great vigor.

The movements of the enemy were so threatening at many points on our center and left as to indicate the presence of large numbers of troops, and for a long time created great uncertainty as to the real point of his main attack. General Porter's first call for reënforcement and a supply of axes failed to reach me; but, upon receiving a second call, I ordered Slocum's division to cross to his support. The head of the division reached the field at 3:30 and immediately went into action. At about 5 P. M. General Porter reported his position as critical, and the brigades of French and Meagher — of Richardson's division — were ordered to reënforce him, although the fearless commander of the Second Corps, General Sumner, thought it hazardous to remove them from his own threatened front. I then ordered the reserve of Heintzelman to move in support of Sumner and a brigade of Keyes's corps to headquarters for such use as might be required. Smith's division, left alone when Slocum crossed to the aid of Porter, was so seriously threatened that I called on Sumner's corps to send a brigade to its support.

French and Meagher reached the field before dusk, just after Porter's corps had been forced by superior numbers to fall back to an interior position nearer the bridges, and, by their steady attitude, checked all further progress of the enemy and completed the attainment of the purpose in view, which was

to hold the left bank of the river until dark, so that the movement to the James might be safely commenced. The siege-guns, material, and trains on the left bank were all safe, and the right wing was in close connection with the rest of the army. The losses were heavy, but the object justified them, or rather made them necessary. At about six o'clock next morning the rear-guard of regulars crossed to the south side and the bridges were destroyed.

I now bent all my energies to the transfer of the army to the James, fully realizing the very delicate nature of a flank march, with heavy trains, by a single road, in face of an active enemy, but confident that I had the army well in hand and that it would not fail me in the emergency. I thought that the enemy would not anticipate that movement, but would assume that all my efforts would be directed to cover and regain the old depots; and the event proved the correctness of this supposition. It seemed certain that I could gain one or two days for the movement of the trains, while he remained uncertain as to my intentions; and that was all I required with such troops as those of the Army of the Potomac.

During the night of the 27th I assembled the corps commanders at headquarters, informed them of my intentions, and gave them their orders. Keyes's corps was ordered to move at once, with its trains, across White Oak Swamp, and occupy positions on the farther side to cover the passage of the remainder of the army. By noon of the 28th this first step was accomplished. During the 28th Sumner, Heintzelman, and Franklin held essentially their old positions; the trains converged steadily to the White Oak Swamp and crossed as rapidly as possible, and during this day and the succeeding night Porter followed the movement of Keyes's corps and took position to support it.

Early on the 28th, when Franklin's corps was drawing in its right to take a more concentrated position, the enemy opened a sharp artillery fire and made at one point a spirited attack with two Georgia regiments, which were repulsed by the two regiments on picket.

Sumner's and Heintzelman's corps and Smith's division of Franklin's were now ordered to abandon their intrenchments, so as to occupy, on the morning of the 29th, a new position in rear, shorter than the old and covering the crossing of the swamp. This new line could easily be held during the day, and these troops were ordered to remain there until dark, to cover the withdrawal of the rest of the trains, and then cross the swamp and occupy the positions about to be abandoned by Keyes's and Porter's corps. Meanwhile Slo-

cum's division had been ordered to Savage's Station in reserve, and, during the morning, was ordered across the swamp to relieve Keyes's corps. This was a critical day; for the crossing of the swamp by the trains must be accomplished before its close, and their protection against attack from Richmond must be assured, as well as communication with the gun-boats.

A sharp cavalry skirmish on the Quaker Road indicated that the enemy was alive to our movement, and might at any moment strike in force to intercept the march to the James. The difficulty was not at all with the movement of the troops, but with the immense trains that were to be moved virtually by a single road, and required the whole army for their protection. With the exception of the cavalry affair on the Quaker Road, we were not troubled during this day south of the swamp, but there was severe fighting north of it. Sumner's corps evacuated their works at daylight and fell back to Allen's farm, nearly two miles west of Savage's Station, Heintzelman being on their left. Here Sumner was furiously attacked three times, but each time drove the enemy back with much loss.

Soon afterwards Franklin, having only one division with him, ascertained that the enemy had repaired some of the Chickahominy bridges and was advancing on Savage's Station, whereupon he posted his division at that point and informed Sumner, who moved his corps to the same place, arriving a little after noon. About 4 P. M. Sumner and Franklin — three divisions in all — were sharply attacked, mainly by the Williamsburg road; the fighting continued until between 8 and 9 P. M., the enemy being at all times thoroughly repulsed, and finally driven from the field.

Meanwhile, through a misunderstanding of his orders, and being convinced that the troops of Sumner and Franklin at Savage's Station were ample for the purpose in view, Heintzelman withdrew his troops during the afternoon, crossed the swamp at Brackett's Ford, and reached the Charles City road with the rear of his column at 10 P. M.

Slocum reached the position of Keyes's corps early in the afternoon, and, as soon as the latter was thus relieved, it was ordered forward to the James near Malvern Hill, which it reached, with all its artillery and trains, early on the 30th. Porter was ordered to follow this movement and prolong the line of Keyes's corps to our right. The trains were pushed on in rear of these corps and massed under cover of the gun-boats as fast as they reached the James, at Haxall's plantation. As soon as the fighting ceased with

the final repulse of the enemy, Sumner and Franklin were ordered to cross the swamp; this was effected during the night, the rear-guard crossing and destroying the bridge at 5 A. M. on the 30th. All the troops and trains were now between the swamp and the James, and the first critical episode of the movement was successfully accomplished.

The various corps were next pushed forward to establish connection with Keyes and Porter and hold the different roads by which the enemy could advance from Richmond to strike our line of march. I determined to hold the positions now taken until the trains had all reached a place of safety, and then concentrate the army near the James, where it could enjoy a brief rest after the fatiguing battles and marches through which it was passing, and then renew the advance on Richmond.

General Franklin, with Smith's division of his own corps, Richardson's of the Second, and Naglee's brigade were charged with the defense of the White Oak Swamp crossing. Slocum held the ground thence to the Charles City road; Kearny from that road to the Long Bridge Road; McCall on his left; Hooker thence to the Quaker Road; Sedgwick at Nelson's farm, in rear of McCall and Kearny. The Fifth Corps was at Malvern Hill, the Fourth at Turkey Bridge. The trains moved on during this day, and at 4 P. M. the last reached Malvern Hill and kept on to Haxall's, so that the most difficult part of the task was accomplished, and it only remained for the troops to hold their ground until night-fall, and then continue the march to the positions selected near Malvern Hill.

The fighting on this day (June 30) was very severe, and extended along the whole line. It first broke out, between twelve and one, on General Franklin's command, in the shape of a fierce artillery fire, which was kept up through the day and inflicted serious losses. The enemy's infantry made several attempts to cross near the old bridge and below, but was in every case thrown back. Franklin held his position until after dark, and during the night fell back to Malvern. At half-past two Slocum's left was attacked in vain on the Charles City road. At about three McCall was attacked, and, after five o'clock, under the pressure of heavy masses, he was forced back; but Hooker came up from the left, and Sedgwick from the rear, and the two together not only stopped the enemy, but drove him off the field.

At about four P. M. heavy attacks commenced on Kearny's left, and three ineffectual assaults were made. The firing continued until after dark. About midnight Sumner's and Heintzelman's corps and McCall's division withdrew

from the positions they had so gallantly held, and commenced their march to Malvern, which they reached unmolested soon after daybreak. Just after the rear of the trains reached Malvern, about 4 P. M., the enemy attacked Porter's corps, but were promptly shaken off.

Thus, on the morning of July 1st, the army was concentrated at Malvern, with the trains at Haxall's, in rear. The supplies which had been sent from White House on the 18th were at hand in the James.

After consultation with Commodore Rodgers, I decided that Harrison's Landing was a better position for the resting-place of the army, because the channel passed so close to City Point as to enable the enemy to prevent the passage of transports if we remained at Malvern. It was, however, necessary to accept battle where we were, in order to give ample time for the trains to reach Harrison's, as well as to give the enemy a blow that would check his farther pursuit.

Accordingly, the army was carefully posted on the admirable position of Malvern Hill, with the right thrown back below Haxall's. The left was the natural point of attack, and there the troops were massed and the reserve artillery placed, while full preparations were made to frustrate any attempt to turn our right. Early in the forenoon the army was concentrated and ready for battle, in a position of unusual strength,—one which, with such troops as held it, could justly be regarded as impregnable. It was, then, with perfect confidence that I awaited the impending battle.

The enemy began feeling the position between 9 and 10 A. M., and at 3 P. M. made a sharp attack upon Couch's division, which remained lying on the ground until the enemy were within close range, when they rose and delivered a volley which shattered and drove back their assailants in disorder. At 4 P. M. the firing ceased for a while, and the lull was availed of to rectify the position and make every preparation for the approaching renewal of the attack. It came at 6 P. M., opened by the fire of all their artillery and followed by desperate charges of infantry advancing at a run. They were always repulsed with the infliction of fearful loss, and in several instances our infantry awaited their approach within a few yards, poured in a single volley, and then dashed forward with the bayonet. At 7 P. M. the enemy was accumulating fresh troops, and the brigades of Meagher and Sickles were sent from Sumner's and Heintzelman's corps to reënforce Porter and Couch; fresh batteries were moved forward from the reserve artillery and ammunition replenished.

The enemy then repeated his attacks in the most desperate style until dark, but the battle ended with his complete repulse, with very heavy losses, and without his even for one moment gaining a foothold in our position. His frightful losses were in vain. I doubt whether, in the annals of war, there was ever a more persistent and gallant attack, or a more effective and cool resistance.

Although the result of this bloody battle was a complete victory on our part, it was necessary, for the reasons already given, to continue the movement to Harrison's, whither the trains had been pushed during the night of the 30th of June and the day of the 1st of July. Immediately after the final repulse the orders were given for the withdrawal of the army. The movement was covered by Keyes's corps. So complete was the enemy's discomfiture, and so excellent the conduct of the rear-guard, that the last of the trains reached Harrison's after dark on the 3d, without loss and unmolested by the enemy. This movement was now successfully accomplished, and the Army of the Potomac was at last in position on its true line of operations, with its trains intact, no guns lost save those taken in battle, when the artillerists had proved their heroism and devotion by standing to their guns until the enemy's infantry were in their midst.

During the "Seven Days" the Army of the Potomac consisted of 143 regiments of infantry, 55 batteries, and less than eight regiments of cavalry, all told. The opposing Confederate army consisted of 187 regiments of infantry, 79 batteries, and 14 regiments of cavalry. The losses of the two armies from June 25th to July 2d were

| | <i>Killed.</i> | <i>Wounded.</i> | <i>Missing.</i> | <i>Total.</i> |
|-------------------------------|----------------|-----------------|-----------------|---------------|
| Confederate Army | 2,823 | 13,703 | 3,223 | 19,749 |
| Army of the Potomac | 1,734 | 8,062 | 6,053 | 15,849 |

The Confederate losses in killed and wounded alone were greater than the total losses of the Army of the Potomac in killed, wounded, and missing.

No praise can be too great for the officers and men who passed through these seven days of battle, enduring fatigue without a murmur, successfully meeting and repelling every attack made upon them, always in the right place at the right time, and emerging from the fiery ordeal a compact army of veterans, equal to any task that brave and disciplined men can be called upon to undertake. They needed now only a few days of well-earned repose, a renewal of ammunition and supplies, and reënforcements to fill the gaps made in their ranks by so many desperate encounters, to be prepared to advance again,

with entire confidence, to meet their worthy antagonists in other battles. It was, however, decided by the authorities at Washington, against my earnest remonstrances, to abandon the position on the James, and the campaign. The Army of the Potomac was accordingly withdrawn, and it was not until two years

later that it again found itself under its last commander at substantially the same point on the bank of the James. It was as evident in 1862 as in 1865 that there was the true defense of Washington, and that it was on the banks of the James that the fate of the Union was to be decided.

George B. McClellan.

NOTE: The foregoing outline of the Peninsular Campaign will be supplemented in succeeding numbers by papers dealing more directly with the engagements, including contributions from Generals Fitz-John Porter, D. H. Hill, Franklin, and Longstreet. The "Recollections of a Private" will also cover the ground of the Seven Days' Battles.—ED.

MEMORANDA ON THE CIVIL WAR.

Effect of the Wind upon the Sound of Battle.

THE incident connected with the fight between the iron-clads in Hampton Roads related by Gen. R. E. Colston, where the power of the wind was sufficient to carry all sounds of the conflict away from people standing within plain sight of it, recalls several similar instances that came within my own experience while serving with the army operating along the sea-coast of the Southern States during the war. At the bombardment of the Confederate works at Port Royal, South Carolina, in November, 1861, the transport my regiment was on lay near enough in shore to give us a fine view of the whole battle; but only in some temporary lull of the wind could we hear the faintest sound of the firing. The day was a pleasant one, and the wind did not appear to be unusually strong; but I noticed then and afterward that a breeze on the coast down that way was very different from the erratic gusts and flaws I had been used to in the New England States, the whole atmosphere seeming to move in a body, giving sound no chance to travel against it, but carrying it immense distances to the leeward. People living at St. Augustine, Florida, told me afterward that the Port Royal cannonade was heard at that place, 150 miles from where the fight took place.

A portion of the siege batteries at Morris Island, South Carolina, were not more than two miles from our camp; but at times the firing from them and the enemy's replies could only be heard very faintly even at that short distance, while at others, when the wind blew from the opposite direction, the sounds were as sharp and distinct as if the battle were taking place within a few rods of us.

S. H. Prescott.

CONCORD, N. H.

The Gun-boat "Taylor" or "Tyler."

WE are permitted to print the following note bearing on a recent criticism of Rear-Admiral Walke's designation of the gun-boat under his command on the Mississippi river as the *Taylor*:

NAVY DEPARTMENT,
WASHINGTON, February 11, 1885.

SIR: In reply to your letter of the 30th ultimo, and referring to previous correspondence, you are informed that at the time Commander John Rodgers purchased the gun-boats *A. O. Tyler* and others, he was acting under the orders of the War Department. In a com-

munication to this Department, dated June 8, 1861, he states as follows:

"I have, after consideration with General McClellan, and after inspection by Mr. Pook, the naval constructor, bought three steamboats for naval service in these waters. They were called the *A. O. Tyler*, the *Lexington*, and the *Conestoga*. The name of the first of these I will, with your permission, change to *Taylor*, a name of better augury than *Tyler*."

No action was taken by this Department concerning the changing of the name of the *A. O. Tyler*.

The Mississippi flotilla was not turned over to the Navy Department until the 1st of October, 1862. Prior to that date the officers and enlisted men, except the regular officers of the navy detailed for duty therein, were paid by Quartermaster Wise, under authority of the War Department.

I am unable to inform you what name the accounting officers of the Treasury recognized in settling the accounts of the vessel referred to. Very respectfully,

W. E. CHANDLER,
Secretary of the Navy.

Colonel A. H. MARKLAND, Washington, D. C.

Col. Markland has ascertained that on the records of the Quartermaster-General's Department the name of the vessel is sometimes written *Taylor*, but more generally *Taylor* or *Tyler*. He claims that as no authorization of the change of name by Admiral Rodgers has been found the boat should go down to history as the *Tyler*.—EDITOR.

Errata.

THE captain who, with his men, volunteered to go on the *Carondelet's* perilous passage of Island Number Ten (as described by Admiral Walke on p. 442 of the January number), was not Hollenstein but Hottenstein.—In the papers on "Shiloh" in the February number, the name of General John C. Breckinridge (*sic* in his autograph) was misprinted Breckenridge, which, however, is not without the apparent sanction of Dr. Thomas's "Dictionary of Biography" (Lippincott). The Breckenridge branch of this eminent Kentucky family (including the Reverend Doctor Robert J. Breckenridge, uncle of the General) were, we believe, staunch supporters of the Union.—A manifest error occurs on page 739 of the March number, in Colonel Wood's article on "The First Fight of Iron-clads," where Norfolk is said to be "within two miles" of Fortress Monroe. The distance, as shown by the map in the same number, is twelve to fifteen miles.—EDITOR.

GENERAL GRANT.

I HAVE elsewhere related the principal events in General Grant's military career, and have but little new to offer on this theme.* All that I shall now attempt is a presentation or portrait of the man, endeavoring especially to show how personal and individual traits have been manifested in the public character. I have, indeed, known General Grant so closely that his image is far more vivid to me in this aspect than as a General or a President; and although many of his notable qualities were displayed when I was near enough to watch their development, I was always able to penetrate through the soldier or the statesman to the individual. The outside garment of public deeds took form and shape to me from the underlying personality.

The family of Grant is of Scotch descent, and the clan Grant claimed him in 1877 when he passed through their territory. I was once on a visit at Castle Grant, the seat of their chief, Lord Seafield, who was greatly interested in his American clansman. He took me to Craig Ellachie, a rocky eminence near by, where in Gaelic days a beacon was lighted to rouse the Grants for war. The device of the clan is still a burning mountain, and their war-cry has always been, "Stand fast, Craig Ellachie." A Grant is to stand as firm as the rocks themselves.

About the same time I went to a gathering of the clans at Braemar, in the heart of the Highlands. The son of the Earl of Fife was there at the head of the Duffs; the chief of the Farquharsons was present with his clan; the Duke of Athole had marched his men across the Grampians, the Duchess, a woman of glorious beauty, riding by his side; the Marquis of Huntley, the Earl of Airlie, and the Lord Kilmarnock were all there, kilted Highlanders; and I found the Duffs and the Gordons and the Stewart-Murrays as ready as the Grants to claim kinship with an American President. They drank his health with Highland honors, and declared that the shrewd sagacity, the pertinacious resolve, the sustained energy which they had heard he possessed, were all due to his Caledonian origin.

General Grant's father was a native of Pennsylvania, but early emigrated to the West, and finally settled in Ohio. He was noted for intelligence as well as energy, and in all his dealings with men he bore an un-

blemished name. At the time when Ulysses was born he dealt largely in leather, and owned several tanneries. His mother also was a Pennsylvanian. The modest virtues of a Christian woman are not fit themes for public portraiture, but it is not difficult to imagine in them the source of that purity and simplicity of character which the strifes and temptations of a public career have been unable to destroy.

Ulysses was born on the 27th of April, 1822, at Point Pleasant, an obscure town on the north bank of the Ohio. The modest cottage where he first saw the light still overlooks the Kentucky shore, and his earliest hours were spent almost in sight of that great theater of war where he was destined to play so prominent a part. In 1823 his parents removed to Georgetown, Ohio, and there the boyhood of young Grant was passed. His father was now a well-to-do man, furnished with as large a supply of this world's goods as any of his neighbors, and both able and willing to afford the son whatever advantages of education were then attainable at so great a distance from the Atlantic coast.

Like Washington, Cromwell, Wellington, and others who became famous in their prime, Grant was in childhood in no way conspicuous above his fellows. It is true that by the reflex light of subsequent performance we can now discern in the traits of the boy the germs of what afterward became distinguished in the man, but the germs were latent till the light and sun of circumstance developed them. None of his early companions saw any indications of his future destiny.

At seventeen he was offered an appointment to the Military Academy at West Point. The youth who had been sent the year before from his congressional district had failed to keep up with his class, and was dismissed in consequence. Had that young predecessor been more successful, Grant might never have received a military education, and possibly not have risen to distinction in arms.

He spent four years at the Academy, but made no brilliant mark there. He had no fondness for his profession, and manifested no special aptness for study, although he mastered the mathematics easily. Riding was his chief accomplishment and amusement. He was careless of the military etiquette imposed on the cadets, and, though far from in-

* See "Military History of Ulysses S. Grant from April, 1861, to April, 1865," by Adam Badeau (N. Y. : D. Appleton & Co., 1881), upon which the author has here drawn.— ED.

subordinate, and never guilty of more serious offense, was constantly subjected to petty punishments for leaving a shoe untied or being late at parade. The same distaste for trivial forms followed him through his military career. No officer of the army was less scrupulous in matters of costume, or exacted fewer ceremonies from those whom he commanded.

In 1843 he was graduated, twenty-first in a class of thirty-nine. The army was full at the time, and its future commander could only be admitted as a supernumerary officer. He was commissioned brevet second lieutenant, and attached to the Fourth Infantry.

When the Mexican war broke out, Grant was ordered with his regiment to Texas to join the army of General Taylor. At Palo Alto and Resaca de la Palma he took his first lessons in actual war—battles which, compared with many of those of the Rebellion, were insignificant skirmishes. Grant often afterward assigned to a brigade more men than there composed the American army. He remained under Taylor until the capture of Monterey, participating in that achievement. His regiment was then transferred to Scott's command.

Grant was now made quartermaster of the regiment—a position which exempted him from the necessity of going under fire; but he was present at every battle of the campaign from Vera Cruz to the City of Mexico. After Molino del Rey he was brevetted for "distinguished gallantry," and at the capture of the capital displayed several of the traits that became notable in his later history.

As the army was approaching the city, Worth's division was ordered to seize a road on the western side. Grant was with Worth's advance. An abrupt turn in the road was defended by a parapet, and, as the division advanced, a raking fire of musketry made it necessary to seek every chance for cover. Grant, however, made his way alone across the space exposed to fire, and discovered an opportunity to flank the parapet. Hastening back to his men, some twenty or thirty in number, he cried out that he had found a chance to turn the enemy, and called for volunteers. Ten or a dozen soldiers jumped up at once and were soon crawling with him behind a wall, when they came upon an entire company under Captain—now General—Horace Brooks, making their way cautiously in the bottom of a ditch. Grant at once cried out: "Captain! I've found a way to flank the enemy"; and Brooks replied: "Well, you know the way. Go on; we'll follow you." So the lieutenant led, and the whole party, now fifty in number, assaulted the end of the

parapet, carried it by storm, and took the enemy in rear. The Mexicans fled at once from the position, no longer tenable, and the work was carried.

The party was now on the direct road to the Garita San Cosme, one of the strongest entrances to the City of Mexico, whose spires and turrets were distinctly visible. They soon struck another parapet, this one defended by a cannon. Grant again advanced at the head of his little column, by this time a hundred and fifty strong, and the second parapet was carried. But they were now directly under the guns of the city, and Brooks, who had assumed command by virtue of seniority, declared he could not hold the position unless he was reënforced. Grant was therefore sent back to Worth to ask for troops, and had hardly left when the command was driven pell-mell from the parapet. He soon, however, found the division-general, and fresh troops were at once sent forward.

A little to the right of the parapet was a rickety village church with a steeple a hundred feet high. Toward this Grant led a section of artillery, dragging a mountain howitzer by hand across the ditches, of which the country is full. He found the priest and demanded the keys, which the father at first was unwilling to yield; but Grant soon convinced him of the necessity of surrender. The howitzer was quickly taken to pieces, and four or five men carried it to the belfry, while Grant disposed the remainder of his force so as to secure the church from easy capture. Then he mounted the steeple, and served and pointed the gun himself, and before long the enemy was driven a second time from the parapet. The gun was now directed upon the city, and the confusion of the Mexicans could be plainly seen, as they huddled in fright behind their walls.

Worth soon perceived the shells issuing from this novel position, and the effect they were producing on the enemy. He sent for Grant, congratulated him, and placed an entire company with a captain under his command. Thus reënforced, the lieutenant returned to his steeple with another howitzer, and reopened fire. That night the Garita San Cosme surrendered, and in the morning the City of Mexico was in the hands of Americans. For this exploit, undertaken without orders, by a lieutenant with no legitimate command, and obliged therefore to gather up men and weapons on the field, Grant was mentioned in all the dispatches, and received a second brevet within five days after the first.

At the close of the war he returned to the United States, and in 1848 he was married. In 1852 he was ordered to Oregon, by way of California. Life was rough then on the

Pacific coast, and his wife was left behind. The route was by sea to the Isthmus of Panama, and during the passage of the Isthmus the cholera broke out. Grant was again acting quartermaster. The Panama railroad at this time extended only thirty miles from the Atlantic, after which boats were taken up the Chagres River to the head of navigation. From this point the troops were to march to the Pacific, about thirty miles farther; but the steamship company had contracted to furnish mules or horses for the sick, and for the wives and children of the soldiers. There were, however, several hundred passengers besides the soldiers, and when the cholera appeared a panic followed. The passengers offered higher prices to the natives than the company had agreed to pay, and thus secured all the animals, leaving absolutely none for the soldiers and their families. The troops marched on, but Grant was left behind with the sick and the women and children, who were unable to walk under the July sun of the tropics. He remained a week in entire command, caring for the sick and the dying, burying the dead, controlling the half-hostile Indians, and struggling to procure transportation. During all this while he never took off his clothes, and only snatched rare intervals of sleep, stretched on a bench or under a shed, exposed to the miasma of the rank forest and the swamp. Finally, as the agents of the steamship company failed entirely in their duty, Grant took upon himself the responsibility of making a new contract in their name. He hired mules and litters at prices double those that the company had agreed to pay, he engaged Indians to bury the dead, and after seven days took up his march for the Pacific. A hundred and fifty souls had been left with him in the interior of the Isthmus, half of whom perished in that week of cholera. His life, however, was preserved. Neither Mexican bullets nor tropical pestilence had been permitted to harm him.

In 1854, having served in the army eleven years, he resigned his commission and occupied a farm, a few miles out of St. Louis, where his wife's family resided. His means were limited, and he worked at the plow himself, or, in winter, cut and corded wood, driving the cart to market in St. Louis. He built a log-house on his farm, and lived a simple life, never so happy as with his wife and children. He had now three sons and a daughter.

Despite his poverty, however, he saw and mingled with the important people of St. Louis. His wife's family belonged to what is called good company, and Grant himself was always welcomed by its most distinguished members. His old army rank was itself a social

introduction, and his old army friends kept up their intimacy.

But with all his industry farming did not succeed. He tried collecting money, but for this he had no talent, and at times his circumstances were narrow indeed. In 1860 he removed to Galena, where his father and brothers were engaged in the leather trade. They gave him occupation, and here he lived for nearly a year, unimportant and unknown. He seemed to have forgotten his military pursuits. The title of captain, which he still retained, hardly recalled the storming of Chapultepec, or the guns he had mounted on the crazy steeple under the walls of Mexico. No restless ambition disturbed his spirits. No craving for fame made him dissatisfied with obscurity. Those nearest him never suspected that he possessed extraordinary ability. He himself never dreamed that he was destined for great place or power.

Yet his vicissitudes as soldier, farmer, and trader, his frontier career among the Indians, his life at West Point, and in Ohio, in Oregon, and Mexico, had given him a wide and practical experience, and made him, unknown to himself, a representative American. In war he had served under the two greatest captains the country had produced in the century, had shared their most important battles, and witnessed their marches and sieges and assaults; in peace he had mingled with all classes of his countrymen, had learned much of life, and laid many of its lessons well to heart.

He had learned patience when hope was long deferred, and endurance under heavy and repeated difficulties; he had displayed audacity in emergencies, as well as persistency of resolve and fertility of resource. If one means failed, he tried another; he was not discouraged by ill fortune, nor discontented with little things. Above all, he never quailed and never despaired. The leather merchant of Galena was not without preparation even for that great future which awaited him, all unknown.

On the 11th of April, 1861, Fort Sumter was attacked by Americans. On the 15th the news reached Galena that Lincoln had called for volunteers. On the 19th Grant was drilling a company, and in a week he led his men to Springfield, the capital of Illinois. He was no politician, and had never voted for a President but once; he had been a slaveholder, but he had no doubt of his duty or his principles. He had been educated by the country, and the country had a right to whatever of skill or experience he had acquired.

The ignorance of all military matters which then prevailed was almost universal. Half a century of peace had hardly been disturbed

by the distant Mexican campaign, and a generation had grown up unused to war. Grant's knowledge of organization and routine now stood him well in hand. He served five weeks without a commission, mustering in new troops under the direction of the Governor of Illinois. Meanwhile he offered his services to the Secretary of War in any capacity that might be desired, but the letter was not deemed of sufficient importance to warrant a reply. He then proceeded to Cincinnati, in the hope that McClellan might offer him a position on his staff. He went twice to headquarters, but did not gain admission to McClellan's presence, and returned to Illinois without mentioning his aspirations to any one.

In June the Governor offered him a regiment of infantry. He said he felt competent to command a regiment, and was ordered at once to Missouri. In August he was commissioned brigadier-general of volunteers. The member of Congress from his district had noticed his diligence and energy in a subordinate position, and when the President was nominating brigadiers from Illinois, Washburne suggested Grant, the whole delegation recommending him. The new general knew nothing of his rank until he saw the announcement in the newspapers. No promotion that he ever received was suggested or procured by any application from himself.

He proceeded at once to Cairo, at the mouth of the Ohio. Colonel (afterwards General) Oglesby was in command of the post, but had never met his new superior. Grant was in citizen's clothes, for he had not found time to purchase a uniform, and walked into headquarters without being recognized. Asking for pen and paper, he wrote out an order assuming command, and handed it to Oglesby. The immature colonel was greatly amazed at the procedure, with which he was unfamiliar; and when Grant inquired if his predecessor had not also assumed command in orders, Oglesby replied: "I guess he didn't know how."

The population of Kentucky was at this time divided in feeling in regard to the war, and the Governor had set up a claim of neutrality. But two days after Grant's arrival at Cairo, the enemy invaded the State and threatened Paducah, at the mouth of the Tennessee. As this was a place of great importance, commanding both the Ohio and the Tennessee, Grant at once notified the State Legislature, which was loyal, and sent word to Fremont, his immediate superior. Later on the same day he telegraphed to Fremont: "Am getting ready to go to Paducah. Will start at six and a half o'clock." Receiving no reply, he

set out the same night on transports with a couple of regiments and a battery. He arrived at Paducah in the morning, and seized the town without firing a gun, a force of the enemy hurrying out by train while he was landing. At noon he returned to Cairo, where he found General Fremont's permission to take Paducah, "if he felt strong enough." Kentucky by this stroke was secured to the Union. No more was heard of neutrality. But Grant was rebuked for corresponding with the Legislature.

This event was the key-note to his entire military career. The keenness with which he perceived both the strategical importance of Paducah and the necessity for immediate action, the indifference with which he brushed away the sophistical pleas of the politicians, the promptness with which he decided to act,—for many can see to the core of things, and yet are not gifted with the power to determine in accordance with what they perceive,—and above all the celerity in putting resolve into execution—these are traits which were displayed a hundred times afterward, and which brought in the end the same result to the general-in-chief as at Paducah they insured to the district commander.

For eight weeks he was now employed teaching his men the very rudiments of war. There was not a professional soldier in his command. The troops and officers were alike from civil life, and Grant was adjutant and quartermaster again, though on a larger scale. Every detail of his past experience became of importance now. He wrote out his own orders, drilled his troops and instructed his colonels, and never worked harder than while preparing his recruits to take the field.

In November he was ordered to make a demonstration on Belmont. The story has been often told—the movement down the Mississippi River, the elation of the raw troops at last led out of camp, and the determination of Grant, who perceived that their blood was up, to convert the demonstration into a real attack. Three thousand men were landed on the west bank, immediately under the guns of Columbus, an important work of the enemy on the opposite shore; they surprised and destroyed the hostile camp; but then, intoxicated with their triumph, they became at once uncontrollable; they shouted and ran around like school-boys, while their colonels made stump speeches for the Union. The enemy, seeing this, recovered from their panic, and reinforcements were sent from the eastern bank. Not a man in Grant's command had ever been in battle before, and it was impossible to restore order, until at last he directed an officer to set fire to the camps.

This, as he had expected, drew the attention of the gunners at Columbus, who opened on his little force; and the troops, perceiving their danger, at length returned to the ranks. But by this time the enemy had also reformed, and were ready to resist his march to the transports. His own men were at first greatly dismayed, and one of his officers came up with the news: "We are surrounded." "Well," said Grant, "if that is so, we must cut our way out as we cut our way in. We have whipped them once, and I think we can do it again." His own confidence quickly inspired his command. The troops took heart; they did "cut their way out as they cut their way in"; they "whipped 'em again," and succeeded in all that had been planned or desired.

This, Grant's earliest absolute battle, although on so small a scale, illustrates, like Paducah, many of the traits which were afterward conspicuous in his military character. His sympathy with the troops at the start, his steadiness under apparent disaster, his promptness in an emergency, the grim device of setting the camps on fire to draw the attention of the enemy, and his ability to restore confidence to the flustered recruits, were all auguries of soldiership not afterward belied.

After this, every one of his great battles brought out some peculiar personal quality to which he was indebted for success. In a war where the prowess of the soldiers was equal, where the Southern enthusiasm was matched by the Northern determination, where the men were of the same race, and on each side thought they were fighting for country and right, the individual qualities of the leaders naturally told.

At Donelson, beyond all doubt, it was the personal traits of Grant that secured the victory; both in the movements preceding the attack and in the battle itself, the influence of the individual man is unmistakable. Numerous soldiers, it is said, had early recognized the importance of capturing the place. McClellan, Buell, Halleck, Cullum, all may, perhaps, lay claim to a perception of the advantages to follow from its fall. But, while they were considering and discussing these advantages, Grant proceeded and accomplished the task. He proposed it to Halleck, his immediate commander, who was probably at that moment contemplating the enterprise, and, not a little chagrined, rebuffed his intrusive subordinate. Grant, however, kept in ignorance of what his superior may have been planning, renewed the suggestion, and Halleck finally gave the orders. Grant started the next day, and four days after-

ward Fort Henry fell. On the 6th of February he announced the fact to Halleck: "Fort Henry is ours. I shall take and destroy Fort Donelson on the 8th, and return to Fort Henry." Halleck, however, preferred more cautious proceedings, and telegraphed: "Hold on to Fort Henry at all hazards. Shovels and picks will be sent to strengthen Fort Henry. The guns should be arranged so as to resist an attack." Grant thought the surest way to defend Fort Henry was to attack Fort Donelson, and while Halleck was ordering picks and shovels for the Tennessee, he was asking for heavy ordnance on the Cumberland. This continued till the fall of the place, and the day of the surrender Halleck's chief of staff, who had not heard the news, telegraphed to Grant "not to be too rash."

It was, however, in the thick of the battle of Fort Donelson that his first great feat of generalship was achieved. He was off the field, consulting with the naval commander, when the enemy, encompassed and disheartened, determined to break through the national lines. They came out before daybreak, throwing themselves in force against Grant's right. The struggle was severe, but the national troops were pushed back more than a mile. At this juncture Grant arrived on the field. He found his own men not yet recovered from the shock of battle, but doggedly retiring, while the enemy, though successful up to a certain point, had not absolutely broken through the lines. There was no pursuit, and the battle had evidently lulled, not ended. The new troops, however, were flustered, and reported that the enemy had come out with their haversacks filled, as if they meant to stay out and fight for several days. Grant at once perceived the significance of the circumstance. "Are the haversacks filled?" he inquired. "Then they mean to fight their way out. They have no idea of staying here to fight us." The whole intent of the enemy was apparent to him in an instant. They were despairing. This was the moment, when both sides were hard pressed, to convert resistance into victory. "Whichever party first attacks now," he said, "will win, and the Rebels will have to be very quick if they beat me." He ordered an instant attack on the left, where the troops had not been engaged, and before night the fate of Fort Donelson was determined.

General Grant has often told me that there comes a time in every hard-fought battle when both armies are nearly or quite exhausted and it seems impossible for either to do more. This he believes to be the turning-point; whichever afterward first renews the fight

is sure to win. He acted upon this belief, not only at Donelson, but at Shiloh, and time after time again. In the Vicksburg campaign, in the Wilderness—always when odds and obstacles were even, or perhaps against him, when both his own men and the enemy were exhausted—then to proceed or to hold out unreasonably brought victory. The general or the man who does what can neither be expected nor required is the one who succeeds.

At Shiloh the same quality was manifest. At a certain moment in this battle the national troops were thrust back nearly to the river. The reinforcements had not arrived; a part of the command was broken; thousands had been taken prisoner, and thousands had fled to the rear. At this juncture General Buell came upon the field, in advance of his troops, still miles away. It was the darkest moment of the day. He rode up to Grant near the river, and, seeing the crowd of cravens there, supposed that all was lost. "What preparations have you made for retreating, General?" he inquired. Grant replied, "I haven't despaired of whipping them yet." "But if you should be whipped," said the other, "how will you get your men across the river? These transports will not take ten thousand men." "If I have to cross the river," said Grant, "ten thousand will be all I shall need transports for." His army was thirty thousand strong.

On this day, also, General Sherman tells that at four o'clock Grant was at his front, and, despite the terrible fighting and the reverses he had sustained, gave orders to assume the offensive in the morning. And this was before Buell's advance had crossed the Tennessee.

If Donelson, Belmont, and Shiloh illustrated the aggressive audacity and stubborn determination, as well as the quickness of perception and the celerity and certainty both of decision and action, which distinguished Grant in absolute battle, Vicksburg and Chattanooga brought out the characteristics of his strategy and the more purely military peculiarities of his genius.

The long series of attempts on the north and west of Vicksburg exhibited indeed the persistency of resolve and fertility of resource of the commander. The amphibious campaign in the bayous and marshes and canals, the ditches that were dug, the levees that were cut, the troops that were carried on narrow tugs through devious channels or marched at night by lighted candles through the cane-brake, the transports that were run by the Vicksburg batteries—all these make an epic worthy of Homer in incident and interest; but all these endeavors Grant never really

hoped would succeed. He was waiting during all these months for the waters to subside, so that he could throw his army south of Vicksburg. Then he undertook the campaign which at once placed him in the front rank of generals. The audacity which led him to penetrate the enemy's country, cutting loose from his base with thirty thousand men, carrying only three days' rations, and leaving an army larger than his own between himself and his supplies, has only been equaled once, if ever, in recent history; while the strategy which separated his antagonists, driving one eastward to strike him alone, and then turning west to destroy the other,—surprising, deceiving, misleading, outmanœuvring the enemy, first dividing and then combining his own command, and finally accomplishing the greatest surrender of men and material that had then been known in modern war,—has no parallel except in the exploits of Moltke or Napoleon.

Chattanooga came next. This was the most elaborate of all Grant's battles, the most like a game between skillful players. Few battles in any war have ever been fought so strictly according to the plan. The manœuvring was in the presence and in sight of the enemy. Grant fought with portions of three armies. One had been brought from the Mississippi and one from the Potomac, and they came upon the field as if they had been timed; they crossed a river and scaled a mountain according to order and under fire, while even the enemy performed his part as Grant had expected and desired. This battle more closely resembled those of European commanders and European fields than any other great engagement of the American war. It was the only one on such a scale where the movements of each army were visible, the only one in which the commanding general could watch the operations in person, could perceive the movements he directed, and trust to his own observations to continue or vary his designs. And, while undoubtedly the contingencies that were unforeseen contributed to the result,—for Grant always knew how to avail himself of unexpected emergencies,—it still remains that this battle was fought as nearly according to the plan laid down in advance as any recorded in the schools.

In the last year of the war, after Grant became general-in-chief, there was need for a combination of his best traits—for the determination which carried him through the Wilderness, which refused to be recalled from Richmond when Early threatened Washington, which kept him immovable in front of Petersburg when the country was impatient

at his apparent lack of success ; for the daring which sanctioned Sherman's march against the opinion and wish of the Executive ; for the decision that told when the moment had come to assault the works that had detained him so long. But in addition to all this—as general-in-chief—Grant had to command armies separated by thousands of miles, to plan campaigns that extended over a year, to match one command against another, to balance the different forces, to weave a tangled skein into a single web, to play a game as intricate as ever taxed the subtlest or profoundest intellect ; against an antagonist wary, untiring, determined, and astute ; with stakes of the most tremendous character, of reputation to himself and existence to his cause ; and he won. Courage and means and moral support, all were necessary ; an army to follow, subordinates to carry out his plans, the country to back him ; but none nor all of these would have sufficed without the highest sagacity as a soldier. A weak man would have succumbed under such a responsibility ; a man with less ability would have been unable to wield the power or the weapons intrusted to Grant. He was equal to all his opportunities.

At the close of the war, the man who had led the victorious armies was not forty-three years of age. He had not changed in any essential qualities from the captain in Mexico or the merchant in Galena. The daring and resource that he showed at Donelson and Vicksburg had been foreshadowed at Panama and Garita San Cosme ; the persistency before Richmond was the development of the same trait which led him to seek subsistence in various occupations, and follow fortune long, deferred through many unsuccessful years. Developed by experience, taught by circumstance, learning from all he saw and even more from what he did, as few have ever been developed or taught, or have learned, he, nevertheless, maintained the self-same personality through it all. The characteristics of the man were exactly those he manifested as a soldier—directness and steadiness of purpose, clearness and certainty of judgment, self-reliance and immutable determination.

Grant's genius too, was always ready ; it was always brightest in an emergency. All his faculties were sharpened in battle ; the man who to some seemed dull, or even slow, was then prompt and decided. When the circumstances were once presented to him, he was never long in determining. He seemed to have a faculty of penetrating at once to the heart of things. He saw what was the point to strike, or the thing to do, and he never wavered in his judgment afterward, unless, of course, under new contingencies. Then he

had no false pride of opinion, no hesitation in undoing what he had ordered ; but if the circumstances remained the same, he never doubted his own judgment. I asked him once how he could be so calm in terrible emergencies, after giving an order for a corps to go into battle, or directing some intricate manœuvre. He replied that he had done his best and could do no better ; others might have ordered more wisely or decided more fortunately, but he was conscious that he had done what he could, and he gave himself no anxiety about the judgment or the decision. Of course he was anxious about the accomplishment of his plans, but never as to whether he ought to have attempted them. So, on the night of the battle of the Wilderness, when the right of his army had been broken and turned, after he had given his orders for new dispositions, he went to his tent and slept calmly till morning.

This confidence, which was not arrogance, for he often spoke of Sherman as the greatest soldier living, and afterward of Sheridan in equal strains—this confidence engendered composure, and left all his faculties at his own disposal. This was the secret of his courage, and of the steadiness which held him to his purpose, not only in a single battle like Shiloh, but through the tremendous losses and encounters of the Wilderness campaign. All through those terrible forty days and nights he never wavered ; he never once thought of retiring ; he never once quailed. After the fiercest fighting, and the most awful destruction of life, he still knew and felt that only by fresh effort of the same sort could he conquer, and gave the orders grimly, but unshaken still.

Not that he was indifferent to human life or human suffering. I have been with him when he left a hurdle race, unwilling to see men risk their necks needlessly ; and he came away from one of Blondin's exhibitions at Niagara, angry and nervous at the sight of one poor wretch in gaudy clothes crossing the whirlpool on a wire. But he could subordinate such sensations when necessity required it. He risked his life, and was ready to sacrifice it, for his country ; and he was ready, if need came, to sacrifice his countrymen, for he knew that they too made the offering.

It was undoubtedly as a fighter rather than a manœvrer that Grant distinguished himself. He was ready with resource and prompt in decision at Belmont and Donelson, but it was the invincible determination at both these places as well as at Shiloh that won. As with men, so with armies and generals : skill and strength are tremendous advantages, but courage outweighs them all. I said something

A. A. Grant

(ENGRAVED BY T. JOHNSON FROM A PHOTOGRAPH TAKEN IN 1864, OWNED BY THE UNION LEAGUE CLUB, NEW YORK CITY.)

like this to him once in discussing a battle, and asked if he concurred. "That is your opinion," he replied; "let it pass." There are friends of Grant who always urge me not to present this view of his character too strongly. They say: "The world already is inclined to think him a 'hammerer.' You should not press this idea of force—even of moral force." But I cannot forbear; it was the moral force of the man, the courage always, under adverse or favorable fortune, the audacity at Vicksburg, the indomitable defiance at Shiloh, the persistent determination in the Wilderness, that always brought victory in the end.

And for my part I cannot see that this trait is less admirable than technical skill or strategical astuteness. A quality that dominates events as well as men, that compels circumstances and accomplishes the grandest results, seems to me equal to that more ingenious, but not necessarily more intellectual, even if more brilliant and fascinating, attribute which attains its purposes by circuitous roads or evasive means. And in the War of the Rebellion no mere manœuvring would have succeeded. The enemy was not only too adroit, but, above all, too determined, to be foiled by stratagems alone. No skill would have tired out Lee. No capture of places or outflanking of armies would have annihilated the Confederacy. It had to be stamped out; its armies and its resources had to be destroyed, its territory and its people conquered; its soldiers killed. Its own magnificent bravery, the spirit of its armies, the heroism of its population, rendered just such a course as Grant pursued indispensable. His greatness lay in the fact that he perceived the situation, and adapted his means to the end. His good fortune was that his nature was fitted for just such emergencies.

The world is right; it was by energy and tenacity that he won, and that the nation was saved. It was because he held up the Government and persisted with his army that the country remained firm and the enemy finally lost heart. Those opposed to him felt that it was hopeless to struggle against a man with the determination of fate itself; and the suffering, anxious crowds at home, amid their tears, felt that the cup could not pass from them. Only through blood and suffering are nations saved.

Nevertheless, it was not mere brute force that availed. The man who devised the various attempts to penetrate the marshes around Vicksburg was not destitute of invention, and he who conceived and executed the subsequent campaign can never be said to have accomplished his most brilliant successes by

butchery or hammering; while, above all, he who was capable of the combinations that stretched across a continent, who could direct the operations of a twelvemonth so that every movement was part of the plan, and finally concentrate all his forces toward a single point and consummate exactly what he set out to do a year before, with a completeness unexampled then, and unsurpassed since in war, may laugh at the critics who pronounce him inapt or blundering.

In battle, as in strategical movements, Grant always meant to take the initiative; he always advanced, was always the aggressor, always sought to force his plans upon the enemy; and if by any chance or circumstance the enemy attacked, his method of defense was an attack elsewhere. At Donelson, as we have seen, when his troops were pushed back on the right he assaulted on the left; and this was only one instance out of a hundred. This, too, not only because he was the invader, or because his forces were numerically stronger, but because it was his nature in war to assail. In the Vicksburg campaign his army was smaller than Pemberton's; yet he was the aggressor. In the operations about Iuka his position was a defensive one, but he attacked the enemy all the same. It was his idea of war to attack incessantly and advance invariably, and thus to make the operations of the enemy a part and parcel of his own.

Nevertheless, no one was quicker than he to perceive the new possibilities that battle is constantly offering. He always left his plans open to change; and some of his greatest successes were suggested and achieved in consequence of the mistakes of the enemy. The final assault at Donelson was provoked by the Rebel attack on the right; the battle of Champion's Hill in the Vicksburg campaign was unplanned until invited by Pemberton's blunders; the reënforcements with which Sheridan conquered at Five Forks were not sent until Lee had attempted to overwhelm him.

Like most great soldiers, Grant was indifferent to fatigue in the field. He could out-ride the youngest and hardiest of his officers, and endured the lack of food or the loss of sleep longer than any of his staff. Yet he slept late whenever it was possible, and never put himself to needless trouble. So, too, he never braved danger unnecessarily; he was not excited by it, but was simply indifferent to it, was calm when others were aroused. I have often seen him sit erect in his saddle when every one else instinctively shrank as a shell burst in the neighborhood. Once he sat on the ground writing a dispatch in a fort just captured from the enemy, but still commanded by another near. A shell burst im-

mediately over him, but his hand never shook, he did not look up, and continued the dispatch as calmly as if he had been in camp.

This calmness was the same in the greatest moral emergencies. At the surrender of Lee he was as impassive as on the most ordinary occasion; and until some of us congratulated him, he seemed scarcely to have realized that he had accomplished one of the greatest achievements in modern history. It did not occur to him to enter Richmond as a conqueror when that city fell; nor to cross inside the Rebel lines at Appomattox until his officers requested it. Then he consented, but meeting Lee at the outposts, he stopped to talk with him for a couple of hours, until the time was past. He returned that day to Washington, and never saw the inside of the lines that had resisted him for a year.

His relations with the troops were peculiar. He never made speeches to the soldiers, and of course never led them himself into battle after he assumed his high commands. But in every battle they saw him certainly once or twice far to the front, as exposed as they; for there always seemed to come a time in each engagement when he was unwilling to use the eyes or ears of another, but must observe for himself in order to determine. The soldiers saw all this; they knew, too, that when he rode around in camp it meant action, and the sight of his blue overcoat, exactly like their own, was a signal to prepare for battle. They found out his character and respected his qualities. They felt that he meant well, although when the time came he spared them not, for the cause. Thus, though so undemonstrative, he awoke a genuine enthusiasm. After the battle of the Wilderness he rode at night along the road where Hancock's veterans lay, and when the men discovered it was Grant, and that his face was turned toward Richmond, they knew in a moment they were not to retire across the Rapidan as so often before; and they rose in the darkness and cheered until the enemy thought it was a night attack and came out and opened fire. When the works were carried at Petersburg, their enthusiasm was of course unbounded; and whenever they caught a glimpse of him in the Appomattox campaign, the cheers were vociferous. After the surrender of Lee they began without orders to salute him with cannon, but he directed the firing to cease, lest it should wound the feelings of the prisoners, who, he said, were once again our countrymen.

This sentiment he retained. Soon after the close of the war I was present when a committee of Congress, headed by Charles Sumner, waited on him to propose that a picture

should be painted of the surrender of Lee, to be placed in the rotunda of the Capitol. But he told them he should never consent, so far as he was concerned, to any picture being placed in the Capitol to commemorate a victory in which our own countrymen were the losers.

His friendship for Sherman all the world knows. It had, however, two great exemplifications which should not be omitted from the portraiture. When Sherman had finished his March to the Sea, and had come out successful at Savannah, the country of course rang with plaudits. Grant had been sitting quietly before Richmond for months and apparently had accomplished nothing, while his great subordinate had not only captured Atlanta, but had absolutely marched through the Confederacy. It was at once proposed to raise Sherman to the same rank with Grant, and make him capable of supreme command. Sherman heard of this, and promptly wrote to Grant: "I have written to John Sherman to stop it. I would rather have you in command than any one else. . . . I should emphatically decline any commission calculated to bring us into rivalry." To this Grant replied: "No one would be more pleased at your advancement than I, and if you should be placed in my position and I put subordinate, it would not change our relations in the least. I would make the same exertions to support you that you have done to support me, and I would do all in my power to make our cause win." These were not mere professions on either side. They were pledges in the view of possible contingencies. And they would have been fulfilled.

There were many during the war and afterward who declared and believed that Sherman thought himself the superior of Grant, and that he should have come out foremost; who represented many of his actions as prompted by rivalry or jealousy; but it was impossible to shake Grant's confidence in his friend. I never saw him so angry as when I showed him Stanton's denunciation of the terms of peace that Sherman had granted Johnston. He declared it was "infamous" to impute any but patriotic motives to a man who had served the country as Sherman had. And although he was empowered, and in fact ordered, to proceed to Sherman's army and "direct in person the operations against the enemy," he scrupulously refrained from assuming personal command. He might, under his orders, have received the surrender of Johnston as well as of Lee, snatching the laurels that his friend had fairly earned; but the enemy did not know of his arrival until after the terms were signed, and Grant went

back to Washington without having seen the Rebel army, and without his presence having been generally known even to Sherman's command.

This friendship did not end with the war. Shortly before his first inauguration as President, while he was still general-in-chief, Mr. Blaine, then Speaker of the House of Representatives, proposed to Grant that a resolution should be introduced in both Houses of Congress giving him a leave of absence for four years, so that he could resume his position in the army at the close of his Presidency. The rank of general, it was said, had been created for him, and he should not be called on to relinquish the place and emoluments bestowed for a lifetime, because in order to serve the country he had accepted even a higher position, which could only last four years. The offer was made in the name of a large majority of both Houses; but Grant declined it peremptorily. He said he could not sleep at night if he felt that he had deprived Sherman and others of the promotion they had earned as fairly as he could be said to have deserved his own. His refusal was final, and the resolution was not proposed.

He formed a similar friendship for Sheridan, but this began later in the war, and has gone on ripening since. His admiration for the present general-in-chief is equally outspoken and generous, and he thinks and says to-day that Sheridan is the peer of any soldier living.

McPherson also was a dear friend; to Rawlins he was warmly attached; and with all his immediate subordinates he lived on terms of comparative intimacy, and with some of personal friendship. He had the faculty in a large degree, which nearly or quite all great commanders possess, of attaching those brought closely about him. His personal staff were, without exception, devoted to him; any one of them would have risked his life for his chief had he known he must share the fate of Desaix when he sacrificed himself for Napoleon. In the last year of the war they organized a system at City Point by which one sat up on guard of him every night to watch against plots of the enemy; for there had been devices of dynamitic character, and attempts not only to capture, but to assassinate prominent national officers.

That camp life at City Point can never be forgotten by those who shared it, living in summer in a group of tents, in winter in rude huts, of which the commander-in-chief's was larger, but in no other respect better than that of the humblest captain on the staff. He shared his table with all his aides-de-camp, and at night he always joined the circle around the camp-fire, and told his stories or

conversed about old comrades, and discussed the chances of Sherman on his march or of Sheridan in the Valley, of Thomas at Nashville or of Butler at Fort Fisher. But with all this familiarity he preserved exactly the degree of reticence that he intended. He never betrayed what he meant should be secret, and though willing to listen to suggestions as to movements or plans, he made no remark in reply. In the middle of a conversation he would leave the circle, enter his tent, write out a telegram without consulting any one, and returning say, "I have ordered Thomas to fight to-morrow," or, "I have sent another division to Sheridan." Thus he gave his orders for the last assault on Petersburg; thus, too, in spite of urgent endeavors on the part of Rawlins and others to change the plan, he wrote the final permission to Sherman to start for the sea.

For all his great determinations were his own, he was never averse to availing himself of the ideas of others, and, as I must always repeat, no man ever learned the lesson of experience quicker, or applied it more absolutely. But the suggestions of others were presented simply, and either accepted or rejected as his judgment dictated; he was never persuaded. And if he took up an idea that he found, it was so developed by his own mind that it became as original in reality as if he had conceived the germ. Every one who might be called an associate felt this. Sherman resented the ascription to himself of the origin of the Vicksburg campaign, and has often told the story of his objection to the movement with loyal and splendid magnanimity.

There are many traits in Grant resembling those displayed by Moltke. All great soldiers indeed have much in common, but perhaps the parallel between these two is closer than any other in recent history. Both lived simply and almost unknown to their countrymen for many years. Moltke, it is true, remained in his profession and was more fortunate as the world goes; but until the great opportunity came he also was comparatively obscure. Both are plain in behavior, modest under unexampled success, undemonstrative in manner, simple in habits and tastes, unassuming and retiring though thrust into the highest positions. Neither ever sought advancement, but each earned it by his deeds. Both are admirable in the family, and attach friends warmly despite their reserved and dispassionate demeanor.

Both have displayed in their public career the tremendous determination, the sustained energy, the persistency of purpose which the world has recognized. Both have exhibited the power to hurl men in successive masses

to certain danger or even destruction in order to gain the victory which they deemed essential to their country, as well as the ability to control different armies simultaneously on the widest theaters, moving them in apparently opposite directions only to concentrate them at last for a single aim. The manœuvres in the early days of the Franco-German war have a similarity in their suddenness and celerity and success to the rapid strokes of the Vicksburg campaign; while the great combinations that spread over all France, and finally resulted in Sedan and Metz and the fall of Paris, are not unlike those by which Grant controlled Sherman and Thomas and Sheridan, and brought about the surrenders of Lee and Johnston, and the capture of Richmond. One general struck down an empire and accomplished the capitulation of a sovereign; the other overthrew a rebellion greater than the world had ever seen before, and stamped out every vestige of resistance on a continent.

When the war was over, Grant's popularity naturally knew no bounds. No American ever received during his lifetime such a unanimity of praise. But he remained unchanged, as simple when the foremost man in all the country as when earning his daily bread in a little inland town. I accompanied him when he returned to Galena, and after the first burst of enthusiasm among those who had been his fellow-citizens had subsided, he resumed much of his life of former years, visited and received his earlier friends without any assumption of superiority, took tea in the little houses of Galena, and chatted with his neighbors about their crops and gains, as if he had never commanded generals nor manœuvred a million of men across a continent.

He was as popular at the South as at the North. The men whom he had conquered never forgot his magnanimity. A few months after Appomattox he made a tour through the Southern States, and then entered Richmond for the first time. Had he been the savior instead of the captor of the town, he could hardly have been more cordially received. The Southerners felt indeed that he had been a savior to them. He had saved them from the rancor and revengeful spirit of many at the North. The terms he had granted them at Appomattox were unexampled for clemency; and when Andrew Johnson attempted to violate those terms, Grant declared he would resign his position in the army unless they were respected. At Richmond, Raleigh, Charleston, Savannah, the most important Southerners, civilians and soldiers, made it their duty to call upon him, to welcome him, to show him their gratitude.

At Raleigh the State Legislature was in session, and he was invited to be present, and the body rose as he entered the capitol which his armies had captured not six months before. Important Southerners soon addressed him, requesting him to become a candidate for the Presidency, assuring him of the unanimous desire of the South to see him at the head of the Government. General Richard Taylor came to me on this errand, and urged that Grant should allow himself to become the candidate of the Democrats.

But Grant was then averse to entering politics. I have rarely seen him more indignant than when individuals with little or no acquaintance persisted in declaring that he must be the next President. For years his nearest friends never heard him express a willingness to accept a nomination. To my certain knowledge both political parties made overtures to him both during and after the war; but it was not until the breach between the Executive and Congress, and the impeachment of Johnson, that he thought it his duty to allow his name to be used. He regretted extremely the original harshness of Mr. Johnson, and frequently interposed to modify his views or to palliate the past offenses of Southerners; he obtained numerous pardons in the days when clemency was not the rule, and only the weight of his great services could have prevailed; but when Mr. Johnson swung to the other extreme, contended with Congress, and was anxious to set up his own policy in opposition to that of the mass of the people who had won, Grant thought he had no choice and threw in his lot with those with whom he had fought.

He never, however, lost his hold on the Southerners. In 1880, on his return from Europe, his reception at the South was as enthusiastic as at the North, and thousands of Southern Democrats assured his political friends that had he been nominated at Chicago the mass of the Southern vote would have been thrown in his favor. Whether they were right or wrong, no one now can tell; but that a large number of prominent Southerners were of this opinion shows the feeling that must have existed at the South for him who fought them to the end.

The man of war, indeed, always preferred peace. He never liked his profession. In England, when the Duke of Cambridge offered him a review, the courtesy was declined; and Grant declared to his intimates that a review was the last thing he desired to see. He had seen soldiers enough, he said, to last him a lifetime.

The great measure of his Presidency was the treaty with England, which submitted the

differences between the two countries to arbitration instead of war; and this, although no one felt more keenly than he the conduct of England during the Rebellion, and, as a soldier, no one could see more plainly the immense advantages we might have retained had the Treaty of Washington never been signed. But he always regarded the negotiation of that treaty as the great achievement of his administration, and he was in some sort rewarded by the extraordinary reception he met with in England.

I had been living in that country officially for some years when General Grant visited England. I supposed that he would be received by the important people in a manner becoming their own station and his illustrious position and fame; but the popular enthusiasm that his arrival evoked was a marvel. It equaled anything in the ovations at home immediately after the war. Streets were illuminated, triumphal arches built, holidays were proclaimed because he entered a town; the whole population crowded to see him, and were as eager to shake his hand as those whom he had helped to save. Every great city welcomed him officially; he was the guest of the Queen and the Prince of Wales. Lord Wharncliffe, the bitterest enemy the Union had in the whole nobility, toasted him at public dinners, and declared: "Had General Grant been an Englishman, I should not now be responding for the House of Lords, for he would have been a duke." And always in England this enthusiasm was avowedly based on the fact that, although a great soldier, he had, as President, referred a grave international dispute to a peaceful tribunal instead of the arbitrament of war.

The same simplicity which he had manifested at Galena was retained at the table of kings. Some one in England inclined to cavil criticised his lack of loquacity and comparative plainness of behavior; but one who could sympathize with him in both respects, the present Earl of Derby, declared there could be no question about General Grant. The man who had achieved what all knew he had performed, and could retain his simplicity and

modesty, must be a very great man. This was the universal verdict.

As all the world knows, his triumphal procession continued for years. He passed through every country of Europe and the most important of Africa and Asia, enjoying an experience that had never before fallen to man. No great personage of ancient or modern times ever made such a journey. He was received everywhere as the equal of the potentates of the earth. The sovereigns of Europe, the Sultan of Turkey, the Czar of Russia, the Pope, the Khedive, the Emperors of Germany and China and Japan, all met him on a level. The Czar took him by the hand and led him to a sofa, talked statecraft with him and compared experiences, asked how he did when his ministers were troublesome and what was his practice in popular emergencies, while Gortschakoff stood behind and helped his master to a word or a phrase when his English halted. Something of the same sort happened with the Emperor of Germany; while the Mikado of Japan and the King of Siam were anxious to learn politics of him. Then came the statesmen themselves—Bismarck and Gortschakoff and Beaconsfield and Gambetta, who could approach him as they would not or could not a sovereign, and were equally anxious to compare notes with the American President; and so with others of high degree. Last of all, Grant, being a genuine democrat, went among the people themselves, talked with them, studied them, understood them as no sovereign or aristocrat would be able to do; so that he went through three tiers of experience—with the monarchs, the statesmen, the people; and being, as I say, a thorough democrat and republican, believing in the people and being of the people, he preserved not only his simplicity of habit and taste amid the pomp of courts and the adulation of the world, but his firm confidence in the superiority of republican institutions and of the American character. He saw the highest and best of modern civilization, and he returned, if possible, a better democrat than when he started.

Adam Badeau.

BIRD-VOICES.

THE robin and sparrow a-wing, in silver-throated accord;
The low soft breath of a flute, and the deep short pick of a chord,
A golden chord and a flute, where the throat of the oriole swells
Fieldward, and out of the blue the passing of bobolink bells.

A. Lampman.

TOPICS OF THE TIME.

A New Volume of "The Century."

THE present number of THE CENTURY begins its thirtieth half-yearly volume with a first edition of a quarter of a million copies.

Mr. Matthew Arnold, in his latest friendly comments upon America, says that he is "not, by nature, disposed to think so much as most people do of 'institutions'"; whereas "Americans think and talk very much of their 'institutions.'" But he adds that the more he saw of America the more he found himself "led to treat 'institutions' with increased respect." Until he went to the United States he "had never seen a people with institutions which seemed expressly and thoroughly suited to it." Well, we think that Mr. Arnold will be quick to acknowledge that the illustrated magazine is an American "institution," and one "expressly and thoroughly suited" to the country, and he must consider it merely an American trait if it treat itself with respect. To be sure, Mr. Arnold has, on another occasion, expressed himself as not particularly impressed by mere numbers; he prefers quality to quantity, and has great faith in a saving remnant. But we are pleased to be able to tell all who think as Mr. Arnold does, that in its path of "popular" success THE CENTURY has never felt it necessary to "appeal downward." It is an unbounded satisfaction for us to be able to put on record here, as a compliment to the great audience of our countrymen, and as an encouragement to all present and future workers in similar fields, that popular success has, from the beginning, followed THE CENTURY'S unswerving attempts at greater thoroughness and excellence in every department. Take the matter of wood-engraving, for instance; for what is the new school — the so-called American school — celebrated, except for its delicacy, its refinement, its artistic expressiveness? And the American romancists and novelists — have they been blamed for a lack of, or rather, indeed, for an excess of, refinement and subtlety?

Those who are actively and eagerly engaged in an enterprise are not the ones to give a final judgment upon it. There are faults which they may not be fully aware of, and tendencies, good or bad, which they cannot discern. At the same time, experience has taught them some things which can profitably be told, and their views and aims may have at least a curious interest. The conduct of a periodical which, twelve times a year, reaches an audience of not much less than a million of people, is so grave a care that those who bear it upon their minds and hearts naturally feel a desire to make friends with this great multitude, to ask for their sympathy, to appeal to their confidence, and, in a certain way, to share with them the burden of responsibility.

This is not a fantastic idea. It is a real thing. There are some who deprecate the very existence of the popular magazines upon which our American writers are so largely dependent — especially depend-

ent in the deplorable absence of international copyright laws, which would not only give them revenue from abroad, but protect them at home from the base competition of stolen literary wares. There are some, we say, who fear that our literature may lose in frankness and in force from the supposed necessity of trimming too consciously to the taste of an audience which has many sensitive and hypercritical elements. There is some truth in this. It cannot be denied that much of the world's most valuable literature, sacred and secular, could never reach the public through the pages of the "family magazine." There is, moreover, a certain unwritten guarantee that every periodical evolves from its own history and habit. It behooves all concerned to see to it that the limitations of the popular periodical do not have a narrowing or flattening effect upon current literature; do not put our best writers into a sort of literary bondage; do not repress originality and individuality either of style or of opinion. It may be said on this point that while the world will always have its share of the long-eared race, fortunately the number of the over-anxious and the super-sensitive seems to be growing yearly less considerable; and the idea is rapidly passing away that editors are bound to the infinite task of themselves entertaining every shade of opinion and belief expressed by the various writers for the periodical with which they are connected. Readers afford help to editors by being tolerant, open-minded, and sympathetic, with "many moods of many minds," as editors themselves must be.

In a country like this, of enormous extent, and wide divergences in local opinions, customs, and legislation, the modern "popular magazine" — with its fresh and graphic records of the various geographical, social, industrial, educational, scientific, artistic, and religious phenomena and enterprises of our great democratic empire — is a national factor of no little importance. If self-knowledge is of the highest consequence to the man, it is no less so to the empire of men; and what agency can be more powerful to this end than those periodicals which are written, not by local coteries of writers, however able, or however sincere in their convictions, but that draw from every quarter the best that can be found, — periodicals which look to no locality for support and audience, but rather to the intelligence of the entire country and continent?

The truth of these remarks is borne in upon us in contemplation of the discussion now going on in THE CENTURY with regard to the pressing question as to the reorganization of society in the Southern States of our Union — one of the gravest and most difficult with which humanity in any age has had to deal. On this question, owing, in some degree, to the blinding effect of inherited views and party bitterness, the North needs information as to facts; the South needs to put itself more and more in a position where it can observe facts with a calmer and deeper vision. The

Northern freeman needs to put himself in the place of the Southern; the Southern freeman in the place of the Southern *freedman*. Mutual respect, sympathy, knowledge—these are indispensable. It is of the highest importance that the Southern majority should consent to consider the opinions advanced by Mr. Cable in the name of the Southern minority. It is of the highest importance that the Northern majority should consider such a representative Southern statement as that of Mr. Grady in the last number of the magazine. The next thing we shall do is to ask our Northern and Southern readers to consider another convinced, outspoken, and eloquent statement on this pressing subject, this time from the (Episcopal) bishop of one of our lately slave-holding states.

In the war now being chronicled in *THE CENTURY* by many of its leading figures, the North and South each discovered the mettle of the other. It is a help to mutual understanding and good-will that the North should know all that is admirable and desirable in Southern life and character, and much of this has been and will be recorded in these pages. It is important that the South should lay aside its prejudice, hold itself in the literary and human frame of mind, and—read, for instance (as it may in our present number), of the life-work of the great lyrical prophet of emancipation, told by the author of the never-to-be-forgotten ballad of Ossawatimie Brown. Later on, we shall ask the South, along with the North, to study the character and motives of one whom even the North itself does not yet fully know, and whom the South long hated with a bitterness born of inherited devotion to an anomalous social system now forever destroyed.

The country, the section, or the man that is not infidel to truth, will never fear honest freedom of debate.

In looking back over what is written above, we fear we have magnified our office. And yet, were not the first illustrated-magazinists kings of the earth? The great Egyptian sovereign, Thothmes III., one of whose obelisks to-day adorns New York's Central Park, was a distinguished member of the ancient and honorable craft. There were no printing-presses in those times, so his pictures and articles were graven upon rock, and may be seen and read of all men to this day. The old Egyptian magazines contained poems, historical articles, accounts of travel, and descriptions of various industries and enterprises,—with, by way of illustration, portraits, scenes of battle, of the chase, of agriculture, etc., pictures of plants and of animals at home and abroad, and engravings of architecture and objects of minuter art. In one of these illustrated articles, published by Thothmes, it is said: "Here are all sorts of plants and all sorts of flowers of the Holy Land, which the king discovered when he went to the land of Ruten to conquer it." The king swears by the sun "that all is plain truth; there is no trace of deception in that which I relate. What the splendid soil brings forth in the way of productions, I have had portrayed in these pictures."

Let us hope that the work of the writers and artists of our own *CENTURY* shall have as long life, and prove as valuable to mankind, as that of the writers and artists of those centuries of long ago, by the storied and eternal Nile.

The Future Life.

"If a man die, shall he live again?" To that question the mind returns in every generation, with an exhaustless and deepening interest. Any worthy discussion of it is sure to attract the thoughtful reader with a fascination such as hardly any other theme possesses. It is discussed in this number of *THE CENTURY* by a writer who rises to the height of the great argument. We believe that Mr. Munger's article is unique, in the combination of powers which it applies to the great problem,—the familiarity with the principles alike of science and philosophy, the firm logic and the spiritual feeling, the open-mindedness and the seriousness. For the adequate study of questions like this there are needed the spirit of science, the spirit of poetry, and the spirit of religion; and Mr. Munger has all three.

We do not attempt to add here a single word to the philosophical discussion, desiring only to set, as it were, a finger-post toward the article, for all readers who care for noble reasoning on the ultimate problems of life. But our thoughts turn toward the many who have a personal and intense interest in the question of immortality, yet feel themselves unable to thoroughly follow such arguments, or to judge whether the welcome conclusion has been fairly reached. Let us remind all such of the truth which Mr. Munger intimates in his opening,—that, in the end, it is not a process of intellect, but a process of life, which best supplies the hope and confidence of immortality. That we may face our future destiny undismayed and joyful, the chief requisite is not that a man be able to reason logically, but that he be faithful, patient, and brave.

The march of the mind in its great quest for truth is like a work of tunneling through a mountain. Marvelous is the engineer's sagacity that directs the advance; mighty are the forces that slowly blast the rock; strong are the arms and resolute the hearts that push their way on through the darkness toward the light beyond. But out on the mountain-side the glad sunlight is poured; every dew-drop glistens in it, every flower drinks it, birds sing and children play in its embrace. So, while thinkers are working their way, there are countless folk, simple or learned, who daily live in untroubled and happy sense of a divine love, from which they can never escape.

It is Life itself which with its various voices teaches us the things best worth knowing. And the voices which come home to us with sovereign authority are those of Love and Death,—and, for the mother's sake, shall we add, Birth? Let one of the chief of women interpret for the mothers,—it is Elizabeth Barrett Browning, speaking to two parents who mourn their child as lost:

"'God lent him and takes him,' you sigh;
Nay, there let me break with your pain:
God's generous in giving, say I;
And the thing which He gives, I deny
That He ever can take back again.

"He gives what He gives. I appeal
To all who bear babes. In the hour
When the veil of the body we feel
Rent round us,—while torments reveal
The motherhood's advent in power,

"And the babe cries!—has each of us known
By apocalypse (God being there

Full in nature) the child is our own,
Life of life, love of love, moan of moan,
Through all changes, all times, everywhere.

"He lends not; but gives to the end,
As He loves to the end. If it seem
That He draws back a gift, comprehend
'Tis to add to it rather,—amend,
And finish it up to your dream,—

"Or keep, as a mother may toys
Too costly, though given by herself,
Till the room shall be stiller from noise,
And the children more fit for such joys
Kept over their heads on the shelf."

So speaks the woman. And what has the man to say? Here is he whom we boast as the wisest and highest among our American authors,—a man, too, so wrapt in philosophic thought, so happy in his lonely contemplation, that he seems generally to stand apart from the struggling, work-a-day world, where most of us live. But the man is a father, like other men; his boy dies, and how does he bear it? He puts his heart into the tenderest poem he ever wrote, the "Threnody." He looks longingly back on just such pictures as other parents do,—the throng of children about the baby in his willow wagon, led by the boy "with sunny face of sweet repose,"—the painted sled, the snow fort, the sand castle, the garden of which his "blessed feet" had trod every step,—and now the boy is gone. The lonely father thinks of it, and will not drown or forget his grief; and slowly there comes to him the sense that love can never lose its own. The rainbow, the sunset, all beauty, all experiences of the soul, teach him a new lesson:

"What is excellent,
As God lives, is permanent;
Hearts are dust, heart's loves remain,
Heart's love will meet thee again."

The moments when such convictions flash in — such insights, rather — are an assurance deeper than belief; but how much can be carried forth from them into the common levels of every-day life? How much will stay after the first exalted hours? There are not many of whom the world can take testimony on these questions; but occasionally there is some one in whom a typical experience is wrought out, and who has the gift of expressing it, like Tennyson in "In Memoriam." It is almost twenty-five years since Mrs. Browning died. Here is a little volume of new poems by her husband, "Ferishtah's Fancies." There run through it—as there have run through all his best works—the notes of the same constant love-song. It is as tender as it was of old, and it merges now in a symphony,—the love of the one blending with the love of

all; the immortality of one union prefiguring a universal joy. In the verses that close the book, the poet tells his companion spirit how all the sadness and trouble of the world cries out to him, and he listens; but, as he hears, a vision rises, and he sees, as if in a rift made by the moon through clouds, the heroes and saviors of past ages;—they bid him fight and trust as they fought and trusted.

"Was it for mere fool's play, make-believe and mumming,
So we battled it like men, not boy-like sulked or whined?
Each of us heard clang God's 'Come!' and each was coming:
Soldiers all, to forward face, not sneaks to lag behind!

"How of the field's fortune? That concerned our Leader!
Led, we struck our stroke, nor cared for doings left and right:
Each as on his sole head, failer or succeder,
Lay the blame, or lit the praise; no care for cowards: fight!

"Then the cloud-rift broadens, spanning earth that's under,
Wide our world displays its worth, man's strife and strife's
success:
All the good and beauty, wonder crowning wonder,
Till my heart and soul appeared perfection, nothing less."

True hearts make answer to each other in all ages. Just as Browning from the joy of a personal undying love goes out with fresh heart for the common battle, so Paul, after his exultant cry, "O Death, where is thy sting? O Grave, where is thy victory?" rallies for the present work: "Therefore, my beloved brethren, be ye steadfast, unmovable, always abounding in the work of the Lord; inasmuch as ye know that your labor is not in vain in the Lord."

Time would fail us to call in other witnesses, of our own day—such as Bryant, Whittier, and the American author of that little poem which is like a sun-burst: "On one who died in May." This last touches the deepest truth,—that it is only the presence of death which teaches the full significance of the present life:

"Dark Death let fall a tear
Why am I here?
O heart ungrateful! will man never know
I am his friend, nor ever was his foe?
All Hope, all Memory,
Have their deep springs in me;
And Love, that else might fade,
By me immortal made,
Spurns at the grave, leaps to the welcoming skies,
And burns a steadfast star to steadfast eyes!"

These voices speak home to the common heart because they speak out of the common heart at its noblest. They are not individual experiences merely; they are typical. It is motherhood and fatherhood, friendship and love that speak; it is the voice of humanity; it is the music drawn from the heart of man when touched by the hand and filled by the breath of God.

OPEN LETTERS.

An Interview with General Robert E. Lee.

A YEAR or more before the death of General Lee, he came to Baltimore as one of a committee to enlist the authorities of the city and the president and directors of the Baltimore and Ohio Railroad in the project for a railroad down the Valley of Virginia.

I had met General Lee but once, and then only for a few minutes; and though his home during his last years was in my native place, I did not intend calling on him in Baltimore; but a Southerner of wealth, then in New York, Cyrus H. McCormick, having telegraphed me to see the General and invite him to come on and be his guest, I called upon him to deliver

the invitation. The General said he was here on a hurried visit, that his duties to the College required his presence at home, and that with many thanks for the courtesy, and the hope that he would be able to enjoy the proffered hospitalities some other time, he must decline. I urged him not to carry out that decision, assuring him that the College would probably gain substantial benefit from his visiting my friend. He at length agreed to hold the question under consideration during a day or two he was to be absent in the country, and made an appointment for my meeting him on his return.

The two days having expired, I called again and found him expecting me. He stated that, having fully considered the subject, he had decided that he must return home. After again presenting reasons why he should make the visit to my friend, I said :

"I think I see, General, that the real difficulty lies in your shrinking from the conspicuity of a visit to New York. I can readily understand that this would be unpleasant. But you need not be exposed to any publicity whatever; my friend has given me *carte blanche* to make all arrangements for your coming. I will engage a compartment in the palace car of the night train, and will telegraph my friend to meet you with his carriage on your arrival in New York."

I shall never forget the deep feeling manifested in the tones of his voice, as he replied :

"Oh, Doctor, I couldn't go sneaking into New York in that way. When I do go there, I'll go in daylight, and go like a man."

I felt rebuked at having made the suggestion; and finding he was fixed in his determination, the subject was dropped. But he seemed in a talkative mood,—remarkably so, considering his reputation for taciturnity,—and immediately began to speak of the issues and results of the war. The topic which seemed to lie uppermost and heaviest on his heart was the vast number of noble young men who had fallen in the bloody strife. In this particular he regarded the struggle as having been most unequal. The North, he said, had, indeed, sent many of her valuable young men to the field; but as in all large cities there is a population which can well be spared, she had from this source and from immigrants from abroad unfailing additional supplies. The South, on the other hand, had none but her own sons, and she sent and sacrificed the flower of her land.

After dwelling with emphasis and with feeling on this point, the General then introduced another topic which also moved him deeply, viz., the persistent manner in which the leading Northern journals, and the Northern people generally, insisted that the object of the war had been to secure the perpetuation of slavery. On this point he seemed not only indignant, but hurt. He said it was not true. He declared that, for himself, he had never been an advocate of slavery; that he had emancipated most of his slaves years before the war, and had sent to Liberia those who were willing to go; that the latter were writing back most affectionate letters to him, some of which he received through the lines during the war. He said, also, as an evidence that the colored people did not consider him hostile to their race, that during this visit to Baltimore some of them who had known him when he was stationed here had come up in the most affectionate manner and

put their hands into the carriage-window to shake hands with him. They would hardly have received him in this way, he thought, had they looked upon him as fresh from a war intended for their oppression and injury. One expression I must give in his own words.

"So far," said General Lee, "from engaging in a war to perpetuate slavery, I am rejoiced that slavery is abolished. I believe it will be greatly for the interests of the South. So fully am I satisfied of this, as regards Virginia especially, that *I would cheerfully have lost all I have lost by the war, and have suffered all I have suffered, to have this object attained.*" This he said with much earnestness.

After expressing himself on this point, as well as others in which he felt that Northern writers were greatly misrepresenting the South, he looked at me and, with emphasis, said :

"Doctor, I think some of you gentlemen that use the pen should see that justice is done us."

I replied that the feeling engendered by the war was too fresh and too intense for anything emanating from a Southern pen to affect Northern opinion; but that time was a great rectifier of human judgments, and hereafter the true history would be written; and that he need not fear that then injustice would be done him.

As the General was in a talking mood, he would have gone on much further, no doubt, but that at this point his son, General W. H. F. Lee, whom he had not seen for some time, and who had just arrived in Baltimore, entered the room.

John Leyburn.

BALTIMORE.

Bishop Bryennios and the Teaching of the Twelve Apostles.

THERE is a quarter of Constantinople called Phanar, inhabited almost exclusively by Greeks. Here the houses are larger and cleaner, and an appearance of greater thrift and comfort exists, than in the Turkish parts of the city. Here is the residence of the Greek Patriarch and of the more celebrated Greek bishops. Here is the patriarchal church, where the great festivals of Christmas and Easter are celebrated with the utmost pomp. Here, too, is the confused and irregular mass of buildings belonging to the Patriarch of Jerusalem, and forming what is called the Jerusalem Monastery of the Holy Sepulchre. Hardly more than a stone's-throw to the east, opposite the entrance of the great patriarchal church, is a narrow, unpainted wooden house, four stories high. This house has been for years the residence of Philotheos Bryennios, metropolitan of Diocletian's ancient capital, Nicomedia, and, of late, specially famous for his discovery of the manuscript volume containing what is called the *Δεδαχῆ*, or Teaching of the Twelve Apostles. In the library of the Jerusalem Monastery that manuscript is still kept which has been more discussed, and has attracted more attention, than any other ancient manuscript since Tischendorf discovered the Codex Sinaiticus.

It has been my good fortune to meet Bishop Bryennios on several occasions. Twice I have had the rare privilege of seeing and glancing over the manuscript—a privilege only one other American gentle-

man has enjoyed. I am sure a few details concerning the book and its discoverer will be of interest to the reader.

The exterior of the Bishop's house is unpretentious and of gloomy appearance. Double doors opening in response to the resounding iron knocker — a broken bell-handle at the side speaks of what has long since ceased to ring — disclose a long, narrow passage, paved with marble. A blank wall stretches on the right. An Oriental kitchen, with servants at work, appears in the distant vista at the end. On the left are numerous doors, giving access, doubtless, to servants' apartments. In the very middle of this left-hand side is the winding wooden staircase, up which the visitor is to go. Two flights bring him to the third story, which is peculiarly the Bishop's dominion. The courteous servant leads the way past a half-open door, which discloses a little chamber with holy pictures on the wall, and burning lamps before them, all marking the tiny sanctuary which, in every Greek house, large or small, patrician or plebeian, is set apart for purposes of devotion. Thence one passes through a spacious hall to a large room facing on the street. This is at once the Bishop's parlor and his private study. No flowers, no pictures, no ornaments adorn the walls. Bare asceticism stamps the place as the residence of a wifeless ecclesiastic, of an Eastern monk. A low, broad divan or sofa bounds one side of the apartment. Eighteen or twenty chairs are drawn up in military precision along the two other sides. Add a table covered and littered with books and pamphlets and papers, and the furniture is complete. Simple and unassuming as is the room, it is nevertheless the audience chamber of a man in ecclesiastical rank second only to the Patriarch and the Bishop of Ephesus, unequaled among his own countrymen for learning.

A tall gentleman rises from his seat behind the table and comes forward rapidly to meet his guest. The warm welcome of his manner is pleasant, and makes the stranger feel at home; but this graceful, gracious cordiality does not characterize Bryennios alone. It is the welcome which the foreigner almost invariably receives from every dignitary in the East.

Now for his personal appearance. Imagine a Greek ecclesiastic in the very prime of life; his head covered by the black, brimless, high-crowned cap which is worn indoors as well as in the street; possessing the long, never-shaven mustache and beard; his black hair unclipped by scissors, braided and gathered in a knot; over his shoulders the black robe, entirely enveloping his person and falling to the bottom of his feet; and you have a picture not only of him, but of every orthodox Greek priest, whatever his degree. But the face is Bishop Bryennios's own private possession. A large dark eye, full of expression, looks kindly at you from the handsome oval face, over which a smile is constantly playing or ready to play, but an eye that can flash forth fire when its owner is excited. A white, high, broad forehead is half concealed by the priestly cap. In the ambush of mustache and beard, a small mouth is hidden which can pour forth words in a hot, impetuous torrent, with no regard to pauses or periods, but which will make no slips, will utter no more than its master wishes, and will commit no blunders to apologize for or recall.

The whole face is remarkably intelligent and winning. A personal magnetism characterizes the man. While one is with him he thinks as he thinks, feels as he feels, receives every word he utters as unquestionable and sincere. The impression he makes is that of personal power and force of character. You feel whatever he chooses to attempt he will accomplish; whatever he sets before him he will attain. You say, this man will become Patriarch if he desires it, and deigns to accept the office; this man can shake his church and nation with reform, and not die, like Kyril Lucar or the Russian Nikon, defeated and disgraced at the end. Or, if by a calmer field his ambitions are bounded, there is no limit to which he may not successfully go. There is nothing more curious than the difference of impression one experiences when with him and away from him. In his presence surmise, doubt, suspicion, grounded or groundless, all are hushed. You are with him heart and soul. His eye holds you, something as the eye of the ancient mariner held the wedding guest. Half an hour after one has left him the personal magnetism has spent its force. One remembers a charming host, a brilliant entertainer for whose courtesies he is grateful; but somehow, I know not how, other feelings have succeeded those experienced in his presence. But Bishop Bryennios must not keep us from the book with which his fame is identified.

I need not tell my readers that the *Διδαχὴ*, or "Teaching of the Twelve Apostles," is the name given to a treatise which was composed in or shortly after the Apostolic age. The *Διαλογαὶ* or *Διδασκαλία* or *Διδαχὴ*, something apparently distinct from the Apostolic Constitutions, is often referred to by the early Christian writers, but doubt has been expressed whether they spoke of a work then existing and afterward lost, or generally of the doctrine or instruction of the Lord through his Apostles. Very many arguments were adduced to prove that such a treatise of about two hundred lines did once exist; that this was the fountain whence seeming quotations were drawn, and that on this was based part of the venerable rules or regulations called the Apostolic Constitutions. But in any case no extant copy of it was known. How, when, where, why it had disappeared no one could tell.

In 1873 Bishop Bryennios was busily looking over the manuscripts in the Jerusalem Monastery at Constantinople. His eye fell upon a small, bulky volume he had never seen before. Indifferently he took it up to glance at its contents. It was not a manuscript on a single subject, but rather a number of manuscripts brought together in one volume, and apparently all written by the same hand. Among them were two treatises of exceedingly great value, or rather three, these being the first and second Epistles of Clement to the Corinthians and the Epistle of Barnabas. In his joy at this discovery he barely noticed and gave only an absent-minded glance at an unpretending treatise occupying the very middle of the book. This was comprised in a little less than ten pages. It was introduced with two inscriptions, one of which was "Teaching of the Twelve Apostles," and the other "Teaching of the Lord through the Twelve Apostles to the Nations." Not till seven years after, in 1880, when the Bishop, freer from cares, again perused the

little treatise, did he realize what he had found. From 1880 he spent upon it every moment he could spare, until it was published with introduction and copious notes in 1883. All this account which I am giving is the Bishop's most interesting story of his discovery, and is derived from his own lips.

The library of the Jerusalem Monastery is contained in a small stone chamber, erected for this purpose, and detached from the other monastic buildings. Its walls are two and a half feet thick. Scanty light struggles in through two strongly barred windows. The massive iron door, when its bolts and chains are removed, on opening, discloses a second and inner door thicker and heavier than that outside. The entrance is piously adorned with many holy pictures, and with the never-failing and always lighted lamps of olive oil. Upon the dingy shelves are arranged perhaps one thousand volumes in an orderly neatness which apparently is seldom disturbed. Moreover, there are found within, as the archimandrite Polycarp, the superior of the monastery, informed me with characteristic indefiniteness, from four hundred to six hundred manuscripts. The collection of manuscripts bound in one volume, and containing the "Teaching," is numbered 456. This is a small thick book, covered with black leather. It is 7.4 inches long and 5.8 inches wide. Altogether it comprises one hundred and twenty leaves of vellum, or two hundred and forty pages. The contents of these one hundred and twenty leaves are most precious to lovers and students of patristic theology. As given by Bryennios in his commentary upon the Epistles of Clement, they are the following:

- (I.) The synopsis of the Old Testament by St. Chrysostom, contained between leaves 1 and 32, or until the 65th page.
- (II.) The Epistle of Barnabas, leaves 33 to 51b, or to the 102d page.

- (III. and IV.) The two Epistles of Clement to the Corinthians, leaves 51b to 76a, or to page 151.
- (V.) Teaching of the Twelve Apostles, leaves 76a to 80, or to page 160.
- (VI.) Epistle of Mary of Cassoboli to the saint and martyr Ignatius, Archbishop of Theopolis, or Antioch, leaves 81-82a, or to page 163.
- (VII.) Twelve Epistles of St. Ignatius of Antioch, leaves 82 to 120a, or to page 239.

Finally is the colophon, or signature of Leo the transcriber, in these words:
 "It was finished in the month of June the 11th day Tuesday the ninth year of the Indiction in the year 6564 by the hand of Leo notary and sinner."

In ecclesiastical documents the Greeks reckon still by the indiction, or period of fifteen years, commencing in 312 A. D.

As the Constantinople Greek calendar estimates our Saviour's birth to have taken place 5508 years after the creation, 6564 corresponds to 1056 of the Christian era. 1056 is ten years before the Norman conquest of England, and forty years before the first crusade. It is only two years after the great schism between the Eastern and Western churches, which has never been closed over and never will be, and seventeen years before Hildebrand the son of the carpenter ascended the papal throne as Gregory VII.

It is an interesting fact that the manuscript written out by the humble notary is to-day demanding and receiving a larger share of learned consideration than the struggles of Hildebrand, or the crusades, or the Norman conquest. Little did Leo imagine how intently barbarous and unknown lands were to discuss his work 800 years after he died. The handwriting is small and cramped, but wonderfully distinct. A photographic facsimile of the signature of Leo and of the first four lines of the *Διδαχή* accompanies this article. Both photographs have been obtained with the utmost difficulty. In fact, the authorities of the monastery are for some reason most reluctant to allow

["Teaching of the Twelve Apostles.
 Teaching of the Lord through the Twelve Apostles to the Gentiles.
 There are Two Ways: one of Life, and one of Death; but there is a great difference between the two ways. The way of Life is this: first, Thou shalt love."]

any person to even see the manuscript. On two occasions I have held it in my hand. Each second of those two golden opportunities I improved as best I could. The archimandrite Polycarp and the librarian Sophronios both assure me that no other Frank has seen so much of it as myself. But my own inspection of it has been most hurried, incomplete, and unsatisfactory. A hundred questions arise concerning it which I cannot answer; questions, some of them, which no man can solve until after careful and rigid examination. The text, as published by Bishop Bryennios in 1883, has been translated and commented largely in Germany, France, and England, but probably it has received more attention in America than in all the three other countries combined. This study has been concentrated, however, only on Bishop Bryennios's rendering or transcription of the text. Leo's yellow bundle of manuscript these learned scholars have never seen. Doubts and uncertainties must exist concerning the manuscript of the "Teaching" which can be set at rest only by patient and competent investigation. May the time speedily come when this manuscript shall be as open to research and inspection as are the like treasures of almost every other monastery in the East.

Edmund A. Grosvenor.

ROBERT COLLEGE, CONSTANTINOPLE.

THE CONTENTS AND VALUE OF THE TEACHING.

TO THE foregoing interesting account of Bryennios and his important discovery, we add a brief estimate of the contents and practical value of the document which professes to contain the "Teaching of the Twelve Apostles," or the "Teaching of the Lord through the Twelve Apostles to the Gentiles."

The "Didache," as it is briefly called, consists of about ten octavo pages, which Bryennios has divided into sixteen chapters. It is a sort of Church Manual, or Directory of Catechetical Instruction, Public Worship, and Church Discipline. It is the oldest and simplest work of that kind, and was afterwards superseded by more extensive works which go under the names of "Ecclesiastical Canons," "Apostolical Constitutions," etc.

The "Didache" naturally divides itself into four parts: I. DOCTRINAL or CATECHETICAL part, chs. 1-6. This contains a summary of practical duties to be taught to such Gentiles as apply for admission to baptism and church membership. The duties resolve themselves into the royal command of love to God and love to our neighbor. The whole is set forth in the parabolic form of Two Ways, a Way of Life and a Way of Death. This was a favorite form of primitive instruction, suggested by Matt. vii. 13, 14; Jer. xxi. 8 ("Behold, I set before you the way of life, and the way of death"); Deut. xxx. 15 ("I have set before thee this day life and good, and death and evil"). Nor was it unknown among the heathen, as the myth of Hercules shows, who in his youth stood hesitating between the easy way of pleasure and disgrace, and the arduous way of virtue and glory. This part of the "Didache" is an echo of the Sermon on the Mount, as reported in the fifth, sixth, and seventh chapters of Matthew. It shows how simple and prevailingly moral the first Christian preaching and teaching was

in that part of the church (probably Syria or Palestine) where the "Didache" was composed.

II. RITUALISTIC or DEVOTIONAL, chs. 7-10. This part treats of the administration of baptism and the Lord's Supper, in connection with the love-feasts. Here occurs the passage which has given rise to so much lively discussion between Baptists and Pedobaptists, as it sanctions both immersion and affusion or sprinkling, but makes no allusion to infant baptism. It reads thus (ch. 7):

"As regards baptism, baptize as follows: Having first taught all the preceding instruction [on the Way of Life and the Way of Death, chs. 1-6], baptize into the name of the Father, and of the Son, and of the Holy Spirit, in living [*i. e.*, running] water. But if thou hast not living water, baptize into other water [*e. g.*, standing water]; and if thou canst not in cold, then in warm [*i. e.*, water]. And if thou hast neither the one nor the other [*i. e.*, in sufficient quantity for immersion], pour water on the head three times, into the name of the Father, and of the Son, and of the Holy Spirit. But before the baptism let the baptizer and the candidate for baptism fast, and any others who can; and thou shalt command the candidate to fast one or two days previously."

This passage shows clearly that preference was given to immersion (total or partial) in running water (as the Jordan where John baptized, and where Christ was baptized, and, as in the oldest catacomb pictures, where the candidate stands knee-deep or waist-deep in the water), but that in exceptional cases pouring or affusion was likewise regarded as valid baptism. This we knew already from Cyprian, but the "Didache" gives us a testimony which is at least a hundred and probably a hundred and fifty years older.

In the same section occur also the oldest and simplest eucharistic prayers (chs. 9 and 10), namely:

"As regards the Eucharist [this was the usual Greek name for the Lord's Supper], give thanks as follows: First for the cup: 'We thank Thee, our Father, for the holy vine of David thy servant, which thou hast made known to us by Jesus thy servant. To Thee be the glory for ever.' And for the broken bread: 'We thank Thee, our Father, for the life and knowledge which Thou hast made known to us by Jesus thy servant. To Thee be the glory for ever. As this broken bread was scattered over the mountains, and being brought together became one, so let thy church be brought together from the ends of the earth into thy kingdom; for thine is the glory and the power, through Jesus Christ, forever.'"

To this is added the warning:

"But let no one eat or drink of your Eucharist, except those baptized into the name of the Lord, for respecting this the Lord has said (Matt. vi. 6), 'Give not that which is holy to the dogs.'"

Then follows a simple and sublime prayer of thanksgiving. It would be difficult to draw out of this passage any of the particular theories of the Lord's Supper — whether transubstantiation, or consubstantiation, or symbolic or dynamic presence — which, in later ages, have so sadly divided the Christian Church. The Lord's Supper was evidently a joyous feast of thanksgiving for the edification of believers, and not a subject of curious speculation and doctrinal controversy.

III. The third part relates to CHURCH POLITY (chs. 11-15). It contains curious information about apostles, *i. e.*, traveling evangelists and prophets, with warnings against mercenary teachers and clerical

tramps who seem to have disturbed and misled congregations in those days. Of congregational officers, bishops (*i. e.*, presbyters) and deacons are mentioned, but no deaconesses. They were elected by the congregation and received an adequate support.

IV. The fourth and last part (ch. 16) is ESCHATOLOGICAL, and warns the congregations to be in readiness for the second coming, the resurrection, and the final judgment. This chapter consists of reminiscences of the discourses of our Lord on the last things, Matt. xxiv., and perhaps also of the passage of Paul, 1 Thess. iv. 13-18. The writer speaks of the coming of Antichrist, or, as he is called, "the world-deceiver," who shall appear "as the son of God, and shall do signs and wonders, and the earth shall be given into his hands, and he shall commit iniquities such as have never yet been done since the beginning."

From this analysis the reader may measure the value of this remarkable document. It takes its place among the writings of the so-called Apostolic Fathers,—Clement of Rome, Polycarp, Barnabas, Ignatius, and Hermas,—which fall far below the inspired height of the Apostles and Evangelists, yet breathe the spirit of the apostolic age and fill up the gap between the New Testament and the latter half of the second century; as the Apocrypha of the Old Testament fill up the gap between Malachi and John the Baptist. The "Didache" is no authority whatever in matters of doctrine or discipline, and does not claim to be the work of the Apostles. Its peculiarities do not exactly fit into any church or party. It is neither Episcopal nor Presbyterian, but both; it is neither sacramentarian nor antisacramentarian, neither sacerdotal nor anti-sacerdotal, neither Baptist nor Pedobaptist, though favoring both sides in part. We may safely use it as a witness of catechetical teaching and ecclesiastical usages at the close of the first or the beginning of the second century of that country where the book originated, *i. e.*, probably Palestine or Syria. It is the record by some unknown writer of what he ascertained either from personal instruction or oral tradition and honestly regarded as the teaching and practice of the Twelve Apostles. Its value is historical, and historical only; but as such it is a very important contribution to our knowledge. For this contribution the Christian church will always feel indebted to the Metropolitan of Nicomedia who drew the "Didache" from the obscurity of the Jerusalem Monastery of the Holy Sepulchre of Jerusalem, where it had been buried for centuries.

Philip Schaff.

Mark Twain.*

MARK TWAIN'S "Tom Sawyer" is an interesting record of boyish adventure; but, amusing as it is, it may yet be fair to ask whether its most marked fault is not too strong adherence to conventional literary models? A glance at the book certainly does not confirm this opinion, but those who recall the precocious affection of Tom Sawyer, at the age when he is losing his first teeth, for a little girl whom he has seen once or twice, will confess that the modern novel exercises a very great influence. What is best in the book,

what one remembers, is the light we get into the boy's heart. The romantic devotion to the little girl, the terrible adventures with murderers and in huge caves, have the air of concessions to jaded readers. But when Tom gives the cat Pain-Killer, is restless in church, and is recklessly and eternally deceiving his aunt, we are on firm ground—the author is doing sincere work.

This later book, "Huckleberry Finn," has the great advantage of being written in autobiographical form. This secures a unity in the narration that is most valuable; every scene is given, not described; and the result is a vivid picture of Western life forty or fifty years ago. While "Tom Sawyer" is scarcely more than an apparently fortuitous collection of incidents, and its thread is one that has to do with murders, this story has a more intelligible plot. Huckleberry, its immortal hero, runs away from his worthless father, and floats down the Mississippi on a raft, in company with Jim, a runaway negro. This plot gives great opportunity for varying incidents. The travelers spend some time on an island; they outwit every one they meet; they acquire full knowledge of the hideous fringe of civilization that then adorned that valley; and the book is a most valuable record of an important part of our motley American civilization.

What makes it valuable is the evident truthfulness of the narrative, and where this is lacking and its place is taken by ingenious invention, the book suffers. What is inimitable, however, is the reflection of the whole varied series of adventures in the mind of the young scapegrace of a hero. His undying fertility of invention, his courage, his manliness in every trial, are an incarnation of the better side of the ruffianism that is one result of the independence of Americans, just as hypocrisy is one result of the English respect for civilization. The total absence of morbidity in the book—for the *mal du siècle* has not yet reached Arkansas—gives it a genuine charm; and it is interesting to notice the art with which this is brought out. The best instance is perhaps to be found in the account of the feud between the Shepherdsons and the Grangerfords, which is described only as it would appear to a semi-civilized boy of fourteen, without the slightest condemnation or surprise,—either of which would be bad art,—and yet nothing more vivid can be imagined. That is the way that a story is best told, by telling it, and letting it go to the reader unaccompanied by sign-posts or directions how he shall understand it and profit by it. Life teaches its lessons by implication, not by didactic preaching; and literature is at its best when it is an imitation of life and not an excuse for instruction.

As to the humor of Mark Twain, it is scarcely necessary to speak. It lends vividness to every page. The little touch in "Tom Sawyer," page 105, where, after the murder of which Tom was an eye-witness, it seemed "that his school-mates would never get done holding inquests on dead cats and thus keeping the trouble present to his mind," and that in the account of the spidery six-armed girl of Emmeline's picture in "Huckleberry Finn," are in the author's happiest vein. Another admirable instance is to be seen in Huckleberry Finn's mixed feelings about rescuing Jim, the negro, from slavery. His perverted views regarding the unholiness of his actions are most instructive and

* Adventures of Huckleberry Finn (Tom Sawyer's Comrade). By Mark Twain. With one hundred and seventy-four illustrations. New York: Charles L. Webster & Co. 1885.

amusing. It is possible to feel, however, that the fun in the long account of Tom Sawyer's artificial imitation of escapes from prison is somewhat forced; everywhere simplicity is a good rule, and while the account of the Southern *vendetta* is a masterpiece, the caricature of books of adventure leaves us cold. In one we have a bit of life; in the other Mark Twain is demolishing something that has no place in the book.

Yet the story is capital reading, and the reason of its great superiority to "Tom Sawyer" is that it is, for the most part, a consistent whole. If Mark Twain would follow his hero through manhood, he would condense a side of American life that, in a few years, will have to be delved out of newspapers, government reports, county histories, and misleading traditions by unsympathetic sociologists.

Our National Defenses.

A SUGGESTION.

It has been generally assumed that we derive immunity from foreign attack, from:

First, our remoteness from any probable enemy;

Second, the habitually peaceful nature of our relations with other powers;

Third, our enormous resources, our acknowledged fertility of invention, and our huge population, leavened with the soldiers and traditions of the civil war.

Taking these in order, the first assumption is speedily disposed of.

We *were* distant from Europe half a century ago. To-day we are separated from it by a journey of a week; no longer time than would ordinarily be consumed by an army in marching from New York to Albany. In 1776 the citizens of the latter place could hardly have felt secure from attack because remote from the British force at New York. Why, then, the people of the country in general and the citizens of our commercial metropolis in particular should now rely upon a mere geographical bulwark is a mystery past finding out. They do not realize that the time spent in breaking off diplomatic relations and in reaching the actual declaration of war (which, by the way, usually *follows* hostilities) would be utilized in preparing a fleet of ocean greyhounds as transports that, under cover of iron-clads we are powerless to resist, could each land her regiment of men on any point of our feeble coast. They do not know that England, at least, has the transport fittings for scores of merchant steamers constantly on hand and that but a few days are needed to erect them on board. Nor do they know that every war office in Europe contains accurate plans of our harbors and alleged fortifications, complete statistics of our actual force and the number of troops, both regular and militia, which could be massed at any place in a given time, the extent and condition of our moribund floating defense, together with well-matured plans of an offensive campaign on our very soil.

Yet these gentlemen accumulate their millions, pay their taxes, and calmly look on while money that ought to be spent in insuring protection against a foe is deliberately thrown away.

To-day Spain and France reach across the Atlantic to bases of attack in Cuba and Martinique; Germany's colonial aspirations may make her a near neighbor; while England lies along our northern and lake fron-

tier, and has threatening coigns of vantage at our very door, in Halifax, Bermuda, and Nassau.

Do our Western citizens appreciate the facts that Chili could with impunity pounce on San Francisco, that at Vancouver England is building the largest dock-yard on the continent, that by the Welland Canal she could turn a fleet of gun-boats loose on Buffalo, Cleveland, Detroit, and Chicago, or that we possess absolutely no navigable water-way between the ocean and the great lakes, upon which we are forbidden by treaty to keep more than one armed vessel?

It is idle to trust to the negative defense of distance; we are, to-day, dangerously near the coasts of Europe.

Our international relations have always been shaped with a view to peace. We have never sought a quarrel in the past, and I hope we shall never seek one in the future.

I am not sure, however, that it is not well, once in a while, to assert ourselves as standing on a right, because it *is* right, and as prepared to maintain it at any cost. Until human nature changes, the respect which the right would secure in the eyes of the world is and will be largely measured by the force with which it is backed.

A ship-owner, known to all the commercial world, tells me that he never sends his ships on a foreign cruise under the American flag. He tried the experiment faithfully for a time, but found that they were subjected to so many petty annoyances and trivial expenses at the hands of officials who care nothing for America's enormous strength at home (to them a vague tradition, not embodied in the tangible shape of an ever-ready war vessel), that, in despair, he was forced to secure them British colors and a British registry. Now they never fail to receive civility and attention, because it is known that any offense will be followed by an immediate demand for explanation, apology, or indemnity, the demand being supported by the presence of a British man-of-war.

Would this have been necessary in the days when the United States, unaided by European powers, resisted the exactions of the Barbary States, and suppressed the piracy which had levied toll on all Christendom?

Or would it have occurred in 1859, when the American flag was as common on the seas as it is now rare, and when our navy, though small in numbers, contained, class for class, the finest ships in the world?

Without discussing the merits of the case, let me ask whether Prince Bismarck would have ventured to intercept and return to the British House of Commons a resolution of sympathy addressed to the Reichstag?

Granted that our own behavior on a well-known occasion was in the highest degree dignified, it is humiliating to confess that no other course could have been open to us even had the chancellor's ill-breeding committed his country to a positive affront directed against the whole American people.

Those who give the subject thought cannot fail to recognize the influence which the Panama Canal, or any other water communication between the Atlantic and the Pacific oceans, must exert upon our international relations. If England, under the peace-loving rule of Mr. Gladstone, was forced to sacrifice life and treasure in preserving the integrity of the Suez Canal (for, after all said and done, there lies the gist of prolonged British intervention in Egypt), can the United

States hope to shirk the obligation of maintaining the neutrality of that part of her water-front which in the near future shall stretch across the great American Isthmus?

We are living in a fool's paradise. The rude awakening must come. Already we have been longer at peace than is our wont. It behooves us to make ready, so that if called upon to stand up for justice and right, we shall respond like men, and not hang our heads like cowards, buying a servile peace with hard dollars.

No, we cannot trust to the even tenor of our diplomatic relations to escape troubles, at least until the millennium comes.

It is taken for granted that in some mysterious, if not providential, manner we shall be able to raise and equip armies, forge guns, build forts, and launch iron-clads.

Let us not be deceived. Matters have changed since 1861.

Although more is exacted of him now than then, the foot-soldier is soon manufactured; the cavalryman less speedily; field artillery slowly, while cannon fit to defend our harbors cannot be made in very many months. There is hardly a power, European or South American, with which we might be embroiled, that could not send here one or more armored ships whose sides would shed our puny projectiles as easily as they would peas. Guns which they would have cause to dread take over a twelvemonth in building, while modern ships are years on the stocks.

To construct guns of to-day, vastly more is needed than an iron furnace and a casting-pit. Plant is demanded for the production of steel of suitable texture and, in adequate masses, hydraulic presses or heavy steam-hammers for shaping it (one of a hundred tons would be required for some pieces, and the whole country contains none heavier than seventeen tons), etc., etc.,—a host of appliances which simply *do not exist* on this side of the Atlantic.

Our fertility of resource is phenomenal, but we cannot construct formidable guns as pins and screws are made, nor can effective ships be built as gun-boats were built during the war of secession, in ninety days; yet upon guns, ashore in forts and afloat in armored ships, will the issue of the next conflict depend.

Thanks to the tremendous development of implements of war, the fate of a campaign is now decided almost at its outset. If to-day we neglect our duty to ourselves, we must expect to pay dearly when the day of reckoning comes. Money judiciously spent at present will be but a small premium to pay for security, and will save itself a thousand-fold.

I am not urging such colossal armaments as have crippled three European states financially. Ours is not a military bully among the nations. I only plead for the lock and bolt with which every man provides his house and the revolver with which he purposes defending his family and his household goods when the thief tries to break in.

It is unnecessary to bring proofs as to the condition of our defenses. Every one knows that our forts are obsolete in design and useless in the few cases where money has been forthcoming for their maintenance; that we have no proper guns ashore or afloat, no torpedo boats, and no ships. Surely a lower ebb is out of the question. Let us hope the tide will turn ere long.

In providing a remedy where everything is lacking, it is hard to say which want is most pressing. It would appear, however, as if the fortifications were in the least hopeful condition.

In this respect I speak with much diffidence, but my observation and reading impel me to believe that for ordinary sites properly designed earthworks afford ample protection.* If their walls are not less than from thirty to forty feet thick, stand fifty feet or more above the water's edge (the more the better), and have high parapet crests, then the ship may expend all the ammunition she can carry without much hope of destroying their defensive integrity. Of course in certain places, armored forts will be indispensable. Types of these are without end: casemates, turrets, cupolas, disappearing guns, etc., etc., a real embarrassment of riches.

The majority of our forts will, it may be assumed, be earthworks, and neither complex nor costly. But forts do not consist of mounds of earth alone. They must be armed with the best guns obtainable if they are to have the breath of life. And the best guns will involve a host of adequate appliances in the shape of approved gun-carriages, shot-lifts, loading machinery, etc., that must be seen to be realized. Here true economy lies in the direction of a wise liberality. As the manufacture of the largest guns (if made of American metal, a consummation devoutly to be wished for) could hardly begin within two years were the word given to-day, longer delay is simply suicidal.

Stationary torpedoes will be needed to keep an enemy from pushing by, but torpedoes are passive in their nature and limited in their range. By themselves they are valueless. They could not, for example, prevent a ship from approaching Coney Island and tossing her shell over into New York. Moreover, I doubt whether we have on hand enough cables and cases to control the channels past Sandy Hook alone.

If any one element of coast defense stands approved by more universal acceptance abroad than another without having been subjected to the crucial test of war, it is the fast torpedo boat. While not sharing personally the general belief that its attack is neither to be repelled nor avoided, I am strongly of opinion that herein the defense may find a very deadly and indispensable weapon. The Germans, who treat military subjects from a purely business stand-point, are creating a torpedo navy of one hundred and fifty boats for their short stretch of coast. And we—have absolutely nothing.

Given forts and torpedoes of the best kinds, they must be supplemented by mobile floating batteries, to act as scouts and skirmishers, undertaking hostile operations in conjunction with shore batteries, reënforcing a hardly pressed point, or covering the weak places between strong strategic centers; in other words, fortifications and ships, both in design and numbers, must be built with a view to effective coöperation.

The proper composition and disposition of our joint land and sea defenses form a question not yet solved—scarcely even thought of. Yet none is of more vital importance to-day. It cannot be decided by one man,

* The question has been discussed *à propos* of the bombardment of Alexandria in a public document accessible to all interested in the technical details.

for it extends beyond the range of a single mind. The naval officer is apt to exaggerate the weight of his branch of the profession of arms, while the soldier in turn looks upon his share in the task as paramount. The truth probably lies between these extremes. Each may, therefore, properly bring his quota of experience to the common fund of knowledge, but neither is fitted to act as the final judge, awarding to every element its due place and value.

Until the subject of our necessities is treated in a broad, catholic manner, and authoritatively revealed in all its shocking magnitude, public opinion must remain vague and ineffectual, through lack of a well-defined end in view. Therefore, besides the immediate establishment of the gun-factories recommended by the "Gun Foundry Board," I urge, as of pressing moment, the forming, under act of Congress, of a commission to inquire into our wants and to suggest the remedy. This commission should be composed of distinguished citizens and officers of the army and navy. To such a board the nation would look for guidance out of its perils, nor would it look in vain.

We may buy peace as butter and cheese are bought, or we may preserve it through being able and ready to fight for it. The choice lies with the people. They shall decide.*

C. F. Goodrich,
Lieutenant-Commander U. S. N.

General Sam Houston: A Correction.

CERTAIN statements of mine concerning what is called the archives war in Texas, which appeared in an article entitled "General Sam Houston" (*THE CENTURY* for August, 1884), having been challenged, I desire as a matter of justice to myself, to *THE CENTURY*, and to those who took part in the so-called war, to make a correction.

I was forced to draw my material from various sources, and I find to my regret that I have allowed some errors to creep into my statements. I should have given my authority or else have sought to verify the newspaper story upon which some of them were founded.

The statement I desire to correct, being the only one to which my attention has been called, may be found on

* Since the above was written I have read a British War-office pamphlet on "The Protection of Heavy Guns for Coast Defense," issued by General Sir Andrew Clarke, Royal Engineers, Inspector General of Fortifications. In his preface Sir Andrew says:

"In my opinion it is undesirable in the highest interests of the country that questions of defense should be dealt with as the special prerogative of a handful of officers in a single office, and I strongly hold that the more minds are brought to bear upon them the better. It is, I consider, of special importance that naval and artillery officers should have an opportunity of hearing and expressing opinions upon matters relating to coast defense. These views cannot fail to act as a wholesome corrective to those of engineers. The opinions advanced in this paper may not, therefore, receive universal acceptance. They are merely put forward as suggestions open to discussion and criticism."

I hope, sincerely, that so laudable an example of the sinking of personal ambitions and class jealousies for the good of the country, may be followed on this side of the Atlantic, and be applied to the larger problem awaiting our solution.

page 503 (*AUGUST CENTURY*), and refers to an attempt made by President Houston to remove the state archives from Austin, where they were in danger from the constant incursions of the Mexicans and Indians, to a place of safety in the temporary capital; also to a duel between a certain Colonel Morton and a scout called Deaf Smith. I gleaned the details of these events from a letter appearing in a leading New York paper purporting to have been written from Austin, Texas.

To be brief, no such man as Morton lived about Austin at that time, and no such duel took place. Deaf Smith had been dead at the date given for five years. The story is a fabrication of a well-known spinner of historical yarns of those days, Judge A. W. Arrington, of Texas. Early in March, 1842, General Vasquez at the head of twelve hundred Mexicans, sacked San Antonio. The citizens of Austin and the vicinity armed for resistance. The President, with the heads of departments, rode out of the place. The seat of government was removed from Austin to Houston, and afterward to Washington on the Brazos. Certain of the public records had been taken away, but a large portion still remained in Austin.

In a few weeks the citizens of Austin returned, and finding their town, which they looked upon as the legal capital, almost deserted, organized themselves into committees to see to it that no further removal of public records took place. During the unsettled and precarious condition of the country in the summer and fall of 1842, President Houston made several attempts to obtain the archives by persuasion, but failed. In December of the same year, after new perils from the Mexicans under General Wool, Houston sent Captain Thomas Smith (confounded with Deaf Smith in Arrington's story) and Captain Chandler to proceed to Austin and remove the papers of the Land Office. The attempt came very near proving successful; the archives were packed and loaded on wagons, ready for removal, before the citizens took in the situation and rallied in sufficient force to resist the measure. A small cannon was trained and fired upon the party at the Land Office, but Captain Smith, protected in the rear by the building, began his march toward Brushy Creek. The citizens followed, continually strengthened by accessions, and compelled the restoration of the archives. Captain Smith's posse, under plea of going to the creek to water their horses, quietly escaped, and the archives remained in Austin until annexation restored the whole government to that place. For a time bitter animosities existed, till annexation left them in the rear.

I am indebted to Judge Joseph Lee, of Austin, and Hon. John Henry Brown, of Dallas, actors in these events, for the account here presented, the facts having come to my knowledge since the *AUGUST CENTURY* was issued.

This correction is intended to be as frank as it is full.

Alexander Hynds.

DANDRIDGE, TENN., December 10, 1884.

BRIC-À-BRAC.

AT THE NEW ORLEANS EXPOSITION — EXTREMES MEET.

Uncle Esek's Wisdom.

WE have no account of anything older than the vices, and we have no account that a single one of them has ever been lost or mislaid.

THERE is perhaps one excuse for telling our sorrows: it makes others better satisfied with their own.

CONSERVATISM is a kind of half-way house between right and wrong, where people meet and talk, and settle nothing.

IMITATION is all that moderns can do, but it is possible for an imitation to surpass an original.

THE man who is first to give his opinion on any subject is equally ready to back out of it whenever it is questioned.

FEAR as often springs from knowledge as from ignorance.

VERY great talkers must lie more or less, for there isn't truth enough in existence to keep their tongues wagging.

IT doesn't require any genius or talent to abuse or insult a man; but it does to give him credit for what he is actually worth.

Uncle Esek.

Cameron's Herd.

ACROSS the prairie, thinking it is theirs,
The foolish sheep go wandering at will;
Or, shepherded by tempting grass that snares
Their idle fancy, stand content and still.

The herdsman with his collie lingers near:—
"The laird owns a' the bonnie brae; but, Flo,
I ken it's mair our ain, who a' the year
Bide here, whatever airt the wind may blow."

The while an unseen artist subtly caught
The tawny fields unspotted by a stone,
The wandering sheep, nay, even the herder's thought,
And made the fields, the sheep, the man, his own.

And she who saw the picture in the town
Thought for herself alone the gracious dower;—
The sheep were there, the prairie was so brown,
That she might charm away an idle hour.

But I who write have caught the lady, too—
Prisoned her in my verse; now all are mine! —
Dear reader, for whose patient ear I sue,
Read but my verse, and all of these are thine.

Alice Wellington Rollins.

To Spring.

THOU fairy-footed Spring,
Lead on the brown-eyed Houris in bright array,
While elfin hands thy floral tributes bring;
For now I hear, like music far away,
Thy tuneful herald on the pendent spray,
With idly folded wing.

Now maidens in their teens
And youths that love to dream on flowering banks,
With fancies caught from pleasing rural scenes,
Will swell the horde of versifying cranks
And reap rich harvests of returning "thanks"
From standard magazines.

J. A. Macon.

A Sea Song.

THE ship swings slowly up and down,
No ripple stirs the sea,
The hardy sailor, tall and brown,
Is whistling wistfully,
E-e E-e E-e E-e!
He whistles shrill,
He whistles high,
But the lazy wind does not reply.

With faces turned to wind'ard then
The sailors stand in row,
In tuneful concert all the men
Pipe for the wind to blow,
O-o O-o O-o O-o!
They whistle shrill,
They whistle high,
But the lazy wind does not reply.

Now if my sailor, by this sign,
Should softly, sweetly say,
"Oh, pretty lassie, Susan mine,
I pray you come this way,
A-a A-a A-a A-a!"
He'd whistle clear,
He'd whistle low,
And swifter than the winds I'd go.

Stanley Wood.

In the German.

SHE stood upon the polished floor,
Amid the ball-room's blazing light,
And slowly scann'd the circle o'er,
That form'd the dance that night.

(The waltz they play'd was "Woman's Love.")
She stood and stroked her long white glove.

The creamy silk her form caress'd,
A bunch of plumes hung o'er her heart,
Her bosom by soft lace was press'd,
Her rich red lips apart.

(The German was the dance that night.)
One high-heel'd shoe was just in sight.

She held a favor in her hand—
A dainty, perfumed, painted thing,
A tiny heart—yet he would stand,
Who won that prize, a king.

(The waltz they play'd was "Woman's Love.")
How fast my throbbing pulse did move!

Men watch'd her there with eager eyes,
Upon her curls the light did shine;
Then with a look of sweet surprise
Her great gray eyes met mine.

(The German was the dance that night.)
She smiled—her smile was wondrous bright.

She waved her fan coquettishly,
And half inclined her well-poised head,
As in a tone part coy, part shy,
"Here, take my heart," she said.

(The waltz they play'd was "Woman's Love.")
Her hand in mine lay like a dove.

I felt love in my pulses start—
She was my own for that brief space;
Her heart was beating 'gainst my heart,
Her breath play'd o'er my face.

(The German was the dance that night.)
The dawn broke slowly into light.

Has she who gave forgotten quite?
I wear that heart my own above.
(The German was the dance that night;
The waltz they play'd was "Woman's Love.")

Chas. W. Coleman, Jr.

Unspoken.

THERE are rich springs underground,
Flowing still, yet never free;
And we never hear their sound,
Nor their waters ever see.

There are thoughts deep in my heart,
Longing for a living tongue;
Yet their secrets ne'er depart,
Never spoken, never sung.

George Birdseye.

SIR JOHN HERSCHEL.

[ENGRAVED BY T. JOHNSON AFTER A PHOTOGRAPH BY MRS. CAMERON.]

seen. Her devotion was not primarily to science, but to an individual. Even the successes which she gained she regarded as a tribute to her brother, not as the reward of her own efforts.

The beauty of her character was not in the least intellectual, though she was possessed of a natural sprightliness and wit. In the appreciative introduction to her "Memoirs" her character is exactly described :

"Great men and great causes have always some helper of whom the outside world knows but little. These helpers and sustainers have the same quality in common—absolute devotion and unwavering faith in the individual or the cause. Seeking nothing for themselves, thinking nothing of themselves, they have all an intense power of sympathy, a noble love of giving themselves for the service of others. Of this noble company of unknown helpers Caroline Herschel was one."

Her devotion was to an individual, and she gave her entire effort and her entire sympathy, and such inspiration as entire sympathy may give. Her face expresses this exactly; here is no Dorothy Wordsworth, but a patient, persistent, faithful soul, which will give up its life for an ideal which is not even fully conceived, but which is held with entire tenacity during every moment of a long life. In another world her first training might be the development of an individuality to which she allowed no scope in this.

In 1792 John Herschel, the only child of the philosopher, was born. There is an amazing difference between the conditions of his early life and that of his father. The contrast is complete. For penury he had luxury; for obscurity, celebrity. He was trained in the midst of the famous telescopes of the most famous observatory of the world. His father and his aunt were still engaged in observations, though the period of greatest activity was past. The whole atmosphere of the household was filled with high philosophy.

From his home he went to Eton, and thence to Cambridge, where he was graduated with the highest honor. He was the senior wrangler of his year, and his first published work was in the direction of pure mathematics. At Cambridge he formed lasting friendships with the men who were to be the intellectual heads of England. His ability, his charming disposition, and his name made him friends everywhere. His first inclination was to the law, but it was not long before science claimed all his energies. He was a highly skillful chemist, and his early tastes were certainly in the direction of chemistry, or at least of chemical physics. It was filial feeling, he himself declares, that led him to astronomy. His admirable training in mathe-

tics, and the unparalleled advantages which the possession of his father's telescopes and methods gave him, soon led him to genuine successes in his inherited profession, and there is no sign of any flagging interest in astronomy in all his subsequent life. The multitude of his observations, their great importance, and the zeal with which they were prosecuted, constitute him one of the most distinguished observers of the century. Before 1833 he had reëxamined most of his father's discoveries and made many of his own. Between 1833 and 1838 he labored at the Cape of Good Hope, where he investigated the southern sky in the same manner. He accomplished the magnificent task of examining the whole sky, from pole to pole, in a uniform way. Our accurate knowledge of the southern sky dates from his work, in the same way that our knowledge of the structure of the northern heavens dates from his father's labors.

The construction of the whole heavens can thus be studied from observations made with a single telescope and by a single observer. All our opinions as to the constitution of the stellar system are grounded in the conceptions of the elder Herschel and best known through the masterly extension and exposition of them by his son.

It is no small virtue to have furnished the basis for the thoughts of the whole intelligent world. This, Sir John Herschel has done in more than one direction. His "Discourse on the Study of Natural Philosophy" and his "Outlines of Astronomy" will always remain as classic expositions of our certain knowledge and as eloquent suggestions for future progress. The chemical principles on which photography rests are his discovery, and it was undoubtedly only his intense occupation in other directions that prevented his anticipating the invention of Daguerre by many years. His public usefulness was very great. As a member of the Royal Society, as one of the founders of the Royal Astronomical Society, as a member of nearly every scientific society in the world, his authority was to England what Humboldt's authority was to Germany. It was always used in the wisest and most temperate way, with patience and moderation and high purpose. By inheritance, by education, and by the effect of his own scientific career, he was forcibly led to take wide and philosophical views. Add to this that he was possessed of poetic and literary abilities of a high order, and there may be a sufficient explanation for the gentleness, the elevation, the strength of his life, which was the ideal life of the man of science—the philosopher. Every opportunity of life was open to him, and of each one he made a full and a wise use. The portrait which accompanies

CAROLINE LUCRETIA HERSCHEL.

[ENGRAVED BY T. JOHNSON AFTER A PHOTOGRAPH BY E. WILLIAMS, FROM A PAINTING IN POSSESSION OF THE FAMILY.]

this paper seems to show him in the possession of these gifts and full of the elevation which comes from an undisturbed dwelling amidst high thoughts.

The Royal Society of London had no more glorious name than that of Herschel for nearly a hundred years, and to-day two of his sons are counted among its honored members. The Royal Astronomical Society was, as has been said, founded largely through his efforts. His father was its first president; he himself was its first secretary. It is impossible that the venerable Sir William should not have been impressed with the strange and wonderful change which had brought him to occupy that chair, and had given him a son as coadjutor who was worthy to succeed to his honors.

There is no private history which better illustrates the progress which the world has made in flexibility — in prompt acceptance of accomplished facts. We have learned what is useful to us, and we have learned the great les-

son of accepting these gifts wherever and whenever we find them, and of giving honor and opportunity to our greatest men. There is an opposite to this virtue, however. We forget too quickly and too lightly. Would it be believed that the Royal Society of London has no portrait of Sir William Herschel, who, next to Newton, was its greatest astronomer? Or, that there is now no way of studying his magnificent memoirs, except by consulting the thirty-nine quarto volumes of the Philosophical Transactions in which they are scattered?

The world at large has accepted the results of all these labors, and does not concern itself with the details. The ideas of the two Herschels have gone into the great common stock of knowledge, along with those of Ptolemy, Galileo, Kepler, Newton, Kant, Laplace. Their names are immortal in the surest way, for their beliefs are held by millions of their fellow-men.

Edward S. Holden.

IN AND OUT OF THE NEW ORLEANS EXPOSITION.

(SECOND PAPER.)

THE common way of going from the city to the Exposition is the one-mule car. There were plans for steam transit at first, and something may come of them before the fair closes but the only charter granted

fell into the hands of some speculative persons, who had no money to build a road themselves and demanded fifty thousand dollars for their privilege. As I wrote in February, the fair-time being already one-third gone, the only alternative to mule transit is the steamboats on the river, which are too far away for most visitors to make use of. The mule-car is not a bad conveyance, however. True, the track is rough and the seats are hard, but the little animal clatters along at a lively pace over the plank roadway in the middle of the street, pulling his load with ease, for the ground is so level that the water in the deep ditches seems in doubt which way to run, and usually ends by standing still and hiding itself under a covering of green slime. In a few minutes the car gets beyond the business district, and thence on to the Exposition gates it runs through green and fragrant suburbs, where the date-palm, the magnolia, and the orange shade delicious little inclosures, half garden and half lawn, which look as if their beauty was quite unpre-

meditated, and came from nature's own generous moods. Handsome mansions, with pillared fronts, alternate with pretty one-story cottages, and a little farther out are the red and green houses of the negroes with their projecting hood-like roofs. There is no crowding of population into tenement houses in New Orleans. The poorest laborer that rolls cotton-bales on the levee can afford a three-room cottage for his family, where there is plenty of light, air, and shade. In hut and mansion life goes on with open doors all the year round, and even in December and January, when fires are kept up, the children play on the thresholds, and you get glimpses of the interiors as the car jogs past. The winter in New Orleans does not seem to be the death of the year, but only a brief sleep filled with dreams of the summer's luxuriance of leaf and blossom. Most of the trees, such as the live-oaks, the water-oaks, the oranges, and the magnolias, do not shed their foliage, and the roses seem not to know when to leave off blooming. I found the rainy season in January, of which there was so much complaint in newspaper correspondence, not altogether disagreeable. The frequent warm showers, and the spring-like feeling in the air, made the weather seem like an English May.

In the street-cars there is less reserve than in such vehicles in Northern cities. Strangers open conversation with you from mere expansiveness and friendliness of feeling. There is a deal of chatting about the city,

the weather, and the fair. Children are noticed and petted, and babies create a general sensation. In every other car smoking is permitted. If ladies get into the smoking-cars, which are plainly distinguished from the others, they are expected to make the best of the situation and not glare at the men for finishing their cigars. Sometimes there are outspoken protests against this custom. A party of ladies entered a car one day in which a Creole gentleman sat in placid enjoyment of his cigar and his morning paper. The windows were shut and the air was thick. The ladies began to make half-whispered remarks about the "horrid air." Then something was said about "no gentleman smoking in the presence of ladies where they came from." Still the smoker was obdurate. He puffed away with increased vigor. He had a right to smoke, and he evidently did not intend to be intimidated. Various sarcastic comments were made with less and less pretense of undertone, until the attention of all the passengers was attracted to the struggle. Finally, one of the women said, "Let's offer him five cents for his cigar." "Of course he'll take it," said another; "he could buy two of the sort he's smoking." This shot finished the poor Creole. He threw his cigar out of the window, scowled at his tormentors, but was too polite to make any retort.

The steamboat route to the Exposition starts from the head of Canal street. It's very odd, this going up hill to get to the water side of the city, and finding all the open drains flowing from the river instead of toward it. During the sail, which lasts nearly an hour, you pass along the greater part of the river frontage of the city and get a strong impression of the extent and variety of its commercial activity. There are dozens of cotton-steamers, flying English, French, Spanish, Dutch, and Italian flags, steamers from Mexico, Cuba, and South America, fruit-schooners with fragrant cargoes from the lagoons of Yucatan and Honduras, black brigs laden with logwood and mahogany, and all sorts of queer, nondescript sail-craft from bays and bayous bringing fish and oysters, sugar and rice. The river steamboats do not make as great a show at the levees as they did years ago, the new railroad running parallel to the Mississippi and Red rivers, or crossing the Atchafalaya and the many navigable bayous that help carry to the gulf the abundant waters of those great streams, having seriously impaired the river trade of late. There is an amusing irregularity in the movements of the Exposition boats. If they have a time-table, they pay no attention to it. The gang-plank is not hauled in as long as a possible passenger is in sight on shore. Two boats will lie for an hour at the wharf, keeping up a terrific din with bells and whistles as if just about to pull out. Each has its runners ashore soliciting passengers, the rival captains standing by the gang-planks and shouting, "First boat for the city—Start in one minute.—Give her another toot, Jim.—Stand by, there, to cast off that line.—This way, gentlemen—go half an hour before that other boat." Meanwhile, the passengers who have come aboard at the advertised time of leaving do not grumble. It's the custom of the country. Nobody is in a hurry; nobody cares to be on time. Even the restless, impatient Northerner soon falls in with the ways of the natives, and finds it delightful to enter into the easy-going spirit of this lazy land, "wherein it seemeth always afternoon."

the weather, and the fair. Children are noticed and petted, and babies create a general sensation. In every other car smoking is permitted. If ladies get into the smoking-cars, which are plainly distinguished from the others, they are expected to make the best of the situation and not glare at the men for finishing their cigars. Sometimes there are outspoken protests against this custom. A party of ladies entered a car one day in which a Creole gentleman sat in placid enjoyment of his cigar and his morning paper. The windows were shut and the air was thick. The ladies began to make half-whispered remarks about the "horrid air." Then something was said about "no gentleman smoking in the presence of ladies where they came from." Still the smoker was obdurate. He puffed away with increased vigor. He had a right to smoke, and he evidently did not intend to be intimidated. Various sarcastic comments were made with less and less pretense of undertone, until the attention of all the passengers was attracted to the struggle. Finally, one of the women said, "Let's offer him five cents for his cigar." "Of course he'll take it," said another; "he could buy two of the sort he's smoking." This shot finished the poor Creole. He threw his cigar out of the window, scowled at his tormentors, but was too polite to make any retort.

the ways of the natives, and finds it delightful to enter into the easy-going spirit of this lazy land, "wherein it seemeth always afternoon."

CONDITION OF NEW ORLEANS.

THE city of New Orleans was in need of the invigorating influences of the Exposition. Its trade has been at a standstill of late. The Eads jetties at the mouth of the Mississippi and the building of new railroads

ON DIXIE'S LINE.

gave it a fresh impetus a few years ago ; but these new forces seem to have culminated. The place is not decaying, but it is not advancing. I noted but two conspicuous new buildings that have been erected in the business quarter since my last visit, six years ago. The receipts of cotton have not averaged as many bales during the past five years as in the five years preceding the war. The heaviest receipts in the history of the city were in the crop year 1859-60 — 2,139,425 bales. The receipts for 1883-84 were only 1,529,188 bales. Besides, the profit arising from handling the staple is much less than formerly, owing to the establishment of steam-presses at various points in the interior which compress the bales ready for shipment to Europe, so that there is nothing for New Orleans to do with them but transfer them directly to the ocean vessels from the cars and steamboats. The sugar crop of Louisiana was 221,515 hogsheads in 1883, and was 449,324 hogsheads as long ago as 1853. The grain movement to Europe by way of New Orleans is not increasing, notwithstanding the enormous expansion in recent years of the Western wheat crop. The gains achieved for the general business of the city appear to have come from the building of railroads and the consequent bringing of the surrounding country within easy reach of its trade. The important new roads — all built with Northern capital and managed by Northern men — are two lines to Texas, connecting with the Southern Pacific system, a line north-eastwardly into Alabama, forming a part of one of the through Northern routes of travel, and a line following the general course of the Mississippi to Memphis. In 1880 the census showed 216,000 people in New Orleans, a gain of only 13,000 in a decade. The present population is probably 225,000, not including the people brought here by the Exposition. These figures do not, however, convey a correct idea of the importance of the city as a center of commerce, for the reason that it is commerce alone that makes New Orleans, the multitude of manufacturing industries which would be found in a Northern city of any considerable size being almost wholly absent. Besides, New Orleans is great by comparison. In all the South-western and Gulf States, the next largest city had only 43,000 inhabitants in 1880. That was Nashville, Tennessee. The gap between 216,000 and 43,000 is a wide one. After Nashville came Memphis with 33,500, Mobile with 29,000, and Galveston with 22,000. The prominence of New Orleans is explained by the fact that it is from five to ten times as large as the other principal cities within the circuit of its trade relations.

“THE SMOKER WAS OBDURATE.”

There is much complaint of the badness of the city government and the lethargy of the business men. At a *café chantant* one night I heard a popular song criticising the mayor, the aldermen, and the merchants, because of dull times, diverted trade, and unemployed labor, and the refrain to each verse was :

“Stick a pin in them and see if they’re alive.”

The Exposition sprang from the conviction that the future growth of New Orleans depends on securing a larger share of the trade of Latin America. The idea back of it is that the shores of the Gulf of Mexico and the Caribbean Sea and the islands of the Antilles should exchange their products here for the manufactures of the North. If this idea bears important fruit, it must be through the accession of fresh Northern blood and capital to the business circles of the Crescent City. This is what it is hoped the Exposition will accomplish, by bringing Northern enterprise here to see the opportunities open to the southward for commercial activity. New blood is needed, because the old stock becomes lethargic through the enervating climatic influences. Rarely does the successful merchant who comes as a young man from the cooler latitudes leave a son who inherits the father’s energy. One generation is enough to change character.

A STEVEDORE.

The long, hot, moist summers of the Louisiana lowlands are fatal to vigor. A city that lies below the level of the river which washes its wharves and only a few feet above the poisonous swamps surrounding it, and which has six sweltering summer months, must always continue to draw upon the North for new men to carry on its larger business activities.

THE WOMAN'S DEPARTMENT.

MRS. JULIA WARD HOWE and her zealous assistants have made of this department a pleasing and successful feature of the Exposition, in spite of a grievous want of funds growing out of the miscalculations of the general management, which obliged them to resort to benefit concerts and lectures to raise money to pay expenses. Their row of State alcoves in one of the galleries of the Government

Building look like a series of sumptuous parlors, profusely decorated with pictures and embroideries. It is pleasant to retreat to one of these nooks from the masculine spaces of the fair, with their aggressive claims upon the attention, and to find one's self surrounded with only feminine influences. No great intellectual effort or physical exertion is needed to see and appreciate the delicate needlework, the decorated porcelain, or the bright crazy-quilts, or the attempts at painting and sculpture here displayed. In fact, the mind is rather benumbed at the view of the patient labor expended to produce pretty effects, as, for instance, the flowered quilt from Louisiana, made of a mosaic of 100,584 pieces of silk. Another quilt from Minnesota is covered with the autographs of the celebrities of all nations, and is said to be the result of ten years' effort. The thought of sleeping under the weight of all those congregated great names is appalling.

Woman's work is shown in more practical fields by the Philadelphia silk-culture exhibit, by scientific analyses of food adulterations; and there are also a library of books by women, some botanical collections, and a few patented inventions. Some of the States have not seen fit to join the department in the gallery, preferring to show their women's exhibits in their State sections on the floor. Among these is Ohio, whose painted pottery and carved wood-work from Cincinnati touch, perhaps, the highest range of feminine achievements in art to be seen at the fair.

The impression a critical observer takes away from the Woman's Department, besides the pleasing one of its soft and pretty decorative effects, is that it is wholly and of necessity inadequate to present a view of the attainments of women in the industries and arts, and their share in carrying forward the world's civilization. Woman's work is so entangled with that of man in a thousand lines of effort, that it cannot be separated, ticketed with a feminine label, and put on exhibition. To realize what women are doing in this country, we must look at the census schedules of the occupations they engage in, and the number employed in each. An enormous amount of the labor, skill, and taste employed to carry on the processes of our modern life comes from women's hands and brains. These handsomely adorned alcoves, each with its State name, which occupy the gallery of the Woman's Department with their treasures of needle-work, and ornamented pottery, and ambitious little pictures, show woman's play rather than woman's work. They are very admirable in their way, and I would not in the least disparage them; but let us not for a moment suppose that they adequately typify woman's achievements. Nine-tenths of the educational exhibit is in reality woman's work, and a majority of the fabrics and wares which fill the Main Building have probably received some touch in making or decoration from her hand. If it were possible to present a picture of what woman does to-day in America, in the

multiform lines of human effort, and to contrast it with a view of her limited field half a century ago, when closely confined to household duties, none of the revolutions of modern times which have set the world

SOME MEMBERS OF THE MEXICAN BAND.

forward would appear so significant and so far-reaching.

THE MEXICAN EXHIBITS.

AMONG foreign nations Mexico has taken the most active interest in the New Orleans World's Fair. Her government has formed an admirable exhibit, which presents a faithful epitome of her natural resources and her industrial life. The aim has not been to display a few articles of exceptional merit, but to show the whole range of useful products and native manufactures. One is surprised at the number of things the Mexicans make, and make well. Their cotton fabrics are good, and of tasteful patterns; their woollens are

well woven; their leather-work, especially in saddlery, is wonderfully fine; their pottery is quaintly original; they prepare a multitude of food products and wines. Many articles show ingenuity and a great deal of patient labor. The little painted clay statuettes made by Indians, and representing phases of Mexican life,—the beggar, the fruit-seller, the priest, the country gentleman, the fisherman, etc.,—and the bird-pictures made from the

cushions, as big as barrels; cacti like giants' clubs, standing thirty feet high; cacti with thorns a finger long; cacti covered with delicate gray hairs; cacti with beautiful tubular pink blossoms; cacti with big roses growing among their spikes; cacti with red, apple-shaped fruit; cacti in pods, in bulbs, in branching candelabra. This cactus show is alone worth a visit to the Exposition. After seeing it one understands why the Mexican infantry

CACTUS FROM MEXICO.

feathers of the birds they represent, show the genius of close imitation, of patient handicraft, and to some extent of original conception, and seem to indicate an aptitude in the people for the higher kinds of manufacturing industry, which could be much developed by training. After spending an hour in the Mexican courts one marvels that a people who can produce all these things should make so small a figure in the sum-total of the world's civilizing forces.

In the Horticultural Hall Mexico makes a remarkable display of the different species of the cactus plant. This odd freak of the vegetable kingdom assumes no end of fantastic shapes. There are cacti like enormous pin-

soldiers wear high-topped boots. I have spoken before of the Moorish Building erected for the display of Mexican mining products, and of the barracks for the Mexican soldiers and the military band. The band has enlivened the fair through all its stages, furnishing music on every ceremonial occasion with never-failing courtesy and good-nature, and with a cosmopolitan impartiality, playing Dixie or Hail Columbia, Gounod, or Rossini, or Mozart, or Strauss with equal good-will, or singing the songs of love and patriotism of their own country. To these swarthy musicians, sixty of them I think in all, and representing most of the types of Mexico's much mixed races, the Exposition is greatly indebted.

LOUISIANA AGRICULTURE.

NEAR the great tower of green sugar-canes which serves as a beacon to guide the visitor through the mazes of the Government

Building to the Louisiana section, and beneath the rice-thatched pavilion, is a placard with the following legend: "Louisiana wants more men and women of brains, energy, and capital. Her lands are the most productive and the cheapest of all the Southern States." Close at hand, on one of the white pillars which show the sources whence the United States draws its supplies of sugar, and the comparative amount furnished by Louisiana, is a statement in black letters that "only one-twentieth of the land in Louisiana available for sugar is now under cultivation." These two inscriptions provoke inquiry. Here is one of the oldest settled portions of the Union, which could show a flourishing agriculture and a considerable

commercial city when such States as Illinois, Iowa, and Wisconsin were peopled only by savages, and such cities as Cincinnati, Chicago, and St. Paul had not even a name, setting up claims for immigration in competition with those of Dakota and Oregon. How does it happen that there are still great areas of rich land untilled in the Mississippi delta? The first answer to the question is, that these lands largely require protection from overflow by levees, and that the present population has all it can do to maintain the old embankments, and cannot afford to build new ones to redeem more soil from the swamps. The second is, that the social organism is based on agriculture, and agriculture in all the lowland districts is based on negro labor. As many white people are now living on the labor of the negroes as that labor will support. The small immigration from Europe and the North goes to the towns and engages in trade. There has been very little influx of new blood in the country districts. The negro labor is probably in the aggregate as productive as in the days of slavery; but a smaller share of its results goes to the white land-owners, and a larger share to the blacks themselves. Thus the whites always speak of "the good old days before the war," and were, no doubt, as a class, in better circumstances then than now, though the aggregate annual wealth-production was not as great. Of the three special staples of Louisiana agriculture, cotton, raised in the uplands north of the Red River, shows some

gain in its annual yield; sugar is variable in quantity, depending greatly on the seasons, and requiring large capital for its culture; rice, which is especially a black man's crop, has increased steadily, beginning with 20,978 barrels in 1865, and without a single set-back advancing to 498,138 barrels in 1883.

The time is not far distant when land will be too valuable on this continent for large areas of the warm, bountiful soils of Louisiana to be allowed to remain idle, and when the Mississippi delta, with its interlacing

rivers and bayous, will be a semi-tropical Holland, as well diked and as thoroughly utilized as the thrifty, populous country in the Rhine delta.

The most interesting phase of Louisiana agriculture is sugar-planting and sugar-making. This whole industry rests on a few lines in the tariff law. Without the duty on sugar and molasses the Louisiana planters could not maintain themselves in competition with those of the West India islands, where labor is cheaper, and where the cane sprouts afresh from the roots every year. The sugar industry in Louisiana is an exotic, but it is too late now to discuss the wisdom of nurturing it by favoring legislation. It is established; it employs large capital; it supports a considerable population; it is one of the pillars of the whole industrial and social fabric in an entire State. To withdraw the legislative shield which protects it would be to bring bankruptcy and misery to many thousands of people. The recent threat of the Spanish treaty produced great alarm in the sugar districts. The planters occupy a peculiarly critical position, their industry and the value of their landed property and machinery depending upon the goodwill of Congress, a large majority of whose members represent constituencies having no interest in the taxation of foreign sugars at the custom-house.

In ante-bellum times the sugar-planters were the flower of the slave-holding aristocracy. They owned large estates, lived gen-

A STUDY IN THE HOTEL.

CREOLES.

erously, valued education, and cultivated the social amenities. They were a gentle, luxurious, hospitable race, and were rudely shaken by the storm of war and the emancipation of the slaves. Many of them were unable to adapt themselves to the new social conditions, and have disappeared in the oblivion of financial and personal ruin. Others hold on to their lands, but are not able to cultivate more than a small part of them. Many of the old, influential families have perished, and their estates have gone into the hands of new men from the North, or of Hebrew money-

lenders in New Orleans. There is still enough left, however, of the old planting life behind the levees on the rivers and bayous, where the warm land slopes back to the mournful cypress swamps, and where the pillared porches of old mansions gleam through the foliage of orange-trees, to give picturesqueness and character to the region.

THE COLORED DEPARTMENT.

It would be more correct to call it the Somewhat Colored Department. Nowhere

THE PROMENADE.

does it appear to represent the achievements of the pure-blooded negro. The woman who comes forward to explain the Kentucky exhibits has blue eyes and brown hair. The lady-like person who calls your attention to the embroideries and the handsome artificial flowers in the Louisiana section is an octoroon. The maker of an assortment of tools, forged with the hammer, hangs his photograph beside his work and displays unmistakable Caucasian features. And so it goes throughout the whole display. Even the chief of the department, a distinguished bureau official from Washington and a former United States senator, is three-fourths white. As a display of a few useful and many ornamental objects and some atrocities in art, produced by people having more or less African blood in their veins, this gallery possesses a moderate interest; but as a presentation of the industrial or educational attainments of the negro race in America, it is of very small value. It is impossible to say in the case of any article whether the white blood or the black, in the veins of the representative of mixed ancestry who made it, produced the progressive tendency. The absurdity of showing the work of quadroons and octoroons as that of the black

race will be manifest if we turn the thing around, and imagine at a fair held in Hayti, where white people are said to be greatly despised, a white department opened and filled with articles made by persons three-fourths black. If this be not a fair comparison, then we must imagine the black blood in the mixed race to have greater potency than the white to develop its own race tendencies, and insist that in an ethnological sense the old barbarous rule of slavery was correct, and that the smallest visible admixture of the African taint makes the man a negro. Of course, the truth is on the opposite side of the proposition: the white blood is the more powerful, and the man who carries a preponderance of it in his veins is not a negro, and must be classed with the white race if any scientific line is to be drawn.

There is every reason to believe that the blacks of our Southern States are making steady progress. On a "Historical Chart of the Colored Race" displayed in the Colored Department is this motto: "We must unite; we must acquire wealth; we must educate, or we will perish." The negroes are slowly getting property and education. They inherit from slavery one great blessing — the habit of

industry; and this is their salvation. As to the higher attainments of civilization, whatever they exhibit, except in rare and isolated cases, is plainly traceable either to contact with the white race or to the admixture of white blood.

I had almost forgotten to point out one undoubted product of negro genius in the Colored Department. The Rev. John Jasper, of Richmond, Virginia, who preaches that the earth stands still, and the sun revolves around

great live-oaks on the grounds, and observe the passing throng, is to my mind the best part of the sight-seeing at the fair. The first broad division one makes is between Northern and Southern people. The energetic tread, the business-like air, and the evident disposition to do up the exhibition thoroughly and speedily, betrays the man from the North, as well as the cut of his coat, his Derby hat, and the unnecessary overcoat he lugs about on his

“WHAT’S THE CHEER GOOD FOR IF IT AIN’T TO SET DOWN IN?”

it, and tries to demolish astronomy with Scripture texts, has his autobiography on sale. Beside the books lies his photograph, which is that of a man whose unmixed African ancestry will not be questioned.

TYPES AND ODDITIES.

THE visitors themselves are as well worth seeing as the show. To sit on a bench on one of the broad aisles of the Main Building, or better still beneath the spreading arms of the

arm, incredulous as to May weather lasting long in February. The Northern woman is more fashionably dressed than her Southern sister, has a quicker gait, a better complexion, a nervous, eager manner, and an appearance of being in quest of information quite essential to her well-being. The Southern visitors saunter and chat a good deal; they seem never in a hurry. The women affect black in preference to colors, and are not particular as to the forms of their bonnets. The Hebrew clothing merchant, who has pervaded the entire South since the war, has nearly driven out the black

broadcloth suit which was once the regulation garb for gentlemen, and it is not much worn now except by the older men, but the soft slouch hat holds its own. There are more distinct and recognizable types among the Southern population than in the North. The large-boned Kentuckian or Tennessean, reared on a limestone soil, differs widely from the inhabitant of the malarial lowlands of Mississippi and Louisiana. The Georgian can be told by speech and look from his neighbor in South Carolina. The Texan is a big breezy fellow, with a long stride and an air of owning half the universe. The Creole Louisianian (by which term, let it be explained for the hundredth time for the benefit of persistent ignorance, is meant, not a mulatto, but a native white of French or Spanish ancestry) is short of stature, slight of frame, with a curious mixture of languor and vivacity in manner, carefully dressed, very polite, and with small interest in the doings of the world outside his own State.

The odd characters at the fair are the terror of exhibitors. A Cincinnati furniture-maker discovered a countryman from Arkansas whittling a handsome mahogany cabinet "to see what the wood was like." The man's knowledge of furniture was evidently limited to articles which could not be damaged by a reasonable use of the jack-knife. Another exhibitor, who had fitted up a room with the finest specimens of his art, was horrified to find an old lady eating her lunch of fried chicken seated in one of his satin upholstered chairs. "What's the cheer good for if it ain't to set down in?" she placidly remarked, in reply to his earnest request that she would go somewhere else with her victuals. The same exhibitor one day found that some visitor to his alcoves had left a token of his approval on the polished surface of a costly mantel, in the words "This is pretty good" scratched with a knife.

The Turks who sell olive-wood, beads, and other trinkets "from Jerusalem"—all made in Paris—are picturesque additions to the

"WHEN DID YOU COME FROM INDIANA?"

permanent personnel of the fair, though their genuineness, like that of their wares, will not always bear inspection. An amusing scene occurred one day at one of these Oriental bazaars. A tall man, with a rural air, stopped before the stand and appeared to take a lively interest, not in the goods, but in the features of one of the salesmen in scarlet fez and baggy trousers. He surveyed the Oriental in front and in profile, and then, slapping him on the shoulder, exclaimed, "Hello, Jake, when did you come from Indiana?" The Turk from Indiana acknowledged his old acquaintance and begged that he would not "give him away."

SOUTHERN TIMBER.

THE Southern States seek in their State displays, in the Government Building, to impress visitors with the fact that they have great undeveloped resources in their forests, which, on account of the rapid devastation of

the Northern pineries, are inviting to enterprise. In these displays sections of tree-trunks and specimens of boards are everywhere conspicuous. Florida erects a quadrilateral wall of trunks, entire below, split above to show the wood, both plain and varnished, and ending with the pressed leaves, accompanied by a little condensed information as to each specimen. In all there are one hundred and eighty varieties. Forty-two per cent. of all the varieties of forest trees known to exist in the United States are found in Florida. An artistic way of showing timber specimens is seen in the Tennessee section, where, on polished squares of the different kinds of wood found in the State, the leaves and flowers of each are prettily painted, the whole forming a large mosaic screen.

Georgia, Florida, Alabama, Mississippi, Louisiana, and Texas have still many thousand square miles of yellow pine timber-lands, barely touched here and there by the lumberman's operations. The yellow pine is the common building wood of the South, and is sent to the ship-yards of the North. The sweet-gum tree, which grows abundantly in northern Louisiana, Arkansas, and the Yazoo delta of Mississippi, is beginning to come into use for furniture-making, and, now that the Northern black-walnut is so nearly exhausted, is likely to attract attention. Its wood takes a fine polish. There are said to be nine million acres of this timber. The tree grows to the height of ninety feet. In the swamps in the lower Mississippi basin the cypress is everywhere the dominant tree. Its trunk spreads out at the base to get a firm hold on the water-soaked loam, and it rears its branches to a height of over one hundred feet. The wood is very tough and durable, and is said to last forty years in the form of shingles and siding without the protection of paint. It is used for general building purposes, for boats, and for furniture veneered with mahogany. The white locust, the white holly, the ash, and the cottonwood are other valuable Southern woods. There used to be a good deal of black-walnut in Tennessee and Arkansas, but the furniture factories in Cincinnati and Grand Rapids have bought the little that remains uncut.

SOUTHERN MANUFACTURES.

ONE sees few evidences in the Exposition of the development of manufactures in the Southern States. In some special lines, at least, such development is going forward to a notable extent, but it is very inadequately represented here. The number of cotton-mills has increased from 161 in 1880 to 270 in 1884. There ought to be a collective display of the products of these factories. Most of

them are small mills, and make only yarns or coarse cloths; but the fact that 109 establishments should have been put in operation in four years is a remarkable evidence of progress. The great coal and iron deposits in northern Alabama have brought into existence a growing iron industry at Birmingham, where pig-iron is now made at less cost than at any other place in the United States. The Alabama coal is fast displacing that of Illinois, Ohio, and western Pennsylvania in New Orleans for domestic and steam fuel.

We must not, however, be led by these facts to suppose that there is any such general growth of manufacturing in the South as is taking place in Western States, like Wisconsin, Iowa, and Minnesota. The Southern States make a striking display of raw materials suitable for various forms of industry, and with iron and coal, timber and fibers, extend an eager invitation to all the world to come and make use of these bountiful gifts of nature; but their people appear to expect somebody else to do for them the work of diversifying their industries. They do little for themselves in this direction, compared to what is done in the West. If the exhibition is a faithful mirror of their achievements, we must conclude that most that we have heard of their recent progress beyond the old lines of raising agricultural staples has been newspaper talk only. Must we not also conclude that the genius of skillful handicraft does not spring from opportunity, but is a rare instinct? Manufacturing is an inherited tendency in the New England stock, and has advanced westward with the migration of that stock. A bountiful supply of natural resources does not give birth to this instinct. The New England States are singularly poor in such resources, while Virginia, Tennessee, and other Southern States are notably rich in them. Yet there are single towns in Massachusetts and Connecticut whose annual product of manufactures nearly equals that of all the Southern States. If the South is ever to become the seat of extensive general manufacturing operations, it will be when the West is full of people, and the tide of migration, which now follows lines of latitude, is deflected southward. The old Southern stock, very little changed by the infusion of new blood since the war, has no aptitude for the small economies, the close application, the attention to detail, and the mastery of machinery required for successful manufacturing.

BRAZILIAN COFFEE.

THE Rio de Janeiro Society of Labor and Commerce displays six hundred and twenty-

four samples of coffee, comprising eighty different qualities, each of which has its own name. This society has been striving for years to rescue Brazilian coffee from the low standing it has in the markets of the world, by proving that "Rio" is merely a trade name for a poor grade, and that all the better grades sold as Java, Ceylon, and Mocha are produced in large quantities in Brazil. It seems that it is the custom of the coffee merchants to sort the beans, calling the small round ones, of which only one grows in a cherry, "Mocha," and the large well-formed ones "Java" or "Ceylon," and then to lump the remainder together, mixed perhaps with a still poorer article from Venezuela or Costa Rica, and call it "Rio." A talk with the members of the Rio de Janeiro Society in charge of this interesting coffee exhibit will show most coffee-drinkers that they are ignorant of the main facts concerning the little berry of which their favorite beverage is made. How few people are connoisseurs of coffee. How few know that, like wine, the berry improves with age, gaining in delicacy and aroma the longer the time between the gathering and the use. We insist that wine should have a proper age, yet we buy the fresh green berries, recently gathered. Most consumers think the green color is an evidence of good quality, while in fact it shows that the bean is not sufficiently cured to be at its best, and that it will give the beverage a raw, crude flavor. The best coffee is of a light yellowish color. As the bean loses in weight with age, it is to the interest of the producer to market it at once. The consumer who is critical as to quality and aroma will lay in one or two years' supply, to insure the proper age, and will have the quantity needed for his breakfast-table freshly roasted and ground every morning in his own kitchen. There is as much difference in coffee as in wine, and nothing is more difficult, as every traveler knows, than to get even a tolerably fair cup of this most common of beverages. I doubt if one American in a hundred ever drank a really good cup of coffee, yet it is a luxury within the reach of everybody. In New Orleans the survival of French traditions in cooking insures a palatable *café au lait*, but the berry in common use comes from Mecca and lacks delicacy of aroma. The custom is to make the coffee very strong and black by the drip method, and to put in the cup as much hot milk as coffee. This makes a very nutritious drink, and, with a loaf of bread about as big as a man's fist and some fresh butter, is the Creole breakfast. To eat meat, potatoes, or hot bread in the morning the Creole regards as an American barbarism.

INDIAN ENGLISH.

IN the New Mexico section are shown a curious batch of compositions written by Indian pupils in the Catholic schools. Some of these specimens of Indian English are very funny. Here are two of them:

The Cow and Oxen.

I write about the cow and oxen. The cows give to milk and the oxen is used to work in the garden and not have milks. Just used to work, and the cows have much milk and very good to drink cows milks, and the oxen is very strong and large oxen, and some oxen not large. The cows is not very fast run and some cows is very poor not fat and some very fat cows. The cows is everywhere walking and very just stay in the home — not go way, all time stand on the fence. The cows are very large horn, and some not cows not very large horn and some not very large. The cows are not have teeth just in the other side and all times chewing grass and oxen also chewing grass. The cows has calf and some not have calf, just has milk and just gave the people, is very good to drink this cows milk.

A Boule Dog.

The dog live in the house take care of it. Dog sleep on the door. Some dogs are good to catch rabbits. Much is snow. Me go mountain and very good dog to catch rabbits take of men. Come house. Good eat. Some dog not runs fast. Just sleep home about fire. Where you sleep fox, guess on the mountain. Guess not sleep every night. Walk rabbits.

BELGIUM AT THE FAIR.

BELGIUM receives hearty praise on all hands for the generous recognition her Government and her manufacturers have given to the Exposition. Other European nations have treated it with indifference, giving no money to aid it, and no stimulus of special effort, and contenting themselves with turning over those of their people who wished to exhibit goods to their respective consuls at New Orleans. Belgium, though in the midst of efforts for an exhibition of her own, of no small importance, to open in Antwerp in May, has devoted both money and effort to the creditable display, under competent supervision, of her art, her machinery, her textile fabrics, and her general manufactures, in the distant city at the mouth of the Mississippi. In all its departments, whether of railway appliances or paintings, cannon or cloths, iron-forging or delicate laces, the exhibit is attractive and worthy of study. The youngest of European nations, created by diplomacy only a little more than half a century ago, has an eye to business as well as to international courtesy in her prompt attendance at all important world's fairs. Her various industries compete sharply with those of France, Germany, and England. In a speech opening the Belgian section, the commissioner spoke of the purpose of his country

to develop commerce between Antwerp and New Orleans, and not only to extend her trade with the United States, but to reach out from New Orleans to Mexico and Central America for new markets for her manufactures. The Belgian paintings show the influence of both Munich and Paris. A distinct national school has hardly yet arisen. There are no great pictures shown, but there are many noticeably good ones, and no bad ones, and the display as a whole is very interesting.

FRENCH EDUCATION.

THE cheap shop-keeping character of the general French exhibit may well be overlooked in view of the very instructive display of educational methods and results made by the French Government, through its Ministry of Public Instruction and Fine Arts. This display is in charge of Professor B. Breisson. It covers the whole field of educational effort in France, from the crèche for infants and the primary school to the colleges, the medical schools, the schools for manual labor, and the national schools of decorative arts. The American teacher visiting the crowded gallery containing this exhibit will be struck, first, by the way in which the French carry their love of system into their school work; next, by a certain artistic feeling and indefinable touch of taste in the work of the pupils; and then, most of all, by the many evidences that instruction is carried outside the text-book, as far as possible, to objects and their relations, teaching theories by things and not by sentences learned by rote. The tendency is strongly in this direction in our own country, but the French carry it farther than we do, seeking in many ways to make the pupil familiar with the main facts in natural science, and with the practical sides of life.

THE LIBERTY BELL AND THE OLD FLAG.

THE old Liberty Bell, which stands in the Main Building upon the car built to transport it and its guard of stalwart policemen from

THE LIBERTY BELL.

Philadelphia, appears to awaken a sentiment of nationality in the breasts of the Southern visitors to the Exposition. Their patriotic feelings do not always extend to the national flag, however. It is rare to see the Stars and Stripes in New Orleans save on the shipping and the Government buildings. The people are fond of bunting, and to gratify their taste for color they devise many strange banners. Visitors are puzzled to make out the meaning of these combinations of red, purple, green, yellow, and white floating from flagstuffs on stores and hotels. To the frequent question, "What sort of a flag is that?" the answer is, "Oh, that don't mean anything in particular. It's just a fancy flag," or more often, "That's the flag of Rex, the King of the Carnival." When the Bankers' Building on the Exposition Grounds was decorated, a photographer from Philadelphia, who had been taking a picture of the throng, called out from his platform as the Stars and Stripes were unfurled from the roof of the structure, "Three cheers for our flag!" There were a few cheers and almost as many hisses. The Exposition will, unquestion-

ably, do much toward stimulating the growth of the national idea in the South. A study of the enormous aggregation of products, arts, and inventions in the Government Building classified by States cannot fail to produce an enlarged conception of the greatness of the republic, and a feeling of pride in its magnificent resources. Opposition to the national emblem is only a sentiment in the South, and is fast fading into a tradition. There is not the slightest desire for separation. The Southerner does not want to hurrah for the old flag, simply because he thinks that to do so would be to show unfaithfulness to the memory of the cause for which he or his kindred fought—a memory which to him is sacred.

A REMEDY FOR HARD TIMES.

THE Centennial Exhibition at Philadelphia was held when the business of the country was deep down in the rut of depression into which it had been settling after the panic of 1873. The exhibition seemed to be the turning-point. It set people in motion and broke the spell of lethargy. Hard times are a mental disease. At the outset a necessary reaction from the fever of speculation, they become a chronic condition prolonged far beyond the time needed for restoring wholesome conditions to trade. People grasp their money tightly, become overcautious, draw back from the most inviting enterprises, and retrench ex-

penses beyond reasonable economy. The malady affects even those whose incomes have not in the least suffered. The rich grow penurious without themselves knowing why. Thus the consumption of products of all kinds diminishes and manufactures and trade languish. A great exhibition encourages people to travel, interests their minds by its display of inventions, processes, and products, and thus lifts them out of the old grooves of inactivity and causes them to loosen their energies and their purse-strings. Perhaps the New Orleans fair is destined to do the same good work in breaking up hard times as was done by the Centennial. It is a pity that its magnitude and attractions did not become earlier known to the country at large. It took about two months to educate the country up to an appreciation of the Philadelphia Exhibition, but afterwards came the pleasant fall weather, most inviting to travel and sight-seeing. Unfortunately, the summer will begin in New Orleans about as soon as a knowledge of the merits of the "World's Industrial and Cotton Centennial Exposition" is widely diffused. If it were practicable to hold the great show together and reopen it in the coming autumn, its benefits would be much increased, and the wise plan of its projectors of bringing together within its gates for better acquaintance and mutual profit the peoples of all the North American republics and colonies might be more fully realized.

Eugene V. Smalley.

A FLORENTINE MOSAIC.

(THIRD PAPER.)

HOSE words of Michael Angelo's answer to Strozzi's civil verses on his Day and Night are nobly simple, and of a colloquial and

natural pitch to which their author seldom condescended in sculpture. Even the Day is too muscularly awaking and the Night too anatomically sleeping for the spectator's perfect loss of himself in the sculptor's thought; but the figures are so famous that it is hard to reconcile one's self to the fact that they do not celebrate the memory of the greatest Medici. That Giuliano whom we see in the chapel there is little known to history; of that Lorenzo, history chiefly remembers that he was the father of Alessandro, whom we have seen slain, and of Catharine de' Medici.

Some people may think this enough; but we ought to read the lives of the other Medici before deciding. Another thing to guard against in that chapel is the cold; and, in fact, one ought to go well wrapt up in visiting any of the indoor monuments of Florence. Santa Croce, for example, is a temple whose rigors I should not like to encounter again in January, especially if the day be fine without. Then the sun streams in with a deceitful warmth through the mellow blazon of the windows, and the crone, with her scaldino at the door, has the air almost of sitting by a register. But it is all an illusion. By the time you have gone the round of the strutting and mincing allegories, and the pompous effigies with which art here, as everywhere, renders death ridiculous, you have scarcely the courage to penetrate to those remote chapels where the Giotto frescoes are. Or if you do,

you shiver round among them with no more pleasure in them than if they were so many boreal lights. Vague they are, indeed, and spectral enough, those faded histories of John the Baptist, and John the Evangelist, and St. Francis of Assisi, and as far from us, morally, as anything at the pole; so that the honest sufferer, who feels himself taking cold in his bare head, would blush for his absurd-

full. The wonder of their temperance comes back with perpetual surprise to the gluttonous northern nature. Their shyness of your fire, their gentle deprecation of your out-of-hours hospitality, amuse as freshly as at first; and the reader who has not known the fact must imagine the well-dressed throng in the Florentine street more meagerly breakfasted and lunched than anything but destitution with

LOGGIA DEI LANZI.

ity in pretending to get any comfort or joy from them, if all the available blood in his body were not then concentrated in the tip of his nose. For my part, I marveled at myself for being led, even temporarily, into temptation of that sort; and it soon came to my putting my book under my arm and my hands in my pockets, and, with a priest's silken skull-cap on my head, sauntering among those works of art with no more sense of obligation to them than if I were their contemporary. It is well, if possible, to have some one with you to look at the book, and see what the works are and the authors. But nothing of it is comparable to getting out into the open piazza again, where the sun is so warm — though not so warm as it looks.

It suffices for the Italians, however, who are greedy in nothing and do not require to be warmed through, any more than to be fed

us, and protected against the cold indoors by nothing but the clothes which are much more efficient without.

II.

WHAT strikes one first in the Florentine crowd is that it *is* so well dressed. I do not mean that the average of fashion is so great as with us, but that the average of raggedness is less. Venice, when I saw it again, seemed in tatters, but, so far as I can remember, Florence was not even patched; and this, in spite of the talk one constantly hears of the poverty which has befallen the city since the removal of the capital to Rome. All classes are said to feel this adversity more or less, but none of them show it on the street; beggary itself is silenced to the invisible speech which one sees moving the lips of the old women who steal an open palm towards you

at the church doors. Florence is not only better dressed on the average than Boston, but, with little over half the population, there are, I should think, nearly twice as many private carriages in the former city. I am not going beyond the most non-committal *si dice* in any study of the Florentine civilization, and I know no more than that it is said (as it has been said ever since the first northern tourist discovered them) that they will starve themselves at home to make a show abroad. But if they do not invite the observer to share their domestic self-denial,—and it is said that they do not, even when he has long ceased to be a passing stranger,—I do not see why he should complain. For my part their abstemiousness cost me no sacrifice, and I found a great deal of pleasure in looking at the turn-outs in the Cascine, and at the fur-lined coats in the streets and piazzas. They are always great wearers of fur in the south, but I think it is less fashionable than it used to be in Italy. The younger swells did not wear it in Florence, but now and then I met an elderly gentleman, slim, tall, with an iron-gray mustache, who, in folding his long fur-lined overcoat loosely about him as he walked, had a gratifying effect of being an ancestral portrait of himself; and with all persons and classes content to come short of recent fashion, fur is the most popular wear for winter. Each has it in such measure as he may; and one day in the Piazza della Signoria, when there was for some reason an assemblage of market-folk there, every man had hanging operatically from his shoulder an overcoat with cheap fur collar and cuffs. They were all babbling and gesticulating with an impassioned amiability, and their voices filled the place with a leafy rustling which it must have known so often in the old times, when the Florentines came together there to govern Florence. One ought not, I suppose, to imagine them always too grimly bent on public business in those times. They must have got a great deal of fun out of it, in the long run, as well as trouble, and must have enjoyed sharpening their wits upon one another vastly.

The presence now of all those busy-tongued people — bargaining or gossiping, whichever they were — gave its own touch to the peculiarly noble effect of the piazza, as it rose before me from the gentle slope of the Via Borgo dei Greci. I was coming back from that visit to Santa Croce, of which I have tried to give the sentiment, and I was resentfully tingling still with the cold, and the displeasure of a backward glance at the grand-new ugliness of the façade, and of the big clumsy Dante on his pedestal before it,

when all my burden suddenly lifted from me, as if nothing could resist the spring of that buoyant air. It was too much for even the dull, vague rage I felt at having voluntarily gone through that dreary old farce of old-master doing again, in which the man only averagely instructed in the history of art is at his last extreme of insincerity, weariness, and degradation — the ridiculous and miserable slave of the guide-book asterisks marking this or that thing as worth seeing. All seemed to rise and float away with the thin clouds, chasing one another across the generous space of afternoon sky which the piazza opened to the vision; and my spirit rose as light as the lion of the Republic, which capers so nimbly up the staff on top of the palace tower.

There is something fine in the old piazza being still true to the popular and even plebeian use. In narrow and crowded Florence, one might have supposed that fashion would have tried to possess itself of the place, after the public palace became the residence of the Medici; but it seems not to have changed its ancient character. It is now the starting-point of a line of omnibuses; a rank of cabs surrounds the base of Cosimo's equestrian statue; the lottery is drawn on the platform in front of the palace; second-rate shops of all sorts face it from two sides, and the restaurants and cafés of the neighborhood are inferior. But this unambitious environment leaves the observer all the freer to his impressions of the local art, the groups of the Loggia dei Lanzi, the symmetrical stretch of the Portico degli Uffizzi, and, best of all, the great, bold, irregular mass of the old palace itself, beautiful as some rugged natural object is beautiful, and with the kindliness of nature in it. Plenty of men have been hung from its windows, plenty dashed from its turrets, slain at its base, torn in pieces, cruelly martyred before it; the wild passions of the human heart have beaten against it like billows; it has faced every violent crime and outbreak. And yet it is sacred, and the scene is sacred, to all who hope for their kind; for there, in some sort, century after century, the purpose of popular sovereignty — the rule of all by the most — struggled to fulfill itself, purblindly, bloodily, ruthlessly, but never ignobly, and inspired by an instinct only less strong than the love of life. There is nothing superfine, nothing of the *salon* about the place, nothing of the beauty of Piazza San Marco at Venice, which expresses the elegance of an oligarchy and suggests the dapper perfection of an aristocracy in decay; it is loud with wheels and hoofs, and busy with commerce, and it has a certain ineffaceable rudeness and unfinish like the structure of a democratic state.

III.

WHEN Cosimo I., who succeeded Alessandro, moved his residence from the family seat of the Medici to the Palazzo Vecchio, it was as if he were planting his foot on the very neck of Florentine liberty. He ground his iron heel in deeply; the prostrate city hardly stirred afterwards. One sees what a potent and valiant man he was from the terrible face of the bronze bust by Benvenuto Cellini, now in the Bargello Museum; but the world, going about its business these many generations, remembers him chiefly by a horrid crime — the murder of his son in the presence of the boy's mother. Yet he was not only a great warrior and wild beast; he befriended letters, endowed universities, founded academies, encouraged printing; he adorned his capital with statues and public edifices; he enlarged and enriched the Palazzo Vecchio; he bought Luca Pitti's palace, and built the Uffizzi, thus securing the eternal gratitude of the tourists who visit these galleries, and have something to talk about at the *table d'hôte*. It was he who patronized Benvenuto Cellini, and got him to make his Perseus in the Loggia de' Lanzi; he built the fishermen's arcade in the Mercato Vecchio, and the fine Loggia of the Mercato Nuovo; he established the General Archives, and reformed the laws and the public employments; he created Leghorn, and throughout Tuscany, which his arms had united under his rule, he promoted the material welfare of his people, after the manner of tyrants when they do not happen to be also fools.

His care of them in other respects may be judged from the fact that he established two official spies in each of the fifty wards of the city, whose business it was to keep him informed of the smallest events, and all that went on in the houses and streets, together with their conjectures and suspicions. He did not neglect his people in any way; and he not only built all those fine public edifices in Florence,—having merely to put his hand in his people's pocket and do it, and then take the credit of them,—but he seems to have loved to adorn it with that terrible face of his on many busts and statues. Its ferocity, as Benvenuto Cellini has frankly recorded it, and as it betrays itself in all the effigies, is something to appall us still; and whether the story is true or not, you see in it a man capable of striking his son dead in his mother's arms. To be sure, Garzia was not Cosimo's favorite, and, like a Medici, he had killed his brother; but he was a boy, and when his father came to Pisa to find him, where he had taken refuge with his mother,

he threw himself at Cosimo's feet and implored forgiveness. "I want no Cains in my family!" said the father, and struck him with the dagger which he had kept hidden in his breast. "Mother! Mother!" gasped the boy, and fell dead in the arms of the hapless woman, who had urged him to trust in his father's mercy. She threw herself on the bed where they laid her dead son, and never looked on the light again. Some say she died of grief, some that she starved herself; in a week she died, and was carried with her two children to Florence, where it was presently made known that all three had fallen victims to the bad air of the Maremma. She was the daughter of a Spanish king, and eight years after her death her husband married the vulgar and ignoble woman who had long been his mistress. This woman was young, handsome, full of life, and she queened it absolutely over the last days of the bloody tyrant. His excesses had broken Cosimo with premature decrepitude; he was helpless in the hands of this creature, from whom his son tried to separate him in vain; and he was two years in dying, after the palsy had deprived him of speech and motion, but left him able to think and to remember!

The son was that Francesco I. who is chiefly known to fame as the lover and then the husband of Bianca Capello,—to so little may a sovereign prince come in the crowded and busy mind of aftertime. This grand duke had his courts and his camps, his tribunals and audiences, his shows of authority and government; but what we see of him at this distance is the luxurious and lawless youth, sated with every indulgence, riding listlessly by under the window of the Venetian girl who eloped with the Florentine banker's clerk from her father's palace in the lagoons, and is now the household drudge of her husband's family in Florence. She is looking out of the window that looks on Savonarola's convent, in the tallest of the stupid, commonplace houses that confront it across the square; and we see the prince and her as their eyes meet, and the work is done in the gunpowdery way of southern passion. We see her again at the house of those Spaniards in the Via de' Banchi, which leads out of our Piazza Santa Maria Novella, from whence the Palazzo Mandragone is actually in sight; and the marchioness is showing Bianca her jewels and— Wait a moment! There is something else the marchioness wishes to show her; she will go get it; and when the door reopens Francesco enters, protesting his love, to Bianca's confusion, and no doubt to her surprise; for how could she suppose he would be there? We see her then at the head of the grand-ducal

court, the poor, plain Austrian wife thrust aside to die in neglect; and then when Bianca's husband, whom his honors and good fortune have rendered intolerably insolent, is slain by some of the duke's gentlemen,—in the narrow street at Santo Spirito, hard by the handsome house in Via Maggio which the duke has given her,—we see them married, and receiving in state the congratulations of Bianca's father and brother, who have come on a special embassy from Venice to proclaim the distinguished lady Daughter of the Republic,—and, of course, to withdraw the price hitherto set upon her head. We see them then in the sort of life which must always follow from such love,—the grand duke had spent three hundred thousand ducats in the celebration of his nuptials,—overeating, overdrinking, and seeking their gross pleasures amid the ruin of the state. We see them trying to palm off a supposititious child upon the Cardinal Ferdinand, who was the true heir to his brother, and would have none of his spurious nephew; and we see these three sitting down in the villa at Poggio a Caiano to the famous tart which Bianca, remembering the skill of her first married days, has made with her own hands, and of which she courteously presses the Cardinal to be the first to partake. He politely refuses, being provided with a ring of admirable convenience at that time in Italy, set with a stone that turned pale in the presence of poison. "Some one has to begin," cries Francesco, impatiently; and in spite of his wife's signs—she was probably treading on his foot under the table, and frowning at him—he ate of the mortal viand; and then in despair Bianca ate too, and they both died. Is this tart perhaps too much for the reader's digestion? There is another story, then, to the effect that the grand duke died of the same malarial fever that carried off his brothers Garzia and Giovanni, and Bianca perished of terror and apprehension; and there is still another story that the Cardinal poisoned them both. Let the reader take his choice of them; in any case, it is an end of Francesco, of whom, as I said, the world remembers so little else.

It almost forgets that he was privy to the murder of his sister Isabella by her husband Paolo Orsini, and of his sister-in-law Eleonora by her husband Pietro de' Medici. The grand duke, who was then in the midst of his intrigue with Bianca, was naturally jealous of the purity of his family; and as it has never been denied that both of those unhappy ladies had wronged their husbands, I suppose he can be justified by the moralists who contend that what is a venial lapse in a man is worthy death, or something like it, in a woman. About the taking-off of Eleonora, however,

there was something gross, Medicean, butcherly, which all must deprecate. She knew she was to be killed, poor woman, as soon as her intrigue was discovered to the grand duke; and one is not exactly able to sympathize with either the curiosity or the trepidation of that "celebrated Roman singer" who first tampered with the letter from her lover, intrusted to him, and then, terrified at its nature, gave it to Francesco. When her husband sent for her to come to him at his villa, she took leave of her child as for the last time, and Pietro met her in the dark of their chamber and plunged his dagger into her breast.

The affair of Isabella Orsini was managed with much greater taste, with a sort of homicidal grace, a sentiment, if one may so speak, worthy a Roman prince and a lady so accomplished. She was Cosimo's favorite, and she was beautiful, gifted, and learned, knowing music, knowing languages, and all the gentler arts; but one of her lovers had just killed her page, of whom he was jealous, and the scandal was very great, so that her brother, the grand duke, felt that he ought, for decency's sake, to send to Rome for her husband, and arrange her death with him. She, too, like Eleonora, had her forebodings, when Paolo Orsini asked her to their villa (it seems to have been the custom to devote the peaceful seclusion of the country to these domestic rites); but he did what he could to allay her fears by his affectionate gayety at supper, and his gift of either of those stag-hounds which he had brought in for her to choose from against the hunt planned for the morrow, as well as by the tender politeness with which he invited her to follow him to their room. At the door we may still see her pause, after so many years, and turn wistfully to her lady in waiting:

"Madonna Lucrezia, shall I go or shall I not go to my husband? What do you say?"

And Madonna Lucrezia Frescobaldi answers, with the irresponsible shrug which we can imagine: "Do what you like. Still, he is your husband!"

She enters, and Paolo Orsini, a prince and a gentleman, knows how to be as sweet as before, and without once passing from caresses to violence, has that silken cord about her neck—

Terrible stories, which I must try to excuse myself for telling the thousandth time. At least, I did not invent them. They are all part of the intimate life of the same family, and the reader must group them in his mind to get an idea of what Florence must have been under the first and second grand dukes. Cosimo is believed to have killed his son Garzia, who had stabbed his brother Giovanni. His son Pietro kills his wife, and his daughter Isabella is strangled by her husband,

both murders being done with the knowledge and approval of the reigning prince. Francesco and Bianca his wife die of poison intended for Ferdinand, or of poison given them by him. On these facts throw the light of St. Bartholomew's day in Paris, whither Catharine de' Medici, the cousin of these homicides, had carried the methods and morals of her family, and you begin to realize the Medici.

By what series of influences and accidents did any race accumulate the enormous sum of evil which is but partly represented in these crimes? By what process was that evil worked out of the blood? Had it wreaked its terrible force in violence, and did it then no longer exist, like some explosive which has been fired? These would be interesting questions for the casuist; and doubtless such questions will yet come to be studied with the same scientific minuteness which is brought to the solution of contemporary social problems. The Medici, a family of princes and criminals, may come to be studied like the Jukes, a family of paupers and criminals. What we know at present is, that the evil in them did seem to die out in process of time; though, to be sure, the Medici died with it. That Ferdinand who succeeded Francesco, whichever poisoned the other, did prove a wise and beneficent ruler, filling Tuscany with good works, moral and material, and, by his marriage with Catharine of Lorraine, bringing that good race to Florence, where it afterwards reigned so long in the affections of the people. His son Cosimo II. was like him, but feebler, as a copy always is, with a dominant desire to get the sepulcher of our Lord away from the Turks to Florence, and long waging futile war to that end. In the time of Ferdinand II., Tuscany, with the rest of Italy, was wasted by the wars of the French, Spaniards, and Germans, who found it convenient to fight them out there, and by famine and pestilence. But the grand duke was a well-meaning man enough; he protected the arts and sciences as he got the opportunity, and he did his best to protect Galileo against the Pope and the inquisitors. Cosimo III., who followed him, was obliged to harass his subjects with taxes to repair the ruin of the wars in his father's reign; he was much given to works of piety, and he had a wife who hated him, and finally forsook him and went back to France, her own country. He reigned fifty years, and after him came his son Gian Gastone, the last of his line. He was a person, by all accounts, who wished men well enough, but, knowing himself destined to leave no heir to the throne, was disposed rather to enjoy what was left of his life than trouble himself about the affairs of state. Ger-

many, France, England, and Holland had already provided him with a successor, by the treaty of London, in 1718; and when Gian Gastone died, in 1737, Francis II. of Lorraine became Grand Duke of Tuscany.

IV.

UNDER the later Medici the Florentines were drawing towards the long quiet which they enjoyed under their Lorraine dukes—the first of whom, as is well known, left being their duke to go and be husband of Maria Theresa and emperor consort. Their son, Pietro Leopoldo, succeeded him in Tuscany, and became the author of reforms in the civil, criminal, and ecclesiastical law, which then astonished all Europe, and which tardy civilization still lags behind in some things. For example, Leopold found that the abolition of the death penalty resulted not in more, but in fewer crimes of violence; yet the law continues to kill murderers, even in Massachusetts.

He lived to see the outbreak of the French revolution, and his son, Ferdinand III., was driven out by the forces of the Republic in 1796, after which Tuscany rapidly underwent the Napoleonic metamorphoses, and was republican under the Directory, regal under Lodovico I., Bonaparte's king of Etruria, and grand-ducal under Napoleon's sister, Elisa Bacciocchi. Then, in 1816, Ferdinand III. came back, and he and his descendants reigned till 1848, when Leopold II. was driven out, to return the next year with the Austrians. Ten years later he again retired, and in 1860 Tuscany united herself by popular vote to the kingdom of Italy, of which Florence became the capital, and so remained till the French evacuated Rome in 1871.

The time from the restoration of Ferdinand III. till the first expulsion of Leopold II. must always be attractive to the student of Italian civilization as the period in which the milder Lorraine traditions permitted the germs of Italian literature to live in Florence, while everywhere else the native and foreign despotisms sought diligently to destroy them, instinctively knowing them to be the germs of Italian liberty and nationality; but I confess that the time of the first Leopold's reign has a greater charm for my fancy. It is like a long stretch of sunshine in that lurid, war-clouded landscape of history, full of repose and genial, beneficent growth. For twenty-five years, apparently, the good prince got up at six o'clock in the morning, and dried the tears of his people. To be more specific, he "formed the generous project," according to Signor Bacciotti, by whose "*Firenze Illustrata*" I would not thanklessly profit, "of restoring

Tuscany to her original happy state" — which, I think, must have been prehistoric. "His first occupation was to reform the laws, simplifying the civil and mitigating the criminal; and the volumes are ten that contain his wise statutes, edicts, and decrees. In his time, ten years passed in which no drop of blood was shed on the scaffold. Prisoners suffered no corporeal penalty but the loss of liberty. The amelioration of the laws improved the public morals; grave crimes, after the abolition of the cruel punishments, became rare, and for three months at one period the prisons of Tuscany remained empty. The hospitals that Leopold founded, and the order and propriety in which he kept them, justly entitled him to the name of Father of the Poor. The education he gave his children aimed to render them compassionate and beneficent to their fellow-beings, and to make them men rather than princes. An illustrious Englishman, then living in Florence, and consequently an eyewitness, wrote of him: 'Leopold loves his people. He has abolished all the imposts which were not necessary; he has dismissed nearly all his soldiers; he has destroyed the fortifications of Pisa, whose maintenance was extremely expensive, overthrowing the stones that devoured men. He observed that his court concealed him from his people; he no longer has a court. He has established manufactures, and opened superb roads at his own cost, and founded hospitals. These might be called, in Tuscany, the palaces of the grand duke. I visited them, and found throughout cleanliness, order, and delicate and attentive treatment; I saw sick old men, who were cared for as if by their own sons; helpless children watched over with a mother's care; and that luxury of pity and humanity brought happy tears to my eyes. The prince often repairs to these abodes of sorrow and pain, and never quits them without leaving joy behind him, and coming away loaded with blessings: you might fancy you heard the expression of a happy people's gratitude, but that hymn rises from a hospital. The palace of Leopold, like the churches, is open to all without distinction; three days of the week are devoted to one class of persons; it is not that of the great, the rich, the artists, the foreigners; it is that of the unfortunate! In many countries, commerce and industry have become the patrimony of the few: in Tuscany, all that know how may do; there is but one exclusive privilege — ability. Leopold has enriched the year with a great number of work-days, which he took from idleness and gave back to agriculture, to the arts, to good morals. . . . The grand duke always rises before the sun, and when that beneficent star rejoices nature with its rays, the good prince

has already dried many tears. . . . Leopold is happy, because his people are happy; he believes in God; and what must be his satisfaction when, before closing his eyes at night, before permitting himself to sleep, he renders an account to the Supreme Being of the happiness of a million of subjects during the course of the day!'"

English which has once been in Italian acquires an emotionality which it does not perhaps wholly lose in returning to itself; and I am not sure that the language of the illustrious stranger, whom I quote at second hand, has not kept some terms which are native to Signor Bacciotti rather than himself. But it must be remembered that he was an eighteenth-century Englishman, and perhaps expressed himself much in this way. The picture he draws, if a little too idyllic, too pastoral, too operatic, for our realization, must still have been founded on fact, and I hope it is at least as true as those which commemorate the atrocities of the Medici. At any rate it is delightful, and one may as probably derive the softness of the modern Florentine morals and manners from the benevolence of Leopold as from the ferocity of Cosimo. Considering what princes mostly were in the days when they could take themselves seriously, and still are now when I should think they would give themselves the wink on seeing their faces in the glass, I am willing to allow that kindly despot of a Leopold all the glory that any history may claim for him. He had the genius of humanity, and that is about the only kind of genius which is entitled to reverence in this world. If he perhaps conceived of men as his children rather than his brothers, still he wished them well and did them all the good he knew how. After a hundred years it must be allowed that we have made a considerable advance beyond him — in theory.

v.

WHAT society in Florence may now be like underneath its superficial effect of gentleness and placidity, the stranger, who reflects how little any one really knows of his native civilization, will carefully guard himself from saying upon his own authority. From the report of others, of people who had lived long in Florence and were qualified in that degree to speak, one might say a great deal — a great deal that would be more and less than true. A brilliant and accomplished writer, a stranger naturalized by many years' sojourn, and of an imaginable intimacy with his subject, sometimes spoke to me of a decay of manners which he had noticed in his time: the peasants no longer saluted persons of civil condition

in meeting them; the young nobles, if asked to a ball, ascertained that there was going to be supper before accepting. I could not find these instances very shocking, upon reflection; and I was not astonished to hear that the sort of rich American girls who form the chase of young Florentine noblemen show themselves indifferent to untitled persons. There was something more of instruction in the fact that these fortune-hunters care absolutely nothing for youth or beauty, wit or character, in their prey, and ask nothing but money. This implies certain other facts—certain compensations and consolations, which the American girl with her heart set upon an historical name would be the last to consider. What interested me more was the witness which this gentleman bore, with others, to the excellent stuff of the peasants, whom he declared good and honest, and full of simple, kindly force and uprightness. The citizen class, on the other hand, was unenlightened and narrow-minded, and very selfish towards those beneath them; he believed that a peasant, for example, who cast his lot in the city, would encounter great unfriendliness in them if he showed the desire and the ability to rise above his original station. Both from this observer, and from other foreigners resident in Florence, I heard that the Italian nobility are quite apart from the national life; they have no political influence, and are scarcely a social power. (There are but three of the old noble families founded by the German emperors remaining—the Ricasoli, the Gherardeschi, and the Stufe; and a title counts absolutely for nothing with the Italians.) At the same time a Corsini was syndic of Florence; all the dead walls invited me to “vote for Peruzzi” in the approaching election for deputy, and at the last election a Ginori had been chosen. It is very hard to know about these things, and I am not saying my informants were wrong; but it is right to oppose to theirs the declaration of the intelligent and sympathetic scholar with whom I took my walks about Florence, and who said that there was great good-will between the people and the historical families, who were in thorough accord with the national aspirations and endeavors. Again, I say, it is difficult to know the truth; but happily the truth in this case is not important.

One of the few acquaintances I made with Italians outside of the English-speaking circles was that of a tradesman who, in the intervals of business, was reading Shakspeare in English, and—if I may say it—“*Venetian Life*.” I think some Americans had lent him the latter classic. I did not learn from him that many other Flor-

entine tradesmen gave their leisure to the same literature; in fact, I inferred that, generally speaking, there was not much interest in any sort of literature among the Florentines; and I only mention him in the hope of throwing some light upon the problem with which we are playing. He took me one night to the Literary Club, of which he was a member, and of which the Marchese Ricci is president; and I could not see that any presentation could have availed me more than his with that nobleman or the other nobleman who was secretary. The president shook my hand in a friendly despair, perfectly evident, of getting upon any common ground with me; and the secretary, after asking me if I knew Doctor Holmes, had an amiable effect of being cast away upon the sea of American literature. These gentlemen, as I understood, came every week to the club, and assisted at its entertainments, which were sometimes concerts, sometimes lectures and recitations, and sometimes conversation merely, for which I found the empty chairs, on my entrance, arranged in groups of threes and fives about the floor, with an air perhaps of too great social premeditation. Presently there was playing on the piano, and at the end the president shook hands with the performer. If there was anything of the snobbishness which poisons such intercourse with our race, I could not see it. Maybe snobbishness, like gentlemanliness, is not appreciable from one race to another.

VI.

My acquaintance, whom I should grieve to make in any sort a victim by my personalities, did me the pleasure to take me over the little ancestral farm which he holds just beyond one of the gates; and thus I got at one of the homely aspects of life which the stranger is commonly kept aloof from. A narrow lane, in which some boys were pitching stones for quoits in the soft Sunday afternoon sunshine, led up from the street to the farm-house, where one wandering roof covered house, stables, and offices with its mellow expanse of brown tiles. A door opening flush upon the lane admitted us to the picturesque interior, which was divided into the quarters of the farmer and his family, and the apartment which the owner occupied during the summer heats. This contained half a dozen pleasant rooms, chief of which was the library, overflowing with books representing all the rich past of Italian literature in poetry, history, and philosophy—the collections of my host’s father and grandfather. On the table he opened a bottle of the wine made on his farm; and then he took me up

to the terrace at the house-top for the beautiful view of the city, and the mountains beyond it, streaked with snow. The floor of the terrace, which, like all the floors of the house, was of brick, was heaped with olives from the orchard on the hillside which bounded the little farm; but I could see from this point how it was otherwise almost wholly devoted to market-gardening. The grass keeps green all winter long at Florence, not growing, but never withering; and there were several sorts of vegetables in view, in the same sort of dreamy arrest. Between the rows of cabbages I noticed the trenches for irrigation; and I lost my heart to the wide, deep well under the shed-roof below, with a wheel, picturesque as a mill-wheel, for pumping water into these trenches. The farm implements and heavier household utensils were kept in order here; and among the latter was a large wash-tub of fine earthenware, which had been in use there for a hundred and fifty years. My friend led the way up the slopes of his olive-orchard, where some olives still lingered among the willow-like leaves, and rewarded my curious palate with the insipidity of the olive which has not been salted. Then we returned to the house, and explored the cow-stables, where the well-kept Italian kine between their stone walls were much warmer than most Italian Christians in Florence. In a large room next the stable and behind the kitchen the farm-people were assembled, men, women, and children, in their Sunday best, who all stood up when we came in — all but two very old men, who sat in the chimney and held out their hands over the fire that sent its smoke up between them. Their eyes were bleared with age, and I doubt if they made out what it was all about; but they croaked back a pleasant answer to my host's salutation, and then let their mouths fall open again and kept their hands stretched over the fire. It would be very hard to say just why these old men were such a pleasure to me.

VII.

ONE January afternoon I idled into the Baptistery, to take my chance of seeing some little one made a Christian, where so many babes, afterwards memorable for good and evil, had been baptized; and, to be sure, there was the conventional Italian infant of civil condition tied up tight in the swathing of its civilization, perfectly quiescent, except for its feebly wiggling arms, and undergoing the rite with national patience. It lay in the arms of a half-grown boy, probably its brother, and there were the father and the nurse; the mother of so young a child could not come, of course.

The officiating priest, with spectacles dropped quite to the point of his nose, mumbled the rite from his book, and the assistant, with one hand in his pocket, held a negligently tilted taper in the other. Then the priest lifted the lid of the font in which many a renowned poet's, artist's, tyrant's, philanthropist's twisted little features were similarly reflected, and poured on the water, rapidly drying the poor little skull with a single wipe of a napkin; then the servant in attendance powdered the baby's head, and the group, grotesquely inattentive throughout to the sacred rite, dispersed, and left me and a German family who had looked in with murmurs of sympathy for the child, to overmaster as we might any interest we had felt in a matter that had apparently not concerned them.

One is always coming upon this sort of thing in the Italian churches, this droll nonchalance in the midst of religious solemnities, which I suppose is promoted somewhat by the invasions of sight-seeing everywhere. In the Church of the Badia at Florence, one day, the indifference of the tourists and the worshippers to one another's presence was carried to such a point that the boy who was showing the strangers about, and was consequently in their interest, drew the curtain of a picture, and then, with his back to a group of kneeling devotees, balanced himself on the chapel-rail and sat swinging his legs there, as if it had been a store-box on a curbstone.

Perhaps we do not sufficiently account for the domestication of the people of Latin countries in their every-day-open church. They are quite at their ease there, whereas we are as unhappy in ours as if we were at an evening party; we wear all our good clothes, and they come into the houses of their Father in any rag they chance to have on, and are at home there. I have never seen a more careless and familiar group than that of which I was glad to form one, in the Church of Ognissanti, one day. I had gone, in my quality of American, to revere the tablet to Amerigo Vespucci which is there, and I found the great nave of the church occupied by workmen who were putting together the foundations of a catafalque, hammering away, and chatting cheerfully, with their mouths full of tacks and pins, and the funereal frippery of gold, black, and silver braid all about them. The church-beggars had left their posts to come and gossip with them, and the grandchildren of these old women were playing back and forth over the structure, unmolested by the workmen, and unawed either by the function going on in a distant chapel or by the theatrical magnificence of the sculptures around them and the fresco overhead, where a painted colonnade lifted another roof high above the real vault.

I liked all this, and I could not pass a church door without the wish to go in, not only for the pictures or statues one might see, but for the delightfully natural human beings one could always be sure of. Italy is above all lands the home of human nature,—simple, unabashed even in the presence of its Maker, who is probably not so much ashamed of his work as some would like to have us think. In the churches, the beggary which the civil government has disheartened almost out of existence in the streets is still fostered, and an aged crone with a scaldino in her lap, a tattered shawl over her head, and an outstretched, skinny palm, guards the portal of every sanctuary. She has her chair, and the church is literally her home; she does all but eat and sleep there. For the rest, these interiors had not so much novelty as the charm of old association for me. Either I had not enlarged my interests in the twenty years since I had known them, or else they had remained unchanged; there was the same old smell of incense, the same chill, the same warmth, the same mixture of glare and shadow. A function in progress at a remote altar, the tapers starring the distant dusk; the straggling tourists; the sacristan, eager, but not too persistent with his tale of some special attraction at one's elbow; the worshippers, all women or old men; a priest hurrying to or from the sacristy; the pictures, famous or unknown, above the side altars; the monuments, serious Gothic or strutting rococo,—all was there again, just as it used to be.

But the thing that was really novel to me, who found the churches of 1883 in Florence so like the churches of 1863 in Venice, was the loveliness of the deserted cloisters belonging to so many of the former. These inclose nearly always a grass-grown space, where daisies and dandelions began to abound with the earliest consent of spring. Most public places and edifices in Italy have been so much photographed that few have any surprise left in them: one is sure that one has seen them before; but the cloisters are not yet the prey of this sort of preacquaintance. Whether the vaults and walls of the colonnades are beautifully frescoed, like those of Sta. Maria Novella or Sta. Annunziata or San Marco, or the place has no attraction but its grass and sculptured stone, it is charming; and these cloisters linger in my mind as something not less Florentine in character than the Ponte Vecchio or the Palazzo Pubblico. I remember particularly an evening effect in the cloister of Santa Annunziata, when the belfry in the corner, lifted aloft on its tower, showed with its pendulous bells like a great, graceful flower against the dome of

the church behind it. The quiet in the place was almost sensible; the pale light, suffused with rose, had a delicate clearness; there was a little agreeable thrill of cold in the air; there could not have been a more refined moment's pleasure offered to a sympathetic tourist loitering slowly homeward to his hotel and its *table d'hôte*; and why we cannot have old cloisters in America, where we are getting everything that money can buy, is a question that must remain to vex us. A suppressed convent at the corner of, say, Clarendon street and Commonwealth Avenue, where the new Brattle street church is, would be a great pleasure on one's way home in the afternoon; but still I should lack the final satisfaction of dropping into the chapel of the Brothers of the Misericordia, a little farther on towards Santa Maria Novella.

The sentimentalist may despair as he pleases, and have his fill of panic about the threatened destruction of the Ponte Vecchio, but I say that while these brothers, "black-stoled, black-hooded, like a dream," continue to light the way to dusty death with their flaring torches through the streets of Florence, the mediæval tradition remains unbroken; Italy is still Italy. They knew better how to treat Death in the middle ages than we do now, with our vain profanation of flowers to his service, our loathsome dapperness of "burial caskets," and dress-coat and white tie for the dead. Those simple old Florentines, with their street wars, their pestilences, their manifold destructive violences, felt instinctively that he, the inexorable, was not to be hidden or palliated, not to be softened or prettified, or anywise made the best of, but was to be confessed in all his terrible gloom; and in this they found, not comfort, not alleviation, which time alone can give, but the anæsthesia of a freezing horror. Those masked and trailing sable figures, sweeping through the wide and narrow ways by night to the wild, long rhythm of their chant, in the red light of their streaming torches, and bearing the heavily draped bier in their midst, supremely awe the spectator, whose heart falters within him in the presence of that which alone is certain to be. I cannot say they are so effective by daylight, when they are carrying some sick or wounded person to the hospital; they have not their torches then, and the sun seems to take a cynical satisfaction in showing their robes to be merely of black glazed cotton. An anteroom of their chapel was fitted with locked and numbered drawers, where the brothers kept their robes; half a dozen coffin-shaped biers and litters stood about, and the floor was strewn with laurel-leaves,—I suppose because it was the festa of St. Sebastian.

THE BROTHERS OF MISERICORDIA.

VIII.

I do not know that the festas are noticeably fewer than they used to be in Italy. There are still enough of them to account for the delay in doing almost anything that has been promised to be done. The carnival came on scatteringly and reluctantly. A large sum of money which had been raised for its celebration was properly diverted to the relief of the sufferers by the inundations in Lombardy and Venetia, and the Florentines patiently set about being merry each on his own personal account. Not many were visibly merry, except in the way of business. The gentlemen of the operatic choruses clad themselves in stage-armor, and went about under the hotel-windows, playing and singing, and levying contributions on the inmates; here and there a white clown or a red devil figured through the streets; two or three carriages feebly attempted a *corso*, and there was an exciting rumor that *confetti* had been thrown from one of them: I did not see the *confetti*. There was for a long time doubt whether there was to be any *veglione* or ball on the

last night of the carnival; but finally there were two of them: one of low degree at the Teatro Umberto, and one of more pretension at the Pergola Theater. The latter presented an agreeable image of the carnival ball which has taken place in so many romances: the boxes filled with brilliantly dressed spectators, drinking champagne; the floor covered with maskers, gibbering in falsetto, dancing, capering, coquetting till daylight. This, more than any other aspect of the carnival, seemed to give one the worth of his money in tradition and association. Not but that towards the end the masks increased in the streets, and the shops where they sold costumes were very gay; but the thing is dying out, as at least one Italian, in whose veins the new wine of Progress had wrought, rejoiced to tell me. I do not know whether I rejoiced so much to hear it; but I will own that I did not regret it a great deal. Italy is now so much the sojourn of barbarians that any such gayety must be brutalized by them, till the Italians turn from it in disgust. Then it must be remembered that the carnival was fostered by their tyrants to corrupt and ener-

vate them; and I cannot wonder that their love of Italy is wounded by it. They are trying to be men, and the carnival is childish. I fancy that is the way my friend felt about it.

IX.

AFTER the churches, the Italians are most at home in their theaters, and I went as often as I could to see them there, preferably where they were giving the Stenterello plays. Stenterello is the Florentine mask or type who survives the older Italian comedy which Goldoni destroyed; and during carnival he appeared in a great variety of characters at three different theaters. He is always painted with wide purplish circles round his eyes, with an effect of goggles, and a hare-lip; and his hair, caught into a queue behind, curls up into a pigtail on his neck. With this face and this wig he assumes any character the farce requires, and becomes delicious in proportion to his grotesque unfitness for it. The best Stenterello was an old man, since dead, who was very famous in the part. He was of such a sympathetic and lovely humor that your heart warmed to him the moment he came upon the stage, and when he opened his mouth, it scarcely mattered what he said: those Tuscan gutturals and abounding vowels as he uttered them were enough; but certainly to see him in "Stenterello and his own Corpse," or "Stenterello Umbrellamender," or "Stenterello Quack Doctor" was one of the great and simple pleasures. He was an actor who united the quaintness of Jefferson to the sweetness of Warren; in his wildest burlesque he was so true to nature in every touch and accent, that I wanted to sit there and spend my life in the innocent folly of enjoying him. Apparently, the rest of the audience desired the same. Nowhere, even in Italy, was the sense of rest from all the hurrying, great weary world outside so full as in certain moments of this Stenterello's absurdity at the Teatro Rossini, which was not otherwise a comfortable place. It was more like a section of a tunnel than like a theater, being a rounded oblong, with the usual tiers of boxes, and the pit where there were seats in front, and two-thirds of the space left free for standing behind. Every day there was a new bill, and I remember "Stenterello White Slave in America" and "Stenterello as Hamlet" among the attractions offered. In fact, he runs through an indefinite number of dramas, as Brighella, Arlecchino, Pantalone, Florindo, Rosaura and the rest, appear and reappear in the comedies of Goldoni while he is temporizing with the old *commedia d'arte*, where he is at his best.

At what I may call the non-Stenterello theaters in Florence, they were apt to give versions of the more heart-breaking, vow-broken, French melodramas, though occasionally there was a piece of Italian origin, generally Giacosa's. But it seemed to me that there were now fewer Italian plays given than there were twenty years ago; and the opera season was almost as short and inclement as in Boston.

X.

I VISITED many places of amusements more popular than the theater, but I do not know that I can fitly offer them all to the more polite and formal acquaintance of my readers, whom I like always to figure as extremely well-behaved and well-dressed persons. Which of these refined and fastidious ladies and gentlemen shall I ask, for example, to go with me to see a dying Zouave in wax in a booth at the Mercato Vecchio, where there were other pathetic and monstrous figures? At the door was a peasant-like personage who extolled himself from time to time as the inventor of a musical instrument within, which he said he had exemplarily spent his time in perfecting, instead of playing cards and *mora*. I followed him inside with the crowd, chiefly soldiers, who were in such overwhelming force that I was a little puzzled to make out which corps and regiment I belonged to; but I shared the common edification of the performance, when our musical genius mounted a platform before a most intricate instrument, which

THE CLOWN.

combined in itself, as he boasted, the qualities of all other kinds of instruments. He shuffled off his shoes and played its pedals with his bare feet, while he sounded its pipes with his mouth, pounding a drum-attachment with one hand and scraping a violin-attachment with the other. I do not think the instrument will ever come into general use, and I have my doubts whether the inventor might not have better spared a moment or two of his time to *mora*. I enjoyed more a little vocal and acrobatic entertainment, where again I found myself in the midst of my brothers in arms. Civilians paid three cents to come in, but we military only two; and we had the best seats and smoked throughout the performance. This consisted of the feats of two nice, innocent-looking boys, who came

out and tumbled, and of two sisters who sang a very long duet together, screeching the dialogue with which it was interspersed in the ear-piercingest voices; it represented a lovers' quarrel, and sounded very like some which I have heard on the roof and the back fences. But what I admired about this and other popular shows was the perfect propriety. At the circus in the Via Nazionale they had even a clown in a dress-coat.

Of course, the two iron tanks full of young crocodiles which I saw in a booth in our piazza classed themselves with great moral shows, because of their instructiveness. The water in which they lay soaking was warmed for them, and the chill was taken off the air by a sheet-iron stove, so that, upon the whole, these saurians had the most comfortable quarters in the whole shivering city. Although they had up a sign, "Animali pericolosi—non si toccano," nothing was apparently further from their thoughts than biting; they lay blinking in supreme content, and allowed a captain of horse to poke them with his finger throughout my stay, and were no more to be feared than that younger brother of theirs whom the showman went about with in his hand, lecturing on him; he was half-hatched from his native egg, and had been arrested and neatly varnished in the act for the astonishment of mankind.

XI.

WE had the luck to be in Florence on the 25th of March, when one of the few surviving ecclesiastical shows peculiar to the city takes place. On that day a great multitude, chiefly of peasants from the surrounding country, assemble in front of the Duomo to see the explosion of the Car of the Pazzi. This car somehow celebrates the exploit of a crusading Pazzi, who broke off a piece of the Holy Sepulcher and brought it back to Florence with him; I could not learn just how or why, from the very scoffing and ironical little pamphlet which was sold in the crowd; but it is certain the car is covered with large fire-crackers, and if these explode successfully, the harvest for that year will be something remarkable. The car is stationed midway between the Duomo and the Baptistry, and the fire to set off the crackers is brought from the high altar by a pyrotechnic dove, which flies along a wire stretched for that purpose. If a mother with a sick child passes under the dove in its flight, the child is as good as cured.

The crowd was vast, packing the piazza outside around the car and the cathedral to its walls with all sorts and conditions of people, and every age and sex. An alley between the living walls was kept open under

the wire, to let the archbishop, heading a procession of priests, go out to bless the car. When this was done, and he had returned within, we heard a faint pop at the high altar, and then a loud fizzing as the fiery dove came flying along the wire, showering sparks on every side; it rushed out to the car, and then fled back to the altar, amidst a most satisfactory banging of the fire-crackers. It was not a very awful spectacle, and I suspect that my sarcastic pamphleteer's description was in the mood of most of the Florentines looking on, whatever the peasant thought. "'Now, Nina,' says the priest to the dove, 'we're almost ready, and look out how you come back, as well as go out. That's a dear! It's for the good of all, and don't play me a trick—you understand? Ready! Are you ready? Well, then,—*Gloria in excelsis Deo*,—go, go, dear, and look out for your feathers! *Shhhhh!* pum, pum! Hurrah, little one! Now for the return! Here you come! *Shhhhh!* pum, pum, pum! And I don't care a fig for the rest!' And he goes on with his mass, while the crowd outside console themselves with the cracking and popping. Then those inside the church join those without, and follow the car up to the corner of the Pazzi palace, where the unexploded remnants are fired in honor of the family."

XII.

THE civil rite now constitutes the only legal marriage in Italy, the blessing of the church going for nothing without it before the law; and I had had a curiosity to see the ceremony which one may see any day in the office of the syndic. The names of those intending matrimony are posted for a certain time on the base of the Public Palace, which gives everybody the opportunity of dedicating sonnets to them. The pay of a sonnet is one franc, so that the poorest couple can afford one; and I suppose the happy pair whom I saw waiting in the syndic's anteroom had provided themselves with one of these simple luxuries. They were sufficiently commonish, kindly-faced young people, and they and their friends wore, with their best clothes, an air of natural excitement. A bell sounded, and we followed the group into a large handsome saloon hung with red silk and old tapestries, where the bride and groom sat down in chairs placed for them at the rail before the syndic's desk, with their two witnesses at their left. A clerk recorded the names and residences of all four; and then the usher summoned the syndic, who entered, a large, stout old gentleman, with a tricolor sash accenting his fat middle—waist he had none. Everybody rose, and he asked the bride and groom severally if they would help each other

through life and be kind and faithful; then in a long, mechanical formula, which I could not hear, he dismissed them. They signed a register, and the affair was all over for us, and just begun for them, poor things. The bride seemed a little moved when we returned to the ante-room; she borrowed her husband's handkerchief, lightly blew her nose with it, and tucked it back in his breast-pocket.

XIII.

IN pursuance of an intention of studying Florence more seriously than anything here represents, I assisted one morning at a session of the police court, which I was willing to compare with the like tribunal at home. I

A SCAVENGER.

found myself in much the same sort of crowd as frequents the police court here; but upon the whole the Florentine audience, though shabby, was not so truculent-looking nor so dirty as the Boston one; and my respectability was consoled when I found myself shoulder to shoulder with an *abbate* in it. The thing that chiefly struck me in the court itself was the abundance of form and "presence," as compared with ours. Instead of our clerk standing up in his sack-coat, the court was opened by a crier in a black gown with a white shoulder-knot, and order was kept by others as ceremoniously appareled, instead of two fat, cravatless officers in blue flannel jackets

and Japanese fans. The judges, who were three, sat on a dais under a bust of King Umberto, before desks equipped with inkstands and sand-boxes exactly like those in the theater. Like the ushers, they wore black gowns and white shoulder-knots, and had on visorless caps bound with silver braid; the lawyers also were in gowns. The business with which the court opened seemed to be some civil question, and I waited for no other. The judges examined the witnesses, and were very keen and quick with them, but not severe; and what I admired in all was the good manner—self-respectful, unabashed; nobody seemed brow-beaten or afraid. One of the witnesses was one whom people near me called a *gobbino* (hunchbackling), and whose deformity was so grotesque that I am afraid a crowd of our people would have laughed at him, but no one smiled there. He bore himself with dignity, answering to the beautiful Florentine name of Vanuccio Vanucci; the judges first addressed him as *voi* (you), but slipped insensibly into the more respectful *lei* (lordship) before they were done with him. I was too far off from them to make out what it was all about.

XIV.

I BELIEVE there are not many crimes of violence in Florence; the people are not brutal, except to the dumb brutes, and there is probably more cutting and stabbing in Boston; and for shooting, it is almost unheard of. A society for the prevention of cruelty to animals has been established by some humane English ladies, which directs its efforts wisely to awakening sympathy for them in the children. They are taught kindness to cats and dogs, and it is hoped that when they grow up they will even be kind to horses. These poor creatures, which have been shut out of the pale of human sympathy in Italy by their failure to embrace the Christian doctrine ("*Non sono Cristiani!*"), are very harshly treated by the Florentines, I was told; though I am bound to say that I never saw an Italian beating a horse. The horses look wretchedly underfed and overworked, and doubtless they suffer from the hard, smooth pavements of the city, which are so delightful to drive on; but as for the savage scourgings, the kicking with heavy boots, the striking over the head with the butts of whips, I take leave to doubt if it is at all worse with the Italians than with us, though it is so bad with us that the sooner the Italians can be reformed the better.

If they are not very good to animals, I saw how kind they could be to the helpless and hapless of our own species, in a visit which I paid one morning to the Pia Casa di Rico-

A COURT-YARD NEAR FLORENCE.

vero in Florence. This refuge for pauperism was established by the first Napoleon, and is formed of two old convents, which he suppressed and joined together for the purpose. It has now nearly eight hundred inmates, men, women, and children; and any one found begging in the streets is sent there. The whole is under police government, and an officer was detailed to show me about the airy wards and sunny courts, and the clean, wholesome dormitories. The cleanliness of the place, in fact, is its most striking characteristic, and is promoted in the persons of the inmates by baths, perfunctory or voluntary, every week. The kitchen, with its shining coppers, was deliciously fragrant with the lunch preparing, as I passed through it: a mush of Indian meal boiled in a substantial meat-broth. This was served with an abundance of bread and half a gill of wine in pleasant refectories; some very old incapables and incurables were eating it in bed. The aged leisure gregariously gossiping in the wards, or blinking vacantly in the sunshine of the courts, was an enviable spectacle; and I should have liked to know what these old fellows had to complain of; for, of course, they were discontented. The younger inmates were all at work; there was an admirably appointed shop where they were artistically instructed in wood-carving and fine cabinet-work; and there were whole rooms full of little girls knitting, and of big girls weaving: all the clothes

worn there are woven there. I do not know why the sight of a very old tailor in spectacles, cutting out a dozen suits of clothes at a time, from as many thicknesses of cloth, should have been so fascinating. Perhaps in his presence I was hovering upon the secret of the conjectured grief of that aged leisure: its clothes were all cut of one size and pattern!

XV.

I HAVE spoken already of the excellent public schools of Florence, which I heard extolled again and again as the best in Italy; and I was very glad of the kindness of certain friends, which enabled me to visit them nearly all. The first which I saw was in that famous old Via de' Bardi where Romola lived, and which was inspired by a charity as large-minded as her own. It is for the education of young girls in book-keeping and those departments of commerce in which they can be useful to themselves and others, and has a subsidy from the state of two-fifths of its expenses; the girls pay each ten francs a year for their tuition, and the rest comes from private sources. The person who had done most to establish it was the lady in whose charge I found it, and who was giving her time to it for nothing; she was the wife of a professor in the School of Superior Studies (as the University of Florence modestly calls itself), and I hope I may be forgiven, for the

I found them in a vast old palace in the Via Parione, and the director kindly showed me through every department. Instruction is given in reading, writing, and arithmetic, and the other simpler branches; but the final purpose of the schools is to train the faculties for the practice of the decorative arts, and any art in which disciplined and nimble wits are useful. When a pupil enters, his name is registered, and his history in the school is carefully recorded up to the time he leaves it. It was most interesting to pass from one room to another, and witness the operation of the admirable ideas which animated the whole. Of course, the younger pupils were the quicker; but the director called them up without regard to age or standing, and let me hear them answer their teachers' questions, merely saying, "This one has been with us six weeks; this one, two; this one, three years," etc. They were mostly poor fellows out of the streets, but often they were peasants who walked five or six miles to and fro to profit by the chance offered them for a little life and light. Sometimes they were not too clean, and the smell in the rooms must have been trying to the teachers; but they were decently clad, attentive, and well-behaved. One of the teachers had come up through the schools, with no other training, and was very efficient. There was a gymnasium, and the pupils were taught the principles of hygiene; there was abundant scientific apparatus, and a free circulating library. There is no religious instruction, but in one of the rooms a professor from the *Studii Superiori* was lecturing on the Duties of a Citizen; I heard him talk to the boys about theft; he was very explicit with them, but just and kindly; from time to time he put a question to test their intelligence and attention. An admirable spirit of democracy—that is to say, of humanity and good sense—seemed to prevail throughout. The director made one little fellow read to me. Then, "What is your business?" he asked. "Cleaning out eave-troughs." Some of the rest tittered. "Why laugh?" demanded the director, sternly. "It is an occupation, like another."

There are no punishments; for gross misbehavior the offender is expelled. On the other hand, the pupils are given premiums for excellence, and are encouraged to put them into the savings-bank. The whole course is for four years; but in the last year's room few remained. Of these was a certain *rosso* (red-head), whom the director called up. Afterwards he told me that this *rosso* had a wild romantic passion for America, whither he supremely desired to go, and that it would be an inexpressible pleasure for him to have seen

me. I came away regretting that he could form so little idea, from my looks, of what America was really like.

In an old Medici palace, which was also once a convent, at the Oltarno end of the Trinità bridge, is the National Female Normal School, one of two in the kingdom, the other being at Naples. On the day of my visit, the older girls had just returned from the funeral of one of their professors—a priest of the neighboring parish of S. Spirito. It was at noon, and, in the natural reaction, they were chatting gayly; and as they ranged up and down stairs and through the long sunny corridors, pairing off, and whispering and laughing over their luncheon, they were very much like school-girls at home. The porter sent me upstairs through their formidable ranks to the room of the professor to whom I was accredited, and he kindly showed me through his department. It was scientific, and to my ignorance, at least, was thoroughly equipped for its work with the usual apparatus; but at that moment the light, clean, airy rooms were empty of students; and he presently gave me in charge of the directress, Signora Billi, who kindly led the way through the whole establishment. Some Boston lady, whom she had met in our educational exhibit at the Exposition in Paris, had made interest with her for all future Americans by giving her a complete set of our public-school textbooks, and she showed me with great satisfaction, in one of the rooms, a set of American school furniture, desks, and seats. But there the Americanism of the Normal School ended. The instruction was oral, the text-books few or none; but every student had her notebook in which she set down the facts and principles imparted. I do not know what the comparative advantages of the different systems are; but it seemed to me that there must be more life and sympathy in the Italian.

The pupils, who are of all ages from six years to twenty, are five hundred in number, and are nearly all from the middle class, though some are from the classes above and below that. They come there to be fitted for teaching, and are glad to get the places which the state, which educates them for nothing, pays scantily enough—two hundred and fifty dollars a year at most. They were all neatly dressed, and well-mannered, of course, from the oldest to the youngest; the discipline is perfect, and the relation of teachers and pupils, I understood, most affectionate. Perhaps after saying this I ought to add that the teachers are all ladies, and young ladies. One of these was vexed that I should see her girls with their hats and sacks on: but they were little ones and just going home; the little

AN ARRANGEMENT IN CHIMNEY-POTS.

ones were allowed to go home at one o'clock, while the others remained from nine till two. In the room of the youngest were two small Scotchwomen who had quite forgotten their parents' dialect; but in their blue eyes and auburn hair, in everything but their speech, they were utterly alien to the dusky bloom and gleaming black of the Italians about them. The girls were nearly all of the dark type, though there was here and there one of those opaque southern blondes one finds in Italy. Fair or dark, however, they all had looks of bright intelligence, though I should say that in beauty they were below the American average. All their surroundings here were wholesome and good, and the place was thoroughly comfortable, as the Italians understand comfort. They have no fire in the coldest weather, though at Signora G——'s commercial school they had stoves, to be used in extreme cases; but on the other hand they had plenty of light and sunny air, and all the brick floors and whitewashed walls were exquisitely clean. I should not have been much the wiser for seeing them at their lessons, and I shall always be glad of that impression of hopeful, cheerful young life which the sight of their leisure gave me, as they wandered happy and free through the corridors where the nuns used to pace with downcast eyes and folded palms; and I came away very well satisfied with my century.

My content was in nowise impaired by the visit which I made to the girls' public school in Via Montebello. It corresponded, I suppose, to one of our primary schools; and here, as elsewhere, the teaching was by dictation; the children had readers, but no other text-books; these were in the hands of the teachers alone. Again everything was very clean, very orderly, very humane and kindly. The little ones in the various rooms, called up at random, were wonderfully proficient in reading,

mathematics, grammar, and geography; one small person showed an intimacy with the map of Europe which was nothing less than dismaying if one had had his difficulties in keeping the Caspian Sea out of it.

I did not succeed in getting to the boys' schools, but I was told that they were practically the same as this; and it seemed to me that if I must miss either, it was better to see the future mothers of Italy at their books. Here alone was there any hint of the church in the school: it was a Friday, and the priest was coming to teach the future mothers their catechism.

XVI.

FEW of my readers, I hope, have failed to feel the likeness of these broken and ineffectual sketches to the pictures in stone which glare at you from the windows of the mosaicists on the Lungarno and in the Via Borgognissanti; the wonder of them is greater than the pleasure. I have myself had the fancy, in my work, of a number of small views and figures of mosaic, set in a slab of black marble for a table-top,—or, if the reader does not like me to be so ambitious, a paper-weight; and now I am tempted to form a border to this *capo d'opera*, bizarre and irregular, such as I have sometimes seen composed of the bits of *pietra viva* left over from a larger work. They are mere fragments of color, scraps and shreds of Florence, which I find still gleaming more or less dimly in my note-books, and I have no notion of making any ordered arrangement of them.

But I am sure that if I shall but speak of how the sunshine lies in the Piazza of the Annunziata at noonday, falling on the feebly dribbling grotesques of the fountain there, and on John of Bologna's equestrian grand duke, and on that dear and ever lovely band of babes by Luca della Robbia in the façade

of the Hospital of the Innocents, I shall do enough to bring it all back to him who has once seen it, and to justify myself at least in his eyes.

The beautiful pulpit of Donatello in San Lorenzo I find associated in sensation with the effect, from the old cloistered court of that church, of Brunelleschi's dome and Giotto's tower showing in the pale evening air above all the picturesque roofs between San Lorenzo and the cathedral; and not remote from these is my pleasure in the rich vulgarity and affluent bad taste of the modern decoration of the *Caffè del Parlamento*, in which one takes one's ice under the chins of all these pretty girls, popping their little sculptured heads out of the lunettes below the frieze, with the hats and bonnets of fifteen years ago on them.

Do you remember, beloved brethren and sisters of Florentine sojourn, the little windows beside the grand portals of the palaces, the *cantine*, where you could buy a graceful wicker-covered flask of the prince's or marquis's wine? "Open from ten till four — till one on holidays," they were lettered; and in the Borgo degli Albizzi I saw the Cantina Filicaja, though it had no longer the old sigh for Italy upon its lips:

"Deh, fossi tu men bella o almen più forte!"

I am far from disdaining the memory of my horse-car tour of the city, on the track which followed so nearly the line of the old city wall that it showed me most of the gates still left standing, and the last grand duke's arch of triumph, very brave in the sunset light. The tramways make all the long distances in the Florentine outskirts and suburbs, and the cars never come when you want them, just as with us, and are always as crowded.

I had a great deal of comfort in two old fellows, unoccupied custodians, in the convent of San Marco, who, while we were all fidgiting about, doing our Fra Angelico or our Savonarola, sat motionless in a patch of sunshine and tranquilly gossiped together in senile falsetto. On the other hand, I never saw truer grief, or more of it, in a custodian than the polite soul displayed in the Bargello on whom we came so near the hour of closing one day that he could show us almost nothing. I could see that it wrung his heart that we should have paid our francs to come in then, when the Dante in the peaceful Giotto fresco was only a pensive blur to the eye, and the hideous realizations of the great Pest in wax were mere indistinguishable nightmares. We tried to console him by assuring him of our delight in Della Robbia's singing boys in another room, and of the compensation we had in getting away from the Twelve (Useless) Labors of Hercules by Rossi, and two or

three particularly unpleasant muscular Abstractions of Michael Angelo. It was in fact too dark to see much of the museum, and we had to come again for that; but no hour could have been better than that of the falling dusk for the old court, with its beautiful staircase, where so many hearts had broken in the anguish of death, and so many bloody heads rolled upon the insensible stones since the first Podestà of Florence had made the Bargello his home, till the last Medici had made it his prison.

Of statues and of pictures I have spoken very little, because it seems to me that others have spoken more than enough. Yet I have hinted that I did my share both of suffering and enjoying in galleries and churches, and I have here and there still lurking in my consciousness a color, a look, a light, a line from some masterpiece of Botticelli, of Donatello, of Mino da Fiesole, which I would fain hope will be a consolation forever, but which I will not vainly attempt to impart to others. I will rather beg the reader, when he goes to Florence, to go for my sake, as well as his own, to the Academy and look at the Spring of Botticelli as long and often as he can keep away from the tender and dignified and exquisitely refined Mino da Fiesole sculptures in the Badia, or wherever else he may find them. These works he may enjoy without technique, and simply upon condition of his being a tolerably genuine human creature. There is something also very sweet and winningly simple in the archaic reliefs in the base of Giotto's tower; and the lessee of the Teatro Umberto in showing me behind the scenes of his theater had a politeness that was delicious, and comparable to nothing less than the finest works of art. In quality of courtesy the Italians are still easily first of all men, as they are in most other things when they will, though I am not sure that the old gentleman who is known in Florence as The American, *par excellence*, is not perhaps preëminent in the art of driving a circus-chariot. This compatriot has been one of the most striking and characteristic features of the place for a quarter of a century, with his team of sixteen or twenty horses guided through the Florentine streets by the reins gathered into his hands. From time to time his horses have run away and smashed his carriage, or at least pulled him from his seat, so that now he has himself strapped to the box, and four grooms sit with folded arms on the seats behind him, ready to jump down and fly at the horses' heads. As the strange figure, drawn at a slow trot, passes along, with stiffly-waxed mustache and impassive face, it looks rather like a mechanical contrivance in the human form; and you are yielding to this fancy, when, approaching

FOUNTAIN IN THE BOBOLI GARDENS.

a corner, it breaks into a long cry, astonishingly harsh and fierce, to warn people in the next street of its approach. It is a curious sight, and seems to belong to the time when rich and privileged people used their pleasure to be eccentric, and the "madness" of Englishmen especially was the amazement and delight of the Continent. It is in character with this that the poor old gentleman should bear one of our own briefly historical names, and that he should illustrate in the indulgence of his caprice the fact that no great length of time is required to arrive at all that centuries can do for a noble family. I have been sorry to observe a growing impatience with him on the part of the Florentine journalists. Upon the occasion of his last accident they asked if it was not time his progresses should be forbidden. Next to tearing down the Ponte Vecchio, I can imagine nothing worse.

Journalism is very active in Florence, and newspapers are sold and read everywhere; they are conspicuous in the hands of people who are not supposed to read; and more than once the cab-driver whom I called at a street corner had to fold up his cheap paper and put it away before he could respond. They are of a varying quality. The "Nazione," which

is serious and political, is as solidly, if not so heavily, written as an English journal; the "Fanfulla della Domenica," which is literary, contains careful and brilliant reviews of new books. The cheap papers are apt to be inflammatory in politics; if humorous, they are local and somewhat unintelligible. The more pretentious satirical papers are upon the model of the French—a little more political, but abounding mostly in jokes at the expense of the seventh commandment, which the Latins find so droll. There are in all thirty periodicals, monthly, weekly, and daily, published in Florence, which you are continually assured is no longer the literary center of Italy. It is true none of the leaders of the new realistic movement in fiction are Florentines by birth or residence; the chief Italian poet, Carducci, lives in Bologna, the famous traveler De Amicis lives in Turin, and most new books are published at Milan or Naples. But I recur again to the group of accomplished scholars who form the intellectual body of the *Studii Superiori*, or University of Florence; and thinking of such an able and delightful historian as Villari, and such a thorough and indefatigable littérateur as Gubernatis, whom the

congenial intellectual atmosphere of Florence has attracted from Naples and Piedmont, I should not, if I were a Florentine, yield the palm without a struggle.

One does not turn one's face from Florence without having paid due honors in many a regretful, grateful look to the noble and famous river that runs through her heart. You are always coming upon the Arno, and always seeing it in some new phase or mood. Belted with its many bridges, and margined with towers and palaces, it is the most beautiful and stately thing in the beautiful and stately city, whether it is in a dramatic passion from the recent rains, or dreamily raving of summer drouth over its dam, and stretching a bar of silver from shore to shore. The tawny splendor of its flood; the rush of its rapids; the glassy expanses in which the skies mirror themselves by day, and the lamps by night; the sweeping curve of the pale buff line of houses that follows its course, give a fascination which is not lost even when the anxiety of a threatened inundation mingles with it. The storms of a single night, sending down their torrents from the hills, set it foaming; it rises momentarily, and nothing but the presence of all the fire-engine companies in the city allays

public apprehension. What they are to do to the Arno in case it overflows its banks, or whether they are similarly called out in summer when it shrinks to a rill in its bed, and sends up clouds of mosquitoes, I do not know; nor am I quite comfortable in thinking the city is drained into it. From the vile old rancid stenches which steam up from the crevices in the pavement everywhere, one would think the city was not drained at all; but this would be as great a mistake as to think New York is not cleaned, merely because it looks filthy.

Before we left Florence we saw the winter drowse broken in the drives and alleys of the Cascine; we saw the grass, green from November till April, snowed with daises, and the floors of the dusky little dingles empurpled with violets. The nightingales sang from the poplar tops in the dull rich warmth; the carriages blossomed with lovely hats and parasols; handsome cavaliers and slim-waisted ladies dashed by on blooded horses (I will say blooded for the effect), and a fat flower-girl urged her wares upon every one she could overtake. It was enough to suggest what the Cascine could be to Florence in the summer, and enough to make one regret the winter, when one could have it nearly all to one's self.

You can never see the Boboli Garden with the same sense of ownership, for it distinctly belongs to the king's palace, and the public has the range of it only on Sundays, when the people throng it. But, unless one is very greedy, it is none the less a pleasure for that, with its charming, silly grottoes, its masses of ivy-covered wall, its curtains of laurel-hedge, its black spires of cypress and domes of pine, its weather-beaten marbles, its sad, unkempt lawns, its grotesque, overgrown fountain, with those sea-horses so much too big

for its lake, its wandering alleys and moss-grown seats abounding in talking age and whispering lovers. It has a tangled vastness in which an American might almost lose his self-consciousness; and the view of Florence from one of its heights is incomparably enchanting,—like every other view of Florence.

Like that, for instance, which one has from the tower of the Palazzo Vecchio, looking down on the picturesque surfaces of the city tiles, the silver breadth and stretch of the Arno, the olive- and vine-clad hills, the vast champaign widening in the distance till the misty tops of the mountains softly close it in at last. Here, as from San Miniato, the domed and galleried bulk of the cathedral showed prodigiously first of all things; then the eye rested again and again upon the lowered crests of the mediæval towers, monumentally abounding among the modern roofs that swelled above their broken pride. The Florence that I saw was indeed no longer the Florence of the sentimentalist's feeble desire, or the romancer's dream, but something vastly better: contemporary, real, busy in its fashion, and wholesomely and every-daily beautiful. And my heart still warms to the famous town, not because of that past which, however heroic and aspiring, was so wrong-headed and bloody and pitiless, but because of the present, safe, free, kindly, full of possibilities of prosperity and fraternity, like Boston or Denver.

The weather had grown suddenly warm overnight. I looked again at the distant mountains, where they smoldered along the horizon: they were purple to their tips, and no ghost of snow glimmered under any fold of their mist. Our winter in Florence had come to an end.

RELIEF FROM PIAZZA DELLA SIGNORIA.

IN THE BIG HORN MOUNTAINS.

[DRAWN BY R. SWAIN GIFFORD, ENGRAVED BY R. A. MULLER.]

STILL-HUNTING THE GRIZZLY.

THE grizzly bear undoubtedly comes in the category of dangerous game, and is, perhaps, the only animal in the United States that can be fairly so placed, unless we count the few jaguars found north of the Rio Grande. But the danger of hunting the grizzly has been greatly exaggerated, and the sport is certainly very much safer than it was at the beginning of this century. The first hunters who came into contact with this great bear were men belonging to that hardy and adventurous class of backwoodsmen which had filled the wild country between the Appalachian Mountains and the Mississippi. These men carried but one weapon, the long-barreled, small-bored pea-rifle, whose bullets ran seventy to the pound, the amount of powder and lead being a little less than that contained in the cartridge of a thirty-two-caliber Winchester. In the Eastern States almost all the hunting was done in the woodland; the shots were mostly obtained at short distance, and deer and black bear were the largest game; moreover, the pea-rifles were marvelously accurate for close range, and their owners were famed the world over for their skill as marksmen. Thus these rifles had so far proved plenty good enough for the work they had to do, and had also done excellent service as military weapons in the ferocious wars that the men of the border carried on with their Indian neighbors, and even in conflict with more civilized foes, as at the battles of King's Mountain and New Orleans. But when the restless frontiersmen pressed out over the Western plains, they encountered in the grizzly a beast of far greater bulk and more savage temper than any of those found in the Eastern woods, and their small-bore rifles were utterly inadequate weapons with which to cope with him. It is small wonder that he was considered by them to be almost invulnerable and extraordinarily tenacious of life. He would be a most unpleasant antagonist now to a man armed only with a thirty-two-caliber rifle, that carried but a single shot and was loaded at the muzzle. A rifle, to be of use in this sport, should carry a ball weighing from half an ounce to an ounce. With the old pea-rifles the shot had to be in the eye or heart, and accidents to the hunter were very common. But the introduction of heavy breech-loading repeaters has greatly lessened the danger, even in the very few and far-off places where the grizzlies are as fer-

ocious as formerly. For nowadays these great bears are undoubtedly much better aware of the death-dealing power of men, and, as a consequence, far less fierce, than was the case with their forefathers, who so unhesitatingly attacked the early Western travelers and explorers. Constant contact with rifle-carrying hunters, for a period extending over many generations of bear-life, has taught the grizzly by bitter experience that man is his undoubted overlord, as far as fighting goes; and this knowledge has become a hereditary characteristic. No grizzly will attack a man now unprovoked, and one will almost always rather run than fight; though if he is wounded or thinks himself cornered he will attack his foes with a headlong, reckless fury that renders him one of the most dangerous of wild beasts. The ferocity of all wild animals depends largely upon the amount of resistance they are accustomed to meet with, and the quantity of molestation to which they are subjected. The change in the grizzly's character during the last half century has been precisely paralleled by the change in the characters of his northern cousin, the polar bear, and of the South African lion. When the Dutch and Scandinavian sailors first penetrated the Arctic seas they were kept in constant dread of the white bear, who regarded a man as simply an erect variety of seal, quite as good eating as the common kind. The records of these early explorers are filled with examples of the ferocious and man-eating propensities of the polar bears; but in the accounts of most of the later Arctic expeditions it is portrayed as having learned wisdom, and being now most anxious to keep out of the way of the hunters. A number of my sporting friends have killed white bears, and none of them were ever even charged. And in South Africa the English sportsmen and Dutch boers have taught the lion to be a very different creature from what it was when the first white man reached that continent. If the Indian tiger had been a native of the United States, it would now be one of the most shy of beasts.

How the prowess of the grizzly compares with that of the lion or tiger would be hard to say; I have never shot either of the latter myself, and my brother, who has killed tigers in India, has never had a chance at a grizzly. Owing to its bulk and muscular development being two or three times as great, I should think that any one of the big bears we killed

on the mountains would make short work of a lion or a tiger; but, nevertheless, I believe either of the latter would be much more dangerous to a hunter or other human being, on account of the immensely superior speed of its charge, the lightning-like rapidity of its movements, and its apparently sharper senses. Still, after all is said, the man should have a thoroughly trustworthy weapon and a fairly cool head who would follow into his own haunts and slay grim Old Ephraim.

A grizzly will only fight if wounded or cornered, or, at least, if he thinks himself cornered. If a man by accident stumbles on to one close up, he is almost certain to be attacked, really more from fear than from any other motive,—exactly the same reason that makes a rattlesnake strike at a passer-by. I have personally known of but one instance of a grizzly turning on a hunter before being wounded. This happened to a friend of mine, a Californian ranchman, who, with two or three of his men, was following a bear that had carried off one of his sheep. They got the bear into a cleft in the mountain from which there was no escape, and he suddenly charged back through the line of his pursuers, struck down one of the horsemen, seized the arm of the man in his jaws and broke it as if it had been a pipe-stem, and was only killed after a most lively fight, in which, by repeated charges, he at one time drove every one of his assailants off the field.

But two instances have come to my personal knowledge where a man has been killed by a grizzly. One was that of a hunter at the foot of the Big Horn Mountains who had chased a large bear and finally wounded him. The animal turned at once and came straight at the man, whose second shot missed. The bear then closed and passed on, after striking only a single blow; yet that one blow, given with all the power of its thick, immensely muscular fore-arm, armed with nails as strong as so many hooked steel spikes, tore out the man's collar-bone and snapped through three or four ribs. He never recovered from the shock, and died that night.

The other instance occurred, two or three years ago, to a neighbor of mine, who has a small ranch on the Little Missouri. He was out on a mining trip, and was prospecting with two other men near the headwaters of the Little Missouri, in the Black Hills country. They were walking down along the river, and came to a point of land thrust out into it, which was densely covered with brush and fallen timber. Two of the party walked round by the edge of the stream; but the third, a German, and a very powerful fellow, followed a well-beaten game-trail leading

through the bushy point. When they were some forty yards apart the two men heard an agonized shout from the German, and at the same time the loud coughing growl, or roar, of a bear. They turned just in time to see their companion struck a terrible blow on the head by a grizzly, which must have been roused from its lair by his almost stepping on it; so close was it that he had no time to fire his rifle, but merely held it up over his head as a guard. Of course it was struck down, the claws of the great brute at the same time shattering his skull like an egg-shell. The man staggered on some ten feet before he fell; but when he did fall he never spoke or moved again. The two others killed the bear after a short, brisk struggle, as he was in the midst of a most determined charge.

In 1872, near Fort Wingate, New Mexico, two soldiers of a cavalry regiment came to their death at the claws of a grizzly bear. The army surgeon who attended them told me the particulars, so far as they were known. They were mail-carriers, and one day did not come in at the appointed time. Next day a relief party was sent out to look for them, and after some search found the bodies of both, as well as that of one of the horses. One of the men still showed signs of life; he came to his senses before dying, and told the story. They had seen a grizzly and pursued it on horseback, with their Spencer rifles. On coming close, one had fired into its side, when it turned with marvelous quickness for so large and unwieldy an animal, and struck down the horse, at the same time inflicting a ghastly wound on the rider. The other man dismounted and came up to the rescue of his companion. The bear then left the latter and attacked the other. Although hit by the bullet, it charged home and threw the man down, and then lay on him and deliberately bit him to death; his groans and cries were frightful to hear. Afterwards it walked off into the bushes without again offering to molest the already mortally wounded victim of its first assault.

At certain times the grizzly works a good deal of havoc among the herds of the stockmen. A friend of mine, a ranchman in Montana, told me that one fall bears became very plenty around his ranches, and caused him severe loss, killing with ease even full-grown beef-steers. But one of them once found his intended quarry too much for him. My friend had a stocky, rather vicious range stallion, which had been grazing one day near a small thicket of bushes, and towards evening came galloping in with three or four gashes in one haunch, that looked as if they had been cut with a dull axe. The cowboys

knew at once that he had been assailed by a bear, and rode off to the thicket near which he had been feeding. Sure enough a bear, evidently in a very bad temper, sallied out as soon as the thicket was surrounded, and, after a spirited fight and a succession of charges, was killed. On examination, it was found that his under jaw was broken, and part of his face smashed in, evidently by the stallion's hoofs. The horse had been feeding, when the bear leaped out at him, but failed to kill at the first stroke; then the horse lashed out behind, and not only freed himself, but also severely damaged his opponent.

Doubtless the grizzly could be hunted to advantage with dogs, which would not, of course, be expected to seize him, but simply to find and bay him, and distract his attention by barking and nipping. Occasionally a bear can be caught in the open and killed with the aid of horses. But nine times out of ten the only way to get one is to put on moccasins and still-hunt it in its own haunts, shooting it at close quarters. Either its tracks should be followed until the bed wherein it lies during the day is found, or a given locality in which it is known to exist should be carefully beaten through, or else a bait should be left out and a watch kept on it to catch the bear when he has come to visit it.

During last summer we found it necessary to leave my ranch on the Little Missouri, and take quite a long trip through the cattle country of south-eastern Montana and northern Wyoming; and having come to the foot of the Big Horn Mountains, we took a fortnight's hunt through them after elk and bear.

We went into the mountains with a pack-train, leaving the ranch wagon at the place where we began to go up the first steep rise. There were two others besides myself in the party: one of them, the teamster, a weather-beaten old plainsman, who possessed a most extraordinary stock of miscellaneous misinformation upon every conceivable subject; and the other, my ranch foreman, Merrifield. Merrifield was originally an Eastern backwoodsman, and during the last year or two has been my *fidus Achates* of the hunting field; he is a well-built, good-looking fellow, an excellent rider, a first-class shot, and a keen sportsman. None of us had ever been within two hundred miles of the Big Horn range before; so that our hunting trip had the added zest of being also an exploring expedition.

Each of us rode one pony, and the packs were carried on four others. We were not burdened by much baggage. Having no tent, we took the canvas wagon-sheet instead; our bedding, plenty of spare cartridges, some flour, bacon, coffee, sugar, and salt, and a few

very primitive cooking utensils, completed the outfit.

The Big Horn range is a chain of bare rocky peaks, stretching lengthwise along the middle of a table-land which is about thirty miles wide. At its edges this table-land falls sheer off into the rolling plains country. From the rocky peaks flow rapid brooks of clear, icy water, which take their way through deep gorges that they have channeled out in the surface of the plateau; a few miles from the heads of the streams these gorges become regular cañons, with sides so steep as to be almost perpendicular. In traveling, therefore, the trail has to keep well up towards timber-line, as lower down horses find it difficult or impossible to get across the valleys. In strong contrast to the treeless cattle plains extending to its foot, the sides of the table-land are densely wooded with tall pines. Its top forms what is called a park country,—that is, it is covered with alternating groves of trees and open glades, each grove or glade varying in size from half a dozen to many hundred acres.

We went in with the pack-train two days' journey before pitching camp in what we intended to be our hunting grounds, following an old Indian trail. No one who has not tried it can understand the work and worry that it is to drive a pack-train over rough ground and through timber. We were none of us very skillful at packing, and the loads were all the time slipping. Sometimes the ponies would stampede with the packs half tied, or they would get caught among the fallen logs, or, in a ticklish place, would suddenly decline to follow the trail, or would commit some other of the thousand tricks which seem to be all a pack-pony knows. Then, at night, they were a bother; if picketed out, they fed badly and got thin, and if they were not picketed, they sometimes strayed away. The most valuable one of the lot was also the hardest to catch. Accordingly, we used to let him loose with a long lariat tied round his neck, and one night this lariat twisted up in a sage brush, and in struggling to free himself the pony got a half-hitch round his hind leg, threw himself, and fell over a bank into a creek on a large stone. We found him in the morning very much the worse for wear, his hind legs swelled up so that his chief method of progression was by a series of awkward hops. Of course, no load could be put upon him, but he managed to limp along behind the other horses, and actually, in the end, reached the ranch on the Little Missouri, three hundred miles off. No sooner had he got there and been turned loose to rest, than he fell down a big wash-out and broke his neck. Another time, one of the mares—a homely beast,

with a head like a camel's — managed to flounder into the very center of a mud-hole, and we spent the better part of a morning in fishing her out.

We spent several days at the first camping-place, killing half a dozen elk, but none with very fine heads. All of these were gotten by still-hunting, Merrifield and I following up their trails, either together or separately. Throughout this trip I used a buckskin hunting-suit, a fur cap, and moccasins. Not only was this dress very lasting, but it was also very inconspicuous in the woods (always an important point for a hunter to attend to); and in it I could walk almost noiselessly, the moccasins making no sound whatever, and the buckskin reducing the rustling of branches and twigs as I passed through them to a minimum. Both of us carried Winchester rifles. Mine was a 45-75, half-magazine, stocked and sighted to suit myself. At one time I had bought a double-barreled English Express, but I soon threw it aside in favor of the Winchester, which, according to my experience, is much the best weapon for any American game.

Although it was still early in September, the weather was cool and pleasant, the nights being frosty; and every two or three days there was a flurry of light snow, which rendered the labor of tracking much more easy. Indeed, throughout our stay in the mountains, the peaks were snow-capped almost all the time. Our fare was excellent, consisting of elk venison, mountain grouse, and small trout, the last caught in one of the beautiful little lakes that lay almost up by the timber-line. To us, who had for weeks been accustomed to make small fires from dried brush, or from sage-brush roots, which we dug out of the ground, it was a treat to sit at night before the roaring and crackling pine logs; as the old teamster quaintly put it, we had at last come to a land "where the wood grew on trees." There were plenty of black-tail deer in the woods, and we came across a number of bands of cow and calf elk, or of young bulls; but after several days' hunting, we were still without any head worth taking home, and had seen no sign of grizzly, which was the game we were especially anxious to kill for neither Merrifield nor I had ever seen a wild bear alive.

One day we separated. I took up the trail of a large bull elk, and though after a while I lost the track, in the end I ran across the animal itself, and after a short stalk got a shot at the noble-looking old fellow. It was a grand bull, with massive neck and twelve-tined antlers; and he made a most beautiful picture, standing out on a crag that jutted over the sheer cliff wall, the tall pine-trees behind him

and the deep cañon at his feet, while in the background rose the snow-covered granite peaks. As I got up on my knees to fire he half-faced towards me, about eighty yards off, and the ball went in behind the shoulder. He broke away into the forest, but stopped before he had gone twenty rods, and did not need the second bullet to which he fell. I reached camp early in the afternoon, and waited for a couple of hours before Merrifield put in an appearance. At last we heard a shout — the familiar long-drawn *Ei-koh-h-h* of the cattlemen — and he came in sight, galloping at speed down an open glade, and waving his hat, evidently having had good luck; and when he reined in his small, wiry cow-pony, we saw that he had packed behind his saddle the fine, glossy pelt of a black bear. Better still, he announced that he had been off about ten miles to a perfect tangle of ravines and valleys where bear sign was very thick; and not of black bear either, but of grizzly. The black bear (the only one we got on the mountains) he had run across by accident. While riding up a valley in which there was a patch of dead timber grown up with berry bushes, he noticed a black object, which he first took to be a stump; for during the past few days we had each of us made one or two clever stalks up to charred logs which our imagination converted into bears. On coming near, however, the object suddenly took to its heels; he followed over frightful ground at the pony's best pace, until it stumbled and fell down. By this time he was close on the bear, which had just reached the edge of the wood. Picking himself up, he rushed after it, hearing it growling ahead of him; after running some fifty yards the sounds stopped, and he stood still listening. He saw and heard nothing until he happened to cast his eyes upwards, and there was the bear, almost overhead, and about twenty-five feet up a tree; and in as many seconds afterwards it came down to the ground with a bounce, stone dead. It was a young bear, in its second year, and had probably never before seen a man, which accounted for the ease with which it was treed and taken. One minor result of the encounter was to convince Merrifield — the list of whose faults did not include lack of self-confidence — that he could run down any bear; in consequence of which idea we on more than one subsequent occasion went through a good deal of violent exertion.

Merrifield's tale made me decide to shift camp at once, and go over to the spot where the bear-tracks were so plenty, which was not more than a couple of miles from where I had slain the big elk. Next morning we were off, and by noon pitched camp by a clear brook, in a valley with steep, wooded sides, but with

good feed for the horses in the open bottom. We rigged the canvas wagon-sheet into a small tent, sheltered by the trees from the wind, and piled great pine logs nearly where we wished to place the fire; for a night-camp in the sharp fall weather is cold and dreary unless there is a roaring blaze of flame in front of the tent.

That afternoon we again went out, and I shot another fine bull elk. I came home alone towards nightfall, walking through a reach of burnt forest, where there was nothing but charred tree-trunks and black mold. When nearly through it I came across the huge, half-human footprints of a great grizzly, which must have passed by within a few minutes. It gave me rather an eerie feeling in the silent, desolate woods, to see for the first time the unmistakable proofs that I was in the home of the mighty lord of the wilderness. I followed the tracks in the fading twilight until it became too dark to see them any longer, and then shouldered my rifle and walked back to camp.

That night we almost had a visit from one of the animals we were after. Several times we had heard at night the calling of the bull elks, a sound than which there is nothing more musical in nature. No writer has done it justice; it has in it soft, flute-like notes, and again chords like those of an *Æolian* harp, or like some beautiful wind instrument. This night, when we were in bed and the fire was smoldering, we were roused by a ruder noise,—a kind of grunting or roaring whine, answered by the frightened snorts of the ponies. It was a bear, which had evidently not seen the fire, as it came from behind the bank, and had probably been attracted by the smell of the horses. After it made out what we were, it staid round a short while, again uttered its peculiar roaring grunt, and went off. We had seized our rifles and run out into the woods, but in the darkness could see nothing; indeed, it was rather lucky we did not stumble across the bear, as he could have made short work of us when we were at such a disadvantage.

Next day we went off on a long tramp through the woods and along the sides of the cañons. There were plenty of berry bushes growing in clusters, and all around these there were fresh tracks of bear. But the grizzly is also a flesh-eater, and has a great liking for carrion. On visiting the place where Merrifield had killed the black bear, we found that the grizzlies had been there before us, and had utterly devoured the carcass with cannibal relish. Hardly a scrap was left, and we turned our steps toward where lay the second bull elk I had killed. It was quite late in the afternoon when we reached

the place. A grizzly had evidently been at the carcass during the preceding night, for his great foot-prints were in the ground all around it, and the carcass itself was gnawed and torn, and partially covered with earth and leaves; for the grizzly has a curious habit of burying all of his prey that he does not at the moment need. A great many ravens had been feeding on the body, and they wheeled about over the tree-tops above us, uttering their barking croaks.

The forest was composed mainly of what are called ridge-pole pines, which grow close together, and do not branch out until the stems are thirty or forty feet from the ground. Beneath these trees we walked over a carpet of pine-needles, upon which our moccasined feet made no sound. The woods seemed vast and lonely, and their silence was broken now and then by the strange noises always to be heard in the great forests, and which seem to mark the sad and everlasting unrest of the wilderness. We climbed up along the trunk of a dead tree which had toppled over until its upper branches struck in the limb-crotch of another, that thus supported it at an angle half-way in its fall. When above the ground far enough to prevent the bear's smelling us, we sat still to wait for his approach; until, in the gathering gloom, we could no longer see the sights of our rifles, and could but dimly make out the carcass of the great elk. It was useless to wait longer, and we clambered down and stole out to the edge of the woods. The forest here covered one side of a steep, almost cañon-like ravine, whose other side was bare except of rock and sage-brush. Once out from under the trees, there was still plenty of light, although the sun had set, and we crossed over some fifty yards to the opposite hillside and crouched down under a bush to see if perchance some animal might not also leave the cover. To our right the ravine sloped downward towards the valley of the Big Horn River, and far on its other side we could catch a glimpse of the great main chain of the Rockies, their snow-peaks glinting crimson in the light of the set sun. Again we waited quietly in the growing dusk until the pine-trees in our front blended into one dark, frowning mass. We saw nothing; but the wild creatures of the forest had begun to stir abroad. The owls hooted dismally from the tops of the tall trees, and two or three times a harsh, wailing cry, probably the voice of some lynx or wolverine, arose from the depths of the woods. At last, as we were rising to leave, we heard the sound of the breaking of a dead stick from the spot where we knew the carcass lay. It was a sharp, sudden noise, perfectly distinct

from the natural creaking and snapping of the branches,—just such a sound as would be made by the tread of some heavy creature. “Old Ephraim” had come back to the carcass. A minute afterward, listening with strained ears, we heard him brush by some dry twigs. It was entirely too dark to go in after him; but we made up our minds that on the morrow he should be ours.

Early next morning we were over at the elk carcass, and, as we expected, found that the bear had eaten his fill at it during the night. His tracks showed him to be an immense fellow, and were so fresh that we doubted if he had left long before we arrived; and we made up our minds to follow him up and try to find his lair. The bears that lived on these mountains had evidently been little disturbed. Indeed, the Indians and most of the white hunters are rather chary of meddling with “Old Ephraim,” as the mountain men style the grizzly, unless they get him at a disadvantage; for the sport is fraught with some danger and but small profit. The bears thus seemed to have very little fear of harm, and we thought it far from unlikely that the bed of the one who had fed on the elk would not be far away.

My companion was a skillful tracker, and we took up the trail at once. For some distance it led over the soft, yielding carpet of moss and pine-needles, and the foot-prints were quite easily made out, although we could follow them but slowly; for we had, of course, to keep a sharp lookout ahead and around us as we walked noiselessly on in the somber half-light always prevailing under the great pine-trees, through whose thickly interlacing branches stray but few beams of light, no matter how bright the sun may be outside. We made no sound ourselves, and every little sudden noise sent a thrill through me as I peered about with each sense on the alert. Two or three of the ravens which we had scared from the carcass flew overhead, croaking hoarsely; and the pine-tops moaned and sighed in the slight breeze—for pine-trees seem to be ever in motion, no matter how light the wind.

After going a few hundred yards the tracks turned off on a well-beaten path made by the elk; the woods were in many places cut up by these game-trails, which had often become as distinct as ordinary foot-paths. The beast's footprints were perfectly plain in the dust, and he had lumbered along up the path until near the middle of the hillside, where the ground broke away and there were hollows and boulders. Here there had been a wind-fall, and the dead trees lay among the living, piled across one another in all directions;

while between and around them sprouted up a thick growth of young spruces and other evergreens. The trail turned off into the tangled thicket, within which it was almost certain we would find our quarry. We could still follow the tracks, by the slight scrapes of the claws on the bark, or by the bent and broken twigs; and we advanced with noiseless caution, slowly climbing over the dead tree-trunks and upturned stumps, and not letting a branch rustle or catch on our clothes. When in the middle of the thicket we crossed what was almost a breastwork of fallen logs, and Merrifield, who was leading, passed by the upright stem of a great pine. As soon as he was by it he sank suddenly on one knee, turning half round, his face fairly aflame with excitement; and as I strode past him, with my rifle at the ready, there, not ten steps off, was the great bear, slowly rising from his bed among the young spruces. He had heard us, but apparently hardly knew exactly where or what we were, for he reared up on his haunches sideways to us. Then he saw us and dropped down again on all fours, the shaggy hair on his neck and shoulders seeming to bristle as he turned towards us. As he sank down on his fore feet I had raised the rifle; his head was bent slightly down, and when I saw the top of the white bead fairly between his small, glittering, evil eyes, I pulled trigger. Half rising up, the huge beast fell over on his side in the death-throes, the ball having gone into his brain, striking as fairly between the eyes as if the distance had been measured by a carpenter's rule.

The whole thing was over in twenty seconds from the time I caught sight of the game; indeed, it was over so quickly that the grizzly did not have time to show fight at all or come a step towards us. It was the first I had ever seen, and I felt not a little proud as I stood over the great brindled bulk, which lay stretched out at length in the cool shade of the evergreens. He was a monstrous fellow, much larger than any I have seen since, whether alive or brought in dead by the hunters. As near as we could estimate (for of course we had nothing with which to weigh more than very small portions), he must have weighed about twelve hundred pounds; and though this is not as large as some of his kind are said to grow in California, it is yet a very unusual size for a bear. He was a good deal heavier than any of our horses; and it was with the greatest difficulty that we were able to skin him. He must have been very old, his teeth and claws being all worn down and blunted; but nevertheless he had been living in plenty, for he was as fat as a prize hog, the layers on his back being a finger's length in thickness. He

was still in the summer coat, his hair being short, and in color a curious brindled brown, somewhat like that of certain bull-dogs; while all the bears we shot afterwards had the long thick winter fur, cinnamon or yellowish brown. By the way, the name of this bear has reference to its character, and not to its color, and should, I suppose, be properly spelt grisly,—in the sense of horrible, exactly as we speak of a “grisly specter,”—and not grizzly; but perhaps the latter way of spelling it is too well established to be now changed.

In killing dangerous game steadiness is more needed than good shooting. No game is dangerous unless a man is close up, for nowadays hardly any wild beast will charge from a distance of a hundred yards, but will rather try to run off; and if a man is close it is easy enough for him to shoot straight if he does not lose his head. A bear's brain is about the size of a pint bottle; and any one can hit a pint bottle off-hand at thirty or forty feet. I have had two shots at bears at close quarters, and each time I fired into the brain, the bullet in one case striking fairly between the eyes, as told above, and in the other going in between the eye and ear. A novice at this kind of sport will find it best and safest to keep in mind the old Norse viking's advice in reference to a long sword: “If you go in close enough, your sword will be long enough.” If a poor shot goes in close enough, he will find that he shoots straight enough.

I was very proud over my first bear; but Merrifield's chief feeling seemed to be disappointment that the animal had not had time to show fight. He was rather a reckless fellow, and very confident in his own skill with the rifle; and he really did not seem to have any more fear of the grizzlies than if they had been so many jack-rabbits. I did not at all share his feeling, having a hearty respect for my foes' prowess, and in following and attacking them always took all possible care to get the chances on my side. Merrifield was sincerely sorry that we never had to stand a regular charge; we killed our five grizzlies with seven bullets, and, except in the case of the she and cub spoken of farther on, each was shot about as quickly as it got sight of us.

The last one we got was an old male, which was feeding on an elk carcass. We crept up to within about sixty feet, and, as Merrifield had not yet killed a grizzly purely to his own gun, and I had killed three, I told him to take the shot. He at once whispered gleefully, “I'll break his leg, and we'll see what he'll do!” Having no ambition to be a participator in the antics of a three-legged bear, I hastily interposed a most emphatic

veto; and with a rather injured air he fired, the bullet going through the neck just back of the head. The bear fell to the shot, and could not get up from the ground, dying in a few minutes; but first he seized his left wrist in his teeth and bit clean through it, completely separating the bones of the paw and arm. Although a smaller bear than the big one I first shot, he would probably have proved a much more ugly foe, for he was less unwieldy, and had much longer and sharper teeth and claws. I think that if my companion had merely broken the beast's leg he would have had his curiosity as to its probable conduct more than gratified.

We tried eating the grizzly's flesh, but it was not good, being coarse and not well flavored; and besides, we could not get over the feeling that it had belonged to a carrion-feeder. The flesh of the little black bear, on the other hand, was excellent; it tasted like that of a young pig. Doubtless, if a young grizzly, which had fed merely upon fruits, berries, and acorns, was killed, its flesh would prove good eating; but even then it would probably not be equal to a black bear.

A day or two after the death of the big bear, we went out one afternoon on horseback, intending merely to ride down to see a great cañon lying some six miles west of our camp; we went more to look at the scenery than for any other reason, though, of course, neither of us ever stirred out of camp without his rifle. We rode down the valley in which we had camped through alternate pine groves and open glades, until we reached the cañon, and then skirted its brink for a mile or so. It was a great chasm, many miles in length, as if the table-land had been rent asunder by some terrible and unknown force; its sides were sheer walls of rock, rising three or four hundred feet straight up in the air, and worn by the weather till they looked like the towers and battlements of some vast fortress. Between them at the bottom was a space, in some places nearly a quarter of a mile wide, in others very narrow, through whose middle foamed a deep rapid torrent of which the sources lay far back among the snow-topped mountains around Cloud Peak. In this valley, dark-green, somber pines stood in groups, stiff and erect; and here and there among them were groves of poplar and cottonwood, with slender branches and trembling leaves, their bright green already changing to yellow in the sharp fall weather. We went down to where the mouth of the cañon opened out, and rode our horses to the end of a great jutting promontory of rock, thrust out into the plain; and in the cold clear air we looked far over the broad valley of the Big Horn as it lay

at our very feet, walled in on the other side by the distant chain of the Rocky Mountains.

Turning our horses, we rode back along the edge of another cañon-like valley, with a brook flowing down in its center, and its rocky sides covered with an uninterrupted pine forest—the place of all others in whose inaccessible wildness and ruggedness a bear would find a safe retreat. After some time we came to where other valleys, with steep grass-grown sides, covered with sage-brush, branched out from it, and we followed one of these out. There was plenty of elk sign about, and we saw several black-tail deer. These last were very common on the mountains, but we had not hunted them at all, as we were in no need of meat. But this afternoon we came across a buck with remarkably fine antlers, finer than any I had ever got, and accordingly I shot it, and we stopped to cut off and skin out the horns, throwing the reins over the heads of the horses and leaving them to graze by themselves. The body lay near the crest of one side of a deep valley or ravine which headed up on the plateau a mile to our left. Except for scattered trees and bushes the valley was bare; but there was heavy timber along the crests of the hills on its opposite side. It took some time to fix the head properly, and we were just finishing when Merrifield sprang to his feet and exclaimed, “Look at the bears!” pointing down into the valley below us. Sure enough, there were two bears (which afterwards proved to be an old she and a nearly full-grown cub) traveling up the bottom of the valley, much too far off for us to shoot. Grasping our rifles and throwing off our hats, we started off as hard as we could run diagonally down the hillside, so as to cut them off. It was some little time before they saw us, when they made off at a lumbering gallop up the valley. It would seem impossible to run into two grizzlies in the open, but they were going up hill and we down, and moreover the old one kept stopping. The cub would forge ahead and could probably have escaped us, but the mother now and then stopped to sit up on her haunches and look round at us, when the cub would run back to her. The upshot was that we got ahead of them, when they turned and went straight up one hillside as we ran straight down the other behind them. By this time I was pretty nearly done out, for running along the steep ground through the sage-brush was most exhausting work; and Merrifield kept gaining on me and was well in front. Just as he disappeared over a bank, almost at the bottom of the valley, I tripped over a bush and fell full length. When I got up I knew I could never make up the ground I had lost, and besides could

hardly run any longer. Merrifield was out of sight below, and the bears were laboring up the steep hillside directly opposite and about three hundred yards off; so I sat down and began to shoot over Merrifield's head, aiming at the big bear. She was going very steadily and in a straight line, and each bullet sent up a puff of dust where it struck the dry soil, so that I could keep correcting my aim; and the fourth ball crashed into the old bear's flank. She lurched heavily forward, but recovered herself and reached the timber, while Merrifield, who had put on a spurt, was not far behind.

I toiled up the hill at a sort of trot, fairly gasping and sobbing for breath; but before I got to the top I heard a couple of shots and a shout. The old bear had turned as soon as she was in the timber, and come towards Merrifield; but he gave her the death-wound by firing into her chest, and then shot at the young one, knocking it over. When I came up he was just walking towards the latter to finish it with the revolver, but it suddenly jumped up as lively as ever and made off at a great pace—for it was nearly full-grown. It was impossible to fire where the tree-trunks were so thick, but there was a small opening across which it would have to pass, and collecting all my energies I made a last run, got into position, and covered the opening with my rifle. The instant the bear appeared I fired, and it turned a dozen somersaults downhill, rolling over and over; the ball had struck it near the tail and had ranged forward through the hollow of the body. Each of us had thus given the fatal wound to the bear into which the other had fired the first bullet. The run, though short, had been very sharp, and over such awful country that we were completely fagged out, and could hardly speak for lack of breath. The sun had already set, and it was too late to skin the animals; so we merely dressed them, caught the ponies—with some trouble, for they were frightened at the smell of the bear's blood on our hands—and rode home through the darkening woods. Next day we brought the teamster and two of the steadiest pack-horses to the carcasses, and took the skins into camp.

The feed for the horses was excellent in the valley in which we were camped, and the rest after their long journey across the plains did them good. They had picked up wonderfully in condition during our stay on the mountains; but they were apt to wander very far during the night, for there were so many bears and other wild beasts round that they kept getting frightened and running off. We were very loath to leave our hunting grounds, but time was pressing, and we had already

THE DEATH OF OLD EPHRAIM.

[DRAWN BY A. B. FROST, ENGRAVED BY S. P. DAVIS.]

many more trophies than we could carry; so one cool morning, when the branches of the evergreens were laden with the feathery snow that had fallen overnight, we struck camp and started out of the mountains, each of us taking his own bedding behind his saddle, while the pack-ponies were loaded down with bear skins, elk and deer antlers, and the hides and furs of other game. In single file we

moved through the woods and across the cañons to the edge of the great table-land, and then slowly down the steep slope to its foot, where we found our canvas-topped wagon. Next day saw us setting out on our long journey homewards, across the three hundred weary miles of treeless and barren-looking plains country.

Theodore Roosevelt.

ORCHIDS.

THE tulipomania which two hundred and fifty years ago shook financial Holland to its very center finds a mild, modern echo in the orchidomania of to-day.

Orchids, it is true, have not created an "exchange" where fortunes are won and lost in a day. An orchid bulb has never been owned by a company and sold on shares, as its prototype was in sober, money-getting Holland in days gone by; still, the fact that a single plant of this group has been known to cost hundreds and even thousands of dollars offers some slight justification for the coinage of a word to express the popular estimate of the fancy that lies back of such transactions.

A visit to a fine collection of plants some months ago brought conviction home that there were still a few people ignorant of what an orchid is. Within the space of ten minutes I heard one group of people informed that they were "pitcher-plants," and that "travelers were often saved from death by the water they held"; and another party was informed that they were "a species of the prickly pear." Pointing to one of the bulbs, the instructress said, "There is the pear, you see, but this one hasn't any prickles."

Orchids are plants belonging to the monocotyledons—the same great class as Indian corn; many of them are air-plants; all of them, almost without exception, show some marked peculiarity of form or function. There are no flowers which so richly repay study as do the

orchids; their forms are so extraordinary, their properties so curious, their structure and habits so marvelous, that it is not strange they should prove so absorbingly interesting to the intelligent collector. A taste for orchids can be indulged by very few people, because of the great expense it entails. The variety of these plants which will grow in an ordinary greenhouse is comparatively small. Being gathered, as they are, from every latitude, growing under every climatic condition, it is necessary, in order to insure success in artificial rearing, to have several different greenhouses for a collection including any great variety.

The mere mimetic quality of orchids, which catches the eye and fancy of casual observers, has been absurdly exaggerated both in verbal description and popular illustration. Making all due allowance, however, for this exaggeration, the suggestion found in their curious forms of birds and butterflies, spiders (Fig. 1) and ants, and even of strange mythologic monsters, is strong enough to give added interest to their fantastic beauty of form and color.

I shall make no attempt here to illustrate many of the more magnificent varieties of the orchids,—of the *Vandea*, the *Sobralias*, the *Laelias* and *Stanhopias*,—since, without reproducing their natural size and colors, no idea of the real beauty of the flowers could be given. The gorgeousness of tint, the singularity of marking to be found among them, are to be found nowhere else in the vegetable world. Every color of the rainbow is represented in the orchid family, and scores of tints that the rainbow knows not. Great rosy sheets of blossoms, masses of gorgeous orange (Fig. 2), vivid lemon-color, somber brown, and coral red, clusters of delicate blue and lilac and pink, of Nile green, and opalescent

FIG. 1.—ODONTOGLOSSUM
CORDATUM.

FIG. 2.—DENDROBIUM FIMBRIATUM.

tints which show gleams of every known color, are to be found among them. These flowers show wonderful markings, too, spots and stripes, and even in one case distinct checks (*Vanda limbata*). The whole gamut of tone and color is touched, and here and there rich harmonies of tint just verging upon discord, minor chords of color, seem vibrating through the air of an orchid house full of plants in bloom.

The number of flowers in bloom at once almost surpasses belief.* I have seen two hundred and seventy blossoms on a single plant in a private orchid house on Madison Square, and even greater numbers are on record.

In *Le Flore* is the account of a plant (*Phalænopsis Schilleriana*, Fig. 3) bearing three hundred and seventy-eight flowers at once, which was purchased at auction by Sir Trevor Lawrence for about \$3300. When it is remembered that every one of these blossoms is as large and perfect as a Cape jasmine, and in color "celestial rosy red," some idea of the glory of the plant may be reached. The duration of the flower is another great charm of some of the members of the orchid family. The plant just spoken of is very remarkable in this respect. Mr. Murray, formerly head gardener of Mr. Isaac Buchanan's orchid house, in Astoria, Long Island, informed me some time ago that he had exhibited the same plant, covered with the same blossoms, for five consecutive months at the Horticultural Rooms,† the flowers remaining perfect all that time.

The fact that so many of these plants are epiphytes, or air-plants, makes an orchid house the most interesting of all conservatories. While the shelves are filled with the terrestrial forms, and such of the air-plants as require a great deal of moisture,—their roots immersed in wet moss, in pots pierced with many holes,—the walls and roofs are hung with myriads of other varieties, fastened upon bits of bark, tied to cross-sections of small trees (Fig. 4), in hanging baskets and other devices, from which great sprays sweep down and out, bearing dozens of exquisite or curious blossoms. Some of them, in accordance with the eccentricities of the family, prefer to live upside down (Fig. 5), and have never been successfully reared until they were hung by the heels in this way.

The epiphytic orchids have often a very curious look, with all their domestic economy in view—their long straggling white roots reaching down into the air below them to gather nutriment and moisture from it. In some common varieties, as well as rare ones, new bulbs form on parts of the stem, which send out leaves and roots and blossoms while still attached to the parent plant (Fig. 6). These pseudo-bulbs, as Fitzgerald calls them, form reservoirs of moisture stored up against a time of drought. Many of the Australian orchids show very

* Fitzgerald speaks of an Australian variety, *Dendrobium Hillii*, which had forty thousand flowers in bloom at once.

† On Twenty-eighth street, near Broadway, where the first Tuesday of every month a display of orchids may usually be seen among other flowers. In May and June the display is sometimes of orchids alone.

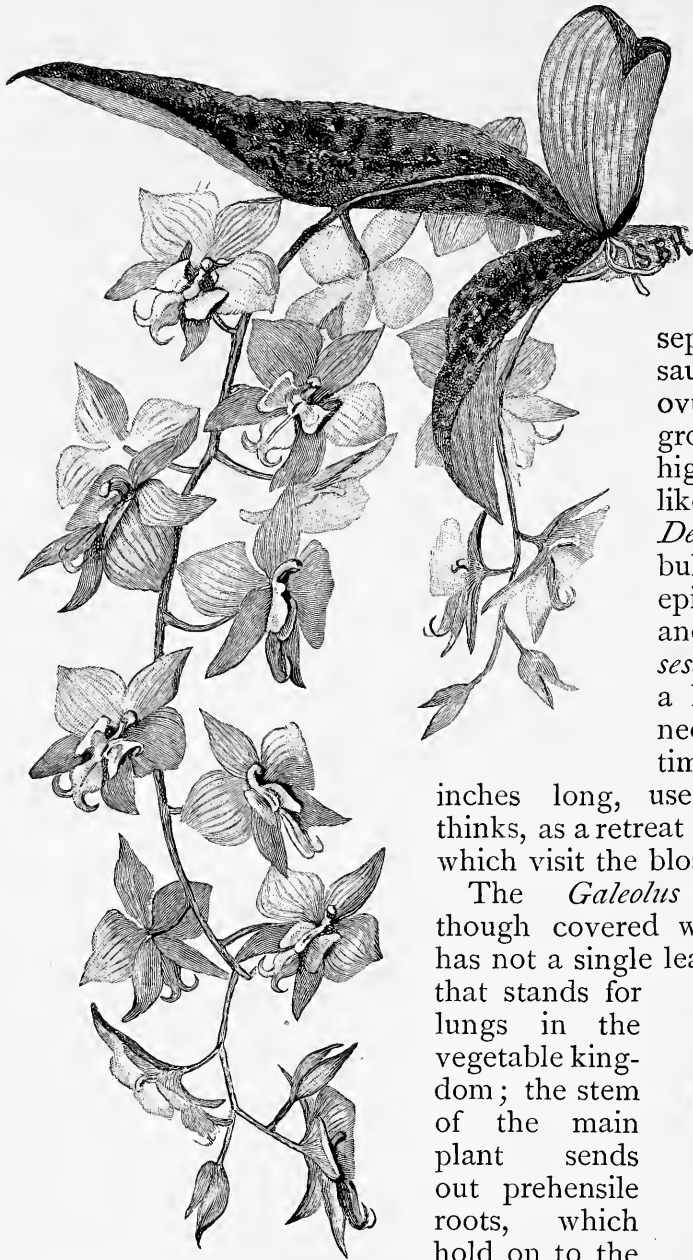

FIG. 3.—PHALÆNOPSIS SCHILLERIANA.

the entire plant look nothing more than a detached spray of blossoms. The peculiarities of this eccentric family are not confined to their flowers. One, *Dendrobium cucumerinum*, has solid leaves, like a cucumber, after which it is named.

The purpose of every plant is not so much the attainment of individual perfection as it is the perpetuation of the species. The culmination in flower and fruit is for this end. In the heart of every flower are guarded the precious pollen and ovules, whose union will produce the seed. The delicate petals wrap them about; the green sepals cradle them safe. The color and perfume and nectar of the flower all help in the attainment of the one end of bringing the two together. In ordinary flowers the sepals—making the green calyx—form the outer protection to the growing bud; the petals,—a single row, many rows, or a bell,—making the corolla, come next in order. In the heart of the rosette

remarkable peculiarities. The *Calochilus campestris* has a fringed labellum, which looks like a pink and blue ostrich feather, as large as the rest of the flower. The *Caleana major* is wonderfully suggestive of a family of fantastic red ants taking a gay promenade up the stem; colors and all are correct imitations. In the corysanthes all the parts are rudimentary except the labellum and the upper sepal. The flower rests like a cup in its saucer upon a flat heart-shaped leaf. If the ovules are fertilized, the column or its pedicel grows from one and one-half to six inches high; if not, the flower perishes, and lies like a blot upon the foliage leaf beneath. *Dendrobium tetragonium* has square pseudobulbs. *Spathoglottis Paulinae*, though an epiphyte, is independent of insect agency and fertilizes itself. The flower of *Angræcum sesquipedale*, like *A. Scottianum* (Fig. 12), has a long whip-like nectary, sometimes fourteen inches long, used, Fitzgerald thinks, as a retreat for the insects which visit the blossom.

The *Galeolus cassythrides*, though covered with blossoms, has not a single leaf—the organ that stands for lungs in the vegetable kingdom; the stem of the main plant sends out prehensile roots, which hold on to the trees on which it lives, making

FIG. 4.—ODONTOGLOSSUM ROSSII AND ONCIDIUM BARKERII ON SECTION OF TRUNK; EPIDENDRUM POLYANTHUS, SPRAY BACK OF CIRCLE.

are the stamens, bearing the yellow pollen-dust, and down deep below the surface nestling in their receptacle the ovules waiting for the vivifying touch of the pollen to wake them into activity. Opening out of the chamber where the ovules rest is some sort of a passage-way through a stem called the style, ending in a sticky stigma, the whole together being commonly called a pistil. For the production of a seed it is necessary that the pollen-grain shall reach an ovule and that the contents of the two cells shall mingle. In many plants the pollen of a flower drops or is blown upon the stigma of the same, or of some other flower; in others insects visiting it for honey or for pollen-dust, out of which they make bee-bread, convey the grains from flower to flower, or from stamen to stigma. However this may happen, when fertilization is effected it is because one or more living pollen-grains have stuck fast to the moist stigma; when this occurs the pollen-grain begins to push out a tiny tube, which grows down and down through the whole length of the style till it reaches the ovary. It then finds its way, often guided by growths and ridges, to the mouth of a little opening in the end of an ovule; when this is done the contents of the pollen-grain pour themselves through the tube into the ovule, and fertilization is effected. Each ovule grows into a seed capable, under proper conditions, of becoming a plant like the parent plants.

Among the orchids there are certain flowers which are singularly affected by this penetration of the pollen-tubes. Flowers which, unfertilized, remain fresh and perfect for weeks, wither away at once after being fertilized. When beauty and fragrance and sweetness have served their purpose, they fade away and disappear.

In some plants this penetration and fertilization of the ovules takes only a few hours or days. In the orchids it sometimes takes three months, and the pollen-tubes may be seen hanging from the stigma like a bundle of white silk threads.

The majority of plants produce more vigorous and healthy seed if they are cross-fertilized,—that is, if the pollen of one flower or plant fertilizes the ovule of another. The devices by which insects are attracted to certain flowers, and then decoyed into performing the service of cross-fertilization, without their own knowledge or consent, are numberless and most curious. Epiphytic orchids especially seem to need this service; the pollen of a flower, in some varieties, is impotent to fertilize its own ovules, and in some cases it even acts as a poison when artificially applied to its own stigma.

The ordinary flower arrangement is very much modified in the orchideæ. Instead of simple circles of sepals, petals, stamens, and pistils, one within the other, as we see in the wild rose and other common flowers, the combinations and peculiar development of certain parts make a very puzzling result. The flower of an ordinary orchid (Fig. 9, *Cattleya triana delicata*) is composed of three colored sepals, three petals (one, the labellum, being very much modified), and a column made up of stamens and pistils. By a singular twist in the stem and ovary of orchids, the flower is turned upside down; the labellum, which by rights would have been the upper petal, becomes the lower one. In *Malaxis paludosa*, a small British species, the twisting has been carried so far that the labellum has come up again, and

FIG. 5.—CATTLEYA CITRINA.

FIG. 6. DENDROBIUM NOBILIS.
L. Labellum. b. Pseudo-bulb. r. Root.

occupies the topmost position on the flower. The labellum of orchids is curiously enough not a simple petal. It has incorporated into it two of the stamens, which probably accounts for its difference from all the other petals of the flower; the back part of it toward the stem is usually prolonged into a horn-shaped nectary, sometimes very long and deep. In *Angraecum Scottianum* (Fig. 12) it reaches the length of ten or twelve inches. In *Disa grandiflora* (Fig. 7), one of the loveliest of the terrestrial orchids, with its large, rosy, lily-like flower, it is the posterior sepal, and not a petal which is drawn out into a nectary.

Some of the simpler cases of cross-fertilization by insect agency may be briefly explained. The pollen of most orchids, instead of lying loose as a yellow dust in the open pods of the stamens, is bound together by elastic threads into little packages about a central stalk; the stalk, its packages of pollen, and the sticky, disk-like base are together called a pollinium. The base is inclosed in a sensitive cap, which usually projects into the cavity of the flower in the direct path to the nectary. Let us take an orchid which the bees frequent, and suppose the insect to enter the flower in search of

honey: the path to the nectary is circumscribed. To reach it the bee must force its way by the sensitive rostellum. A touch, and the cap flies back, the base of the pollinia rests upon the head of the bee, and in a few seconds the sticky cement sets hard, gluing the pollinia, or one of them, upon the head of the insect, which soon withdraws, adorned with a top-knot. Darwin has found bees with numbers of these bases glued fast to their heads; in some cases the insect was blinded by them, the eyes being completely covered with the hardened basal disk of the pollinium, which only comes off by wearing off. In accordance with the instinct of bees not to "mix their drinks," our little messenger goes from one flower to another of the same kind. It is easy to see that if she enters a second flower as she entered the first, the pollen on the end of the pollinium will only strike another pollen mass, and no good will be effected; but let us try an experiment. An ordinary lead-pencil inserted into the flower will simulate a bee, and being left there as long as it takes a bee to drink her fill, and then withdrawn, the pencil will come out adorned, like the bee, with a top-knot. Now watch! the stalk of the pollinium slowly bends and takes such a position that, inserting the pencil into a second flower, it strikes directly on its stigma, and is glued fast to it. Now the elastic threads show what is their use. If the pencil is left in the second flower long enough to fasten the pollen firmly to the stigma, the packages are torn away from the stalk of the pollinium; if not, the elastic threads hold them so that they are not lost, and the bee (or pencil) may effect fertilization in a third flower.

This is a very simple device for an orchid. Let us look into another, a little more complex. The *Aërides odorata* (Fig. 8) is a very common and favorite orchid; the cluster looks not unlike a raceme of pale-pink hyacinths, and has an odor of overpowering sweetness. A single flower, separated from the cluster and viewed sidewise, is seen to be made up of a very much curved horn, with five small petals springing from its convex side not far below the upper or larger end. The upper part of the horn is divided into four flaps by four longitudinal clefts. The two slightly curved side-flaps stand up in position; the front one on the concave side of the horn is of a long, leaf-like form, and curves over the top toward the back, making a lid to the mouth of the horn from the back-flap spring, the five petals with the stem coming from the midst. The horn is the labellum lengthened out into the nectary which holds the honey. The so-called petals are as numbered—1, 2, 3, sepals; 4 and 5, petals. Looked at from every side, there is no appearance of column, no stamens or pistil. Now press against the lidded part of the horn; it swings lightly away from the rest of the flower, and a little upright bird comes out, the petals forming its liberal supply of wings. The stigma lies in the throat of the bird, the

pollen-pods on the top of its head; the pollen is where the eye-mark appears.

The flower of the *Aërides* shows one of the simpler modes which, in the orchid tribe, insure cross-fertilization. But, before looking into this, it will be necessary to examine a little more closely the organization of the flower. In the illustration, the head, body, and legs of the bird form the column; at *s*, below the bill, in the throat, is the sticky stigma, ready to receive and hold fast any pollen that touches it. In this orchid, as in most of the tribe, the pollen, instead of lying loose in the pods when they open, as is the case with most flowers, is done up in neat parcels bound to the stalk of the pollinium. An insect attracted to the flower by its sweetness alights on the closed mouth of the horn, the labellum, which is always the "alighting-board" of the orchid-trap. The weight of the bee (let us say) is sufficient to make the hinged cornucopia swing a little downward and away from the rest of the flower. This makes a slight opening between the tip of the lid and the bird's throat; into this goes the bee's head, pressing against the bill of the bird. While sucking, the base of the pollinium is glued fast, and the bee comes out adorned with it. Bees with the pollinia of orchids on their heads had been observed and named "captain bees" by certain apiculturists, who supposed the crest to mark some natural difference. This, however, has proved to be nothing more than a badge of office.

Following Mr. Darwin, I inserted my pencil into the nectary of the flower; in passing, it touched the bird's bill; the rostellum flew back, the base of the pollinium glued itself to the pencil, and the stalk sprang up at right angles to the base; slowly the stalk began to bend forward and take such a position as would make it strike the stigma in the next flower entered, the projecting bill of the bird helping to scoop off the pollen masses as the pencil was withdrawn from a second flower.

Very remarkable members of the orchid family are the species of *Pterostylis* (Fig. 10), which seem to belong in great measure to Australia. Fitzgerald, in his work on Australian orchids, pictures a large number, and they all appear to have one striking peculiarity: they set a sort of spring-trap, catching unwary insects, and holding them prisoners till they perform the office desired of them. The flower of *Pterostylis longifolia*, a good type of the class, is long and tubular, being closed in on every side, as well as on top, with the exception of one opening in the front. Out of this hangs a thick, rough petal, almost as a tongue might loll out of an open mouth. On this tongue—the labellum—the insect visitor is sure to settle. In an instant the unwary victim is thrown into the closed chamber of the flower by the sudden flapping up of the lolling tongue, which almost completely closes the outlet. There is just one place where the light comes in to the captive; he makes for that by the only path open to him, which forces him to press closely to the pollen, and get well dusted over with it as he comes out. He cannot enter the same flower immediately, as the tongue does not come out again for about half an hour; so he goes to some other blossom of the same kind, to be again caught and again released, this time depositing pollen-grains on the stigma, and taking on a new load.

FIG. 8.—DISSECTION OF *AËRIDES ODORATA*.

FIG. 7.—*DISA GRANDIFLORA*.

The flower of the vanilla, which is allied to the *Pterostylis*, just described, attracts insects by its delicious odor. The "way into this parlor" is as easy as the way into difficulties proverbially is: the entrance is lined with a flexible brush made of a series of

FIG. 9.—CATTLEYA TRIANA DELICATA.

combs, placed side by side and turned *toward* the nectary. It is easy enough to get in; but when the captive has satisfied himself and wants to get out, the problem is a very different one. All the teeth of the comb now are bristling in his face, forming a perfect *chevaux-de-frise*. In order to escape, he has to press close against the column, which covers him with pollen, to be deposited on the stigma of the next flower he shall visit. Both Darwin and Fitzgerald remark upon the fact that, in spite of all these wonderful contrivances, few beans are perfected on the vanillas unless artificial fertilization is resorted to.

One of the sobralias of Guatemala, allied to the vanilla, Darwin says, secretes a nectar too powerful for the British bee. After partaking, the bee stretched his legs out and lay on the labellum for some time, apparently dead; after a while, however, he recovered and seemed as well as ever, having evidently slept off the effects of his debauch.

Some orchids, with all these wonderful adaptations for cross-fertilization, yet make provision against extinction in case the insects do not do their duty. The *Cephalanthera*, one of these, is a tubular flower, with a slightly projecting tongue. Its pollen, instead of being bound into packets, is dry and easily dispersed. It is found that before the flower opens part of the pollen sends down a multitude of tubes into its own stigma, but only a part of it. Experimenting upon this plant, Darwin found that these self-fertilized ovules produced

seed, but that they were not as vigorous as those produced by cross-fertilization. Besides securing the flower against accidents, these pollen-tubes served two other purposes: they anchored the remainder of the pollen, saving it from being dispersed, and they also formed guiding ridges which should secure the cross-fertilization of a number of the ovules, in case the flower was visited by insects.

The ovules of the beautiful *Disa grandiflora* are usually self-fertilized, though cross-fertilization by insects is also possible, and sometimes occurs; but foreign agency seems far less necessary to the terrestrial orchids than it is to the epiphytes.

A most remarkable exotic orchid belongs to the family of the *Vandææ*, the *Coryanthes* (Fig. 11). In this species the petals and sepals flare out like wings, while the nectary forms a rounded bucket, overhung by the

FIG. 10.—PTEROSTYLIS LONGIFOLIA.

labellum in the form of a rounded or flat plate, with two horns projecting, one on either side. These horns drop a liquid-like sweetened water into the bucket. When the fluid rises to a certain height, it pours off through a spout in the back of the bucket. The plate above the bucket is a favorite feeding-ground of certain humble-bees (*Euglossæ*), who crowd upon it so that one after another is pushed off in the struggle, and falls off into the bucket beneath. Soaked and sticky from their sudden plunge, the bees cannot fly, so they crawl out by the way of the spout, and in doing so are crowded against the stigma first, and then the pollen, and come out covered with the grains. These bees are described by Dr. Crüger, who first

FIG. 11.—*CORYANTHES SPECIOSA*.

but in this case the sensitiveness lies in the rostellum, which is most wonderfully modified. This, instead of being a mere cap surrounding the viscid base of the pollinium, is a great pointed organ, looking like a queer sort of leaf, and prolonged below into two tapering antennæ, or horns, the right one hanging down powerless, while the left projects over the labellum. There is no nectary, but the labellum offers inviting pasturage to the insects which visit the plant. While gnawing the labellum the head or wings of the guest are sure to touch the extended antenna. In an instant the shock sets free the pollinium, which starts out of its socket with a curve and a rebound that throws the whole pollinium base forward, if nothing be in the way, to the distance of several feet. The insect which causes this disturbance, however, is always in the way, being just in front of the column on the labellum, and receives the pollinium disk, which glues itself firmly somewhere about its head or body, ready for transportation. The only sensitive place in the plant is the left antenna. This orchid, *Catasetum saccatum*, produces only male flowers; that is, only the pollen is perfected, the stigma and ovules never being developed. After a good deal of experimenting by different botanists, it was found that two other forms, classified as separate genera of the *Catasetum* family, were the female and hermaphrodite forms of the same plant.

Another anomaly of this kind is found in the familiar swan-flower, or *Cycnoches ventricosum*. This form belongs to the sub-family of the *Catasetida*, and is fertilized in the same way by the flirting of the pollinia. Bateman mentions, in his "Orchids of Mexico and Guatemela," the discovery of a new variety of this species, *Cycnoches Egertonianum*, which bore a long raceme of flowers, very unlike in color, form, and mode of growth to the *C. ventricosum*. The plant was sent to England, and when it bloomed the flowers proved to be the familiar swan-flower. Suspecting some blunder, another and another plant were forwarded, with the same result. Finally, the discoverer himself returned, bringing with him a bulb, which survived and after a time bloomed, bearing the old disappointing flowers. Before the wonderment was over, the same scape produced another raceme of twenty-eight flowers of *C. Egertonianum* (Fig. 13), and the two forms are now accepted as the different sexes of the same plant.

While it is true that the remarkable peculiarities of some

discovered the singular mechanism of the plant and the uses of the various parts, as forming a regular procession out of the bucket by way of the spout, and all covered with pollen. Undaunted by their ill luck, they go straight back to the gnawing-ground, to be subjected to another tumble, this time depositing the pollen on the stigma of some flower in the cluster upon their exit, after their involuntary bath.

The *Catasetida*, members of the same family as the *Coryanthes*, are the most remarkable of all the orchids. Like the *Pterostylis*, they are sensitive and have the power of movement,

but in this case the sensitiveness lies in the rostellum, which is most wonderfully modified. This, instead of being a mere cap surrounding the viscid base of the pollinium, is a great pointed organ, looking like a queer sort of leaf, and prolonged below into two tapering antennæ, or horns, the right one hanging down powerless, while the left projects over the labellum. There is no nectary, but the labellum offers inviting pasturage to the insects which visit the plant.

While gnawing the labellum the head or wings of the guest are sure to touch the extended antenna. In an instant the shock sets free the pollinium, which starts out of its socket with a curve and a rebound that throws the whole pollinium base forward, if nothing be in the way, to the distance of several feet. The insect which causes this disturbance, however, is always in the way, being just in front of the column on the labellum, and receives the pollinium disk, which glues itself firmly somewhere about its head or body, ready for transportation.

The only sensitive place in the plant is the left antenna. This orchid, *Catasetum saccatum*, produces only male flowers; that is, only the pollen is perfected, the stigma and ovules never being developed. After a good deal of experimenting by different botanists, it was found that two other forms, classified as separate genera of the *Catasetum* family, were the female and hermaphrodite forms of the same plant.

Another anomaly of this kind is found in the familiar swan-flower, or *Cycnoches ventricosum*. This form belongs to the sub-family of the *Catasetida*, and is fertilized in the same way by the flirting of the pollinia. Bateman mentions, in his "Orchids of Mexico and Guatemela," the discovery of a new variety of this species, *Cycnoches Egertonianum*, which bore a long raceme of flowers, very unlike in color, form, and mode of growth to the *C. ventricosum*. The plant was sent to England, and when it bloomed the flowers proved to be the familiar swan-flower. Suspecting some blunder, another and another plant were forwarded, with the same result. Finally, the discoverer himself returned, bringing with him a bulb, which survived and after a time bloomed, bearing the old disappointing flowers. Before the wonderment was over, the same scape produced another raceme of twenty-eight flowers of *C. Egertonianum* (Fig. 13), and the two forms are now accepted as the different sexes of the same plant.

While it is true that the remarkable peculiarities of some

FIG. 12.—*ANGRÆCUM SCOTTIANUM*.

FIG. 13.—CYCNOCHES EGERTONIANUM AND VENTRICOSUM.

orchids aid in inducing fertilization, it is, on the other hand, equally true that such peculiarities sometimes hinder the process. The sensitive labellum of *Pterostylis longifolia* secures the conveyance of pollen from flower to flower; the equally sensitive labellum of *Pterostylis curta* as often excludes the insects which alight on it as incloses them. This is the case with other varieties. Fitzgerald, one of the best observers, whose experience, however, had been in that country of anomalies, Australia, concludes in these words: "Thus throughout the whole order, as far as my experience extends, fertility is in an inverse ratio to the apparent arrangement for its production by the intervention of insects." Darwin's conclusions, founded upon his observations on native and exotic species, were exactly the reverse of this.

The singularity of one very large genus of the orchideæ, *Masdevallia* (Fig. 14), lies in their remarkable forms and wonderful coloring, which is almost unprecedented. These plants are largely cultivated by orchid growers, and so cannot be omitted here. This is also the case with *Brassavola* (Fig. 16).

The last family of the orchids are terrestrial, and are found in some varieties in the woods of our Northern States. In its wild state this orchid is called in America Indian moccasin; in England, lady's slipper; in France, *sabot de la Vierge*, or *soulier de Notre-Dame*. The American plant, *Cypripedium pubescens*, is supposed to be identical with the English *C. calceolus*. *C. barbatum* (Fig. 15) is from Malacca. The *Cypripediaceæ* are an immense family, having every manner of coloring and marking, and related to the still more remarkable *Selenipediums* and *Urepopediums*.

All have the same pouch-like labellum, partially inclosing the reproductive organs. Cross-fertilization is brought about in this family by small insects, which crawl or fly into the pouch, and then, being unable to crawl out the same way because of the incurved edges, are forced to make their exit by way of the column.

One other point in regard to the orchids must not be left untouched. In most plants, as is well known, there is an enormous development of loose pollen which goes to waste, not one grain in a thousand perhaps being used to fertilize an ovule,—as in the case of corn, for example. Why, then, should such care be taken to prevent the loss of the pollen of the orchids? By computation it is found that in some varieties a single orchid flower produces over a million and a half of seeds. If pollen were produced in such excess of the needs of the ovules as in the case of corn and other wind-fertilized plants, the orchid would be utterly exhausted. All these wonderful adaptations are therefore for the purpose of making the pollen “go” as far as possible.

Fitzgerald seems inclined to demur to any word in favor of the economy of life in the orchids; he speaks of the fearful waste of energy in the production of pollen and ovules which never come to seed, but it is certain that without these provisions the waste would be far greater than it now is.

The number of indigenous orchids in the United States is very great, but they do not seem to be very generally known, as careful search has only shown a few which have popular names. In England they

FIG. 14. A GROUP OF MASDEVALLIAS.

must be more common. Even in Shakspeare's day some varieties were familiar. In Hamlet he speaks of “long purples” and “dead men's fingers,” both orchids. With us “Bartram's tree orchis,” the “yellow moccasin,” “Indian moccasin flower,” “lady's slipper,” “grass-pink,” “salep,” “great fringed orchis,” “snake-mouth,” and “ladies' tresses,” or “traces,” as Meehan calls them, constitute as far as I can find all the orchids which have received names in the vernacular, among a large number known to botanists. A very valuable addition to the literature of our native orchids has just appeared, “The Orchids of New England,” by Mr. Henry Baldwin.

We are apt to think of orchids as queer rather than as beautiful, because of their rarity. The singular forms have not lost their novelty with us, and so have not taken on the quality which so many of our common garden and wild flowers possess. We feel that the violet, the lily of the valley, the mignonette, and rose are friends in contradistinction to tulips and dahlias, fuchsias and geraniums, around which sentiment refuses to cling. The orchids in their native homes seem to have to an exceptional degree this sentiment, this power of linking themselves to the joy and sorrow of human life. Scarcely a feast or fast or act of devotion among the fanciful Mexicans but has its special orchid as its emblem and appropriate offering. Christenings, marriages, and deaths are all symbolized by some one variety of these wonderful and beautiful flowers.

And they are not quite without the qualities which

FIG. 15.—CYPRIPEDIUM BARBATUM.

make them of material value to the native tribes. In Demerara, the juice of the singular *Catasetums* is used to mix in the famous *wourali* to poison the arrows of the native warriors, as well as for the more domestic use of hardening leather for shoe-soles. Salep, a nutritious substance, is obtained from the root of the *Orchis mascula*. Bulbs of the *Maxillaria* supply drink to the perishing traveler, and cooling draughts for fevered patients are extracted from some varieties of *lælias*. But, beyond the mere uses and abuses of orchids in their native homes,—which are not very many nor very important,—in their singular structure and wonderful life-history lies their real claim to the attention of the student.

S. B. Herrick.

FIG. 16.—BRASSAVOLA.

NEXT OF KIN.

NATIVE land hadst thou not,
Born out at sea;
Named for the rocking ship,
Cradle to thee.

Voyage thine verily
Over life's wave,
Owing earth barely for
Tiniest grave.

Never I looked on thee,
Thy little span
Measured and ended long
Ere mine began.

Yet have I yearned to thee,
Yearn to thee yet;
Strangely my spirit turns
From the world's fret;

Dwells on the thought of thee,
Hungers to know
How it has fared with thee
Since long ago.

Art thou the baby still?
Or hast thou flown—
Have I for near of kin
Angel full-grown?

Free from earth's soil and sting,
Blest in thy lot,
Dost thou not sadden for
Us who are not?

Dost thou not hover near
Sometimes to me,
Pant to come face to face—
As I to thee?

Bitter the barrier—
Oh, 'twere divine:
Friend without clay to grate
Harsh upon mine!

Should I have grace to win
Lowliest gate
To thy beatitude,
Stand thou in wait!

Hold, thou, and tenderly
Smile down on me;
Touch these blurred eyes of mine,
That I may see!

Lead me and comfort me,
Dear unbeguiled,—
Thou the grown sister, and
I the young child!

James T. McKay.

THE RISE OF SILAS LAPHAM.*

BY W. D. HOWELLS,

Author of "Venetian Life," "A Chance Acquaintance," "A Modern Instance," "A Woman's Reason," etc.

XIX.

"HE talked sense, Persis," said Lapham gently, as he mounted to his wife's side in the buggy and drove slowly homeward through the dusk.

"Yes, he talked sense," she admitted. But she added, bitterly, "I guess, if he had it to *do!* Oh, he's right, and it's got to be done. There ain't any other way for it. It's sense; and, yes, it's justice." They walked to their door after they left the horse at the livery stable around the corner, where Lapham kept it. "I want you should send Irene up to our room as soon as we get in, Silas."

"Why, ain't you going to have any supper first?" faltered Lapham, with his latch-key in the lock.

"No. I can't lose a minute. If I do, I sha'n't do it at all."

"Look here, Persis," said her husband tenderly, "let *me* do this thing."

"Oh, *you!*" said his wife, with a woman's compassionate scorn for a man's helplessness in such a case. "Send her right up. And I shall feel —" She stopped, to spare him.

Then she opened the door, and ran up to her room, without waiting to speak to Irene, who had come into the hall at the sound of her father's key in the door.

"I guess your mother wants to see you upstairs," said Lapham, looking away.

Her mother turned round and faced the girl's wondering look as Irene entered the chamber, so close upon her that she had not yet had time to lay off her bonnet; she stood with her wraps still on her arm.

"Irene!" she said harshly, "there is something you have got to bear. It's a mistake we've all made. He don't care anything for you. He never did. He told Pen so last night. He cares for her."

The sentences had fallen like blows. But the girl had taken them without flinching. She stood up immovable, but the delicate rose-light of her complexion went out and left her snow-white. She did not offer to speak.

"Why don't you say something?" cried her mother. "Do you want to kill me, Irene?"

"Why should I want to hurt *you*, mamma?" the girl replied steadily, but in an alien voice.

"There's nothing to say. I want to see Pen a minute."

She turned and left the room. As she mounted the stairs that led to her own and her sister's rooms on the floor above, her mother helplessly followed. Irene went first to her own room at the front of the house, and then came out, leaving the door open and the gas flaring behind her. The mother could see that she had tumbled many things out of the drawers of her bureau upon the marble top.

She passed her mother, where she stood in the entry. "You can come too, if you want to, mamma," she said.

She opened Penelope's door without knocking, and went in. Penelope sat at the window, as in the morning. Irene did not go to her; but she went and laid a gold hair-pin on her bureau, and said, without looking at her, "There's a pin that I got to-day, because it was like his sister's. It won't become a dark person so well, but you can have it."

She stuck a scrap of paper in the side of Penelope's mirror. "There's that account of Mr. Stanton's ranch. You'll want to read it, I presume."

She laid a withered *boutonnière* on the bureau beside the pin. "There's his button-hole bouquet. He left it by his plate, and I stole it."

She had a pine-shaving, fantastically tied up with a knot of ribbon, in her hand. She held it a moment; then, looking deliberately at Penelope, she went up to her, and dropped it in her lap without a word. She turned, and, advancing a few steps, tottered and seemed about to fall.

Her mother sprang forward with an imploring cry, "Oh, 'Rene, 'Rene, 'Rene!"

Irene recovered herself before her mother could reach her. "Don't touch me," she said icily. "Mamma, I'm going to put on my things. I want papa to walk with me. I'm choking here."

"I — I can't let you go out, Irene, child," began her mother.

"You've got to," replied the girl. "Tell papa to hurry his supper."

"Oh, poor soul! He doesn't want any supper. *He* knows it too."

"I don't want to talk about that. Tell him to get ready."

She left them once more.

Mrs. Lapham turned a hapless glance upon Penelope.

"Go and tell him, mother," said the girl. "I would, if I could. If she can walk, let her. It's the only thing for her." She sat still; she did not even brush to the floor the fantastic thing that lay in her lap, and that sent up faintly the odor of the sachet powder with which Irene liked to perfume her boxes.

Lapham went out with the unhappy child, and began to talk with her, crazily, incoherently enough.

She mercifully stopped him. "Don't talk, papa. I don't want any one should talk with me."

He obeyed, and they walked silently on and on. In their aimless course they reached the new house on the water side of Beacon, and she made him stop, and stood looking up at it. The scaffolding which had so long defaced the front was gone, and in the light of the gas-lamp before it all the architectural beauty of the façade was suggested, and much of the finely felt detail was revealed. Seymour had pretty nearly satisfied himself in that rich façade; certainly Lapham had not stinted him of the means.

"Well," said the girl, "I shall never live in it," and she began to walk on.

Lapham's sore heart went down, as he lumbered heavily after her. "Oh, yes, you will, Irene. You'll have lots of good times there yet."

"No," she answered, and said nothing more about it. They had not talked of their trouble at all, and they did not speak of it now. Lapham understood that she was trying to walk herself weary, and he was glad to hold his peace and let her have her way. She halted him once more before the red and yellow lights of an apothecary's window.

"Isn't there something they give you to make you sleep?" she asked vaguely. "I've got to sleep to-night!"

Lapham trembled. "I guess you don't want anything, Irene."

"Yes, I do! Get me something!" she retorted willfully. "If you don't, I shall die. I *must* sleep."

They went in, and Lapham asked for something to make a nervous person sleep. Irene stood poring over the show-case full of brushes and trinkets, while the apothecary put up the bromide, which he guessed would be about the best thing. She did not show any emotion; her face was like a stone, while her father's expressed the anguish of his sympathy. He looked as if he had not slept for

a week; his fat eyelids drooped over his glassy eyes, and his cheeks and throat hung flaccid. He started as the apothecary's cat stole smoothly up and rubbed itself against his leg; and it was to him that the man said, "You want to take a table-spoonful of that as long as you're awake. I guess it won't take a great many to fetch you."

"All right," said Lapham, and paid and went out. "I don't know but I *shall* want some of it," he said, with a joyless laugh.

Irene came closer up to him and took his arm. He laid his heavy paw on her gloved fingers. After a while she said, "I want you should let me go up to Lapham to-morrow."

"To Lapham? Why, to-morrow's Sunday, Irene! You can't go to-morrow."

"Well, Monday, then. I can live through one day here."

"Well," said the father passively. He made no pretense of asking her why she wished to go, nor any attempt to dissuade her.

"Give me that bottle," she said, when he opened the door at home for her, and she ran up to her own room.

The next morning Irene came to breakfast with her mother; the Colonel and Penelope did not appear, and Mrs. Lapham looked sleep-broken and careworn.

The girl glanced at her. "Don't you fret about me, mamma," she said. "I shall get along." She seemed herself as steady and strong as rock.

"I don't like to see you keeping up so, Irene," replied her mother. "It'll be all the worse for you when you do break. Better give way a little at the start."

"I sha'n't break, and I've given way all I'm going to. I'm going to Lapham to-morrow,—I want you should go with me, mamma,—and I guess I can keep up one day here. All about it is, I don't want you should say anything, or *look* anything. And, whatever I do, I don't want you should try to stop me. And, the first thing, I'm going to take her breakfast up to her. Don't!" she cried, intercepting the protest on her mother's lips. "I shall not let it hurt Pen, if I can help it. She's never done a thing nor thought a thing to wrong me. I had to fly out at her last night; but that's all over now, and I know just what I've got to bear."

She had her way unmolested. She carried Penelope's breakfast to her, and omitted no care or attention that could make the sacrifice complete, with an heroic pretense that she was performing no unusual service. They did not speak, beyond her saying, in a clear, dry note, "Here's your breakfast, Pen," and her sister's answering, hoarsely and tremulously, "Oh, thank you, Irene." And, though

two or three times they turned their faces toward each other while Irene remained in the room, mechanically putting its confusion to rights, their eyes did not meet. Then Irene descended upon the other rooms, which she set in order, and some of which she fiercely swept and dusted. She made the beds; and she sent the two servants away to church as soon as they had eaten their breakfast, telling them that she would wash their dishes. Throughout the morning her father and mother heard her about the work of getting dinner, with certain silences which represented the moments when she stopped and stood stock-still, and then, readjusting her burden, forced herself forward under it again.

They sat alone in the family-room, out of which their two girls seemed to have died. Lapham could not read his Sunday papers, and she had no heart to go to church, as she would have done earlier in life when in trouble. Just then she was obscurely feeling that the church was somehow to blame for that counsel of Mr. Sewell's on which they had acted.

"I should like to know," she said, having brought the matter up, "whether he would have thought it was such a light matter if it had been his own children. Do you suppose he'd have been so ready to act on his own advice if it *had* been?"

"He told us the right thing to do, Persis,—the only thing. We couldn't let it go on," urged her husband gently.

"Well, it makes me despise Pen! Irene's showing twice the character that she is, this very minute."

The mother said this so that the father might defend her daughter to her. He did not fail. "Irene's got the easiest part, the way I look at it. And you'll see that Pen'll know how to behave when the time comes."

"What do you want she should do?"

"I haven't got so far as that yet. What are we going to do about Irene?"

"What do you want Pen should do," repeated Mrs. Lapham, "when it comes to it?"

"Well, I don't want she should take him, for *one* thing," said Lapham.

This seemed to satisfy Mrs. Lapham as to her husband, and she said, in defense of Corey, "Why, I don't see what *he's* done. It's all been our doing."

"Never mind that now. What about Irene?"

"She says she's going to Lapham to-morrow. She feels that she's got to get away somewhere. It's natural she should."

"Yes. And I presume it will be about the best thing *for* her. Shall you go with her?"

"Yes."

"Well." He comfortlessly took up a newspaper again, and she rose with a sigh, and went to her room to pack some things for the morrow's journey.

After dinner, when Irene had cleared away the last trace of it in kitchen and dining-room with unsparing punctilio, she came downstairs, dressed to go out, and bade her father come to walk with her again. It was a repetition of the aimlessness of the last night's wanderings. They came back, and she got tea for them, and after that they heard her stirring about in her own room, as if she were busy about many things; but they did not dare to look in upon her, even after all the noises had ceased, and they knew she had gone to bed.

"Yes; it's a thing she's got to fight out by herself," said Mrs. Lapham.

"I guess she'll get along," said Lapham. "But I don't want you should misjudge Pen either. She's all right too. She ain't to blame."

"Yes, I know. But I can't work round to it all at once. I sha'n't misjudge her, but you can't expect me to get over it right away."

"Mamma," said Irene, when she was hurrying their departure the next morning, "what did she tell him when he asked her?"

"Tell him?" echoed the mother; and after a while she added, "She didn't tell him anything."

"Did she say anything about me?"

"She said he mustn't come here any more."

Irene turned and went into her sister's room. "Good-bye, Pen," she said, kissing her with an effect of not seeing or touching her. "I want you should tell him all about it. If he's half a man, he won't give up till he knows why you won't have him; and he has a right to know."

"It wouldn't make any difference. I couldn't have him after —"

"That's for you to say. But if you don't tell him about me, *I* will."

"'Rene!"

"Yes! You needn't say I cared for him. But you can say that you all thought he — cared for — me."

"Oh, Irene —"

"Don't!" Irene escaped from the arms that tried to cast themselves about her. "You are all right, Pen. You haven't done anything. You've helped me all you could. But I can't — yet."

She went out of the room and summoned Mrs. Lapham with a sharp "Now, mamma!" and went on putting the last things into her trunks.

The Colonel went to the station with them, and put them on the train. He got them a

little compartment to themselves in the Pullman car; and as he stood leaning with his lifted hands against the sides of the doorway, he tried to say something consoling and hopeful: "I guess you'll have an easy ride, Irene. I don't believe it'll be dusty, any, after the rain last night."

"Don't you stay till the train starts, papa," returned the girl, in rigid rejection of his futilities. "Get off now."

"Well, if you want I should," he said, glad to be able to please her in anything. He remained on the platform till the cars started. He saw Irene bustling about in the compartment, making her mother comfortable for the journey; but Mrs. Lapham did not lift her head. The train moved off, and he went heavily back to his business.

From time to time during the day, when he caught a glimpse of him, Corey tried to make out from his face whether he knew what had taken place between him and Penelope. When Rogers came in about time of closing, and shut himself up with Lapham in his room, the young man remained till the two came out together and parted in their salutationless fashion.

Lapham showed no surprise at seeing Corey still there, and merely answered, "Well!" when the young man said that he wished to speak with him, and led the way back to his room.

Corey shut the door behind them. "I only wish to speak to you in case you know of the matter already; for otherwise I'm bound by a promise."

"I guess I know what you mean. It's about Penelope."

"Yes, it's about Miss Lapham. I am greatly attached to her—you'll excuse my saying it; I couldn't excuse myself if I were not."

"Perfectly excusable," said Lapham. "It's all right."

"Oh, I'm *glad* to hear you say that!" cried the young fellow joyfully. "I want you to believe that this isn't a new thing or an unconsidered thing with me—though it seemed so unexpected to her."

Lapham fetched a deep sigh. "It's all right as far as I'm concerned—or her mother. We've both liked you first-rate."

"Yes?"

"But there seems to be something in Penelope's mind—I don't know——" The Colonel consciously dropped his eyes.

"She referred to something—I couldn't make out what—but I hoped—I hoped—that with your leave I might overcome it—the barrier—whatever it was. Miss Lapham—Penelope—gave me the hope—that I was—wasn't—indifferent to her——"

"Yes, I guess that's so," said Lapham. He suddenly lifted his head, and confronted the young fellow's honest face with his own face, so different in its honesty. "Sure you never made up to any one else at the same time?"

"*Never!* Who could imagine such a thing? If that's all, I can easily——"

"I don't say that's all, nor that that's it. I don't want you should go upon that idea. I just thought, may be—you hadn't thought of it."

"No, I certainly hadn't thought of it! Such a thing would have been so impossible to me that I *couldn't* have thought of it; and it's so shocking to me now that I don't know what to say to it."

"Well, don't take it too much to heart," said Lapham, alarmed at the feeling he had excited; "I don't say she thought so. I was trying to guess—trying to——"

"If there is *anything* I can say or do to convince you——"

"Oh, it ain't necessary to say anything. I'm all right."

"But Miss Lapham! I may see her again? I may try to convince her that——"

He stopped in distress, and Lapham afterwards told his wife that he kept seeing the face of Irene as it looked when he parted with her in the car; and whenever he was going to say yes, he could not open his lips. At the same time he could not help feeling that Penelope had a right to what was her own, and Sewell's words came back to him. Besides, they had already put Irene to the worst suffering. Lapham compromised, as he imagined.

"You can come round to-night and see *me*, if you want to," he said; and he bore grimly the gratitude that the young man poured out upon him.

Penelope came down to supper and took her mother's place at the head of the table.

Lapham sat silent in her presence as long as he could bear it. Then he asked, "How do you feel to-night, Pen?"

"Oh, like a thief," said the girl. "A thief that hasn't been arrested yet."

Lapham waited awhile before he said, "Well, now, your mother and I want you should hold up on that awhile."

"It isn't for you to say. It's something I *can't* hold up on."

"Yes, I guess you can. If I know what's happened, then what's happened is a thing that nobody is to blame for. And we want you should make the best of it, and not the worst. Heigh? It ain't going to help Irene any for you to hurt yourself—or anybody else; and I don't want you should take up with any such crazy notion. As far as heard

from, you haven't stolen anything, and whatever you've got belongs to you."

"Has he been speaking to you, father?"

"Your mother's been speaking to me."

"Has *he* been speaking to you?"

"That's neither here nor there."

"Then he's broken his word, and I will never speak to him again!"

"If he was any such fool as to promise that he wouldn't talk to me on a subject" — Lapham drew a deep breath, and then made the plunge — "that I brought up —"

"Did you bring it up?"

"The same as brought up — the quicker he broke his word the better; and I want you should act upon that idea. Recollect that it's my business, and your mother's business, as well as yours, and we're going to have our say. He hain't done anything wrong, Pen, nor anything that he's going to be punished for. Understand that. He's got to have a reason, if you're not going to have him. I don't say you've got to have him; I want you should feel perfectly free about that; but I *do* say you've got to give him a reason."

"Is he coming here?"

"I don't know as you'd call it *coming* —"

"Yes, you do, father!" said the girl, in forlorn amusement at his shuffling.

"He's coming here to see *me* —"

"When's he coming?"

"I don't know but he's coming to-night."

"And you want I should see him?"

"I don't know but you'd better."

"All right. I'll see him."

Lapham drew a long, deep breath of suspicion inspired by this acquiescence. "What you going to do?" he asked presently.

"I don't know yet," answered the girl sadly.

"It depends a good deal upon what *he* does."

"Well," said Lapham, with the hungriness of unsatisfied anxiety in his tone. When Corey's card was brought into the family-room where he and Penelope were sitting, he went into the parlor to find him. "I guess Penelope wants to see you," he said; and, indicating the family-room, he added, "She's in there," and did not go back himself.

Corey made his way to the girl's presence with open trepidation, which was not allayed by her silence and languor. She sat in the chair where she had sat the other night, but she was not playing with a fan now.

He came toward her, and then stood faltering. A faint smile quivered over her face at the spectacle of his subjection. "Sit down, Mr. Corey," she said. "There's no reason why we shouldn't talk it over quietly; for I know you will think I'm right."

"I'm sure of that," he answered hopefully. "When I saw that your father knew of it

to-day, I asked him to let me see you again. I'm afraid that I broke my promise to you — technically —"

"It had to be broken."

He took more courage at her words. "But I've only come to do whatever you say, and not to be an — annoyance to you —"

"Yes, you have to know; but I couldn't tell you before. Now they all think I should."

A tremor of anxiety passed over the young man's face, on which she kept her eyes steadily fixed.

"We supposed it — it was — Irene —"

He remained blank a moment, and then he said with a smile of relief, of deprecation, of protest, of amazement, of compassion:

"*Oh!* Never! Never for an instant! How could you think such a thing? It was impossible! I never thought of her. But I see — I see! I can explain — no, there's nothing to explain! I have never knowingly done or said a thing from first to last to make you think that. I see how terrible it is!" he said; but he still smiled, as if he could not take it seriously. "I admired her beauty — who could help doing that? — and I thought her very good and sensible. Why, last winter in Texas, I told Stanton about our meeting in Canada, and we agreed — I only tell you to show you how far I always was from what you thought — that he must come North and try to see her, and — and — of course, it all sounds very silly! — and he sent her a newspaper with an account of his ranch in it —"

"She thought it came from you."

"Oh, good heavens! He didn't tell me till after he'd done it. But he did it for a part of our foolish joke. And when I met your sister again, I only admired her as before. I can see, now, how I must have seemed to be seeking her out; but it was to talk of you with her — I never talked of anything else if I could help it, except when I changed the subject because I was ashamed to be always talking of you. I see how distressing it is for all of you. But tell me that you believe me!"

"Yes, I must. It's all been our mistake —"

"It has indeed! But there's no mistake about my loving *you*, Penelope," he said; and the old-fashioned name, at which she had often mocked, was sweet to her from his lips.

"That only makes it worse!" she answered.

"Oh, no!" he gently protested. "It makes it better. It makes it right. How is it worse? How is it wrong?"

"Can't you see? You must understand all now! Don't you see that if she believed so too, and if she —" She could not go on.

"Did she — did your sister — think that too?" gasped Corey.

"She used to talk with me about you; and when you say you care for me now, it makes me feel like the vilest hypocrite in the world. That day you gave her the list of books, and she came down to Nantasket, and went on about you, I helped her to flatter herself—oh! I don't see how she can forgive me. But she knows I can never forgive myself! That's the reason she can do it. I can see now," she went on, "how I must have been trying to get you from her. I can't endure it! The only way is for me never to see you or speak to you again!" She laughed forlornly. "That would be pretty hard on you, if you cared."

"I do care—all the world!"

"Well, then, it would if you were going to keep on caring. You won't long, if you stop coming now."

"Is this all, then? Is it the end?"

"It's—whatever it is. I can't get over the thought of her. Once I thought I could, but now I see that I can't. It seems to grow worse. Sometimes I feel as if it would drive me crazy."

He sat looking at her with lack-luster eyes. The light suddenly came back into them. "Do you think I could love you if you had been false to her? I know you have been true to her, and truer still to yourself. I never tried to see her, except with the hope of seeing you too. I supposed she must know that I was in love with you. From the first time I saw you there that afternoon, you filled my fancy. Do you think I was flirting with the child, or—no, you *don't* think that! We have not done wrong. We have not harmed any one knowingly. We have a right to each other——"

"No! no! you must never speak to me of this again. If you do, I shall know that you despise me."

"But how will that help her? I don't love her."

"Don't say that to me! I have said that to myself too much."

"If you forbid me to love you, it won't make me love her," he persisted.

She was about to speak, but she caught her breath without doing so, and merely stared at him.

"I must do what you say," he continued. "But what good will it do her? You can't make her happy by making yourself unhappy."

"Do you ask me to profit by a wrong?"

"Not for the world. But there *is* no wrong!"

"There is something—I don't know what. There's a wall between us. I shall dash myself against it as long as I live; but that won't break it."

"Oh!" he groaned. "We have done no wrong. Why should we suffer from another's mistake as if it were our sin?"

"I don't know. But we must suffer."

"Well, then, I *will* not, for my part, and I will not let you. If you care for me——"

"You had no right to know it."

"You make it my privilege to keep you from doing wrong for the right's sake. I'm sorry, with all my heart and soul, for this error; but I can't blame myself, and I won't deny myself the happiness I haven't done anything to forfeit. I will never give you up. I will wait as long as you please for the time when you shall feel free from this mistake; but you shall be mine at last. Remember that. I might go away for months—a year, even; but that seems a cowardly and guilty thing, and I'm not afraid, and I'm not guilty, and I'm going to stay here and try to see you."

She shook her head. "It won't change anything. Don't you see that there's no hope for us?"

"When is she coming back?" he asked.

"I don't know. Mother wants father to come and take her out West for a while."

"She's up there in the country with your mother yet?"

"Yes."

He was silent; then he said, desperately:

"Penelope, she is very young; and perhaps—perhaps she might meet——"

"It would make no difference. It wouldn't change it for me."

"You are cruel—cruel to yourself, if you love me, and cruel to me. Don't you remember that night—before I spoke—you were talking of that book; and you said it was foolish and wicked to do as that girl did. Why is it different with you, except that you give me nothing, and can never give me anything when you take yourself away? If it were anybody else, I am sure you would say——"

"But it isn't anybody else, and that makes it impossible. Sometimes I think it might be if I would only say so to myself, and then all that I said to her about you comes up——"

"I will wait. It can't always come up. I won't urge you any longer now. But you will see it differently—more clearly. Good-bye—no! Good-night! I shall come again tomorrow. It will surely come right, and, whatever happens, you have done no wrong. Try to keep that in mind. I am so happy, in spite of all!"

He tried to take her hand, but she put it behind her. "No, no! I can't let you—yet!"

XX.

AFTER a week Mrs. Lapham returned, leaving Irene alone at the old homestead in Vermont. "She's comfortable there—as com-

fortable as she can be anywheres, I guess," she said to her husband, as they drove together from the station, where he had met her in obedience to her telegraphic summons. "She keeps herself busy helping about the house; and she goes round amongst the hands in their houses. There's sickness, and you know how helpful she is where there's sickness. She don't complain any. I don't know as I've heard a word out of her mouth since we left home; but I'm afraid it'll wear on her, Silas."

"You don't look over and above well yourself, Persis," said her husband kindly.

"Oh, don't talk about me. What I want to know is whether you can't get the time to run off with her somewhere? I wrote to you about Dubuque. She'll work herself down, I'm afraid; and *then* I don't know as she'll be over it. But if she could go off, and be amused — see new people —"

"I could *make* the time," said Lapham, "if I had to. But, as it happens, I've got to go out West on business,— I'll tell you about it,— and I'll take Irene along."

"Good!" said his wife. "That's about the best thing I've heard yet. Where you going?"

"Out Dubuque way."

"Anything the matter with Bill's folks?"

"No. It's business."

"How's Pen?"

"I guess she ain't much better than Irene."

"He been about any?"

"Yes. But I can't see as it helps matters much."

"Tchk!" Mrs. Lapham fell back against the carriage cushions. "I declare, to see her willing to take the man that we all thought wanted her sister! I can't make it seem right."

"It's right," said Lapham stoutly; "but I guess she ain't willing; I wish she was. But there don't seem to be any way out of the thing, anywhere. It's a perfect snarl. But I don't want you should be anyways ha'sh with Pen."

Mrs. Lapham answered nothing; but when she met Penelope she gave the girl's wan face a sharp look, and began to whimper on her neck.

Penelope's tears were all spent. "Well, mother," she said, "you come back almost as cheerful as you went away. I needn't ask if 'Rene's in good spirits. We all seem to be overflowing with them. I suppose this is one way of congratulating me. Mrs. Corey hasn't been round to do it yet."

"Are you — are you engaged to him, Pen?" gasped her mother.

"Judging by my feelings, I should say not. I feel as if it was a last will and testament. But you'd better ask him when he comes."

"I can't bear to look at him."

"I guess he's used to that. He don't seem to expect to be looked at. Well! we're all just where we started. I wonder how long it will keep up?"

Mrs. Lapham reported to her husband when he came home at night—he had left his business to go and meet her, and then, after a desolate dinner at the house, had returned to the office again—that Penelope was fully as bad as Irene. "And she don't know how to work it off. Irene keeps doing; but Pen just sits in her room and mopes. She don't even read. I went up this afternoon to scold her about the state the house was in—you can see that Irene's away by the perfect mess; but when I saw her through the crack of the door I hadn't the heart. She sat there with her hands in her lap, just staring. And, my goodness! she *jumped* so when she saw me; and then she fell back, and began to laugh, and said she, 'I thought it was my ghost, mother!' I felt as if I should give way."

Lapham listened jadedly, and answered far from the point. "I guess I've got to start out there pretty soon, Persis."

"How soon?"

"Well, to-morrow morning."

Mrs. Lapham sat silent. Then, "All right," she said. "I'll get you ready."

"I shall run up to Lapham for Irene, and then I'll push on through Canada. I can get there about as quick."

"Is it anything you can tell me about, Silas?"

"Yes," said Lapham. "But it's a long story, and I guess you've got your hands pretty full as it is. I've been throwing good money after bad,— the usual way,— and now I've got to see if I can save the pieces."

After a moment Mrs. Lapham asked, "Is it — Rogers?"

"It's Rogers."

"I didn't want you should get in any deeper with him."

"No. You didn't want I should press him either; and I had to do one or the other. And so I got in deeper."

"Silas," said his wife, "I'm afraid I made you!"

"It's all right, Persis, as far forth as that goes. I was glad to make it up with him — I jumped at the chance. I guess Rogers saw that he had a soft thing in me, and he's worked it for all it was worth. But it'll all come out right in the end."

Lapham said this as if he did not care to talk any more about it. He added, casually, "Pretty near everybody but the fellows that owe *me* seem to expect me to do a cash business, all of a sudden."

“Do you mean that you’ve got payments to make, and that people are not paying *you*?”

Lapham winced a little. “Something like that,” he said, and he lighted a cigar. “But when I tell you it’s all right, I mean it, Persis. I ain’t going to let the grass grow under my feet, though,—especially while Rogers digs the ground away from the roots.”

“What are you going to do?”

“If it has to come to that, I’m going to squeeze him.” Lapham’s countenance lighted up with greater joy than had yet visited it since the day they had driven out to Brookline. “Milton K. Rogers is a rascal, if you want to know; or else all the signs fail. But I guess he’ll find he’s got his come-uppance.” Lapham shut his lips so that the short, reddish-gray beard stuck straight out on them.

“What’s he done?”

“What’s he done? Well, now, I’ll tell you what he’s done, Persis, since you think Rogers is such a saint, and that I used him so badly in getting him out of the business. He’s been dabbling in every sort of fool thing you can lay your tongue to,—wild-cat stocks, patent-rights, land speculations, oil claims,—till he’s run through about everything. But he did have a big milling property out on the line of the P. Y. & X.,—saw-mills and grist-mills and lands,—and for the last eight years he’s been doing a land-office business with ’em—business that would have made anybody else rich. But you can’t make Milton K. Rogers rich, any more than you can fat a hide-bound colt. It ain’t *in* him. He’d run through Vanderbilt, Jay Gould, and Tom Scott rolled into one, in less than six months, give him a chance, and come out and want to borrow money of you. Well, he won’t borrow any more money of *me*; and if he thinks I don’t know as much about that milling property as he does, he’s mistaken. I’ve taken his mills, but I guess I’ve got the inside track; Bill’s kept me posted; and now I’m going out there to see how I can unload; and I sha’n’t mind a great deal if Rogers is under the load when it’s off, once.”

“I don’t understand you, Silas.”

“Why, it’s just this. The Great Lacustrine & Polar Railroad has leased the P. Y. & X. for ninety-nine years,—*bought* it, practically,—and it’s going to build car-works right by those mills, and it may want them. And Milton K. Rogers knew it when he turned ’em in on me.”

“Well, if the road wants them, don’t that make the mills valuable? You can get what you ask for them!”

“Can I? The P. Y. & X. is the only road that runs within fifty miles of the mills, and you can’t get a foot of lumber nor a pound of flour to market any other way. As long as he had a little local road like the P. Y. & X. to

deal with, Rogers could manage; but when it come to a big through line like the G. L. & P., he couldn’t stand any chance at all. If such a road as that took a fancy to his mills, do you think it would pay what he asked? *No*, sir! He would take what the road offered, or else the road would tell him to carry his flour and lumber to market himself.”

“And do you suppose he knew the G. L. & P. wanted the mills when he turned them in on you?” asked Mrs. Lapham, aghast, and falling helplessly into his alphabetical parlance.

The Colonel laughed scoffingly. “Well, when Milton K. Rogers don’t know which side his bread’s buttered on! I don’t understand,” he added thoughtfully, “how he’s always letting it fall on the buttered side. But such a man as that is sure to have a screw loose in him somewhere.”

Mrs. Lapham sat discomfited. All that she could say was, “Well, I want you should ask yourself whether Rogers would ever have gone wrong, or got into these ways of his, if it hadn’t been for your forcing him out of the business when you did. I want you should think whether you’re not responsible for everything he’s done since.”

“You go and get that bag of mine ready,” said Lapham sullenly. “I guess I can take care of myself. And Milton K. Rogers too,” he added.

THAT evening Corey spent the time after dinner in his own room, with restless excursions to the library, where his mother sat with his father and sisters, and showed no signs of leaving them. At last, in coming down, he encountered her on the stairs, going up. They both stopped consciously.

“I would like to speak with you, mother. I have been waiting to see you alone.”

“Come to my room,” she said.

“I have a feeling that you know what I want to say,” he began there.

She looked up at him where he stood by the chimney-piece, and tried to put a cheerful note into her questioning “Yes?”

“Yes; and I have a feeling that you won’t like it—that you won’t approve of it. I wish you did—I wish you could!”

“I’m used to liking and approving everything you do, Tom. If I don’t like this at once, I shall try to like it—you know that—for your sake, whatever it is.”

“I’d better be short,” he said, with a quick sigh. “It’s about Miss Lapham.” He hastened to add, “I hope it *isn’t* surprising to you. I’d have told you before, if I could.”

“No, it isn’t surprising. I was afraid—I suspected something of the kind.”

They were both silent in a painful silence.

"Well, mother?" he asked at last.

"If it's something you've quite made up your mind to——"

"It is!"

"And if you've already spoken to her——"

"I had to do that first, of course."

"There would be no use of my saying anything, even if I disliked it."

"You do dislike it!"

"No — no! I can't say that. Of course, I should have preferred it if you had chosen some nice girl among those that you had been brought up with — some friend or associate of your sisters, whose people we had known ——"

"Yes, I understand that, and I can assure you that I haven't been indifferent to your feelings. I have tried to consider them from the first, and it kept me hesitating in a way that I'm ashamed to think of; for it wasn't quite right towards — others. But your feelings and my sisters' have been in my mind, and if I couldn't yield to what I supposed they must be, entirely ——"

Even so good a son and brother as this, when it came to his love affair, appeared to think that he had yielded much in considering the feelings of his family at all.

His mother hastened to comfort him. "I know — I know. I've seen for some time that this might happen, Tom, and I have prepared myself for it. I have talked it over with your father, and we both agreed from the beginning that you were not to be hampered by our feeling. Still — it is a surprise. It must be."

"I know it. I can understand your feeling. But I'm sure that it's one that will last only while you don't know her well."

"Oh, I'm sure of that, Tom. I'm sure that we shall all be fond of her, — for your sake at first, even, — and I hope she'll like us."

"I am quite certain of that," said Corey, with that confidence which experience does not always confirm in such cases. "And your taking it as you do lifts a tremendous load off me."

But he sighed so heavily, and looked so troubled, that his mother said, "Well, now, you mustn't think of that any more. We wish what is for your happiness, my son, and we will gladly reconcile ourselves to anything that might have been disagreeable. I suppose we needn't speak of the family. We must both think alike about them. They have their — drawbacks, but they are thoroughly good people, and I satisfied myself the other night that they were not to be dreaded." She rose, and put her arm round his neck. "And I wish you joy, Tom! If she's half as good as you are, you will both be very happy." She

was going to kiss him, but something in his looks stopped her — an absence, a trouble, which broke out in his words.

"I must tell you, mother! There's been a complication — a mistake — that's a blight on me yet, and that it sometimes seems as if we couldn't escape from. I wonder if you can help us! They all thought I meant — the other sister."

"Oh, Tom! But how *could* they?"

"I don't know. It seemed so glaringly plain — I was ashamed of making it so outright from the beginning. But they did. Even she did, herself!"

"But where could they have thought your eyes were — your taste? It wouldn't be surprising if any one were taken with that wonderful beauty; and I'm sure she's good too. But I'm astonished at them! To think you could prefer that little, black, odd creature, with her joking and ——"

"*Mother!*" cried the young man, turning a ghastly face of warning upon her.

"What do you mean, Tom?"

"Did you — did — did *you* think so, too, — that it was *Irene* I meant?"

"Why, of course!"

He stared at her hopelessly.

"Oh, my son!" she said, for all comment on the situation.

"Don't reproach me, mother! I couldn't stand it."

"No. I didn't mean to do that. But how — *how* could it happen?"

"I don't know. When she first told me that they had understood it so, I laughed — almost — it was so far from me. But now, when you seem to have had the same idea — Did you all think so?"

"Yes."

They remained looking at each other. Then Mrs. Corey began: "It did pass through my mind once — that day I went to call upon them — that it might not be as we thought; but I knew so little of — of ——"

"Penelope," Corey mechanically supplied.

"Is that her name? — I forgot — that I only thought of you in relation to her long enough to reject the idea; and it was natural, after our seeing something of the other one last year, that I might suppose you had formed some — attachment ——"

"Yes; that's what they thought too. But I never thought of her as anything but a pretty child. I was civil to her because you wished it; and when I met her here again, I only tried to see her so that I could talk with her about her sister."

"You needn't defend yourself to *me*, Tom," said his mother, proud to say it to him in his trouble. "It's a terrible business for them,

poor things," she added. "I don't know how they could get over it. But, of course, sensible people must see ——"

"They haven't got over it. At least *she* hasn't. Since it's happened, there's been nothing that hasn't made me prouder and fonder of her! At first I *was* charmed with her—my fancy was taken; she delighted me—I don't know how; but she was simply the most fascinating person I ever saw. Now I never think of that. I only think how good she is—how patient she is with me, and how unsparing she is of herself. If she were concerned alone—if I were not concerned too—it would soon end. She's never had a thought for anything but her sister's feeling and mine from the beginning. I go there,—I know that I oughtn't, but I can't help it,—and she suffers it, and tries not to let me see that she is suffering it. There never was any one like her—so brave, so true, so noble. I won't give her up—I can't. But it breaks my heart when she accuses herself of what was all *my* doing. We spend our time trying to reason out of it, but we always come back to it at last, and I have to hear her morbidly blaming herself. Oh!"

Doubtless Mrs. Corey imagined some reliefs to this suffering, some qualifications of this sublimity in a girl she had disliked so distinctly; but she saw none in her son's behavior, and she gave him her further sympathy. She tried to praise Penelope, and said that it was not to be expected that she could reconcile herself at once to everything. "I shouldn't have liked it in her if she had. But time will bring it all right. And if she really cares for you ——"

"I extorted that from her."

"Well, then, you must look at it in the best light you can. There is no blame anywhere, and the mortification and pain is something that must be lived down. That's all. And don't let what I said grieve you, Tom. You know I scarcely knew her, and I—I shall be sure to like any one you like, after all."

"Yes, I know," said the young man drearily. "Will you tell father?"

"If you wish."

"He must know. And I couldn't stand any more of this, just yet—any more mistake."

"I will tell him," said Mrs. Corey; and it was naturally the next thing for a woman who dwelt so much on decencies to propose: "We must go to call on her—your sisters and I. They have never seen her even; and she mustn't be allowed to think we're indifferent to her, especially under the circumstances."

"Oh, no! Don't go—not yet," cried

Corey, with an instinctive perception that nothing could be worse for him. "We must wait—we must be patient. I'm afraid it would be painful to her now."

He turned away without speaking further; and his mother's eyes followed him wistfully to the door. There were some questions that she would have liked to ask him; but she had to content herself with trying to answer them when her husband put them to her.

There was this comfort for her always in Bromfield Corey, that he never was much surprised at anything, however shocking or painful. His standpoint in regard to most matters was that of the sympathetic humorist who would be glad to have the victim of circumstance laugh with him, but was not too much vexed when the victim could not. He laughed now when his wife, with careful preparation, got the facts of his son's predicament fully under his eye.

"Really, Bromfield," she said, "I don't see how you *can* laugh. Do you see any way out of it?"

"It seems to me that the way has been found already. Tom has told his love to the right one, and the wrong one knows it. Time will do the rest."

"If I had so low an opinion of them all as that, it would make me very unhappy. It's shocking to think of it."

"It is, upon the theory of ladies and all young people," said her husband, with a shrug, feeling his way to the matches on the mantel, and then dropping them with a sigh, as if recollecting that he must not smoke there. "I've no doubt Tom feels himself an awful sinner. But apparently he's resigned to his sin; he isn't going to give her up."

"I'm glad to say, for the sake of human nature, that *she* isn't resigned—little as I like her," cried Mrs. Corey.

Her husband shrugged again. "Oh, there mustn't be any indecent haste. She will instinctively observe the proprieties. But come, now, Anna! you mustn't pretend to me here, in the sanctuary of home, that practically the human affections don't reconcile themselves to any situation that the human sentiments condemn. Suppose the wrong sister had died: would the right one have had any scruple in marrying Tom, after they had both 'waited a proper time,' as the phrase is?"

"Bromfield, you're shocking!"

"Not more shocking than reality. You may regard this as a second marriage." He looked at her with twinkling eyes, full of the triumph the spectator of his species feels in signal exhibitions of human nature. "Depend upon it, the right sister will be reconciled; the wrong one will be consoled; and all will go

merry as a marriage bell—a second marriage bell. Why, it's quite like a romance!" Here he laughed outright again.

"Well," sighed the wife, "I could almost wish the right one, as you call her, would reject Tom. I dislike her so much."

"Ah, now you're talking business, Anna," said her husband, with his hands spread behind the back he turned comfortably to the fire. "The whole Lapham tribe is distasteful to *me*. As I don't happen to have seen our daughter-in-law elect, I have still the hope—which you're disposed to forbid me—that she may not be quite so unacceptable as the others."

"Do you really feel so, Bromfield?" anxiously inquired his wife.

"Yes—I think I do"; and he sat down, and stretched out his long legs toward the fire.

"But it's very inconsistent of you to oppose the matter now, when you've shown so much indifference up to this time. You've told me, all along, that it was of no use to oppose it."

"So I have. I was convinced of that at the beginning, or my reason was. You know very well that I am equal to any trial, any sacrifice, day after to-morrow; but when it comes to-day it's another thing. As long as this crisis decently kept its distance, I could look at it with an impartial eye; but now that it seems at hand, I find that, while my reason is still acquiescent, my nerves are disposed to—excuse the phrase—kick. I ask myself, what have I done nothing for, all my life, and lived as a gentleman should, upon the earnings of somebody else, in the possession of every polite taste and feeling that adorns leisure, if I'm to come to this at last? And I find no satisfactory answer. I say to myself that I might as well have yielded to the pressure all round me, and gone to work, as Tom has."

Mrs. Corey looked at him forlornly, divining the core of real repugnance that existed in his self-satire.

"I assure you, my dear," he continued, "that the recollection of what I suffered from the Laphams at that dinner of yours is an anguish still. It wasn't their behavior,—they behaved well enough—or ill enough; but their conversation was terrible. Mrs. Lapham's range was strictly domestic; and when the Colonel got me in the library, he poured mineral paint all over me, till I could have been safely warranted not to crack or scale in any climate. I suppose we shall have to see a good deal of them. They will probably come here every Sunday night to tea. It's a perspective without a vanishing-point."

"It may not be so bad, after all," said his

wife; and she suggested for his consolation that he knew very little about the Laphams yet.

He assented to the fact. "I know very little about them, and about my other fellow-beings. I dare say that I should like the Laphams better if I knew them better. But in any case, I resign myself. And we must keep in view the fact that this is mainly Tom's affair, and if his affections have regulated it to his satisfaction, we must be content."

"Oh, yes," sighed Mrs. Corey. "And perhaps it won't turn out so badly. It's a great comfort to know that you feel just as I do about it."

"I do," said her husband, "and more too."

It was she and her daughters who would be chiefly annoyed by the Lapham connection; she knew that. But she had to begin to bear the burden by helping her husband to bear his light share of it. To see him so depressed dismayed her, and she might well have reproached him more sharply than she did for showing so much indifference, when she was so anxious, at first. But that would not have served any good end now. She even answered him patiently when he asked her, "What did you say to Tom when he told you it was the other one?"

"What could I say? I could do nothing, but try to take back what I had said against her."

"Yes, you had quite enough to do, I suppose. It's an awkward business. If it had been the pretty one, her beauty would have been our excuse. But the plain one—what do you suppose attracted him in her?"

Mrs. Corey sighed at the futility of the question. "Perhaps I did her injustice. I only saw her a few moments. Perhaps I got a false impression. I don't think she's lacking in sense, and that's a great thing. She'll be quick to see that we don't mean unkindness, and can't, by anything we say or do, when she's Tom's wife." She pronounced the distasteful word with courage, and went on: "The pretty one might not have been able to see that. She might have got it into her head that we were looking down on her; and those insipid people are terribly stubborn. We can come to some understanding with *this* one; I'm sure of that." She ended by declaring that it was now their duty to help Tom out of his terrible predicament.

"Oh, even the Lapham cloud has a silver lining," said Corey. "In fact, it seems really to have all turned out for the best, Anna; though it's rather curious to find you the champion of the Lapham side, at last. Confess, now, that the right girl has secretly been your choice all along, and that while you sym-

pathize with the wrong one, you rejoice in the tenacity with which the right one is clinging to her own!" He added with final seriousness, "It's just that she should, and, so far as I understand the case, I respect her for it."

"Oh, yes," sighed Mrs. Corey. "It's natural, and it's right." But she added, "I suppose they're glad of him on any terms."

"That is what I have been taught to believe," said her husband. "When shall we see our daughter-in-law elect? I find myself rather impatient to have that part of it over."

Mrs. Corey hesitated. "Tom thinks we had better not call, just yet."

"She has told him of your terrible behavior when you called before?"

"No, Bromfield! She couldn't be so vulgar as *that*?"

"But anything short of it?"

XXI.

LAPHAM was gone a fortnight. He was in a sullen humor when he came back, and kept himself shut close within his own den at the office the first day. He entered it in the morning without a word to his clerks as he passed through the outer room, and he made no sign throughout the forenoon, except to strike savagely on his desk-bell from time to time, and send out to Walker for some book of accounts or a letter-file. His boy confidentially reported to Walker that the old man seemed to have got a lot of papers round; and at lunch the book-keeper said to Corey, at the little table which they had taken in a corner together, in default of seats at the counter, "Well, sir, I guess there's a cold wave coming."

Corey looked up innocently, and said, "I haven't read the weather report."

"Yes, sir," Walker continued, "it's coming. Areas of rain along the whole coast, and increased pressure in the region of the private office. Storm-signals up at the old man's door now."

Corey perceived that he was speaking figuratively, and that his meteorology was entirely personal to Lapham. "What do you mean?" he asked, without vivid interest in the allegory, his mind being full of his own tragedy.

"Why, just this: I guess the old man's takin' in sail. And I guess he's got to. As I told you the first time we talked about him, there don't any one know one-quarter as much about the old man's business as the old man does himself; and I ain't betraying any confidence when I say that I guess that old partner of his has got pretty deep into his books. I guess he's over head and ears in 'em, and

the old man's gone in after him, and he's got a drownin' man's grip round his neck. There seems to be a kind of a lull — kind of a dead calm, I call it — in the paint market just now; and then again a ten-hundred-thousand-dollar man don't build a hundred-thousand-dollar house without feeling the drain, unless there's a regular boom. And just now there ain't any boom at all. Oh, I don't say but what the old man's got anchors to windward; guess he *has*; but if he's *goin'* to leave me his money, I wish he'd left it six weeks ago. Yes, sir, I guess there's a cold wave comin'; but you can't generally 'most always tell, as a usual thing, where the old man's concerned, and it's *only* a guess." Walker began to feed in his breaded chop with the same nervous excitement with which he abandoned himself to the slangy and figurative excesses of his talks. Corey had listened with a miserable curiosity and compassion up to a certain moment, when a broad light of hope flashed upon him. It came from Lapham's potential ruin; and the way out of the labyrinth that had hitherto seemed so hopeless was clear enough, if another's disaster would befriend him, and give him the opportunity to prove the unselfishness of his constancy. He thought of the sum of money that was his own, and that he might offer to lend, or practically give, if the time came; and with his crude hopes and purposes formlessly exulting in his heart, he kept on listening with an unchanged countenance.

Walker could not rest till he had developed the whole situation, so far as he knew it. "Look at the stock we've got on hand. There's going to be an awful shrinkage on that, now! And when everybody is shutting down, or running half time, the works up at Lapham are going full chip, just the same as ever. Well, it's his pride. I don't say but what it's a good sort of pride, but he likes to make his brags that the fire's never been out in the works since they started, and that no man's work or wages has ever been cut down yet at Lapham, it don't matter *what* the times are. Of course," explained Walker, "I shouldn't talk so to everybody; don't know as I should talk so to *anybody* but you, Mr. Corey."

"Of course," assented Corey.

"Little off your feed to-day," said Walker, glancing at Corey's plate.

"I got up with a headache."

"Well, sir, if you're like me you'll carry it round all day, then. I don't know a much meaner thing than a headache — unless it's earache, or toothache, or some other kind of ache. I'm pretty hard to suit, when it comes to diseases. Notice how yellow the old man

looked when he came in this morning? I don't like to see a man of his build look yellow — much."

About the middle of the afternoon the dust-colored face of Rogers, now familiar to Lapham's clerks, showed itself among them. "Has Colonel Lapham returned yet?" he asked, in his dry, wooden tones, of Lapham's boy.

"Yes, he's in his office," said the boy; and as Rogers advanced, he rose and added, "I don't know as you can see him to-day. His orders are not to let anybody in."

"Oh, indeed!" said Rogers; "I think he will see *me!*" and he pressed forward.

"Well, I'll have to ask," returned the boy; and hastily preceding Rogers, he put his head in at Lapham's door, and then withdrew it. "Please to sit down," he said; "he'll see you pretty soon;" and, with an air of some surprise, Rogers obeyed. His sere, dull-brown whiskers and the mustache closing over both lips were incongruously and illogically clerical in effect, and the effect was heightened for no reason by the parchment texture of his skin; the baldness extending to the crown of his head was like a baldness made up for the stage. What his face expressed chiefly was a bland and beneficent caution. Here, you must have said to yourself, is a man of just, sober, and prudent views, fixed purposes, and the good citizenship that avoids debt and hazard of every kind.

"What do you want?" asked Lapham, wheeling round in his swivel-chair as Rogers entered his room, and pushing the door shut with his foot, without rising.

Rogers took the chair that was not offered him, and sat with his hat-brim on his knees, and its crown pointed towards Lapham. "I want to know what you are going to do," he answered, with sufficient self-possession.

"I'll tell you, first, what I've *done*," said Lapham. "I've been to Dubuque, and I've found out all about that milling property you turned in on me. Did you know that the G. L. & P. had leased the P. Y. & X.?"

"I some suspected that it might."

"Did you know it when you turned the property in on me? Did you know that the G. L. & P. wanted to buy the mills?"

"I presumed the road would give a fair price for them," said Rogers, winking his eyes in outward expression of inwardly blinking the point.

"You lie," said Lapham, as quietly as if correcting him in a slight error; and Rogers took the word with equal *sang froid*. "You knew the road wouldn't give a fair price for the mills. You knew it would give what it chose, and that I couldn't help myself, when you let me take them. You're a thief, Milton

K. Rogers, and you stole money I lent you." Rogers sat listening, as if respectfully considering the statements. "You knew how I felt about that old matter—or my wife did; and that I wanted to make it up to you, if you felt anyway badly used. And you took advantage of it. You've got money out of me, in the first place, on securities that wa'n't worth thirty-five cents on the dollar, and you've let me in for this thing, and that thing, and you've bled me every time. And all I've got to show for it is a milling property on a line of road that can squeeze me, whenever it wants to, as dry as it pleases. And you want to know what I'm going to do? I'm going to squeeze *you*. I'm going to sell these collaterals of yours,"—he touched a bundle of papers among others that littered his desk,—“and I'm going to let the mills go for what they'll fetch. *I ain't* going to fight the G. L. & P."

Lapham wheeled about in his chair and turned his burly back on his visitor, who sat wholly unmoved.

"There are some parties," he began, with a dry tranquillity ignoring Lapham's words, as if they had been an outburst against some third person, who probably merited them, but in whom he was so little interested that he had been obliged to use patience in listening to his condemnation,—“there are some English parties who have been making inquiries in regard to those mills."

"I guess you're lying, Rogers," said Lapham, without looking round.

"Well, all that I have to ask is that you will not act hastily."

"I see you don't think I'm in earnest!" cried Lapham, facing fiercely about. "You think I'm fooling, do you?" He struck his bell, and "William," he ordered the boy who answered it, and who stood waiting while he dashed off a note to the brokers and inclosed it with the bundle of securities in a large envelope, "take these down to Gallop & Paddock's, in State street, right away. Now go!" he said to Rogers, when the boy had closed the door after him; and he turned once more to his desk.

Rogers rose from his chair, and stood with his hat in his hand. He was not merely dispassionate in his attitude and expression, he was impartial. He wore the air of a man who was ready to return to business whenever the wayward mood of his interlocutor permitted. "Then I understand," he said, "that you will take no action in regard to the mills till I have seen the parties I speak of."

Lapham faced about once more, and sat looking up into the visage of Rogers in silence. "I wonder what you're up to," he said at last; "I *should* like to know." But as

Rogers made no sign of gratifying his curiosity, and treated this last remark of Lapham's as of the irrelevance of all the rest, he said, frowning, "You bring me a party that will give me enough for those mills to clear me of you, and I'll talk to you. But don't you come here with any man of straw. And I'll give you just twenty-four hours to prove yourself a swindler again."

Once more Lapham turned his back, and Rogers, after looking thoughtfully into his hat a moment, cleared his throat, and quietly withdrew, maintaining to the last his unprejudiced demeanor.

Lapham was not again heard from, as Walker phrased it, during the afternoon, except when the last mail was taken in to him; then the sound of rending envelopes, mixed with that of what seemed suppressed swearing, penetrated to the outer office. Somewhat earlier than the usual hour for closing, he appeared there with his hat on and his overcoat buttoned about him. He said briefly to his boy, "William, I sha'n't be back again this afternoon," and then went to Miss Dewey and left a number of letters on her table to be copied, and went out. Nothing had been said, but a sense of trouble subtly diffused itself through those who saw him go out.

That evening, as he sat down with his wife alone at tea, he asked, "Ain't Pen coming to supper?"

"No, she ain't," said his wife. "I don't know as I like the way she's going on, any too well. I'm afraid, if she keeps on, she'll be down sick. She's got deeper feelings than Irene."

Lapham said nothing, but, having helped himself to the abundance of his table in his usual fashion, he sat and looked at his plate with an indifference that did not escape the notice of his wife. "What's the matter with you?" she asked.

"Nothing. I haven't got any appetite."

"What's the matter?" she persisted.

"Trouble's the matter; bad luck and lots of it's the matter," said Lapham. "I haven't ever hid anything from you, Persis, when you asked me, and it's too late to begin now. I'm in a fix. I'll tell you what kind of a fix, if you think it'll do you any good; but I guess you'll be satisfied to know that it's a fix."

"How much of a one?" she asked, with a look of grave, steady courage in her eyes.

"Well, I don't know as I can tell, just yet," said Lapham, avoiding this look. "Things have been dull all the fall, but I thought they'd brisk up, come winter. They haven't. There have been a lot of failures, and some of 'em owed me, and some of 'em had me on their paper; and——" Lapham stopped.

"And what?" prompted his wife.

He hesitated before he added, "And then — Rogers."

"I'm to blame for that," said Mrs. Lapham. "I forced you to it."

"No; I was as willing to go into it as what you were," answered Lapham. "I don't want to blame anybody."

Mrs. Lapham had a woman's passion for fixing responsibility; she could not help saying, as soon as acquitted, "I warned you against him, Silas. I told you not to let him get in any deeper with you."

"Oh, yes. I had to help him to try to get my money back. I might as well poured water into a sieve. And now——" Lapham stopped.

"Don't be afraid to speak out to me, Silas Lapham. If it comes to the worst, I want to know it — I've got to know it. What did I ever care for the money? I've had a happy home with you ever since we were married, and I guess I shall have as long as you live, whether we go on to the Back Bay, or go back to the old house at Lapham. I know who's to blame, and I blame myself. It was my forcing Rogers on to you." She came back to this, with her helpless longing, inbred in all Puritan souls, to have some one specifically suffer for the evil in the world, even if it must be herself.

"It hasn't come to the worst yet, Persis," said her husband. "But I shall have to hold up on the new house a little while, till I can see where I am."

"I shouldn't care if we had to sell it," cried his wife, in passionate self-condemnation. "I should be *glad* if we had to, as far as I'm concerned."

"I shouldn't," said Lapham.

"I know!" said his wife; and she remembered ruefully how his heart was set on it.

He sat musing. "Well, I guess it's going to come out all right in the end. Or, if it ain't," he sighed, "we can't help it. May be Pen needn't worry so much about Corey, after all," he continued, with a bitter irony new to him. "It's an ill wind that blows nobody good. And there's a chance," he ended, with a still bitterer laugh, "that Rogers will come to time, after all."

"I don't believe it!" exclaimed Mrs. Lapham, with a gleam of hope in her eyes. "What chance?"

"One in ten million," said Lapham; and her face fell again. "He says there are some English parties after him to buy these mills."

"Well?"

"Well, I gave him twenty-four hours to prove himself a liar."

"You don't believe there are any such parties?"

"Not in *this* world."

"But if there were?"

"Well, if there were, Persis — But pshaw!"

"No, no!" she pleaded eagerly. "It don't seem as if he *could* be such a villain. What would be the use of his pretending? If he brought the parties to you —"

"Well," said Lapham scornfully, "I'd let them have the mills at the price Rogers turned 'em in on me at. I don't want to make anything on 'em. But guess I shall hear from the G. L. & P. first. And when they make their offer, I guess I'll have to accept it, whatever it is. I don't think they'll have a great many competitors."

Mrs. Lapham could not give up her hope. "If you could get your price from those English parties before they knew that the G. L. & P. wanted to buy the mills, would it let you out with Rogers?"

"Just about," said Lapham.

"Then I know he'll move heaven and earth to bring it about. I *know* you won't be allowed to suffer for doing him a kindness, Silas. He *can't* be so ungrateful! Why, why *should* he pretend to have any such parties in view when he hasn't? Don't you be down-hearted, Si. You'll see that he'll be round with them to-morrow."

Lapham laughed, but she urged so many reasons for her belief in Rogers that Lapham began to rekindle his own faith a little. He ended by asking for a hot cup of tea; and Mrs. Lapham sent the pot out and had a fresh one steeped for him. After that he made a hearty supper in the revulsion from his entire despair; and they fell asleep that night talking hopefully of his affairs, which he laid before her fully, as he used to do when he first started in business. That brought the old times back, and he said: "If this had happened then, I shouldn't have cared much. I was young then, and I wasn't afraid of anything. But I noticed that after I passed fifty I began to get scared easier. I don't believe I could pick up, now, from a regular knockdown."

"Pshaw! *You* scared, Silas Lapham?" cried his wife, proudly. "I should like to see the thing that ever scared you; or the knockdown that *you* couldn't pick up from!"

"Is that so, Persis?" he asked, with the joy her courage gave him.

In the middle of the night she called to him, in a voice which the darkness rendered still more deeply troubled: "Are you awake, Silas?"

"Yes; I'm awake."

"I've been thinking about those English parties, Si —"

"So've I."

"And I can't make it out but what you'd be just as bad as Rogers, every bit and grain, if you were to let them have the mills —"

"And not tell 'em what the chances were with the G. L. & P.? I thought of that, and you needn't be afraid."

She began to bewail herself, and to sob convulsively: "Oh, Silas! Oh, Silas!" Heaven knows in what measure the passion of her soul was mixed with pride in her husband's honesty, relief from an apprehended struggle, and pity for him.

"Hush, hush, Persis!" he besought her. "You'll wake Pen if you keep on that way. Don't cry any more! You mustn't."

"Oh, let me cry, Silas! It'll help me. I shall be all right in a minute. Don't you mind." She sobbed herself quiet. "It does seem too hard," she said, when she could speak again, "that you have to give up this chance when Providence had fairly raised it up for you."

"I guess it wa'n't *Providence* raised it up," said Lapham. "Any rate, it's got to go. Most likely Rogers was lyn', and there ain't any such parties; but if there were, they couldn't have the mills from me without the whole story. Don't you be troubled, Persis. I'm going to pull through all right."

"Oh, I ain't afraid. I don't suppose but what there's plenty would help you, if they knew you needed it, Si."

"They would if they knew I *didn't* need it," said Lapham sardonically.

"Did you tell Bill how you stood?"

"No, I couldn't bear to. I've been the rich one so long, that I couldn't bring myself to own up that I was in danger."

"Yes."

"Besides, it didn't look so ugly till to-day. But I guess we sha'n't let ugly looks scare us."

"No."

(To be continued.)

W. D. Howells.

THE BOSTONIANS.*

BY HENRY JAMES,

Author of "Portrait of a Lady," "Daisy Miller," "Lady Barberina," etc.

XVII.

THE next time Verena saw Olive, she said to her that she was ready to make the promise she had asked the other night; but, to her great surprise, this young woman answered her by a question intended to check such rashness. Miss Chancellor raised a warning finger; she had an air of dissuasion almost as solemn as her former pressure; her passionate impatience appeared to have given way to other considerations, to be replaced by the resignation that comes with deeper reflection. It was tinged in this case, indeed, by such bitterness as might be permitted to a young lady who cultivated the brightness of a great faith.

"Don't you want any promise at present?" Verena asked. "Why, Olive, how you change!"

"My dear child, you are so young—so strangely young. I am a thousand years old; I have lived through generations—through centuries. I know what I know by experience; you know it by imagination. That is consistent with your being the fresh, bright creature that you are. I am constantly forgetting the difference between us—that you are a mere child as yet, though a child destined for great things. I forgot it the other night, but I have remembered it since. You must pass through a certain phase, and it would be very wrong in me to pretend to suppress it. That is all clear to me now; I see it was my jealousy that spoke—my restless, hungry jealousy. I have far too much of that; I oughtn't to give any one the right to say that it's a woman's quality. I don't want your signature; I only want your confidence—only what springs from that. I hope with all my love that you won't marry; but, if you don't, it must not be because you have promised me. You know what I think—that there is something noble done when one makes a sacrifice for a great good. Priests—when they were real priests—never married, and what you and I dream of doing demands of us a kind of priesthood. It seems to me very poor, when friendship and faith and charity and the most interesting occupation in the world—when such a combination as this doesn't seem, by itself, enough to live for. No man that I have ever seen cares a straw in his heart for what

we are trying to accomplish. They hate it; they scorn it; they will try to stamp it out whenever they can. Oh, yes, I know there are men that pretend to care for it; but they are not really men, and I wouldn't be sure even of them! Any man that one would look at—with him, as a matter of course, it is war upon us to the knife. I don't mean to say there are not some male beings who are willing to patronize us a little; to pat us on the back and recommend a few moderate concessions; to say that there *are* two or three little points in which society has not been quite just to us. But any man who pretends to accept our programme *in toto*, as you and I understand it, of his own free will, before he is forced to—such a person simply schemes to betray us. There are gentlemen in plenty who would be glad to stop your mouth by kissing you! If you become dangerous some day to their selfishness, to their vested interests, to their immorality,—as I pray heaven every day, my dear friend, that you may!—it will be a grand thing for one of them if he can persuade you that he loves you. Then you will see what he'll do with you, and how far his love will take him! It would be a sad day for you and for me and for all of us if you were to believe something of that kind. You see I am very calm now; I have thought it all out."

Verena had listened with earnest eyes. "Why, Olive, you are quite a speaker yourself!" she exclaimed. "You would far surpass me if you would let yourself go."

Miss Chancellor shook her head with a melancholy that was not devoid of sweetness. "I can speak to *you*; but that is no proof. The very stones of the street—all the dumb things of nature—might find a voice to talk to you. I have no facility; I am awkward and embarrassed and dry." When this young lady, after a struggle with the winds and waves of emotion, emerged into the quiet stream of a certain high reasonableness, she presented her most graceful aspect; she had a tone of softness and sympathy, a gentle dignity, a serenity of wisdom, which sealed the appreciation of those who knew her well enough to like her, and which always impressed Verena as something almost august. Such moods, however, were not often revealed

to the public at large ; they belonged to Miss Chancellor's very private life. One of them had possession of her at present, and she went on to explain the inconsequence which had puzzled her friend with the same quiet clearness, the detachment from error, of a woman whose self-scrutiny has been as sharp as her deflection.

"Don't think me capricious if I say that I had rather trust you without a pledge. I owe you, I owe every one, an apology for my rudeness and fierceness at your mother's. It came over me — just seeing those young men — how exposed you are ; and the idea made me (for the moment) frantic. I see your danger still, but I see other things too, and I have recovered my balance. You must be safe, Verena — you must be saved ; but your safety must not come from your having tied your hands. It must come from the growth of your perception ; from your seeing things, of yourself, sincerely and with conviction, in the light in which I see them ; from your feeling that for your work your freedom is essential, and that there is no freedom for you and me save in religiously *not* doing what you will often be asked to do — and I never!" Miss Chancellor brought out these last words with a proud jerk which was not without its pathos. "Don't promise, don't promise!" she went on. "I would far rather you didn't. But don't fail me — don't fail me, or I shall die!"

Her manner of repairing her inconsistency was altogether feminine ; she wished to extract a certainty at the same time that she wished to deprecate a pledge, and she would have been delighted to put Verena into the enjoyment of that freedom which was so important for her by preventing her exercising it in a particular direction. The girl was now completely under her influence ; she had latent curiosities and distractions. Left to herself, she was not always thinking of the unhappiness of women ; but the touch of Olive's tone worked a spell, and she found something to which at least a portion of her nature turned with eagerness in her companion's wider knowledge, her elevation of view. Miss Chancellor was historic and philosophic ; or, at any rate, she appeared so to Verena, who felt that through such an association one might at last intellectually command all life. And there was a simpler impulse. Verena wished to please her because she had such a dread of displeasing her. Olive's displeasures, disappointments, disapprovals were tragic, truly memorable ; she grew white under them, not shedding many tears, as a general thing, like inferior women (she cried when she was angry, not when she was hurt), but limping and panting, morally, as if she had received a wound that she would carry for life. On the other hand, her com-

mendations, her satisfactions were as soft as a west wind ; and she had this sign, the rarest of all, of generosity, that she liked obligations of gratitude when they were not laid upon her by men. Then, indeed, she scarcely recognized them. She considered men in general as so much in the debt of the opposite sex that any individual woman had an unlimited credit with them ; she could not possibly overdraw the general feminine account. The unexpected temperance of her speech on this subject of Verena's accessibility to matrimonial error seemed to the girl to have an antique beauty, a wisdom purged of worldly elements ; it reminded her of qualities that she believed to have been proper to Electra or Antigone. This made her wish the more to do something that would gratify Olive ; and, in spite of her friend's dissuasion, she declared that she should like to promise. "I will promise, at any rate, not to marry any of those gentlemen that were at the house," she said. "Those seemed to be the ones you were principally afraid of."

"You will promise not to marry any one you don't like," said Olive. "That would be a great comfort."

"But I do like Mr. Burrage and Mr. Gracie."

"And Mr. Matthias Pardon? What a name!"

"Well, he knows how to make himself agreeable. He can tell you everything you want to know."

"You mean everything you don't! Well, if you like every one, I haven't the least objection. It would only be preferences that I should find alarming. I am not the least afraid of your marrying a repulsive man ; your danger would come from an attractive one."

"I'm glad to hear you admit that some *are* attractive!" Verena exclaimed, with the light laugh which her reverence for Miss Chancellor had not yet quenched. "It sometimes seems as if there weren't any you could like!"

"I can imagine a man I should like very much," Olive replied, after a moment. "But I don't like those I see. They seem to me poor creatures." And, indeed, her uppermost feeling in regard to them was a kind of cold scorn ; she thought most of them palterers and bullies. The end of the colloquy was that Verena, having assented, with her usual docility, to her companion's optimistic contention that it was a "phase," this taste for evening calls from collegians and newspaper men, and would consequently pass away with the growth of her mind, remarked that the injustice of men might be an accident, or it might be a part of their nature ; but, at any rate, she should have to change a good deal before she should want to marry.

About the middle of December, Miss Chancellor received a visit from Matthias Pardon,

who had come to ask her what she meant to do about Verena. She had never invited him to call upon her, and the appearance of a gentleman whose desire to see her was so irrepressible as to dispense with such a preliminary was not in her career an accident frequent enough to have taught her equanimity. She thought Mr. Pardon's visit a liberty; but, if she expected to convey this idea to him by withholding any suggestion that he should sit down, she was greatly mistaken, inasmuch as he cut the ground from under her feet by himself offering her a chair. His manner represented hospitality enough for both of them, and she was obliged to listen, on the edge of her sofa (she could at least seat herself where she liked), to his extraordinary inquiry. Of course she was not obliged to answer it, and indeed she scarcely understood it. He explained that it was prompted by the intense interest he felt in Miss Verena; but that scarcely made it more comprehensible, such a sentiment (on his part) being such a curious mixture. He had a sort of enamel of good humor, which showed that his indelicacy was his profession; and he asked for revelations of the *vie intime* of his victims with the bland confidence of a fashionable physician inquiring about symptoms. He wanted to know what Miss Chancellor meant to do, because, if she didn't mean to do anything, he had an idea—which he wouldn't conceal from her—of going into the enterprise himself. "You see, what I should like to know is this: do you consider that she belongs to you, or that she belongs to the people? If she belongs to you, why don't you bring her out?"

He had no purpose and no consciousness of being impertinent; he only wished to talk over the matter sociably with Miss Chancellor. He knew, of course, that there was a presumption she would not be sociable, but no presumption had yet deterred him from presenting a surface which he believed to be polished till it shone; there was always a larger one in favor of his power to penetrate and of the majesty of the "great dailies." Indeed, he took so many things for granted that Olive remained dumb while she regarded them; and he availed himself of what he considered as a fortunate opening to be really very frank. He reminded her that he had known Miss Verena a good deal longer than she; he had traveled out to Cambridge the winter before (when he could get an off night), with the thermometer at ten below zero. He had always thought her attractive, but it wasn't till this season that his eyes had been fully opened. Her talent had matured, and now he had no hesitation in calling her brilliant. Miss Chancellor could imagine whether, as

an old friend, he could watch such a beautiful unfolding with indifference. She would fascinate the people, just as she had fascinated her (Miss Chancellor), and, he might be permitted to add, himself. The fact was, she was a great card, and some one ought to play it. There never had been a more attractive female speaker before the American public; she would walk right past Mrs. Farrinder, and Mrs. Farrinder knew it. There was room for both, no doubt, they had such a different style; anyhow, what he wanted to show was that there was room for Miss Verena. She didn't want any more tuning-up, she wanted to break right out. Moreover, he felt that any gentleman who should lead her to success would win her esteem; he might even attract her more powerfully—who could tell? If Miss Chancellor wanted to attach her permanently, she ought to push her right forward. He gathered from what Miss Verena had told him that she wanted to make her study up the subject a while longer—follow some kind of course. Well, now, he could assure her that there was no preparation so good as just seeing a couple of thousand people down there before you who have paid their money to have you tell them something. Miss Verena was a natural genius, and he hoped very much she wasn't going to take the nature out of her. She could study up as she went along; she had got the great thing that you couldn't learn, a kind of divine afflatus, as the ancients used to say, and she had better just begin on that. He wouldn't deny what was the matter with *him*; he was quite under the spell, and his admiration made him want to see her where she belonged. He shouldn't care so much how she got there, but it would certainly add to his pleasure if he could show her up to her place. Therefore, would Miss Chancellor just tell him this: How long did she expect to hold her back; how long did she expect a humble admirer to wait? Of course he hadn't come there to cross-question her; there was one thing he trusted he always kept clear of: when he was indiscreet, he wanted to know it. He had come with a proposal of his own, and he hoped it would seem a sufficient warrant for his visit. Would Miss Chancellor be willing to divide a—the—well, he might call it the responsibilities? Couldn't they run Miss Verena together? In that case, every one would be satisfied. She could travel round with her as her companion, and he would see that the American people walked up. If Miss Chancellor would just let her go a little, he would look after the rest. He wanted no odds; he only wanted her for about an hour and a half three or four evenings a week.

Olive had time, in the course of this appeal, to make her faculties converge, to ask herself what she could say to this prodigious young man that would make him feel how base a thing she held his proposal that they should "work" Verena in partnership to be. Unfortunately, the most sarcastic inquiry that could occur to her as a response was also the most obvious one, so that he hesitated but a moment with his rejoinder after she had asked him how many thousands of dollars he expected to make.

"For Miss Verena? It depends upon the time. She'd run for ten years, at least. I can't figure it up till all the States have been heard from," he said, smiling.

"I don't mean for Miss Tarrant, I mean for you," Olive returned, with the impression that she was looking him straight in the eye.

"Oh, as many as you'll leave me!" Matthias Pardon answered, with a laugh that contained all, and more than all, the jocularly of the American press. "To speak seriously," he added, "I don't want to make money out of it."

"What do you want to make, then?"

"Well, I want to make history! I want to help the ladies."

"The ladies?" Olive murmured. "What do you know about ladies?" she was on the point of adding, when his promptness checked her.

"All over the world. I want to work for their emancipation. I regard it as the great modern question."

Miss Chancellor got up now; this was rather too strong. Whether, eventually, she was successful in what she attempted, the reader of her history will judge; but at this moment she had not that promise of success which resides in a willingness to make use of every aid that offers. Such is the penalty of being of a fastidious, exclusive, uncompromising nature; of seeing things not simply and sharply, but in perverse relations, in intertwined strands. It seemed to our young lady that nothing could be less attractive than to owe her emancipation to such a one as Matthias Pardon; and it is curious that those qualities which he had in common with Verena, and which in her seemed to Olive romantic and touching,—her having sprung from the "people," had an acquaintance with poverty, a hand-to-mouth development, and an experience of the seamy side of life,—availed in no degree to conciliate Miss Chancellor. I suppose it was because he was a man. She told him that she was much obliged to him for his offer, but that he evidently didn't understand Verena and herself. No, not even Miss Tarrant, in spite of his long acquaintance with her. They had no desire to be notorious; they only wanted to be useful. They had no wish to make money; there would always

be plenty of money for Miss Tarrant. Certainly, she should come before the public, and the world would acclaim her and hang upon her words; but crude, precipitate action was what both of them least desired. The change in the dreadful position of women was not a question for to-day simply, or for to-morrow, but for many years to come; and there would be a great deal to think of, to map out. One thing they were determined upon—that men shouldn't taunt them with being superficial. When Verena should appear, it would be armed at all points, like Joan of Arc (this analogy had lodged itself in Olive's imagination); she should have facts and figures; she should meet men on their own ground. "What we mean to do, we mean to do well," Miss Chancellor said to her visitor, with considerable sternness; leaving him to make such an application to himself as his fancy might suggest.

This announcement had little comfort for him; he felt baffled and disheartened—indeed, quite sick. Was it not sickening to hear her talk of this dreary process of preparation?—as if any one cared about that, and would know whether Verena were prepared or not! Had Miss Chancellor no faith in her girlhood? didn't she know what a card that would be? This was the last inquiry Olive allowed him the opportunity of making. She remarked to him that they might talk forever without coming to an agreement—their points of view were so far apart. Besides, it was a woman's question; what they wanted was for women, and it should be by women. It had happened to the young Matthias more than once to be shown the way to the door, but the path of retreat had never yet seemed to him so unpleasant. He was naturally amiable, but it had not hitherto befallen him to be made to feel that he was not—and could not be—a factor in contemporary history: here was a rapacious woman who proposed to keep that favorable setting for herself. He let her know that she was right-down selfish, and that if she chose to sacrifice a beautiful nature to her antediluvian theories and love of power, a vigilant daily press—whose business it was to expose wrong-doing—would demand an account from her. She replied that, if the newspapers chose to insult her, that was their own affair; one outrage the more to the sex in her person was of little account. And after he had left her she seemed to see the glow of dawning success; the battle had begun, and something of the ecstasy of the martyr.

XVIII.

VERENA told her, a week after this, that Mr. Pardon wanted so much she should say

she would marry him ; and she added, with evident pleasure at being able to give her so agreeable a piece of news, that she had declined to say anything of the sort. She thought that now, at least, Olive must believe in her ; for the proposal was more attractive than Miss Chancellor seemed able to understand. "He does place things in a very seductive light," Verena said ; "he says that if I become his wife I shall be carried straight along by a force of excitement, of which at present I have no idea. I shall wake up famous, if I marry him ; I have only got to give out my feelings, and he will take care of the rest. He says every hour of my youth is precious to me, and that we should have a lovely time traveling round the country. I think you ought to allow that all that is rather dazzling — for I am not naturally concentrated, like you!"

"He promises you success. What do you call success?" Olive inquired, looking at her friend with a kind of salutary coldness — a suspension of sympathy — with which Verena was now familiar (though she liked it no better than at first), and which made approbation more gracious when approbation came.

Verena reflected a moment, and then answered, smiling, but with confidence: "Producing a pressure that shall be irresistible. Causing certain laws to be repealed by Congress and by the State legislatures, and others to be enacted." She repeated the words as if they had been part of a catechism committed to memory, while Olive saw that this mechanical tone was in the nature of a joke that she could not deny herself; they had had that definition so often before, and Miss Chancellor had had occasion so often to remind her what success *really* was. Of course it was easy to prove to her now that Mr. Pardon's glittering bait was a very different thing; was a mere trap and lure, a bribe to vanity and impatience, a device for making her give herself away — let alone fill his pockets while she did so. Olive was conscious enough of the girl's want of continuity; she had seen before how she could be passionately serious at times, and then perversely, even if innocently, trivial — as just now, when she seemed to wish to convert one of their most sacred formulas into a pleasantry. She had already quite recognized, however, that it was not of importance that Verena should be just like herself; she was all of one piece, and Verena was of many pieces, which had, where they fitted together, little capricious chinks, through which mocking inner lights seemed sometimes to gleam. It was a part of Verena's being unlike her that she should feel Mr. Pardon's promise of eternal excitement to be a brilliant thing, should indeed consider Mr. Pardon with any tolerance

at all. But Olive tried afresh to allow for such aberrations, as a phase of youth and suburban culture; the more so that, even when she tried most, Verena reproached her — so far as Verena's incurable softness could reproach — with not allowing enough. Olive didn't appear to understand that, while Matthias Pardon drew that picture and tried to hold her hand (this image was unfortunate), she had given one long, fixed, wistful look, through the door he opened, at the bright tumult of the world, and then had turned away, solely for her friend's sake, to an austerer probation and a purer effort; solely for her friend's, that is, and that of the whole enslaved sisterhood. The fact remained, at any rate, that Verena had made a sacrifice; and this thought, after a while, gave Olive a greater sense of security. It seemed almost to seal the future; for Olive knew that the young interviewer would not easily be shaken off, and yet she was sure that Verena would never yield to him.

It was true that at present Mr. Burrage came a great deal to the little house at Cambridge; Verena told her about that, told her so much that it was almost as good as if she had told her all. He came without Mr. Gracie now; he could find his way alone, and he seemed to wish that there should be no one else. He had made himself so pleasant to her mother that she almost always went out of the room; that was the highest proof Mrs. Tarrant could give of her appreciation of a "gentleman caller." They knew everything about him by this time; that his father was dead, his mother very fashionable and prominent, and he himself in possession of a handsome patrimony. They thought ever so much of him in New York. He collected beautiful things, pictures and antiques and objects that he sent for to Europe on purpose, many of which were arranged in his rooms at Cambridge. He had intaglios and Spanish altarcloths and drawings by the old masters. He was different from most others; he seemed to want so much to enjoy life, and to think you easily could if you would only let yourself go. Of course — judging by what *he* had — he appeared to think you required a great many things to keep you up. And then Verena told Olive — she could see it was after a little delay — that he wanted her to come round to his place and see his treasures. He wanted to show them to her, he was so sure she would admire them. Verena was sure also, but she wouldn't go alone, and she wanted Olive to go with her. They would have tea, and there would be other ladies, and Olive would tell her what she thought of a life that was so crowded with beauty. Miss Chancellor made her reflections on all this, and the

first of them was that it was happy for her that she had determined for the present to accept these accidents, for otherwise might she not now have had a deeper alarm? She wished to heaven that conceited young men with time on their hands would leave Verena alone; but evidently they wouldn't, and her best safety was in seeing as many as should turn up. If the type should become frequent, she would very soon judge it. If Olive had not been so grim, she would have had a smile to spare for the frankness with which the girl herself adopted this theory. She was eager to explain that Mr. Burrage didn't seem at all to want what poor Mr. Pardon had wanted; he made her talk about her views far more than that gentleman, but gave no sign of offering himself either as a husband or as a lecture-agent. The furthest he had gone as yet was to tell her that he liked her for the same reason that he liked old enamels and old embroideries; and when she said that she didn't see how she resembled such things, he had replied that it was because she was so peculiar and so delicate. She might be peculiar, but she had protested against the idea that she was delicate; it was the last thing that she wanted to be thought; and Olive could see from this how far she was from falling in with everything he said. When Miss Chancellor asked if she respected Mr. Burrage (and how solemn Olive could make that word she by this time knew), she answered, with her sweet, vain laugh, but apparently with perfect good faith, that it didn't matter whether she did or not, for what was the whole thing but simply a phase—the very one they had talked about? The sooner she got through it the better, was it not?—and she seemed to think that her transit would be materially quickened by a visit to Mr. Burrage's rooms. As I say, Verena was pleased to regard the phase as quite inevitable, and she had said more than once to Olive that, if their struggle was to be with men, the more they knew about them the better. Miss Chancellor asked her why her mother should not go with her to see the curiosities, since she mentioned that their possessor had not neglected to invite Mrs. Tarrant; and Verena said that this, of course, would be very simple—only her mother wouldn't be able to tell her so well as Olive whether she ought to respect Mr. Burrage. This decision, as to whether Mr. Burrage should be respected, assumed in the life of these two remarkable young women, pitched in so high a moral key, the proportions of a momentous event. Olive shrank at first from facing it—not, indeed, the decision,—for we know that her own mind had long since been made up in regard to the quantity of esteem

due to almost any member of the other sex,—but the incident itself, which, if Mr. Burrage should exasperate her further, might expose her to the danger of appearing to Verena to be unfair to him. It was her belief that he was playing a deeper game than the young Matthias, and she was very willing to watch him; but she thought it prudent not to attempt to cut short the phase (she adopted that classification) prematurely—an imputation she should incur if, without more delay, she were to “shut down,” as Verena said, on the young connoisseur.

It was settled, therefore, that Mrs. Tarrant should, with her daughter, accept Mr. Burrage's invitation; and in a few days these ladies paid a visit to his apartments. Verena subsequently, of course, had much to say about it, but she dilated even more upon her mother's impressions than upon her own. Mrs. Tarrant had carried away a supply which would last her all winter; there had been some New York ladies present who were “on” at that moment, and with whom her intercourse was rich in emotions. She had told them all that she should be happy to see them in her home, but they had not yet picked their way along the little planks of the front yard. Mr. Burrage, at all events, had been quite lovely, and had talked about his collections, which were wonderful, in the most interesting manner. Verena inclined to think he was to be respected. He admitted that he was not really studying law at all; he had only come to Cambridge for the form; but she didn't see why it wasn't enough when you made yourself as pleasant as that. She went so far as to ask Olive whether taste and art were not something, and her friend could see that she was certainly very much involved in the Phase. Miss Chancellor, of course, had her answer ready. Taste and art were good when they enlarged the mind, not when they narrowed it. Verena assented to this, and said it remained to be seen what effect they had had upon Mr. Burrage,—a remark which led Olive to fear that at such a rate much would remain, especially when Verena told her, later, that another visit to the young man's rooms was projected, and that this time she must come, he having expressed the greatest desire for the honor, and her own wish being greater still that they should look at some of his beautiful things together.

A day or two after this, Mr. Henry Burrage left a card at Miss Chancellor's door, with a note, in which he expressed the hope that she would take tea with him on a certain day on which he expected the company of his mother. Olive responded to this invitation in conjunction with Verena; but in doing

so she was in the position, singular for her, of not quite understanding what she was about. It seemed to her strange that Verena should urge her to take such a step when she was free to go without her, and it proved two things: first, that she was much interested in Mr. Henry Burrage, and second, that her nature was extraordinarily beautiful. Could anything, in effect, be less underhand than such an indifference to what she supposed to be the best opportunities for carrying on a flirtation? Verena wanted to know the truth, and it was clear that by this time she believed Olive Chancellor to have it, for the most part, in her keeping. Her insistence, therefore, proved, above all, that she cared more for her friend's opinion of Henry Burrage than for her own,—a reminder, certainly, of the responsibility that Olive had incurred in undertaking to form this generous young mind, and of the exalted place that she now occupied in it. Such revelations ought to have been satisfactory; if they failed to be completely so, it was only on account of the elder girl's regret that the subject as to which her judgment was wanted should be a young man destitute of the worst vices. Henry Burrage had contributed to throw Miss Chancellor into a "state," as these young ladies called it, the night she met him at Mrs. Tarrant's; but it had none the less been conveyed to Olive by the voices of the air that he was a gentleman and a good fellow.

This was painfully obvious when the visit to his rooms took place; he was so good-humored, so amusing, so friendly and considerate, so attentive to Miss Chancellor, he did the honors of his bachelor nest with so easy a grace, that Olive, part of the time, sat dumbly shaking her conscience, like a watch that wouldn't go, to make it tell her some better reason why she shouldn't like him. She saw that there would be no difficulty in disliking his mother; but that, unfortunately, would not serve her purpose nearly so well. Mrs. Burrage had come to spend a few days near her son; she was staying at a hotel in Boston. It presented itself to Olive that after this entertainment it would be an act of courtesy to call upon her; but here, at least, was the comfort that she could cover herself with the general absolution extended to the Boston temperament and leave her alone. It was slightly provoking, indeed, that Mrs. Burrage should have so much the air of a New Yorker who didn't particularly notice whether a Bostonian called or not; but there is ever an imperfection, I suppose, in even the sweetest revenge. She was a woman of society, large and voluminous, fair (in coloring) and regularly ugly, looking as if she

ought to be slow and rather heavy, but disappointing this expectation by a quick, amused utterance, a short, bright, summary laugh, with which she appeared to dispose of the joke (whatever it was) forever, and an air of recognizing on the instant everything she saw and heard. She was evidently accustomed to talk, and even to listen, if not kept waiting too long for details and parentheses; she was not continuous, but frequent, as it were, and you would see that she hated explanations, though it was not to be supposed that she had anything to fear from them. Her favors were general, not particular; she was civil enough to every one, but not in any case endearing, and perfectly genial without being confiding, as people were in Boston when (in moments of exaltation) they wished to mark that they were not suspicious. There was something in her whole manner which seemed to say to Olive that she belonged to a larger world than hers; and our young lady was vexed at not hearing that she had lived for a good many years in Europe, as this would have made it easy to classify her as one of the corrupt. She learned, almost with a sense of injury, that neither the mother nor the son had been longer beyond the seas than she herself; and if they were to be judged as triflers, they must be dealt with individually. Was it an aid to such a judgment to see that Mrs. Burrage was very much pleased with Boston, with Harvard College, with her son's interior, with her cup of tea (it was old Sèvres), which was not half so bad as she had expected, with the company he had asked to meet her (there were three or four gentlemen, one of whom was Mr. Gracie), and, last, not least, with Verena Tarrant, whom she addressed as a celebrity, kindly, cleverly, but without maternal tenderness or anything to mark the difference in their age? She spoke to her as if they were equals in that respect, as if Verena's genius and fame would make up the disparity, and the girl had no need of encouragement and patronage. She made no direct allusion, however, to her particular views, and asked her no question about her "gift,"—an omission which Verena thought strange, and, with the most amiable candor, spoke of to Olive afterwards. Mrs. Burrage seemed to imply that every one present had some distinction and some talent, that they were all good company together. There was nothing in her manner to indicate that she was afraid of Verena on her son's account; she didn't resemble a person who would like him to marry the daughter of a mesmeric healer, and yet she appeared to think it charming that he should have such a young woman there to give gusto to her hour at Cambridge. Poor

Olive was, in the nature of things, entangled in contradictions; she had a horror of the idea of Verena's marrying Mr. Burrage, and yet she was angry when his mother demeaned herself as if the little girl with red hair, whose freshness she enjoyed, could not be a serious danger. She saw all this through the blur of her shyness, the conscious, anxious silence to which she was so much of the time condemned. It may therefore be imagined how sharp her vision would have been could she only have taken the situation more simply; for she was intelligent enough not to have needed to be morbid, even for purposes of self-defense.

I must add, however, that there was a moment when she came near being happy — or, at any rate, reflected that it was a pity she could not be so. Mrs. Burrage asked her son to play "some little thing," and he sat down to his piano and revealed a talent that might well have gratified that lady's pride. Olive was extremely susceptible to music, and it was impossible to her not to be soothed and beguiled by the young man's charming art. One "little thing" succeeded another; his selections were all very happy. His guests sat scattered in the red firelight, listening, silent, in comfortable attitudes; there was a faint fragrance from the burning logs, which mingled with the perfume of Schubert and Mendelssohn; the covered lamps made a glow here and there, and the cabinets and brackets produced brown shadows, out of which some precious object gleamed — some ivory carving or cinque-cento cup. It was given to Olive, under these circumstances, for half an hour, to surrender herself, to enjoy the music, to admit that Mr. Burrage played with exquisite taste, to feel as if the situation were a kind of truce. Her nerves were calmed, her problems — for the time — subsided. Civilization, under such an influence, in such a setting, appeared to have done its work; harmony ruled the scene; human life ceased to be a battle. She went so far as to ask herself why one should have a quarrel with it; the relations of men and women, in that picturesque grouping, had not the air of being internecine. In short, she had an interval of unexpected rest, during which she kept her eyes mainly on Verena, who sat near Mrs. Burrage, letting herself go, evidently, more completely than Olive. To her, too, music was a delight, and her listening face turned itself to different parts of the room, unconsciously, while her eyes vaguely rested on the objects that emerged into the firelight. At moments Mrs. Burrage bent her countenance upon her and smiled, at random, kindly; and then Verena smiled back,

while her expression seemed to say that, oh, yes, she was giving up everything, all principles, all projects. Even before it was time to go, Olive felt that they were both (Verena and she) quite demoralized, and she only summoned energy to take her companion away when she heard Mrs. Burrage propose to her to come and spend a fortnight in New York. Then Olive exclaimed to herself, "Is it a plot? Why in the world can't they let her alone?" and prepared to throw a fold of her mantle, as she had done before, over her young friend. Verena answered, somewhat impetuously, that she should be delighted to visit Mrs. Burrage; then checked her impetuosity, after a glance from Olive, by adding that perhaps this lady wouldn't ask her if she knew what strong ground she took on the emancipation of women. Mrs. Burrage looked at her son and laughed; she said she was perfectly aware of Verena's views, and that it was impossible to be more in sympathy with them than she herself. She took the greatest interest in the emancipation of women; she thought there was so much to be done. These were the only remarks that passed in reference to the great subject; and nothing more was said to Verena, either by Henry Burrage or by his friend Gracie, about her addressing the Harvard students. Verena had told her father that Olive had put her veto upon that, and Tarrant had said to the young men that it seemed as if Miss Chancellor was going to put the thing through in her own way. We know that he thought this way very circuitous; but Miss Chancellor had made him feel that she was in earnest, and that idea frightened the resistance out of him — it had such terrible associations. The people he had ever seen who were most in earnest were a committee of gentlemen who had investigated the phenomena of the "materialization" of spirits some ten years before, and had bent the fierce light of the scientific method upon him. To Olive it appeared that Mr. Burrage and Mr. Gracie had ceased to be jocular; but that did not make them any less cynical. Henry Burrage said to Verena, as she was going, that he hoped she would think seriously of his mother's invitation; and she replied that she didn't know whether she should have much time in the future to give to people who already approved of her views; she expected to have her hands full with the others, who didn't.

"Does your scheme of work exclude all distraction, all recreation, then?" the young man inquired; and his look expressed real suspense.

Verena referred the matter, as usual, with her air of bright, ungrudging deference, to her

companion. "Does it, should you say — our scheme of work?"

"I am afraid the distraction we have had this afternoon must last us for a long time," Olive said, without harshness, but with considerable majesty.

"Well, now, *is* he to be respected?" Verena demanded, as the two young women took their way through the early darkness, pacing quietly side by side, in their winter robes, like women consecrated to some holy office.

Olive turned it over a moment. "Yes, very much — as a pianist!"

Verena went into town with her in the horse-car, — she was staying in Charles street for a few days, — and that evening she startled Olive by breaking out into a reflection very similar to the whimsical falterings of which she herself had been conscious while they sat in Mr. Burrage's pretty rooms, but against which she had now violently reacted.

"It would be very nice to do that always — just to take men as they are, and not to have to think about their badness. It would be very nice not to have so many questions, but to think they were all comfortably answered, so that one could sit there on an old Spanish leather chair, with the curtains drawn and keeping out the cold, the darkness, all the big, terrible, cruel world — sit there and listen forever to Schubert and Mendelssohn. *They* didn't care anything about female suffrage! And I didn't feel the want of a vote to-day at all, did you?" Verena inquired, ending, as she always ended in these few speculations, with an appeal to Olive.

This young lady thought it necessary to give her a very firm answer. "I always feel it — everywhere — night and day. I feel it *here*;" and Olive laid her hand solemnly on her heart. "I feel it as a deep, unforgettable wrong; I feel it as one feels a stain that is on one's honor."

Verena gave a clear laugh, and after that a soft sigh, and then said, "Do you know, Olive, I sometimes wonder whether, if it wasn't for you, I should feel it so very much!"

"My own friend," Olive replied, "you have never yet said anything to me which expressed so clearly the closeness and sanctity of our union."

"You do keep me up," Verena went on. "You are my conscience."

"I should like to be able to say that you are my form — my envelope. But you are too beautiful for that!" So Olive returned her friend's compliment; and later she said that, of course, it would be far easier to give up everything and draw the curtains to and pass one's life in an artificial atmosphere, with rose-colored lamps. It would be far easier to aban-

don the struggle, to leave all the unhappy women of the world to their immemorial misery, to lay down one's burden, close one's eyes to the whole dark picture, and, in short, simply expire. To this Verena objected that it would not be easy for her to expire at all; that such an idea was darker than anything the world contained; that she had not done with life yet, and that she didn't mean to allow her responsibilities to crush her. And then the two young women concluded, as they had concluded before, by finding themselves completely, inspiringly in agreement, full of the purpose to live indeed, and with high success; to become great, in order not to be obscure, and powerful, in order not to be useless. Olive had often declared before that her conception of life was as something sublime or as nothing at all. The world was full of evil, but she was glad to have been born before it had been swept away, while it was still there to face, to give one a task and a reward. When the great reforms should be consummated, when the day of justice should have dawned, would not life perhaps be rather poor and pale? She had never pretended to deny that the hope of fame, of the very highest distinction, was one of her strongest incitements; and she held that the most effective way of protesting against the state of bondage of women was for an individual member of the sex to become illustrious. A person who might have overheard some of the talk of this possibly infatuated pair would have been touched by their extreme familiarity with the idea of earthly glory. Verena had not invented it, but she had taken it eagerly from her friend, and she returned it with interest. To Olive it appeared that just this partnership of their two minds — each of them, by itself, lacking an important group of facts — made an organic whole, which, for the work in hand, could not fail to be brilliantly effective. Verena was often far more irresponsive than she liked to see her; but the happy thing in her composition was that, after a short contact with the divine idea, — Olive was always trying to flash it at her, like a jewel in an uncovered case, — she kindled, flamed up, took the words from her friend's less persuasive lips, resolved herself into a magical voice, became again the pure young sibyl. Then Olive perceived how fatally, without Verena's tender notes, her crusade would lack sweetness, what the Catholics call unction; and, on the other hand, how weak Verena would be on the statistical and logical side if she herself should not bring up the rear. Together, in short, they would be complete, they would have everything, and together they would triumph.

Henry James.

JOHN BROWN AT HARPER'S FERRY.*

THE FIGHT AT THE ENGINE-HOUSE, AS SEEN BY ONE OF HIS PRISONERS.

AS to John Brown and his appearance at Harper's Ferry, probably there is no one now living who can tell more of that affair than myself, as I then lived at Harper's Ferry, and was a prisoner of Brown's until rescued by General Robert E. Lee, then colonel in the United States Army. Prior to Brown's sudden appearance at the Ferry, there had been seen by the neighbors small squads of men with picks and spades moving about the mountain-sides, making small excavations here and there, pretending to be looking for gold, of which they declared the mountains were full.

They went repeatedly to the small property-owners, trying to buy land, until all the neighborhood was much excited, and they had succeeded in diverting the minds of the people from their real object.

These men had rented a house near the Ferry, where they were seen in small parties, but never in such large numbers as to excite suspicion.

Some of them often came to the Ferry, but they excited no suspicion, as strangers were always there viewing the scenery and Government works. Brown himself was said to have been seen there often, but I do not recollect meeting him, and feel sure his appearance would have made an impression on me. When his plans were matured, by the aid of one Cook, who was a citizen of the town, he determined to make his invasion to release the negroes of Virginia from servitude.

His descent upon the town was in this wise: On Sunday night, Oct. 16, 1859, about twelve or one o'clock, the gate-keeper of the bridge over the Potomac leading into Maryland was startled by the steady tramp of many men approaching the gate, having with them wagons, who, upon reaching the gate, ordered it to be opened to them. This the gate-keeper refused to do, saying they were strangers. They, however, while parleying with him, seized him and, presenting a pistol at his head, compelled him to be silent. They then wrenched off the locks and came over, he thinks about sixty strong, though he was evidently frightened and could not speak with accuracy.

Upon getting over, the first building taken possession of was the depot of the Balti-

more and Ohio Railroad, then in charge of a very trusty negro, who slept in the building. Upon Brown's men demanding admittance, he refused to let them come in, saying he was in charge, and his instructions were to let no one in at night. He was then shot down, a negro faithful to his trust being the first victim of those whose mission it was to free the African race from bondage.

Brown's party next proceeded to the hotel, rapped up the landlord, put him under arrest, and placed guards at the doors, so that no one could go out or come in. All this was in perfect quiet at dead of night. They went next to place guards at the arsenal and armories, and fix their pickets at all the streets, so that no one could come or go who was not at once picked up and placed with an armed guard over him and compelled to be silent.

Next they divided their force, sending Cook with some men to seize Colonel Washington and other slaveholders. These gentlemen Brown's party waked from sleep and compelled to go with them as prisoners, at the same time taking all the slaves they could find, carriages, horses, etc.

With the prisoners and property they had collected, they returned to Harper's Ferry before daylight, and thence across the bridge into Maryland and Pennsylvania. The gentlemen arrested were left as prisoners with John Brown. This seems to have been the programme for the night; now as to my introduction to John Brown, and what occurred afterwards.

About daylight one of my servants came to my room door and told me "there was war in the street." I, of course, got up at once, dressed, and went out, my dwelling being immediately on the street. Upon looking round I saw nothing exciting. The only person in view was a man from the country, who was riding rapidly, and I supposed he had lost some of his negroes, who had been stopped at the gate of the bridge and made fight.

I walked towards my office, then just within the armory inclosure, and not more than a hundred yards from my dwelling. As I proceeded I saw a man come out of an alley near me, then another, and another,

* See "The John Brown Raid," illustrated, in *THE CENTURY* for July, 1883. By Alexander R. Boteler and Frank B. Sanborn.— Mr. Daingerfield was Acting Paymaster at the time. He was afterwards in charge of Confederate Armory at Goldsboro, N. C., with rank of Captain.

all coming towards me. When they came up to me I inquired what all this meant; they said, nothing, only they had taken possession of the Government works.

I told them they talked like crazy men. They answered, "Not so crazy as you think, as you will soon see." Up to this time I had not seen any arms; presently, however, the men threw back the short cloaks they wore, and displayed Sharpes's rifles, pistols, and knives. Seeing these, and fearing something serious was going on, I told the men I believed I would return to my quarters. They at once cocked their guns, and told me I was a prisoner. This surprised me, of course, but I could do nothing, being entirely unarmed. I talked with them some little time longer, and again essayed to return to my house; but one of the men stepped before me, presented his gun, and told me if I moved I would be shot down. I then asked them what they intended to do with me. They said I was in no personal danger; they only wanted to carry me to their captain, John Smith. I asked where Captain Smith was. They answered, "At the guard-house, inside of the armory inclosure." I told them I would go there, as that was the point for which I first started. My office was at this place, and I felt uneasy lest the vault might have been broken open.

Upon reaching the gate I saw what, indeed, looked like war—negroes armed with pikes, and sentinels with muskets all around. When I reached the gate I was turned over to "Captain Smith."

He called me by name, and asked if I knew Colonel Washington and others, mentioning familiar names. I said I did, and he then said, "Sir, you will find them there," motioning me towards the engine-room.

We were not kept closely confined, but were allowed to converse with him. I asked him what his object was; he replied, "To free the negroes of Virginia." He added that he was prepared to do it, and by twelve o'clock would have fifteen hundred men with him, ready armed.

Up to this time the citizens had hardly begun to move about, and knew nothing of the raid.

When they learned what was going on, some came out armed with old shot-guns, and were themselves shot by concealed men. All the stores, as well as the arsenal, were in the hands of Brown's men, and it was impossible to get either arms or ammunition, there being hardly any private arms owned by citizens. At last, however, a few weapons were obtained, and a body of citizens crossed the river and advanced from the Maryland side. They made a vigorous attack, and in a few

minutes caused all the invaders who were not killed to retreat to Brown inside of the armory gate. Then he entered the engine-house, carrying his prisoners along, or rather part of them, as he made selections among them.

After getting into the engine-house with his men, he made this speech: "Gentlemen, perhaps you wonder why I have selected you from the others. It is because I believe you to be the most influential, and I have only to say now that you will have to share precisely the same fate that your friends extend to my men." He began at once to bar the doors and windows, and to cut port-holes through the brick wall.

Then commenced a terrible firing from without, from every point from which the windows could be seen, and in a few minutes every window was shattered, and hundreds of balls came through the doors. These shots were answered from within whenever the attacking party could be seen. This was kept up most of the day, and, strange to say, no prisoner was hurt, though thousands of balls were imbedded in the walls, and holes shot in the doors almost large enough for a man to creep through.

At night the firing ceased, for we were in total darkness, and nothing could be seen in the engine-house.

During the day and night I talked much with John Brown, and found him as brave as a man could be, and sensible upon all subjects except slavery. Upon that question he was a religious fanatic, and believed it was his duty to free the slaves, even if in doing so he lost his own life.

During a sharp fight one of Brown's sons was killed. He fell; then trying to raise himself, he said, "It is all over with me," and died instantly.

Brown did not leave his post at the port-hole, but when the fighting ceased he walked to his son's body, straightened out his limbs, took off his trappings, then, turning to me, said, "This is the third son I have lost in this cause." Another son had been shot in the morning and was then dying, having been brought in from the street. While Brown was a murderer, yet I was constrained to think that he was not a vicious man, but was crazed upon the subject of slavery. Often during the affair in the engine-house, when his men would want to fire upon some one who might be seen passing, Brown would stop them, saying, "Don't shoot; that man is unarmed." The firing was kept up by our men all day and until late at night, and during this time several of his men were killed; but, as I said before, none of the prisoners were hurt, though in great danger.

During the day and night many propositions *pro* and *con* were made, looking to Brown's surrender and the release of the prisoners, but without result.

When Colonel Lee came with the Government troops, at one o'clock at night, he at once sent a flag of truce by his aide, J. E. B. Stuart, to notify Brown of his arrival, and in the name of the United States to demand his surrender, advising him to throw himself upon the clemency of the Government.

Brown declined to accept Colonel Lee's terms, and determined to await the attack.

When Stuart was admitted, and a light brought, he exclaimed, "Why, aren't you old Ossawatimie Brown, of Kansas, whom I once had there as my prisoner?" "Yes," was the answer, "but you did not keep me." This was the first intimation we had as to Brown's true name. He had been engaged in the Kansas border war, and had come from there to Harper's Ferry. When Colonel Lee advised Brown to trust to the clemency of the Government, he responded that he knew what that meant,—a rope for his men and himself,—adding, "I prefer to die just here."

Stuart told him he would return at early morning for his final reply, and left him.

When he had gone, Brown at once proceeded to barricade the doors, windows, etc., endeavoring to make the place as strong as possible.

During all this time no one of Brown's men showed the slightest fear, but calmly awaited the attack, selecting the best situations to fire from upon the attacking party, and arranging their guns and pistols so that a fresh one could be taken up as soon as one was discharged. During the night I had a long talk with Brown, and told him that he and his men were committing treason against the State and the United States. Two of his men, hearing the conversation, said to their leader, "Are we committing treason against our country by being here?" Brown answered, "Certainly." Both said, "If that is so, we don't want to fight any more. We thought we came to liberate the slaves, and did not know that was committing treason."

Both of these men were killed in the attack on the engine-house when Brown was taken.

When Lieutenant Stuart came in the morning for the final reply to the demand to surrender, I got up and went to Brown's side to hear his answer.

Stuart asked, "Are you ready to surrender, and trust to the mercy of the Government?"

Brown answered promptly, "No! I prefer to die here."

His manner did not betray the least fear.

Stuart stepped aside and made the signal for the attack, which was instantly begun with sledge-hammers to break down the door.

Finding it would not yield, the soldiers seized a long ladder for a battering-ram, and commenced beating the door with that, the party within firing incessantly. I had assisted in the barricading, fixing the fastenings so that I could remove them upon the first effort to get in. But I was not at the door when the battering began, and could not get to the fastenings until the ladder was used. I then quickly removed the fastenings, and after two or three strokes of the ladder the engine rolled partially back, making a small aperture, through which Lieutenant Green of the marines forced himself, jumped on top of the engine, and stood a second in the midst of a shower of balls, looking for John Brown. When he saw Brown he sprang about twelve feet at him, and gave an under-thrust of his sword, striking him about midway the body and raising him completely from the ground. Brown fell forward with his head between his knees, and Green struck him several times over the head, and, as I then supposed, split his skull at every stroke.

I was not two feet from Brown at that time. Of course I got out of the building as soon as possible, and did not know till some time later that Brown was not killed. It seems that in making the thrust Green's sword struck Brown's belt and did not penetrate the body. The sword was bent double. The reason that Brown was not killed when struck on the head was that Green was holding his sword in the middle, striking with the hilt and making only scalp wounds.

When Governor Wise came and was examining Brown, I heard the questions and answers; and no lawyer could have used more careful reserve, while at the same time he showed no disrespect. Governor Wise was astonished at the answers he received from Brown.

After some controversy between the United States and the State of Virginia as to which had jurisdiction over the prisoners, Brown was carried to the Charlestown jail, and, after a fair trial, was hanged.

Of course I was a witness at the trial, and must say that I have never seen any man display more courage and fortitude than John Brown showed under the trying circumstances in which he was placed. I could not go to see him hanged. He had made me a prisoner, but had spared my life and that of other gentlemen in his power; and when his sons were shot down beside him, almost any other man similarly situated would at least have exacted life for life.

John E. P. Daingerfield.

HILARY'S HUSBAND.

HILARY stood leaning against a rugged old oak just outside the farm-house gate, watching her lover as he drove away from her forever. It was a lonely road; there were neither neighbors nor passers-by to peer curiously into her face, and Aaron never once looked round as he went; she need not have pressed back the tears so resolutely. But she stood perfectly calm and still, looking fixedly down the road after the retreating wheels, though feeling as if she were watching a hearse that bore away her heart to burial in some far-away graveyard beyond reach of tears.

When the last flutter of dust had laid itself in the road behind the gig, like a sorrow momentarily lulled to sleep, but ready to start into life at memory's first breath, the girl raised her clasped hands above her head, and closed her eyes tightly as if to shut out the vision of the long dull years to come, stretching themselves aimlessly into the distance, empty, loveless, and hard like the blank road before her. Then she turned and walked steadily into the house, and up the narrow stairs into her aunt's room, and sat down by the bed, folding her slender hands in her lap, and looking down at the invalid with tired gray eyes that seemed suddenly to have discovered the end of all things, and to know that henceforth they must always look back instead of forward.

The paralytic neither saw nor heard when Hilary came in. She lay as she had lain these many months,—past seeing, past hearing, past suffering, yet living still, though as utterly dead to her old life as had the *Requiescat in pace* already been written in letters of marble above her. For a long time Hilary sat by the bedside, absolutely motionless, save when she mechanically leaned forward to brush a fly from her aunt's brow, or smooth away a crease in the counterpane, or straighten some small crookedness that unconsciously arrested her eye. One's outward senses are never so peculiarly alive to trifles as when a great crisis of fate holds all the spirit spell-bound.

So now the various consecutive sounds of every-day farm-life struck sharply through to Hilary's brain, and she rose obediently from her seat at the first stroke of the bell ringing in the men from the fields to their evening meal. She lingered a moment before going down, to look curiously at herself in the glass. No; this change that had come was all in her life—not in herself. There were no wrinkles amid the faint horizontal lines

that crossed her forehead, no hollows in the smooth, pale cheeks, no faded threads in the blonde braids that covered her head in such profusion. She looked the same now as when she had run down so blithely to bid her lover welcome only an hour before. She pressed her thin, sweet lips together, and shook her head as if to fence off memory, and then slowly descended to the dining-room, where Farmer Perkins and his wife, with whom she and her aunt had boarded ever since she could remember, were already seated at the table, which was set for four, and had that air of elaboration about it which tables, like people, put on for an expected guest.

"Why, where's Aaron?" asked Mrs. Perkins, in evident disappointment. "I made sure he would stay, and opened a jar of my best strawberries, though young men are that ignorant, I believe he'd all as soon have had crab-apples."

"He couldn't wait," Hilary answered quietly, as she took her place and busied herself with her napkin. "He had a great deal to do."

Farmer Perkins raised his bushy brows without lifting his eyes from his plate. "Had he, then?" he said, with good-humored doubt. "I'd be glad of the day when Aaron Johns had a deal to do."

"Yes," answered Hilary, lifting her head with a desperate feeling that it was best to get through the worst at once. "He had so little time. He leaves to-night for the West—for Omaha."

"What!"

The exclamation came from Mrs. Perkins. Her husband merely suspended his operations with the waffles, and stared at Hilary sideways.

"Yes," she continued, in a perfectly quiet, unemotional voice. "He said he had failed long enough here, and he was sure to get a start there. It's a poor opening a young lawyer has in a little country town like this, he says."

"Right enough there," assented the farmer, resuming his knife and fork and appetite. "We ain't so dishonest about here yet, that many folks can earn a living swearing black is white for us. He'll do a sight better in that lying country where he's going. He's a smart enough fellow too, is Aaron. Give him a start, and he'll not come in with the hindmost."

"Well, I am took back," said Mrs. Perkins slowly, quite forgetting to spread her bread in her surprise, absently eating the butter in little lumps off the end of her knife, as if test-

ing it. "I can't seem to settle down to it. Who'd have thought he'd go off so sudden, for all the world like a rocket before the match is set to it! And when is he coming back to fetch you, Hilary?"

"He is not coming back."

"Not ever?"

"No."

The girl answered steadily enough, but her eyes fell.

"Hilary," said Mrs. Perkins solemnly, leaning forward to look at her, with both elbows on the table, "you don't mean you've been keeping company with Aaron Johns this twelvemonth back, for him to give you the go-by like that in the end?"

"There isn't any go-by about it," replied Hilary quickly, a hot crimson spot coming to each cheek. "We've broken with each other—that's all. He wanted me to go with him, and I wouldn't. How could I leave aunt, when she's only me in all the world to stay by her and close her eyes decently when she dies?"

"Come, come," said Mrs. Perkins sympathetically. "I don't know as your church is stricter than ours, though it's true Episcopalians have queer notions; but I do think there oughtn't *any* religion to expect a young girl to let go so likely a fellow as Aaron, and tie herself down to a half-dead body like yon poor, unknowing creature upstairs, that can't tell porridge from cider."

"I don't tie myself to her," Hilary answered. "God tied me to her when he left us two all alone in the world, and I can't undo a duty of God's making."

There was silence for a time, during which Mrs. Perkins gazed fixedly at the girl, occasionally giving some tempting dish an abrupt push in her direction, and once going to the pantry to cut off a slice of particularly successful election cake, which she silently put on Hilary's plate, as if wishing to offer such alleviations of destiny as were in her power.

"Don't you feel bad, Hilary?" she brusquely asked, at last.

It was a cruel question, and the poor girl winced. She looked up appealingly, all her features quivering, but controlled herself with a great effort. "There is no good making moan over what has to be," she replied simply.

"Very true, my dear," said Mrs. Perkins approvingly, considerably cheered by the answer. "That's the only proper way to take afflictions. That's just what I said myself when the black hen wouldn't set, and all the eggs went addled. And I dare say there'll be some other young man along all as good as Aaron, and a stay-at-home besides. There's Nathan Taylor, now. He's none so bad when you get used to his squint. Oh, you needn't

think you've had your last chance yet, Hilary. There's many a hook slips a fish that lands its second easy."

Hilary shivered ever so slightly. "There'll never be any one else for me, Mrs. Perkins. Don't let's talk about it. Are you going to look over those currants to-night? Shall I help you?"

"Well, yes, if you like," answered the good woman briskly. "Four hands is always better than two at a job, and there's nothing like picking over currants for diverting the mind. It's the most distracting thing I know of. I set myself right to it the night after my little Jim was buried, and it consoled me wonderful. It was really providential that he died in currant-time. I'll fetch 'em right in."

They all left the table together, and the farmer took up his straw hat from the chair where he had thrown it upon entering, then turned back awkwardly to lay a heavy hand on Hilary's shoulder.

"Hilary, my girl," he said kindly, "you're made of pretty decent stuff. You'll do."

By ten o'clock that night all apparent life had ceased in the little farm-house. Save in Hilary's room every light was out, and all but she were sunk in the dreamless sleep of the hard-working. But Hilary still sat by her aunt's bed, lost in thought and taking no note of time. At last she rose, with the look of one who has come to some solemn decision, and, going to a tall chest of drawers that stood square and ungainly in a corner of the room under the sloping roof, she took out a white muslin dress that had lain there undisturbed since her first and only ball, and which was still very fresh and unrumpled. She shook it carefully out of its creases and laid it by while she sought for various other dainty articles of apparel,—her one pair of silk stockings and kid slippers, a white ribbon sash, a bit of rare old lace,—and then, taking off her plain stuff dress, she proceeded to make a fresh toilette from head to foot, even rebraiding her heavy masses of hair and arranging them in a way that suited her better. She stood at last fully dressed in the soft white muslin,—very fair, very bride-like. But something was still wanting. Brides wear veils. Ah, she must borrow hers. That little Shetland shawl, soft as spun silk and cobwebby as lace, which had been her aunt's pride in bygone days,—what could better fit her need? With trembling hands she unfolded it from its many wrappers and threw it over her head, fastening it deftly here and there to her shining braids. It fell fleecy and light over her shoulders and floated far down over her dress. It was the finishing touch. Surely all was complete now. But no; did ever bride go to the altar without a flower

upon her? Hilary hesitated an instant, then gathering her white skirts closely around her, with her long veil flung over one bare white arm, down she went, noiselessly as the ghost she seemed, to the tiny hall below. She listened anxiously. Had the creaking wooden stairs betrayed her? There was not a sound indoors save the old clock ticking wearily in the corner, where it stood like a sentinel at his post waiting to be relieved. Another step and she reached the front door, slid back the bolt, lifted the latch, and passed out into the dark and dewy garden.

Her heart beat high as she stole softly down between the shrubberies. There was but moonlight enough to make the darkness visible, and to show her herself a misty white spot upon it, strange in the midst of strangeness, as if a cloud had fallen to earth and gathered a semblance of human shape in falling; the rustling of the leaves was as so many faint spirit-voices asking in frightened whispers who and what she was that had thus come among them; the tan felt cold and unaccustomed beneath her feet; the air was damp and heavy with too sweet odors; bats flew low across her pathway with ugly, flapping wings, and her ears tingled with a thousand little sounds that she seemed never to have heard before. It was a gruesome hour for a girl to be out alone, but she kept steadily on her way, down between the straight, stiff flower-beds. The lilacs were long since done blooming, and the lilies and the syringas too. She thought of these last with a sigh; they would have been quite like orange-blossoms. There were plenty of white balsams and white phlox and candy-tuft too, on either side; but she passed them swiftly by, never pausing till she came to the very end of the garden, where a white rose-bush, laden with half-open buds, seemed to have bloomed purposely for this hour. Hilary broke off the flowers with hasty hands,—a few for her breast and a few for her hair were all she needed,—and then, with an exultant thrill at her heart, she turned and retraced her steps through the fitful moonlight and the mysterious shadows, that seemed to turn when she did, and to chase her with gliding, dusky footsteps, as though loath to let so fair a vision go.

But the house was reached in safety, the door reclosed upon that strangely unfamiliar world of night outside, and Hilary stood once more in her room before the glass, smiling a sad little smile of triumph at herself. Yes, it was all complete now. There lacked nothing save only some one to say that she was fair. She glanced shyly at her own image, ashamed of her involuntary pleasure in its sweetness, and turning away went to the bed to bend down over the poor invalid, who was no far-

ther from her now sleeping than waking, and softly kissed her forehead.

"Aunt," she murmured beneath her breath, "I take you for my witness."

The clock in the hall below struck eleven; the lamp began to flicker and turn dim; Hilary saw she must not delay.

From some hidden nook that held her choicest treasures she took out a daguerreotype and placed it open upon the table. It was the likeness of a good-humored, sturdy young fellow of about three and twenty, with a beardless face and honest blue eyes, and big, awkward hands, brought into bold relief against the uncomfortably fitting Sunday coat. It was not altogether admirable as a work of art, but Hilary looked at it with loving eyes as she knelt by the table in her bridal draperies, and opening her prayer-book laid her right hand upon the picture and repeated aloud in a grave, hushed voice, firm with resolve and sweet with unutterable love: "I, Hilary, take thee, Aaron, to my wedded husband, to have and to hold from this day forward, for better for worse, for richer for poorer, in sickness and in health, to love, cherish, and to obey, till death us do part, according to God's holy ordinance; and thereto I give thee my troth."

The strange rite was not ended yet. Should she too not wear a marriage symbol upon her hand, like all women who have sworn this vow? Still on her knees, Hilary reached out for a spool of yellow silk in her basket, and, knotting a slender thread firmly about her wedding-finger, slipped over it a little ring which she had heretofore always worn on the other hand. Now she felt wedded indeed, and bending forward she pressed her lips against the unresponsive pictured face, blushing all over hotly in sweet shame.

And so the weird midnight ceremony came to an end, and Hilary rose, folded up her wedding garments one by one and laid them tenderly away forever with the white roses that had scarcely yet lost their dew, returned the picture to its hiding-place, blew out the light, crept silently to her couch, and lay there motionless as the sleeping figure in the bed beyond, but with wide, bright eyes that refused to close, though all was so dark and still.

From that night a new life began for Hilary—a life unshared by any, unknown to any, and of which the only outward sign was that tiny silken thread upon her finger, which she replaced as often as it loosened or showed dim, and which, safely hidden as it was beneath the little trumpery garnet ring, provoked no manner of comment. Or if occasionally it caught a curious eye, her simple answer—"It is only to remember something

by"— was a quite sufficient explanation. But everything was changed to her from that night. She wore only the ribbons that he best liked her in ; every new gown was chosen and fashioned wholly according to his taste. Every Christmas, every birthday, she worked him presents that none saw save the poor to whom she gave them in his stead. "Aaron's handkerchiefs must be nearly worn out by now," she would say soberly to herself. "I must hem him some more." Or—"Aaron's shirts can surely hold no longer ; I must make him another set. His wife must not neglect him." And the needy creatures who received her gifts little knew what pure and perfect love had aided in their making. Once a year upon her wedding anniversary, as she called it in her thoughts, she always made a little feast to mark out the day from its uneventful fellows. Was it not natural enough sometimes to call a few friends together ? And no one thought of noticing that on those occasions she invariably wore a bunch of white roses at her breast.

And so the years went by. The poor old aunt quietly slipped away altogether out of the life upon which she had long had so slight a hold ; the farmer and his wife became old and infirm, and upon Hilary, who had grown to be more daughter than guest in the house, now devolved much of the real management of the homestead. But who, seeing the quiet, middle-aged woman moving methodically and prosaically about her work, slurring no homely part of it, neglecting no wearisome detail, would have guessed that she hid such a bright fresh romance in her heart, and was glad of it and comforted by it through all the lonely days, and through all the tedious common-places of the monotonous routine ?

Aaron Johns had been heard of but once since he drove angrily away through the sunshine and the dust, never turning to look back at the girl who could so lightly let him go ; and that once was when Farmer Perkins brought home word from town that Aaron had gone on from Omaha to Denver, and settled there, and had married a wife and was doing well. Hilary listened with no deepening of color, no quickening of her even pulses, but with a curious sense that Aaron had committed a crime, and that she was responsible for his sin. But even that feeling wore off soon, and Aaron remained her dream-husband still, her secret counsel in emergencies, her daily director and helper and comforter, while she tried to think of him as keeping pace with time, and to imagine him every year with hair a little more gray, and eyes a little less blue, and cheeks a little more sunken and furrowed. "I should know him anywhere if I saw him," she

often said to herself. "Of course he would not recognize me now ; but my love has kept step with his changes, and he could not have grown away from it."

And so the years slipped softly by, until one day Farmer Perkins returned from town bringing a wonderful bit of news with him.

"Hilary," he said, as he sat down, resting the palms of both hands on his knees, and looking solemnly at her over his spectacles, "Aaron Johns is back. He's picked up a tidy bit of money and buried his wife out there, and now he's come on a visit to see how the old place looks. I told him he'd find you here the same as ever, only that the old aunt was dead. He wanted to know special if she was alive still. I always said he was a smart fellow, was Aaron. I knew he'd get on."

"You don't mean Aaron's back !" Mrs. Perkins exclaimed, all in a flutter of excitement at once. "Now I shouldn't wonder if he'd really come for Hilary at last, and here she's been a-waiting ready to his hand all these years !"

Hilary said nothing, but got up and took one of the old man's withered hands and stroked it gently for an instant, and then quietly left the room. Could it be true ? Was it possible the dream was to become a reality ?

She went about all day as if stunned, and when at last word was brought her that Aaron was there and asking for her, she went to meet him like one walking in a dream. "He will never know me," she repeated to herself. "I have changed, and so of course has he ; yet I feel that I should know him anywhere."

And then she heard a voice saying heartily, "Why, she's positively not altered through all these twenty years ! Hilary, I should have known you the world over !" And raising her eyes she saw a stranger standing looking at her, a large, stout man, with a bald head, and bushy, red-brown whiskers, and not a wrinkle anywhere on all his round, good-humored face. Was this Aaron ? Was it possible that this was he ? Not a look, not a tone, not a gesture seemed familiar ; even the blue eyes recalled no memory ; even his smile seemed strange.

It came upon her like a shock and took away her breath. She could only give him her hand in silence.

"Yes, the very, very same !" he cried delightedly. "Nothing is changed. No one is changed. The same place, the same house, the same people. It is as if the whole town had been sleeping an enchanted sleep. There are no improvements, no innovations, no alterations anywhere,—not so much as a sign-board torn down. Everybody seems just to have become his own grandfather. I could swear I saw some of the very hats in the street to-day that I saw twenty years ago. It's de-

lightful. You can't think how it rests a man, after he has lived so long in the midst of perpetual newness and stir and change, to step back to some spot where time is at a standstill, and where there is really nothing new under the sun. Should you have known me, Hilary? Forgive me; I could not call you by anything but the old name."

"She hasn't any other hereabouts," said the farmer, patting her shoulder affectionately. "Our Hilary is Hilary to all the townsfolk still, just as she was in her young days."

"She has never outgrown her young days," said Aaron, looking with pleased eyes at the slim figure and gentle, lovable face. "Time has stood more still with her than with anything else. But I'm afraid you have forgotten me, Hilary."

She flushed deeply all over her delicate pale face, and her eyes dropped.

"No," she answered, "I have not. But—but you do not seem the same."

And try as she would, through all the days that followed, she could not think him back into his own place. He was a new Aaron altogether, not the old Aaron whom she had so loved, and to whom she had been so faithful through the years. She could not get used to him. His presence was a continuous shock to her, as if his real and his imaginary self were always at war with each other. This Aaron was too stout, too noisy, too careless, and in too exuberant good spirits. His clothes fitted him too well, and she missed the blue necktie, and the limp collar, and the big flapping silver chain. And he carried silk handkerchiefs now, and wore shirts beyond anything her simple skill could fashion. He was very nice, very pleasant; she found no fault with him as he was: it was only that he was not the Aaron of her dreams.

And when one evening, as he was bidding her good-bye, he came nearer and said, gently, "Hilary, will you go West with me this time when I go back?" she trembled violently, and caught away her hand, looking up at him with eyes full of perplexity.

"Oh, Aaron, give me time, give me time," she faltered. "I do not know,—I cannot say,—let me think."

She sat up late in her own room that night, as she had sat there once so many years before, thinking it all over with a disquiet heart. There was no helpless form stretched on the bed beside her now. There was absolutely no one to keep her back—nothing to keep her from him. She had been true to him all these years; she had shut out all other love from her heart because of that lost love of his;

and now he had brought it back to her to be hers, and hers always, if she would. How could she do else than reach out to him the hand that she had given him so many years ago? She looked down at it, fingering the little gold thread nervously. Must she part with that? Could any shining wedding-ring ever be dearer to her than that had been? It would be like unsaying an old vow, like casting off an old allegiance, to take this thread away. She went to her desk and took the little daguerreotype from its hiding-place. A faint odor of rose-leaves clung to it, like a tangible emanation from all the gentle and sweet associations with which it had enriched her life. A tranquillizing sense of peace stole over her as she looked down at the dear familiar face that had smiled changelessly back at her for so long. Oh, *this* was the real Aaron,—*this* was the Aaron to whom she had given her heart,—this was the Aaron who had been with her till he had grown into every fiber of her being. How could she be faithless to him now, giving herself away to that other and different Aaron who had so boldly come in to claim her?

"Oh, no, no!" she cried aloud, clasping the picture to her heart with a sudden paroxysm of foolish tears; "I cannot—I cannot! Aaron, my dear picture-love, you have been my all when I had no one else, and I will not give you up. This new Aaron is not the same, and if I took him in your place, it would be like divorcing myself from you to marry him; and I should miss you, oh, I should miss you till I died!"

And so, merely for sake of a dream which she could not banish, Hilary sent her lover away once more, and stood at the end of her story as at the beginning, watching him as he drove disconsolately down the road, knowing that she should never see him again. But he turned this time to wave his hand to her in friendly farewell, feeling vaguely, perhaps, that she was right after all, and that the Hilary he loved would cease to be the same transplanted to foreign soil. And when he had disappeared and the dust had settled quietly down behind him, Hilary turned with a smile on her lips to reënter the house. Farmer Perkins stood upon the threshold, watching her somewhat anxiously. She went up to him and laid her hand upon his shoulder. "Aaron is going back to Denver to-morrow," she said, still smiling. "And—I shall stay behind again."

"Hilary, my girl," said the old man earnestly, "I've always said it, you're made of pretty decent stuff, and"—he took off his spectacles and wiped them carefully—"and I think you'll do, Hilary,—you'll do."

HOW SHALL WE HELP THE NEGRO?

BY THE PROTESTANT EPISCOPAL BISHOP OF KENTUCKY.

IN discussing this question I do not propose to enter the arena of statistics. I am not quite ready to admit the statement of one writer, that "comparison based on the census of 1870 is utterly worthless as regards the negroes," while yet I do agree that in certain portions of the South it was materially at fault. And although, therefore, the figures of Professor Gilliam, showing that eighty years hence the Southern blacks will nearly double the Southern whites, may not be perfectly accurate, yet, as he further says, "it is morally certain that by that date, and perhaps sooner, the negroes throughout the South will have a great numerical superiority."

Nor do I propose to enter the lists either as champion or as assailant of the negro's progress, physical, intellectual, or moral. There can be no question that Mr. Greener, the first colored graduate of Harvard University, says truly that the negro is self-supporting, that he adds to the wealth of the country, and that he is accumulating property. As certainly, too, we must admit that the intellectual progress claimed for his race by Mr. Greener is indicated by the existence of "upward of a hundred journals owned and edited by negroes," and by the "number and influence of educated negroes who are now scattered broadcast throughout the South." But on the other hand we note his own declaration that "intemperance, a low standard of morality, an emotional rather than a reflective system of religious ethics, a partial divorce of creed and conduct, and a tendency (by no means confined to negroes) of superficial learning, and of the less desirable elements of character, fitness, or brain, to force their way to the front, are evils which every honest negro must deplore, while sadly admitting their existence."

I recall, as I write, a conversation in New Orleans, in 1880, when I chanced to be placed next to a distinguished Federal official at a dinner-table, whereat the wealth and the intelligence of the Crescent City were gathered to do honor to the Chief Justice of the United States. A rather malapropos remark of mine elicited from my companion the confession that he had come to Louisiana as a philanthropist in the days of reconstruction; that he had been nourished in the faith of human freedom; that his aged father in New Hampshire had prayed with his family morning and evening, since his earliest recollection, that the negro

might be freed. And then he added that the greatest disappointment of his life was to be compelled by experience to acknowledge that the negro is incapable of development, and that he is utterly incapable of the proper performance of the citizen's duty, either at the polls or in the jury-box. Beyond controversy and by the testimony of the educated negro leaders, and of their partisan friends of the white race, there are still remaining, in spite of all their boasted progress, an ignorance which is simply abysmal, and a moral incapacity before which the lover of humanity, and still more the patriot American, stands appalled. So that I am constrained to fear, and to believe, that Professor Gilliam speaks truth when he adds, as conclusion of the sentence of which I have already quoted a part, that, with numerical superiority, eighty years hence the negroes throughout the South will have made a "disproportionate gain in wealth and education, and a gain lower still in the domain of morals."

And thirdly, I would say that in seeking for an answer to the dreadful question which keeps repeating itself, "What are you going to do about it?" I shall not for a moment consider the possibility of any emigration of these people which would so much as diminish the cotton crop by a single bale. To my mind it is perfectly absurd to talk of deporting the negroes of the South to Africa, or to any other country; and it is just as much so to think of setting apart for them a reservation of territory in our own country to which they shall be confined. The fact that by a sacred provision of our Constitution these people are citizens of the United States, and so citizens of each and every State, is sufficient barrier to protect them from forcible migration or emigration; and the further facts that for twenty years they have enjoyed the sweet privileges of American citizenship, that under its protection they have made material progress, that members of their race have sat in the high places as rulers of the nation, and that the school and the ballot-box open a like glorious prospect before the eyes of all,—all these things declare that voluntary migration can never take place. No. "The negro has come to America to stay," says Mr. Armstrong, in the "North American Review" for July, 1884, and his opinion is corroborated by the opinions of all the educated negroes given in the symposium whereof he was one.

What then? Here they are, and here they will stay; here we are, and here we mean to stay. Why not? Shall Brobdingnag empty itself of all its giant inhabitants in hurrying dread because Gulliver is come? Or rather, shall Gulliver be alarmed because of the multitude of tiny Lilliputians who crowd the fair land he has found, and madly expatriate himself lest he be destroyed by the pygmies whom he himself has brought there? True, he must recognize, if he be wise, the terrible danger presented by their very number. Doubtless he will feel before long the touch of their restraining hands, if he foolishly lie down to sleep in their midst, and, it may be, will awake to discover that he is conquered. But surely, because of coward fear of such result, he cannot run away and abandon his home. Let us then dismiss both these suggested solutions of our problem as entirely impossible. The negro cannot be banished from the Southern States, and the white man will not abandon them. The negro cannot be colonized against his will, nor yet be shut up within any prescribed territory; even did the black man consent thus to dwell apart, when by blood-sealed covenant he is entitled to home and citizenship in each and every State, the enterprising white man would refuse to respect the sanctity of the reservation.

The problem still confronts us. We may not omit to mention still another solution, suggested by no less authority than the great Canon Rawlinson, the historian of the monarchies of the ancient world,—namely, that the races mingle without restraint, that we make marriages with these people of Canaan, and expect from the union a mixed race mightier and more developed than either factor (such is his promise).

Perhaps it is hardly possible for an American, and least of all an American born to the traditions of the slave-holder, calmly to discuss this proposition to forget the mother who bore him, and to pollute the pure stream of our Caucasian blood by such admixture. But the hope which the English historian has found in the moldy parchments of the far-away East is utterly belied by the results of modern race-fusion, which without an exception are adverse to miscegenation. "In no instance," says Professor Gardiner, "does the mixed people show the mental vigor of the Caucasian parent stock, and in most instances the mental and moral condition of the half-caste is lower even than that of the inferior parent stock." More than this, as is well pointed out by the same writer, Canon Rawlinson, in discussing this question, has fallen into the blunder which in general waits for an Englishman coming to consider

anything American. He always thinks of our country as a small island, and would find no fun in Mark Twain's reply to the interviewer "that he was born in New Jersey or Kansas, or just around there." Consequently the great professor thinks of the 6,500,000 negroes as a mere handful dispersed throughout the 43,000,000 whites, and easily absorbed and assimilated. He is ignorant of, or he ignores, the fact that the negro must inevitably remain in the Southern States, where even at present the races are about numerically equal, and hence that "a general amalgamation would produce a mulatto stock in which the negro physique and physiognomy would predominate. Whites would be absorbed by negroes, not negroes by whites, and the brain capacity of the mixed race would be little superior to that of the pure negro. Fifty years hence, when negroes will surpass whites as three to one, the mongrel race will represent capacity decidedly inferior to the negro of pure blood." Certainly the white man of the Southern States cannot even consider this remedy for his present ills, this prophylactic against future woes. And let us remember that the negro looks with just as little good-will upon the project to break down the wall of race-partition, and make of the twain but one race. Mr. Frederick Douglass seems not to have gained but rather to have lost influence with his people by his recent matrimonial alliance with a white woman; and our own observation fully confirms the statement of Mr. Harris in the "North American Review," that "whenever the occasion arises the negro is quick to draw the color-line, and in some sections of the South, notably in the older cities, there are well-defined social feuds between the blacks and the mulattoes."

What may come in the far-distant future, when by long contact with the superior race the negro shall have been developed to a higher stage, none can tell. For my own part, believing as I do that "God hath made of one blood all the nations of men," I look for the day when race-peculiarities shall be terminated, when the unity of the race shall be manifested. I can find no reason to believe that the great races into which humanity is divided shall remain forever distinct, with their race-marks of color and of form. Centuries hence the red man, the yellow, the white, and the black may all have ceased to exist as such, and in America be found the race combining the bloods of them all; but it must be centuries hence. Instinct and reason, history and philosophy, science and revelation, all alike cry out against the degradation of the race by the free commingling of the tribe which is highest with that

which is lowest in the scale of development. The process of selection which nature indicates as the method of most rapid progress indignantly refuses to be thus set at naught. Our temporary ills of to-day may not be remedied by the permanent wrong of the whole family in heaven and earth.

Still the problem remains, how shall these alien races dwell in safety side by side, each free and unhampered in the enjoyment of life and liberty and in the pursuit of its happiness? They are the descendants of one father, the redeemed children of one God, the citizens of one nation, neighbors with common interests, and yet are separated by the results of centuries of development, physical, mental, and moral,—separated by inherited traditions, by the spirit of caste, by the recollection of wrongs done and suffered, though it may be in general as innocent in the perpetrator as in the sufferer. How shall the rights of all be duly guarded? How shall the lower race be lifted up to higher stages of human development, for only so can the rights of the superior race be made secure for the present and for the future, and this is the chiefest right of them who are now cast down?

I answer, by the personal endeavors of individuals of the higher race; by their personal contact with these, their ignorant and untaught neighbors, exhibiting before their wondering eyes in daily life the principles of truth and justice, purity and charity, honesty and courage. Perhaps this may seem to be but the veriest platitude, the gush of sentiment, the twaddle of a maudlin religion, but in all truth and soberness I mean exactly what I say. Let me try to explain more fully.

These people need help, that they may be lifted up. I mean, then, that in my judgment that help must be personal and not official, the hand of a friend rather than the club of an officer, the patient counsel of a neighbor rather than the decree of a court, the enactment of a Congress, or the proclamation of a President. The solemn sanctions of the organic law are thrown round about this liberty, and the robe of citizenship, full, perfect, and complete, with never seam nor rent, has been put upon it. The courts have declared its inviolable character, and this decree affirms the negro, the liberated slave, a citizen. But does the declaration make him such? I mean does it, can it impart the intelligent life, the moral consciousness which shall vivify the dead mass and make it a helpful member of the body politic? We have had declarations from every department of the Government that the negro is a citizen; but they are as powerless to effect their purpose as were the oft-repeated acts of the Confed-

erate Congress to make the paper dollar worth more than two cents; as nugatory and vain as the old-time legislation of Virginia that there should be a town at such and such a designated cross-road. The negro is a citizen, and he has the rights under the Constitution and the laws that any white man has; and yet he needs help, though it may be the black and white demagogues would dislike him to think so,—he needs help, personal, individual, patient, loving help, that he may be fitted to exercise his covenanted rights, and to do the duties which these rights impose.

Let us turn for a moment to another sphere of life wherein he now plays an independent part. I mean the Christian Church, using the term in its widest popular signification, as including all organized bodies of Christian disciples. When the war was ended, nowhere was the newly acquired freedom more quickly active than in the organization of religious societies among the negroes. The white pastors who for so many years had ministered unto them were cast out without ceremony; the guidance of the experienced and trusty Christian white men was repudiated, and in each congregation the government was given exclusively to black men; and while we may hesitate to believe that "the Lord gave the word," yet certainly, as the psalmist says, great was the company of the preachers, "those that published." In very many places, because of the rapid influx of the liberated slaves into the towns, new and large meeting-houses were erected and new congregations organized. Utterly ignorant men, gifted with a fatal fluency of speech, unable often to read the Bible in English, much less in its original tongues, became the blind guides of blind followers; and the result is that in some places within my personal knowledge a revival meeting has been going on every night since the surrender of Johnston's army. The orgies of their so-called worship are such as to cause any Christian man to blush for the caricature of our holy religion therein portrayed. As the years passed by, the congregations were associated under the particular polity to which they happened to belong, preacher and people being in general alike ignorant of the features and the claims of all. Conferences meet, general associations are held, bishops, presiding elders, professors, and doctors in divinity assemble, and there is much oratory; and alas! it is too often made plain that the teachers are themselves ignorant of the very first principles of the gospel of Christ. Not that I mean to say that these men cannot all talk glibly in slang theological phrase about the eternal verities,—for they can. And still less would I be understood as say-

ing that there are not among these, my colored brothers, men whom I rejoice to call brothers, and from whom I rejoice to learn, not the science of the books, but the glorious guarantee of my Christian hope in their vital apprehension of the Father's love. And others there are now fully equal in learning to the average white minister, but these are few and far separated. But I believe that in general it were as wise to take the infant-class of a well-taught Sunday-school, with one of the older boys as its preacher, and set it up as an independent church, as so to constitute a body of the average negroes in the Southern States.

I hold that those Christian bodies have acted most unwisely who have set off the negroes belonging to their communions as independent churches, and so have taken from them the enlightening instruction, the helpful guidance, the pastoral care of the white men. I know that it was hard to resist the importunity of the negroes, eager thus to display their capacity as leaders, organizers, and preachers, backed as they were by the thoughtless mob behind them. I know, too, that it was taking a burden from shoulders already heavily laden, thus to shift the responsibility of giving religious instruction to this great multitude. But I know equally well that the result has been evil, that the religious development of the negro race in our Southern States has been hindered by the separation. Just a year and a half ago there was held in the city of Louisville, Kentucky, a meeting of colored ministers, and the report of their proceedings, published in a newspaper conducted by negroes, affords a most melancholy evidence of the fact that, separated from their white brethren, these, the leaders, had degenerated, and had ceased to realize, if they had ever fully done so, that the end and object of religion is morality, the uplifting of men into the likeness of God: for this report portrays ministers of the gospel charging one another with the grossest violations of the moral law! "If the light that is in thee be darkness, how great is that darkness!" If the teachers of religion, the exponents of the moral law, be thus liable to mutual recrimination, what must be the condition of the great mass of their followers! Declared Christians as declared citizens, they need help — personal, individual, tender, persistent — to enable them to become such in any true sense. The mistake of the United States Government has been repeated by some of the Christian denominations. Perhaps it was inevitable, but at all events it has taken away one of the chief agencies which the white man could employ to educate the black man to a

true conception of citizenship; and alas! as the years go by, it must be more and more difficult for us to gain control of it again. Is it not worthy of consideration by the Southern men who are the ministers and leaders of the denominations with which these people are most largely associated, at least in name, whether they cannot make the bond a closer one, and so be enabled, at least indirectly, to shape the policy of their weaker brethren? Responsibility must be heavy in proportion to opportunity, and that responsibility cannot be put away by a mere yielding to the clamor of an ignorant populace, demanding that it may rest upon them and their children.

To return to the more general discussion of our question, I ask, by whom should this personal interest in the negro be felt and shown? And the answer is, of course, patent, that the duty rests upon all Americans alike. We need not reopen the old sore of the original importation of Africans into our country, and allege, as we might, that the guilt of it, if there be guilt, rests upon the ancestors of our New England cousins, rather than upon the fathers of us Southern people. Further, it goes without saying that the Federal Government which added this great number to our roll of citizens should, in common fairness, do all that it may do to help them to the attainment of civic capacity, and to help us so to help them. And if it be questioned whether the constitutional power to do this thing exist, it would seem to be sufficient answer in equity that it must be a part of the power by which emancipation was effected. But in a word, because the citizen of one State is a citizen of every other, and because, if one member of our body politic suffer, all the others by the very law of our being must suffer also, it follows that from every American white man this help may be rightfully expected. But to the men of the South, my own dear kinsmen after the flesh, I would speak, and say that of necessity the burden of this labor must fall upon us. Hard it may seem to some of us that, despoiled of our property for which our money was paid, and whose protection was guaranteed to our fathers, placed under the very feet of our former slaves by the conquering power of the Federal Government and the chicanery and fraud of unscrupulous white men, we should now be called upon to give our personal care, our time, our sympathy, and our meager resources to the development of these semi-barbarians up to true manhood and intelligent citizenship. But be it hard, 'tis true. The burden rests upon us, and we cannot put it away. The love of our whole country demands it; that special regard we cannot but feel for

the well-being and advancement of our own people and our own sunny home demands it; recognition of the truth of human brotherhood—that revelation of Jesus Christ and that last result of sociological study—demands it.

And how and where shall we begin? I answer, "every man in the deep of his own heart," by building there, firm and stable, the conviction that the negro is a man and a citizen; that the conditions of our life are all changed; that old things are passed away, and that the new things which are come to us demand, with an authority which may not be gainsaid, the effort of mind and heart and hand for the uplifting of the negro, lest, if he be left lying in his degradation, he pull us down to his defilement. Nay, we must build higher than this, even the conviction that it is the will of God that the nobler shall be evolved from the ignoble, that the race shall progress toward his likeness; and from the summit of this lofty conception we can look out and see the work to be done, and there we can breathe the pure air of heaven, and get inspiration for its performance, though it cost self-denial and self-sacrifice. Here we must begin in ridding our hearts of the feeling of caste, which has made them its citadel for generations.

But let it be clearly understood that I have not the least reference to the social status of the freedman when I so speak. That mysterious thing which we call "society" will ever take care of itself, and my taking away the pariah badge which caste has affixed to the negro is by no means the presentation to him of a card of invitation to the soiree in my parlor. No man has an inherent right to be admitted into a circle which is in general defined by equality of distance from some fixed point of refinement, culture, leisure, or wealth. Undoubtedly it seems to be too true that the door of admission in our American life is generally to be unlocked by the golden key, whatever be the hand that holds it. And yet, after all, this seeming welcome to the almighty dollar is in reality accorded to the qualifications which wealth can supply, even culture, leisure, and refinement, and the community of interests with those possessing like advantages. But certainly no man or woman has any indefeasible right to social recognition, and its refusal is not a denial of equity. The time may come, and will, when the prejudices now apparently invincible shall have been conquered by the changed characteristics of the race now under the social ban. Society, then as now organized upon the basis of community of interests, congeniality of tastes, and equality of position, will exclude the multitude who cannot speak its shibboleth; but there will be no color-line of separa-

tion. If the aspirate be duly sounded, the thickness of the lips that frame the word shall be no hindrance to the social welcome. When shall this be? Ah, when? In the far-distant future it may be; and equally it may be that our great-grandchildren shall behold such a social revolution as will open wide the drawing-rooms of Washington to the black men who have been honored guests in the palaces of England and of France. But whether it shall ever be or not is no point in the discussion I am making; for immediate social recognition is not an equitable demand, nor yet a necessary factor in the development of the negro race, which is his right and our only safety.

But poverty and ignorance are no barrier in the way of the elevation of any white man in America, nor yet the obscurity or even degradation of his origin. Though in infancy he may have lain "among the pots," yes, and the pigs of an Irish hovel, yet in this favored land of equal rights no arbitrary distinction shall stand in the way of his education into a cultivated refinement that shall be as "the wings of a dove covered with silver," nor prevent that his trained powers shall cover "her feathers with yellow gold." Why shall a different condition hedge about the black man because, forsooth, the hovel he was born in was in Carolina rather than Galway, and the pigs, his playmates, had a private pen?

But further, the helping hand of intelligent wealth never fails to be outstretched to smooth the path of the indigent white boy whose honesty and capacity and diligence give promise of a successful career. Our annals are full of splendid instances of the success attending such personal effort to further the progress of the struggling child of poverty, and even of shame. Why shall not these annals record in the future the names of black boys thus developed, by the personal care of members of the higher race, into a manhood as noble and as beneficent? Is it that there is lacking the capacity for development? Such opinion will hardly be expressed by any intelligent observer in our day. The scholars and orators, the mechanics and accountants, of pure negro blood, moral and upright, trusty and trusted, who have been made here in America, flatly contradict any such assumption. True, they are few in number; true, that in general the members of this race have as yet acquired but the little learning which is so dangerous; true, that left to themselves, under leaders of their own race, they have in almost every case made grievous failure, have made loud boasting of an uplifting which was just high enough to display their grotesque ugliness. Surely these results were to be expected in the circumstances attending their

effort for self-advancement. Yet, one man of high character and real education is enough to prove capacity. America can furnish many such, and of the great number which England offers, I cite one that is a crucial, splendid instance, and which alone must satisfy. An English cruiser overhauls a slave-ship homeward bound with its cargo of living treasure. The hatches are burst open, and the bondmen come forth from the nameless horrors of the middle passage just begun. Among them is a boy of typical African feature and form, who, for some cause, attracts the notice of a man who loves his fellow-men; and when the liberated are carried back to roam again as free savages their native wilds, he is taken to England, that culture may develop the god-like nature in which he was created, that by contact with individuals of the higher kingdom this denizen of the lower may be lifted up. To-day that boy is the Bishop of the Niger, governing and guiding the missionary work of the Church of England in all the vast region of West Africa.

Capacity is not lacking, but help is needed; the help, I repeat, which the intelligence of the superior race must give by careful selection and personal contact with the selected. Does not our mother nature teach us that this is the only process offering prospect of success, such being her method of procedure in her constant working under the Creator's law? "The plant," says Mr. Drummond, "stretches down to the dead world beneath it, touches its minerals and gases with its mystery of life, and brings them up ennobled and transformed to the living sphere." "The kingdom of heaven," said Jesus of Nazareth, "is like leaven which a woman took and hid in three measures of meal till the whole was leavened." The teaching of nature and of the Lord of nature alike declare that the leavened mass, the alive, must touch that which is dead to impart of its life; the higher must stoop to touch the lower, and its contact must be long continued, individual, personal, real, if the lower is to be carried up to the superior sphere. And the Christian philosopher, the greatest expounder of the religion of Jesus Christ, sums it all up into one command, when he charges those who would help forward the coming of the kingdom of the Christ, wherein shall be universal brotherhood among Christian men: "Be not high-minded, but condescend to men of low estate."

The separation of the negro race from the white means for the negro continued and increasing degradation and decay. His hope, his salvation, must come from association with that people among whom he dwells, but from whose natural guidance and care he has

been separated largely by the machinations of unscrupulous demagogues. These care not a straw for his elevation, but would mount on his shoulders to place and power. They find their opportunity in the natural, indeed inevitable, estrangement of the liberated slave from his former master; and they are more than content to keep the negro in thriftless ignorance, that he may continue their subservient follower. Certainly it was natural that these new-created citizens should join themselves to the leaders whose hands had broken the shackles of their slavery. Instinct prompted such alliance, and the fawning words of the cringing flatterer found ready acceptance and belief, when he told of the old master's desire again to fasten the chain which he, the orator, had broken with the tools in his carpet-bag. 'Twas pitiable to see the sorrow of many of these people when the announcement was made that a Democrat had been elected President, for they had been taught to believe that such an event meant their restoration to the condition of servitude. And it was cruel to witness, as I did, the sportive mockery of unthinking white men, who tortured the negroes by the assertion of ownership, and in some cases went through the mockery of selling them at auction. But is not now the opportunity of Southern white men to reestablish the bond of friendship with their former slaves, and to prove to them that our interests are identical? The issue of the last presidential election has opened even the blindest eyes to see that the freedom of their race is in no sense dependent upon the continued supremacy of the Republican party, but is assured by the organic law which no political party can change. The time is come that we may make them know that our desire is to help them along the road to prosperity and happiness, even as we ask them to help us. The time is come for honest, manly effort to teach them that in our union is the only hope of both races; that separated from us, their neighbors and friends, they must retrograde toward the barbarism whence they are sprung, and, that then, alas! we might be compelled to wage relentless war against them for our own preservation. The white men of the South must help the negro politically, if they would be helped by him, and first of all must give him assurance of honest purpose, by the removal of the ban which prejudice has established, and treat as a freeman him whom the Constitution and the laws declare free.

I am sure that particular cases of his present hardship will readily occur to all; notably one to which Mr. Cable called such vigorous attention in *THE CENTURY* for January of the current year. I could but think of it with a blush

as I journeyed a little while ago on a south-bound railway train, and saw a tidy, modest, and intelligent black woman restricted to a car which, when she entered it, was about as full of oaths and obscenity as of the foul vapor compounded of the fumes of tobacco and of whisky. At the same station came aboard the train two white women, evidently less intelligent, less refined in manner, and by no means so cleanly dressed; and they were admitted to the privileges of the so-called ladies' car, which, under the usual interpretation, means merely "white people's car." Is this just? Is this equitable? Must not any possible elevation of the negro race by our efforts have a beginning in the removal of such flagrant wrongs as this?

Again, I notice, as perhaps falling more constantly under my own observation, the cruel prejudice which stands like an angry sentinel at our church-doors to warn away these people whom we yet declare to be children of the one Father. Certainly it is no injustice to anybody that a number of Christians shall join together for the erection of a church and the provision of services; and in the architecture they shall select, the form of worship they shall employ, the doctrines they shall have proclaimed, they may please their own fancy or conscience, and no man has a right to complain. More than this, there is no more wrong in the appropriation of particular seats to particular persons who choose to pay therefor a price greater or less. Still further, the American Christian's pew is his castle, if he please to make it such, and no stranger may with impunity invade it. The religious club may, like other associations of that species, grant admission to the privileges of its club-house only by card, and nobody has a right to complain. But when the religious club sets up a claim to be the visible kingdom of God on earth, whose mission and ground of being are the making known the glad tidings to the poor and the outcast, what absurdity of contradiction is such exclusive selfishness! The congregations of Christian people in our country seem with one accord to recognize their duty as their highest pleasure, and welcome most gladly all who come to join their prayers and praises and to hear their teacher. Ushers will confront you with smiling welcome at the door of any church in the land, and conduct you to a seat, though you be introduced by no member. Your manhood is your right to enter — *if only your face is white*. Is this just? Is this equitable? Above all, is this Christian? It is but a foolish dread which justifies such distinction on the ground that, once admitted, the negro would take possession and rule the church. Social sympathies, we know very well, have perhaps most to do with the gathering

of any congregation of regular worshipers; sympathies which, as we have seen, arise from equality of material condition, community of tastes, participation in the same daily life. Why do we not fear to welcome as occasional visitor the white man or woman of low degree? Why does not like danger in their case restrain our Christian hospitality? Is the negro more pushing and self-assertive than the rude white man? Nay, rather is he not by his very pride of race, and his natural resentment of the white man's contumely, unwilling even to join with him in doing homage to the one King? This is but a pretext to excuse the conduct which, in our heart of hearts, we know to proceed from the old root of bitterness — the feeling of caste which demands that the liberated slave shall be forever a menial.

I charge the Christian white men of the South to mark that the effect of this separation, on which we have insisted, has helped to drive these people into a corresponding exclusiveness, and is constantly diminishing the influence of our Christian thinkers upon their belief and their practice. And twenty years of the separate life of these churches of the black man have made plain the inevitable tendency. They have colleges and newspapers, missionary societies and mammoth meeting-houses; they have baptized multitudes, and they maintain an unbroken revival; and yet confessedly the end of the commandment, the morality, the godlikeness which all religion is given to attain, is farther away than at the beginning. Their religion is a superstition, their sacraments are fetiches, their worship is a wild frenzy, and their morality a shame. I have myself heard the stewards of a city congregation reviling a country visitor because she always selected the Communion Sunday as the occasion of her visit, "that she might drink their good wine"; and the soft impeachment was not denied.

True, there are white people equally ignorant of the first principles of Christianity, and whose moral character is equally destitute of religious influence; but would it be wise or safe or Christian to let them organize separate communions, to give them up to their blind guides? This is all I plead for, that separation from us is for the negro destruction, and perhaps for us as well. Therefore we must help them, teach them, guide them, lift them up; and that we may do so, we must treat them as men.

Difficulties frown upon us as we enter this path. Our friends will look at us with eyes askant, and it may be will speak bitter words whose sting will wound; but this we can bear, for their conduct will not much damage our work, and we can believe that by and by they will see the truth and love it. But harder to

overcome, and of direful influence upon the very beginning of their labor who labor for peace, are the black demagogues who have learned from their white partners that the ignorance of their brethren must be the mother of devotion to their selfish interests; that their unreasoning hostility to their white neighbors is the cement which fastens securely their dependence upon them. Preachers and politicians, each being as much the one as the other, will resent and resist our effort to open the blind eyes that they may see their glorious freedom in the Church and in the State. Pride of race will be summoned to resist the alien; grateful recollection will turn away to the white men who came a score of years ago kindly to become their governors and congressmen and senators. The ignorant ranter who has held thousands spell-bound while he pictured the torment of the flaming lake, and called his hearers away to the sensuous delights of a Mohammedan paradise, will not freely consent to the introduction of preachers having intelligence, learning, and rational piety. But the truth will prevail at the last, if only it can find an entrance. We must

LOUISVILLE, KY.

carry it to them ourselves, despite all opposition. We must put away from us the devil's delusion that by declaring them citizens we have made them really such; that in giving them the alphabet of the Christian faith we have fitted them to dwell apart and alone.

I noticed in the brave and manly plea of Mr. Cable, already mentioned, these words, quoted from a newspaper published by black men:

"We ask not Congress, nor the Legislature, nor any other power, to remedy these evils, but we ask the people among whom we live. Those who *can* remedy them if they *will*. Those who have a high sense of honor and a deep moral feeling. Those who have one vestige of human sympathy left. . . . Those are the ones we ask to protect us in our weakness and ill-treatments. . . . As soon as the colored man is treated by the white man *as a man*, that harmony and pleasant feeling which should characterize all races which dwell together, shall be the bond of peace between them."

White men of the South, what answer shall we, the intelligent, the cultured, the powerful, the inheritors of noble traditions and of splendid ideas,—what answer, I ask in the name of God, of freedom and of humanity, shall we make to these men?

T. U. Dudley.

STONEWALL JACKSON IN THE SHENANDOAH.

INCLUDING HIS RELATIONS TO THE PENINSULAR CAMPAIGN.

THE

A CONFEDERATE OF 1862.

movement to capture Harper's Ferry and the fire-arms manufactured and stored there was organized at the Exchange Hotel in Richmond on the night of April 16, 1861. Ex-Governor Henry A. Wise was at the head of this purely impromptu affair. The Virginia Secession Convention, then sitting, was by a large majority "Union" in its sentiments till Sumter was fired on and captured, and Mr. Lincoln called for 75,000 men to enforce the laws in certain Southern States. Virginia was then, as it were, forced to "take sides," and she did not hesitate. I had been one of the candidates for a seat in that Convention from Augusta County but was overwhelmingly

defeated by the "Union" candidates, because I favored secession as the only "peace measure" Virginia could then adopt, our aim being to put ourselves in an independent position to negotiate between the United States and the seceded Gulf and Cotton States for a new Union, to be formed on a compromise of the slavery question by a convention to be held for that purpose.

Late on April 15 I received a telegram from "Nat" Tyler, the editor of the "Richmond Enquirer," summoning me to Richmond, where I arrived the next day. Before reaching the Exchange Hotel I met ex-Governor Wise on the street. He asked me to find as many officers of the armed and equipped volunteers of the inland towns and counties as I could, and request them to be at the hotel by seven in the evening to confer about a military movement which he deemed important. Not many such officers were in town, but I found Captains Turner Ashby and Richard Ashby of Fauquier County, Oliver R. Funsten of Clarke County, all commanders of volunteer companies of cavalry; also Captain John A. Harman of Staunton—my home—and Alfred Barbour, the latter

ex-civil superintendent of the Government works at Harper's Ferry.

These persons, with myself, promptly joined ex-Governor Wise, and a plan for the capture of Harper's Ferry was at once discussed and settled upon. The movement, it was agreed, should commence the next day, the 17th, as soon as the Convention voted to secede,— provided we could get railway transportation and the concurrence of Governor Letcher. Colonel Edmund Fontaine, president of the Virginia Central Railroad, and John S. Barbour, president of the Orange and Alexandria and Manassas Gap railroads, were sent for, and joined us at the hotel near midnight. They agreed to put the necessary trains in readiness next day to obey any request of Governor Letcher for the movement of troops.

A committee, of which I was chairman, waited on Governor Letcher after midnight, arousing him from his bed, and laid the scheme before him. He stated that he would take no step till officially informed that the ordinance of secession was passed by the Convention. He was then asked if contingent upon the event he would next day order the movement by telegraph. He consented. We then informed him what companies would be under arms ready to move at a moment's notice. All the persons I have named above are now dead, except John S. Barbour (who is in Congress), "Nat" Tyler, and myself.

On returning to the hotel and reporting Governor Letcher's promise, it was decided to telegraph the captains of companies along the railroads mentioned to be ready next day for orders from the Governor. In that way I ordered the Staunton Artillery, which I commanded, to assemble at their armory by 4 P. M. on the 17th, to receive orders from the Governor to aid in the capture of the Portsmouth Navy Yard. This destination had been indicated in all our dispatches to deceive the Government at Washington, in case there should be a "leak" in the telegraph offices. Early in the evening a message had been received by ex-Governor Wise from his son-in-law Doctor Garnett of Washington, to the effect that a Massachusetts regiment, one thousand strong, had been ordered to Harper's Ferry. Without this reënforcement we knew the guard there consisted of only about thirty men, who could be captured or driven away, perhaps without firing a shot, if we could reach the place secretly with a considerable force.

The Ashbys, Funsten, Harman and I, remained up the entire night. The superintendent and commandant of the Virginia Armory at Richmond, Captain Charles Dimmock, a Northern man by birth and a West

Point graduate, was in full sympathy with us, and that night filled our requisitions for ammunition, and moved it to the railway station before sunrise. He also granted one hundred stand of arms for the Martinsburg Light Infantry, a new company just formed. All these I receipted for and saw placed on the train. Just before we moved out of the depot, ex-Superintendent Barbour made an unguarded remark in the car, which was overheard by a Northern traveler who immediately wrote a message to President Lincoln and paid a negro a dollar to take it to the telegraph office. This act was discovered by one of our party, who induced a friend to follow the negro and take the dispatch from him. This perhaps prevented troops being sent to head us off.

My telegram to the Staunton Artillery produced wild excitement, that spread rapidly through the county, and brought thousands of people to Staunton during the day. Augusta had been a strong Union county, and a doubt was raised by some whether I was acting under the orders of Governor Letcher. To satisfy them, my brother, George W. Imboden, sent a message to me at Gordonsville, inquiring under whose authority I had acted. On the arrival of the train at Gordonsville, Captain Harman received the message and replied to it in my name, that I was acting by order of the Governor. Harman had been of the committee, the night before, that waited on Governor Letcher, and he assumed that by that hour — noon — the Convention must have voted the State out of the Union, and that the Governor had kept his promise to send orders by wire. Before we reached Staunton, Harman handed me the dispatch and told me what he had done. I was annoyed by his action till the train drew up at Staunton, where thousands of people were assembled, and my artillery company and the West Augusta Guards (the finest infantry company in the Valley) were in line. Major-General Kenton Harper, a native of Pennsylvania, "a born soldier," and Brigadier-General William H. Harman, both holding commissions in the Virginia militia,— and both of whom had won their spurs in the regiment the State had sent to the Mexican war,— met me, as I alighted, with a telegram from Governor Letcher, ordering them into service, and referring them to me for information as to our destination and troops. Until I confidentially imparted to them all that had occurred the night before, they thought, as did all the people assembled, that we were bound for the Portsmouth Navy Yard. For prudential reasons we said nothing to dispel this illusion. The Governor in his dispatch informed General Harper that he

was to take chief command, and that full written instructions would reach him *en route*. He waited till after dark, and then set out for Winchester behind a good team. Brigadier-General Harman was ordered to take command of the trains and of all troops that might report *en route*. (See map, page 293.)

About sunset we took train; our departure was an exciting and affecting scene. On the east side of the Blue Ridge a slide caused some delay. At Charlottesville, in the night, the Monticello Guards, a fine company under Captain R. T. W. Duke (since the war a member of Congress), came aboard. At Culpeper, a rifle company — the name of whose commander that night I have forgotten — also joined us, and just as the sun rose on the 18th of April we reached Manassas Junction.

The Ashbys and Funsten had gone on the day before to collect their cavalry companies, and also the famous "Black Horse Cavalry," a superb body of men and horses under Captains John Scott and Welby Carter of Fauquier. By marching across the Blue Ridge, they were to rendezvous near Harper's Ferry. Ashby had sent men on the night of the 17th to cut the wires between Manassas and Alexandria, and to keep them cut for several days.

Our advent at Manassas astounded the quiet people of the village. General Harman at once "impressed" the Manassas Gap train to take the lead, and switched two or three other trains to that line in order to proceed to Strasburg. I was put in command of the foremost train, and had not gone five miles when I discovered that the engineer could not be trusted. He let his fire go down, and came to a dead standstill on a slight ascending grade. I ran forward and found the engineer under his engine. He alleged that something was wrong, and was using a monkey wrench to take bolts out of the reversing links. An engineer from the next train, which was close behind, came up, and looking at the steam-gauge swore the fire was out, and nothing else the matter. As soon as he saw the engineer of my train he denounced him as a Northern man. A cocked pistol induced him to fire up and go ahead. From there to Strasburg I rode in the engine-cab, and we made full forty miles an hour with the aid of good dry wood and a navy revolver.

At Strasburg we disembarked, and before ten o'clock the infantry companies took up the line of march for Winchester. I had to procure horses for my guns. The farmers were in their corn-fields. Some of them agreed to hire us horses as far as Winchester, eighteen miles, and others refused. The situation being urgent, we took the horses by force, under threats of being indicted by the first grand

jury to meet in the county. By noon we had sufficient teams and followed the infantry down the Valley turnpike, reaching Winchester just at nightfall. The people generally received us very coldly. The war-spirit that bore them up through four years of trial and privation had not yet been aroused.

General Harper was at Winchester, and had sent forward his infantry by rail to Charlestown, eight miles from Harper's Ferry. In a short time a train returned for my battery. The farmers got their horses and went home rejoicing, and we set out for the Ferry. The infantry moved out of Charlestown about midnight. We kept to our train as far as Halltown, only four miles from the Ferry. There we disembarked our guns to be run forward by hand to Bolivar Heights or Furnace Hill, from which we could shell the place if necessary.

A little before day-dawn a brilliant light arose from near the point of confluence of the Shenandoah and Potomac rivers. General Harper, who up to that moment had expected a conflict with the Massachusetts regiment supposed to be at Harper's Ferry, was making his dispositions for an attack at daybreak, when this light convinced him that the enemy had fired the arsenal and fled. He marched in and took possession, but too late to extinguish the flames. Nearly twenty thousand rifles and pistols were destroyed. The workshops had not been fired. The people of the town told us the catastrophe, for such it was to us, was owing to declarations made the day before by ex-Superintendent Alfred Barbour, who was popular with the workmen. He reached Harper's Ferry, *via* Washington, on the 18th about noon, when the mechanics in the works had knocked off for dinner. Collecting them in groups, he informed them that the place would be captured within twenty-four hours by Virginia troops. He urged them to protect the property, and join the Southern cause, promising, if war ensued, that the place would be held by the South, and they would be continued at work on high wages. His influence with the men was great, and most of them decided to accept his advice. But Lieutenant Roger Jones, who commanded the little guard of some thirty men, hearing what was going on, at once took measures to destroy the place if necessary. Trains of gunpowder were laid through the buildings to be fired. In the shops the men of Southern sympathies managed to wet the powder in many places during the night, rendering it harmless. Jones's troops, however, held the arsenal buildings and stores, and when advised of Harper's rapid approach from Charlestown, the gunpowder was fired, and he crossed into Maryland with his handful of men. So we secured

only the machinery, and the burnt gun and pistol barrels and locks, which, however, were sent to Richmond and Columbia, South Carolina, and were worked over into excellent arms.

Within a week about thirteen hundred rank and file of the Virginia volunteers had assembled there. As these companies were, in fact, a part of the State militia, they were legally under command of the three brigadiers and one major-general of militia who had authority over this, that, or the other organization. These generals surrounded themselves with a numerous staff, material for which was abundant in the rank and file of the volunteers; for instance, in my battery there were at least a dozen college graduates of and below the grade of corporal. Every fair afternoon the official display in Harper's Ferry of "fuss and feathers" would have done no discredit to the Champs Élysées.

One afternoon, six or eight days after our occupation, General Harper sent for me as the senior artillery officer (we then had three batteries, but all without horses) to say he had been told that a number of trains on the Baltimore and Ohio railroad would try to pass us in the night, transporting troops from the West to Washington, and that he had decided to prevent them at the risk of bringing on a battle. He ordered the posting of guns so as to command the road for half a mile or more, all to be accurately trained on the track by the light of day, and loaded ready to be discharged at any moment. Infantry companies were stationed to fire into the trains, if the artillery failed to stop them. Pickets were posted out two or three miles, with orders to fire signal-guns as soon as the first troop-laden train should pass. About one o'clock at night we heard the rumbling of an approaching train. The long roll was beat; the men assembled at their assigned positions and in silence awaited the sound of the signal-guns. A nervous cavalryman was the vedette. As the train passed him (it was the regular mail) he thought he saw soldiers in it and fired. *Pop! pop! pop!* came down the road from successive sentries. Primers were inserted and lanyards held taut, to be pulled when the engine turned a certain point four hundred yards distant from the battery. By great good luck Colonel William S. H. Baylor, commanding the Fifth Virginia regiment, was with some of his men stationed a little beyond the fatal point, and seeing no troops aboard the train signaled it to stop. It did so, not one hundred yards beyond where the artillery would have opened on it. When the first excitement was over, he demanded of the conductor what troops, if any, were on board, and was told there was "one old fellow in uniform asleep on the mail-bags in the first

car." Entering that car with a file of soldiers, he secured the third prisoner of war taken in Virginia. It proved to be Brig.-Gen. W. S. Harney of the United States Army, on his way from the West to Washington, to resign his commission and go to Europe rather than engage in a fratricidal war. He surrendered with a pleasant remark, and was taken to General Harper's headquarters, where he spent the night. On his assurance that he knew of no troops coming from the West, Harper ordered us all to quarters. Next morning General Harney was paroled to report in Richmond, and was escorted to a train about to leave for Winchester. He was a fine-looking old soldier, and as he walked down the street to the depot he saw all our forces, except the cavalry. He was accompanied socially by two or three of our generals and a swarm of staff-officers. He cast his eagle glance over the few hundred men in sight, and turning to General Harper, I heard him inquire, with a merry twinkle in his eye, "Where is your army encamped, General?" Harper's face crimsoned as he replied, "Excuse me from giving information." Harney smiled, and politely said, "Pardon me for asking an improper question, but I had forgotten I was a prisoner." He went on to Richmond, was treated with marked courtesy, and in a day or two proceeded to Washington.

In a few days our forces began to increase by the arrival of fresh volunteer companies. Being only a captain, I was kept very busy in trying to get my battery into the best condition. We had no caissons and insufficient harness. For the latter I sent to Baltimore, purchasing on my private credit. In the same way I ordered from Richmond red flannel shirts and other clothing for all my men, our uniforms being too fine for camp life. The Governor subsequently ordered these bills to be paid by the State Treasurer. We found at the armory a large number of very strong horse-carts. In my battery were thirty or more excellent young mechanics. By using the wheels and axles of the carts they soon constructed good caissons, which served us till after the first battle of Bull Run.

We had no telegraph line to Richmond, and the time of communication by mail was two days. General Harper found it so difficult to obtain needed munitions and supplies, that about the last day of April he decided to send me to the Governor, who was my intimate friend, with a requisition for all we needed, and verbal instructions to make to him a full statement of our necessitous and defenseless condition, in case General Patterson, who was with a Federal force at Chambersburg, should move against us. When I arrived in Rich-

mond, General Robert E. Lee had been placed in command of all the Virginia forces by the Convention, and by ordinance every militia officer in the State above the rank of captain had been decapitated, and the Governor and his military council had been authorized to fill vacancies thus created. This was a disastrous blow to "the pomp and circumstance of glorious war" at Harper's Ferry. Militia generals and the brilliant "staff" were stricken down, and their functions devolved, according to Governor Letcher's order of April 27, upon Thomas J. Jackson, colonel commandant, and James W. Massie, major and assistant adjutant-general, who arrived during the first week of May.

This was "Stonewall" Jackson's first appearance on the theater of the war. I spent one day and night in Richmond, and then returned to camp, arriving about 2 P. M. What a revolution three or four days had wrought! I could scarcely realize the change. The militia generals were all gone; the staff had vanished. The commanding colonel and his adjutant had arrived, and were occupying a small room in the little wayside hotel near the railroad bridge. Knowing them both, I immediately sought an interview and delivered a letter and some papers I had brought from General Lee. Jackson and his adjutant were at a little pine table figuring upon the rolls of the troops present. They were dressed in well-worn, dingy uniforms of professors in the Virginia Military Institute, where both had recently occupied chairs. Colonel Jackson had issued and sent to the camps a short, simple order assuming the command, but had had no intercourse with the troops. The deposed officers had nearly all left for home or for Richmond in a high state of indignation. After an interview of perhaps a half hour I proceeded to my camp on the hill, and found the men of the Fifth Virginia regiment, from my own county, in assembly, and greatly excited. They were deeply attached to their field-officers, and regarded the action of the Convention as an outrage on freemen and volunteers, and were discussing the propriety of passing denunciatory resolutions. On seeing me they called for a speech. As I did not belong to the regiment, I declined to say anything, but ordered the men of the Staunton Artillery to fall into line. Then I briefly told them that we were required to muster into service either for twelve months or during the war, at our option. I urged them to go in for the full period of the war, as such action would be most creditable to them, and a good example to others. They unanimously shouted, "For the war! For the war!" Before they were dismissed the ceremony of mustering in was

completed, and I proudly took the roll down to Colonel Jackson with the remark, "There, Colonel, is the roll of your first company mustered in for the war." He looked it over, and rising, shook my hand, saying, "Thank you, Captain—thank you; and please thank your men for me." He had heard there was some dissatisfaction in the camps, and asked me to act as mustering officer for the two other artillery companies present. Before sunset the rolls were returned. This prompt action of the batteries was emulated the next day by the other troops, and all were mustered in. Within a week Governor Letcher very wisely appointed Major-General Harper colonel of the Fifth Virginia, Brigadier-General Harman lieutenant-colonel, and the late Colonel Baylor major, and I venture to say no regiment in either army was ever better officered. The fame it won in the "Stonewall" brigade proves this.

The presence of a master mind was visible in the changed condition of the camp. Perfect order reigned. Instruction in all the details of military duties occupied Jackson's whole time. He urged all officers to call upon him for information about even the minutest details of duty, often remarking that it was no discredit to a civilian to be ignorant of military matters. He was a rigid disciplinarian, and yet as gentle and kind as a woman. He was the easiest man in our army to get along with pleasantly so long as one did his duty, but as inexorable as fate in exacting its performance; yet he would overlook serious faults if he saw they were the result of ignorance, and in a kindly way would instruct the offender. He was as courteous to the humblest private who sought an interview for any purpose, as to the highest officer in his command. He despised superciliousness and self-assertion, and nothing angered him so quickly as to see an officer wound the feelings of those under him by irony or sarcasm.

When Jackson found we were without artillery horses, he went into no red-tape correspondence with the circumlocution offices in Richmond, but ordered his quartermaster, Major John A. Harman, to proceed with men to the Quaker settlements in the rich county of Loudoun, famous for its good horses, and buy or impress as many as we needed. Harman executed his orders with such energy and dispatch that he won Jackson's confidence and remained his chief quartermaster till the day of Jackson's death.

About ten days after Jackson assumed command at the Ferry, everything being perfectly quiet, I rode up to his quarters and told him we had been so suddenly called into service that I had left important private

business unprovided for, and had written for my wife to bring papers needing my signature; that I had received a note from Colonel Ware saying she was a guest at his house, some seventeen miles from our camp. I said to the Colonel that I knew of nothing to prevent my going to Colonel Ware's that night, and that I would return by nine or ten o'clock next morning. I made no formal application for leave of absence, and as he said nothing against my going, I mounted and rode off. I reached Ware's in time for supper. A heavy rain-storm set in. About two o'clock some one hallooed lustily at the front gate. Raising the window, I called out, "Who is there?" My brother's voice shouted back that he had an order from Colonel Jackson requiring me to report to him at daybreak. This order had been sent to my camp at nine P. M. without explanation, and my brother, not knowing that I had seen Colonel Jackson before I left camp, thought my absence might compromise me, and therefore rode through the storm to enable me to get back to camp before daylight. Of course, I returned with him, reaching Harper's Ferry at early dawn, wet to the skin, and very muddy. I went to headquarters and found Adjutant Massie up, but Colonel Jackson had not risen. I inquired at once, "What news from the enemy?" supposing, of course, that some trouble was impending. He replied, "Everything is quiet." I pulled out the order and asked, "What does this mean?" He answered, "It's plain: you are to report here at daybreak." "What for?" "I don't know, but have only my suspicions." "What are they?" "That it is to teach you that a soldier in the face of the enemy has no business away from his post." At this I became very angry, and declared I would have an explanation when Jackson arose.

Massie and I had been intimate from boyhood. He said, "Let me advise you. You don't know Jackson as I do. He is one of the best-hearted men in the world, and the truest. He has the most rigid ideas of duty. He thought last night that you went off in a rather free-and-easy manner. He likes you, and would not forbid your going, though he gave you no leave to go. You assumed it. He meant to rebuke you for it, and teach you a military lesson that you would not forget. He sent this order to your camp last night, as if he supposed you were there. I am glad it reached you, and that you are here. It will raise you and your brother in his estimation." He advised me to cool down, get breakfast, and come back. "I will tell him," he said, "that you have been here. He was up late last night, or he would be out of bed now."

I followed Massie's advice, and about eight o'clock called on Colonel Jackson, and asked if he had any orders for me. He said he had decided to take possession of the bridge across the Potomac at Point of Rocks, twelve miles below Harper's Ferry, and wished me to command the post. He asked how soon I could be ready to go. I replied, "In thirty minutes — just as soon as we can harness the horses and hitch up." He saw I was still angry, but never alluded to my recall from Ware's. He smiled at my prompt reply and said, "You needn't be in such a hurry — it will do to get off by eleven o'clock." The episode was soon the gossip of the camp, and, perhaps, had a salutary effect.

I fortified the Virginia end of the Point of Rocks bridge, as we expected a visit any night from General B. F. Butler, who was at the Relay House on the Baltimore and Ohio railroad. It was my habit to keep awake all night to be ready for emergencies, and to sleep in the day-time, making daily reports, night and morning, to Jackson.

One Sunday afternoon, a little over a week after we occupied this post, I was aroused from my nap by one of my men, who said there were two men in blue uniforms (we had not yet adopted the gray) riding about our camp, and looking so closely at everything that he believed they were spies! I went out to see who they were. It was Jackson and one of his staff. As I approached them, he put his finger on his lips and shook his head as a signal for silence. In a low tone he said he preferred it should not be known he had come there. He approved of all I had done, and soon galloped away. I afterward suspected the visit was simply to familiarize himself with the line of the canal and railroad from Point of Rocks to Harper's Ferry preparatory to a sharp bit of strategy he practiced a few days later. One of the great and growing wants felt by the Confederacy from the very beginning of the war was that of rolling-stock for the railroads. We were particularly short of locomotives, and were without the shops to build them. Jackson, appreciating this, hit upon a plan to obtain a large supply from the Baltimore and Ohio road. Its line was double-tracked, at least from Point of Rocks to Martinsburg, a distance of twenty-five or thirty miles.

By our occupation of Harper's Ferry we had not interfered with the running of trains except on the occasion of the arrest of General Harney. The coal traffic from Cumberland was immense, as the Washington Government was accumulating supplies of coal on the seaboard. These coal trains passed Harper's Ferry at all hours of the day and night,

and thus furnished Jackson a pretext for arranging a brilliant "scoop." When he sent me to Point of Rocks, he ordered Colonel Harper with the Fifth Virginia infantry to Martinsburg. He then complained to President Garrett, of the Baltimore and Ohio, that the night trains, eastward bound, disturbed the repose of his camp, and requested a change of schedule that would pass all east-bound trains by Harper's Ferry between eleven and one o'clock in the day-time. Mr. Garrett complied, and thereafter for several days we heard the constant roar of passing trains for an hour before and an hour after noon. But since the "empties" were sent up the road at night, Jackson again complained that the nuisance was as great as ever, and as the road had two tracks, he must insist that west-bound trains should pass Harper's Ferry during the same two hours as those east-bound. Mr. Garrett promptly complied, and we then had, for two hours every day, the liveliest railroad in America. As soon as the schedule was working at its best, Jackson sent me an order one night to take a force of men across to the Maryland side of the river next day at eleven o'clock, and let all west-bound trains pass till twelve o'clock, but permit none to go east, and at twelve o'clock to obstruct the road so that it would require several days to repair it. He ordered the reverse to be done at Martinsburg. Thus he caught all the trains that were going east or west between those points, and ran them up to Winchester, thirty-two miles on the branch road, where they were safe, and whence they were removed by horse-power to Strasburg and Staunton. I do not remember the number of trains captured, but the loss crippled the Baltimore and Ohio road seriously for some time, and the gain to our scantily stocked Virginia roads of the same gauge was invaluable.

While we held the Point of Rocks bridge, J. E. B. Stuart (afterwards so famous as a cavalry leader) was commissioned lieutenant-colonel and reported to Colonel Jackson for assignment to duty. Jackson ordered the consolidation of all the cavalry companies into a battalion to be commanded by Stuart, who appeared then more like a well-grown, manly youth than the matured man he really was. This order was very offensive to Captain Turner Ashby, at that time the idol of all the troopers in the field, as well he might be, for a more brave and chivalrous officer never rode at the head of well-mounted troopers. Ashby was older than Stuart, and he thought, and we all believed, he was entitled to first promotion. When not absent scouting, Ashby spent his nights with me at the bridge, our relations being confidential. He was unmarried and of a meditative tem-

perament, that sometimes made him gloomy. He often expressed the belief that he and his fondly loved brother "Dick" Ashby would fall early in the conflict. The evening upon which he received Colonel Jackson's order to report to Stuart he came to the bridge from his camp, two miles out on the Leesburg road, and asked me to go up on the bridge roof for a talk. He then told me of the order, and that he would reply to it next morning with his resignation. I expostulated with him, although he had all my sympathies. I urged him to call upon Colonel Jackson that night. It was only twelve miles by the tow-path of the canal, and on his black Arabian he could make it in less than an hour. I believed Jackson would respect his feelings and leave his company out of Stuart's battalion. I ventured to write a private letter to Jackson, appealing in the strongest terms for the saving of Ashby to the service.

About ten o'clock, under a bright moonlight, the guards let Ashby through the bridge, and in a lope he turned up the tow-path toward Harper's Ferry. In crossing one of the little bridges over a waste-slucice, something frightened the Arabian, and with a bound they landed in the canal. The water did not quite swim the horse, but the banks were so steep that he could not get out of it till he had ridden several hundred yards and found the bank less steep. Then on he went, and reached Jackson's headquarters before he had retired. Jackson not only relieved him from the obnoxious order, but agreed to divide the companies between him and Stuart, and to ask for his immediate promotion, forming thus the nuclei of two regiments of cavalry, to be filled as rapidly as new companies came to the front. Ashby got back to Point of Rocks about two in the morning, as happy a man as I ever saw, and completely enraptured with Jackson. From that night on their mutual affection and confidence were remarkable. He said his night ride and ducking in the canal so excited Jackson's amusement and admiration that he believed they did more than all else to secure the favorable result of his visit. But it is more likely that a trip Ashby had made a few days before to Chambersburg and the encampment of General Robert Patterson was the real reason for Jackson's favor. Ashby had rigged himself in a farmer's suit of homespun that he borrowed, and hiring a plow-horse, had personated a rustic horse-doctor. With his saddle-bags full of some remedy for spavin or ringbone, he had gone to Chambersburg, and had returned in the night with an immense amount of information. The career of Ashby was a romance from that time on till he fell, shot through the

heart, two days before the battle of Cross Keys, of which I shall speak later on.

In May, 1861, Colonel Jackson was superseded in command at Harper's Ferry by Brigadier-General Joseph E. Johnston. When General Johnston arrived, several thousand men had been assembled there, representing nearly all the seceded States east of the Mississippi River. Johnston at once began the work of organization on a larger scale than Jackson had attempted. He brigaded the troops, and to the exclusively Virginia brigade assigned Colonel Jackson as its commander. The latter was almost immediately commissioned brigadier-general, and when early in June Johnston withdrew from Harper's Ferry to Winchester, he kept Jackson at the front along the Baltimore and Ohio road to observe General Patterson's preparations. Nothing of much importance occurred for several weeks, beyond a little affair near Martinsburg in which Jackson captured about forty men of a reconnoitering party sent out by Patterson. His vigilance was ceaseless, and General Johnston felt sure, at Winchester, of ample warning of any aggressive movement of the enemy. The first great distinction won by Jackson was at Bull Run on the 21st of July.* Soon after, he was promoted to major-general, and the Confederate Government having on the 21st of October, 1861, organized the Department of Northern Virginia, under command of General Joseph E. Johnston, it was divided into the Valley District, the Potomac District, and Acquia District, to be commanded respectively by Major-Generals Jackson, Beauregard, and Holmes. On October 28 General Johnston ordered Jackson to Winchester to assume command of his district, and on the 6th of November the War Department ordered his old "Stonewall" brigade, and six thousand troops under command of Brigadier-General W. W. Loring, to report to him. These, together with Ashby's cavalry, gave him a force of about ten thousand men all told.

His only movement of note in the winter of 1861-2 was an expedition at the end of December to Bath and Romney, to destroy the Baltimore and Ohio railroad and a dam or two near Hancock on the Chesapeake and Ohio canal. The weather set in to be very inclement about New Year's, with snow, rain, sleet, high winds, and intense cold. Many in Jackson's command were opposed to the expedition, and as it resulted in nothing of much military importance, but was attended with great suffering on the part of his troops, nothing but the confidence he had won by his previous services saved him from personal ruin. He and his second in command, Gen-

eral Loring, had a serious disagreement. He ordered Loring to take up his quarters, in January, in the exposed and cheerless village of Romney on the south branch of the upper Potomac. Loring objected to this. Jackson was inexorable. Loring and his principal officers united in a petition to Mr. Benjamin, Secretary of War, to order them to Winchester, or at least away from Romney. This document was sent direct to the War office, and the Secretary, in utter disregard of "good order and discipline," granted the request, without consulting Jackson. As soon as information reached Jackson of what had been done, he indignantly resigned his commission. Governor Letcher was astounded, and at once wrote Jackson a sympathetic letter, and then expostulated with Mr. Davis and his Secretary with such vigor that an apology was sent to Jackson for their obnoxious course. The orders were revoked and modified, and Jackson was induced to retain his command. This little episode gave the Confederate civil authorities an inkling of "what manner of man" "Stonewall" Jackson was. Devoted as he was to the South, he had a due appreciation of his own character, and was justly tenacious of all his personal rights, especially when their infraction involved what he considered a fatal blow at the proper discipline of the army.

In that terrible winter's march and exposure, he endured all that any private was exposed to. One morning, near Bath, some of his men, having crawled out from under their snow-laden blankets, half-frozen, were cursing him as the cause of their sufferings. He lay close by under a tree, also snowed under, and heard all this; but without noticing it, presently crawled out too, and shaking the snow off, made some jocular remark to the nearest men, who had no idea he had ridden up in the night and lain down amongst them. The incident ran through the little army in a few hours, and reconciled his followers to all the hardships of the expedition, and fully re-established his popularity.

As the winter wore on and spring was opening, a tremendous host of enemies was assembling to crush out all resistance to the Federal Government in Virginia. In March General McClellan withdrew from Johnston's front at Manassas, and collected his army of more than one hundred thousand men on the Peninsula. Johnston moved south to confront him. Jackson, whose entire army in the Shenandoah Valley did not exceed thirteen thousand effective men of all arms, retired up the Valley. McClellan had planned and organized a masterly movement to capture, hold, and occupy the Valley and the Piedmont region; and if

* See "Incidents of the Battle of Manassas" by General Imboden in the *CENTURY* for May, 1885.—ED.

his subordinates had been equal to the task, and there had been no interference from Washington, it is probable the Confederate army would have been driven out of Virginia and Richmond captured by midsummer, 1862.

Milroy, with near twelve thousand men, was on the Staunton and Parkersburg road at McDowell, less than forty miles from Staunton, about the 1st of May. Frémont, with a force reputed then at thirty thousand men, was at Franklin, only fifty miles north-west of Staunton, and in close supporting distance from Milroy. Banks, with over ten thousand men, was fortified at Strasburg, seventy miles north-east of Staunton, by the great Valley turnpike. And Shields was on the east side of the Blue Ridge, so as to be able to move either to Fredericksburg or to the Luray Valley, and thence to Staunton. This force, aggregating about sixty-four thousand men, was confronted by Jackson with barely thirteen thousand. General McDowell, at the same time, was at or near Fredericksburg, with a reputed force of forty thousand more Federals.

General Johnston could spare no assistance to Jackson, for McClellan was right in his front with superior numbers, and menacing the capital of the Confederacy with almost immediate and certain capture. Its only salvation depended upon Jackson's ability to hold back Milroy, Frémont, Banks, Shields, and McDowell long enough to let Johnston try doubtful conclusions with McClellan. If he failed in this, these five commanders of an aggregate force then reputed to be, and I believe in fact, over one hundred thousand, would converge and move down upon Richmond from the west as McClellan advanced from the east, and the city and its defenders would fall an easy prey to nearly, if not quite, a quarter of a million of the best armed and equipped men ever put into the field by any government.

"Stonewall" Jackson—silent as a sphinx, brave as a lion, and sustained by a religious fervor as ardent as that of Cromwell's army, which believed in the efficacy of prayer for success, but prudentially kept their powder dry—was near Port Republic early in May, contemplating his surroundings and maturing his plans. What these latter were no mortal man but himself knew.

Suddenly the appalling news spread through the Valley that Jackson had fled from his district to the east side of the Blue Ridge through Brown's and Swift Run gaps. Only Ashby remained behind with about one thousand cavalry, scattered and moving day and night in the vicinity of McDowell, Franklin, Strasburg, Front Royal, and Luray, and reporting to Jackson every movement of his Briarean

enemy. Despair was fast settling upon the minds of the people of the Valley. Jackson made no concealment of his flight. He indeed had gone, and the fact soon reached his enemies. Milroy advanced two regiments to the top of the Shenandoah Mountain, only twenty-two miles from Staunton, and was preparing to move his entire force to Staunton, to be followed by Frémont.

Jackson had gone to Charlottesville and other stations on the Virginia Central Railroad, and had collected enough railway trains to transport all of his little army. That it was to be taken to Richmond when the troops were all embarked no one doubted. It was Sunday, and many of his sturdy soldiers were Valley men. With sad and gloomy hearts they boarded the trains. When all were on, lo! they took a westward course, and a little after noon the first train rolled into Staunton, the men got off, and as quickly as possible a cordon of sentinels was thrown around the town, and no human being was permitted to pass out. The people were at the churches. Those from the neighborhood could not return to their homes because of the cordon of sentinels. News of Jackson's arrival spread like wild-fire, and crowds flocked to the station to see the soldiers, and learn what it all meant. No one knew, and no one could tell. The most prominent citizen of the place was the venerable Judge Lucas P. Thompson, whose rank in the State judiciary was inferior to none. He was a personal friend of General Jackson, and the people urged him to see the General, and find out and tell them what Jackson meant to do.

Jackson was found in a little room quietly writing some orders. He received his old friend the Judge very cordially, who remarked: "General, your appearance here is a complete surprise. We thought you had gone to Richmond." "Ah! indeed?" said Jackson. "Yes; and we can't understand it. Where are you going? or do you expect to meet the enemy here?" Jackson's eye twinkled with amusement, as he leaned over and spoke to the Judge in a low, confidential tone: "Judge, can you keep a secret—a secret that must not be told to any one?" "Oh, yes!" "So can I, Judge, and you must excuse me for not telling it to you." His Honor's face turned scarlet, and he soon left, answering his eager questioners with judicial gravity, "Jackson's movement is a secret."

As soon as the troops could be put in motion they took the road leading towards McDowell, the General having sent forward cavalry to Buffalo Gap and beyond to arrest all persons going that way. The next morning by a circuitous mountain-path he tried to send

a brigade of infantry to the rear of Milroy's two regiments on Shenandoah Mountain, but they were improperly guided and failed to reach their proposed position in time, and both regiments escaped when attacked in front. Jackson followed as rapidly as possible, and the following day, May 8, encountered Milroy's army on top of the mountain three miles east of McDowell. The conflict lasted many hours, and was severe and bloody. It was fought mainly with small arms, the ground forbidding much use of artillery. Milroy was routed, and fled precipitately towards Franklin, to unite with Frémont. The route lay along a narrow valley hedged by high mountains, perfectly protecting the flanks of the retreating army from Ashby's pursuing cavalry. Jackson ordered Ashby to pursue as vigorously as possible, and to guard completely all avenues of approach from the direction of McDowell or Staunton till relieved of this duty. Jackson buried the dead and rested his army one day, and then fell back to the Valley on the Warm Springs and Harrisonburg road. (See map, page 293.)

It was sometimes questioned whether Jackson was entitled to all the credit for the strategy that enabled him in thirty-three days, with thirteen thousand men, to defeat successively Milroy, Banks, Frémont, and Shields, with an aggregate force of sixty-four thousand men, and to clear the Valley of all hostile troops. I happen to know one fact that sheds a flood of light on this question, and have repeated it hundreds of times, though I do not know that it has ever been in print. It is this :

The morning after the battle of McDowell I called very early on Jackson at the residence of Colonel George W. Hull of that village, where he had his headquarters, to ask if I could be of any service to him, as I had to go to Staunton, forty miles distant, to look after some companies that were to join my command. He asked me to wait a few moments, as he wished to prepare a telegram to be sent to President Davis from Staunton, the nearest office to McDowell. He took a seat at a table and wrote nearly half a page of foolscap ; he rose and stood before the fire-place pondering it some minutes ; then he tore it into pieces and wrote again, but much less, and again destroyed what he had written, and paced the room several times. He suddenly stopped, seated himself, and dashed off two or three lines, folded the paper, and said, "Send that off as soon as you reach Staunton." As I bade him "good-bye," he remarked : "I may have other telegrams to-day or to-morrow, and will send them to you for transmission. I wish you to have two or three well-mounted couriers ready to bring me the replies promptly." I promised to do so and departed.

I read the message he had given me. It was dated "McDowell," and read about thus: "Providence blessed our arms with victory over Milroy's forces yesterday." That was all. The second day thereafter a courier arrived with a message to be telegraphed to the Secretary of War. I read it, sent it off, and ordered a courier to be ready with his horse, while I waited at the telegraph office for the reply. The message was to this effect: "I think I ought to attack Banks, but under my orders I do not feel at liberty to do so." In less than an hour a reply came, but not from the Secretary of War. It was from General Joseph E. Johnston, to whom I supposed the Secretary had referred General Jackson's message. I have a distinct recollection of its substance, as follows: "If you think you can beat Banks, attack him. I only intended by my orders to caution you against attacking fortifications." Banks was understood to have strongly fortified himself at Strasburg and Cedar Creek. I started the courier with this reply, as I supposed to McDowell, but, lo! it met Jackson only twelve miles from Staunton, to which point on the Harrisonburg and Warm Springs turnpike he had marched the whole of his little army except Ashby's cavalry, about one thousand men. These latter, under that intrepid leader, Ashby, who was to fall within a month, he had sent from McDowell to menace Frémont, who was at Franklin in Pendleton County, where he remained in blissful ignorance that Jackson had left McDowell, till telegraphed some days later by Banks that Jackson had fallen upon him at Front Royal and driven him through Winchester and across the Potomac.

Two hours after receiving this telegram from General Johnston, Jackson was *en route* for Harrisonburg, where he came upon the great Valley turnpike. By forced marches he reached New Market in two days. Detachments of cavalry guarded every road beyond him, so that Banks remained in total ignorance of his approach. This Federal commander had the larger part of his force well fortified at and near Strasburg, but he kept a large detachment at Front Royal, about eight miles distant and facing the Luray or Page Valley.

From New Market Jackson disappeared so suddenly that the people of the Valley were again mystified. He crossed the Massanutten Mountain, and passing Luray, hurried towards Front Royal. He sometimes made thirty miles in twenty-four hours with his entire army, gaining for his infantry the sobriquet of "Jackson's foot cavalry." He struck Fort Royal very early in the morning of May 23. The surprise was complete, and disastrous to the enemy under Colonel John R. Kenly. After a short and fruit-

less resistance they fled towards Winchester, twenty miles distant, with Jackson at their heels.

News of this disaster reached Banks at Strasburg, by which he learned that Jackson was rapidly gaining his rear towards Newtown. The works Banks had constructed had not been made for defense in that direction. He abandoned them and set out with all haste for Winchester; but *en route*, near Newtown (May 24), Jackson struck his flank, inflicting heavy loss, and making enormous captures of property, consisting of wagons, teams, camp equipage, provisions, ammunition, and over seven thousand stand of arms, all new, and in perfect order; also, a large number of prisoners.

Jackson chased Banks's fleeing army beyond Winchester (May 25), and held his ground till he was satisfied they had crossed the Potomac. His problem now was to escape Frémont's clutches, knowing that that officer would be promptly advised by wire of what had befallen Banks. He could go back the way he came, by the Luray Valley, but that would expose Staunton (the most important depot in the valley) to capture by Frémont, and he had made his plans to save it.

I had been left at Staunton organizing my recruits. From New Market on his way to attack Banks, Jackson sent me an order to throw as many men as I could arm, and as quickly as possible, into Brock's Gap, west of Harrisonburg, and any other mountain-pass through which Frémont could reach the Valley at or south of Harrisonburg. I knew that within four miles of Franklin, on the main road leading to Harrisonburg, there was a narrow defile hemmed in on both sides by nearly perpendicular cliffs, over five hundred feet high. I sent about fifty men, well armed with long-range guns, to occupy these cliffs, and defend the passage to the last extremity. They got there in time.

As soon as Frémont learned of Banks's defeat, he put his array in motion to cut off Jackson's retreat up the Valley. Ashby was still in his front towards McDowell, with an unknown force; so Frémont did not attempt that route, but sent his cavalry to feel the way towards Brock's Gap, on the direct road to Harrisonburg. The men I had sent to the cliffs let the head of the column get well into the defile or gorge, when, from a position of perfect safety to themselves, they poured a deadly volley into the close column. Being so unexpected, and coming from a foe of unknown strength, the Federal column halted and hesitated to advance. Another volley and the "rebel yell" from the cliffs turned them back, never to appear again. Frémont took the road to Moorefield, and thence to Strasburg. It shows how close had been Jackson's calculation

of chances, to state that as his rear-guard marched up Fisher's Hill, two miles from Strasburg, Frémont's advance came in sight on the mountain-side on the road from Moorefield. Jackson continued his march up the Valley to Harrisonburg, hotly pursued by Frémont, but avoiding a conflict.

The news of Banks's defeat created consternation at Washington, and Shields was ordered to the Luray Valley in all haste to cooperate with Frémont. Jackson was advised of Shields's approach, and his aim was to prevent a junction of their forces till he reached a point where he could strike them in quick succession. He therefore sent cavalry detachments along the Shenandoah to burn the bridges as far as Port Republic, the river being at that time too full for fording. At Harrisonburg he took the road leading to Port Republic, and ordered me from Staunton, with a mixed battery and battalion of cavalry, to the bridge over North River near Mount Crawford, to prevent a cavalry force passing to his rear.

At Cross Keys, about four miles from Harrisonburg, he delivered battle to Frémont, on June 8, and after a long and bloody conflict, as night closed in he was master of the field. Leaving one brigade—Ewell's—on the ground, to resist Frémont if he should return next day, he that night marched the rest of his army to Port Republic, which lies in the forks of the river, and made his arrangements to attack Shields next morning on the Lewis farm, just below Port Republic.

On the day of the conflict at Cross Keys I held the bridge across North River at Mount Crawford with a battalion of cavalry, four howitzers, and a Parrott gun, to prevent a cavalry flank movement on Jackson's trains at Port Republic. About ten o'clock at night I received a note from Jackson, written in pencil on the blank margin of a newspaper, directing me to report with my command at Port Republic before daybreak. On the same slip, and as a postscript, he wrote, "Poor Ashby is dead. He fell gloriously . . . [June 6] I know you will join with me in mourning the loss of our friend, one of the noblest men and soldiers in the Confederate army." I carried that slip of paper till it was literally worn to tatters.

It was nearly dark when Jackson and his staff reached the bridge at Port Republic from Cross Keys. Shields had sent two guns and a few men under a green lieutenant to the bridge. They arrived about the same time as Jackson, and his troops soon coming up, the Federal lieutenant and his supports made great haste in the dark back to the Lewis farm.

I reached Port Republic an hour before day-

break of June 9, and sought the house occupied by Jackson; but not wishing to disturb him so early, I asked the sentinel what room was occupied by "Sandy" Pendleton, Jackson's adjutant-general.

"Upstairs, first room on the right," he replied.

Supposing he meant our right as we faced the house, up I went, softly opened the door, and discovered General Jackson lying on his face across the bed, fully dressed, with sword, sash, and boots all on. The low-burnt tallow candle on the table shed but a dim light, yet enough by which to see and recognize his person. I had entered the wrong room, and I endeavored to withdraw without waking him, but it was too late.

He turned over, sat up on the bed, and called out, "Who is that?"

I immediately stepped again inside the room and apologized for the intrusion. He checked me with "That is all right. It's time to be up. I am glad to see you. Were the men all up as you came through camp?"

"Yes, General, and cooking."

"That's right. We move at daybreak. Sit down while I wash. I want to talk to you."

I had long ago learned never to ask him questions about his plans, for he would never answer such to any one. I therefore waited for him to speak first. He referred very feelingly to Ashby's death, and spoke of it as an irreparable loss to him or any future commander in the Valley. When he paused I said, "General, you made a glorious winding-up of your four weeks' work yesterday."

He replied, "Yes, God blessed our army again yesterday, and I hope with his protection and blessing we shall do still better to-day."

Then seating himself, for the first time in all my intercourse with him, he outlined the day's proposed operations. I remember perfectly his conversation; we had then learned to look upon him as invincible, if not inspired.

He said: "Charley Winder [Brigadier-General commanding his old 'Stonewall' brigade] will cross the river at daybreak and attack Shields on the Lewis farm [two miles below]. I shall support him with all the other troops as fast as they can be put in line. General 'Dick' Taylor will move through the woods on the side of the mountain with his Louisiana brigade, and rush upon their left flank by the time the action becomes general. By ten o'clock we shall get them on the run, and I'll now tell you what I want with you. Send the

big new rifle-gun you have [a twelve-pounder Parrott] to Poague [commander of the Rock-bridge Artillery], and let your mounted men report to the cavalry. I want you in person to take your mountain howitzers to the field, in some safe position in rear of the line, keeping everything packed on the mules, ready at any moment to take to the mountain-side. Three miles below Lewis's there is a defile on the Luray road. Shields may rally and make a stand there. If he does, I can't reach him with the field batteries on account of the woods. You can carry your twelve-pounder howitzers on the mules up the mountain-side, and, at some good place, unpack and shell the enemy out of the defile, and the cavalry will do the rest."

This plan of battle was carried out to the letter. I took position in a ravine about two hundred yards in rear of Poague's battery in the center of the line. General Shields made a very stubborn fight, and by nine o'clock matters began to look very serious for us. Dick Taylor had not yet come down out of the woods on Shields's left flank.

Meanwhile, I was having a remarkable time with our mules in the ravine. Some of the shot aimed at Poague came bounding over our heads, and occasionally a shell would burst there. The mules became frantic. They kicked, plunged, and squealed. It was impossible to quiet them, and it took three or four men to hold one mule from breaking away. Each mule had about three hundred pounds' weight on him, so securely fastened that the load could not be dislodged by any of his capers. Several of them lay down and tried to wallow their loads off. The men held these down, and that suggested the idea of throwing them all on the ground and holding them there. The ravine sheltered us so that we were in no danger from the shot or shell which passed over us.

Just about the time our mule "circus" was at its height, news came up the line from the left that Winder's brigade near the river was giving way. Jackson rode down in that direction to see what it meant. As he passed on the brink of our ravine, his eye caught the scene, and, reining up a moment, he accosted me with "Colonel, you seem to have trouble down there." I made some reply which drew forth a hearty laugh, and he said, "Get your mules to the mountain as soon as you can, and be ready to move."

Then he dashed on. He found his old brigade had yielded slightly to overwhelming pressure. Galloping up, he was received with a cheer; and, calling out at the top of his voice, "The 'Stonewall' brigade never retreats; follow me!" led them back to their original line.

Taylor soon made his appearance, and the flank attack settled the work of the day. A wild retreat began. The pursuit was vigorous. No stand was made in the defile. We pursued them eight miles. I rode back with Jackson, and at sunset we were on the battle-field at the Lewis mansion.

Jackson accosted a medical officer, and said, "Have you brought off all the wounded?"

"Yes, all of ours, but not all of the enemy's."

"Why not?"

"Because we were shelled from across the river."

"Had you your hospital flag on the field?"

"Yes."

"And they shelled that?"

"Yes."

"Well, take your men to their quarters; I would rather let them all die than have one of my men shot intentionally under the yellow flag when trying to save their wounded. They are barbarians."

Frémont, hearing the noise of the battle, had hurried out from Harrisonburg to help Shields; but Jackson had burnt the bridge at Port Republic, after Ewell had held Frémont in check some time on the west side of the river and escaped, so that when Frémont came in sight of Shields's battle-field the latter had been whipped and the river could not be crossed. And, as this medical officer reported, Frémont then shelled the relief parties, thus compelling many of Shields's wounded to pass a dreadful night where they lay. No doubt many died who might have been saved.

The next day I returned to Staunton, and found General W. H. C. Whiting, my old commander after the fall of General Bee at Bull Run, arriving with a division of troops to reinforce Jackson. Taking him and his staff to my house as guests, General Whiting left soon after breakfast with a guide to call on Jackson at Swift Run Gap, near Port Republic, where he was resting his troops. The distance from Staunton was about twenty miles, but Whiting returned after midnight. He was in a towering passion, and declared that Jackson had treated him outrageously. I asked, "How is that possible, General, for he is very polite to every one?"

"Oh! hang him, he was polite enough. But he didn't say one word about his plans, though he knows I am next in rank to him, and second in command. I finally asked him for orders, telling him what troops I had. He simply told me to go back to Staunton, and he would send me orders to-morrow. I haven't the slightest idea what they will be. I believe he hasn't any more sense than my horse."

Seeing his frame of mind, and he being a

guest in my house, I said little. Just after breakfast next morning, a courier arrived with a terse order to embark his troops on the railroad trains and move to Gordonsville at once, where he would receive further orders. This brought on a new explosion of wrath. "Didn't I tell you he was a fool, and don't this prove it? Why, I just came through Gordonsville day before yesterday."

However, he obeyed the order; and when he reached Gordonsville he found Jackson there, and his little Valley army coming after him; a few days later McClellan was astounded when Jackson struck his right flank on the Chickahominy. Shortly after the seven days' battles around Richmond, I met Whiting again, and he then said: "I didn't know Jackson when I was at your house. I have found out now what his plans were, and they were worthy of a Napoleon. But I still think he ought to have told me his plans; for if he had died McClellan would have captured Richmond. I wouldn't have known what he was driving at, and might have made a mess of it. But I take back all I said about his being a fool."

From the date of Jackson's arrival at Staunton till the battle of Port Republic was 35 days. He marched from Staunton to McDowell, 40 miles, from McDowell to Front Royal, about 110, from Front Royal to Winchester, 20 miles, Winchester to Port Republic, 75 miles, a total of 245 miles, fighting in the meantime four desperate battles, and winning them all.

On the 17th of June, leaving only his cavalry, under Brigadier-General B. H. Robertson, and Chew's battery, and the little force I was enlisting in the Valley, now no longer threatened by the enemy, Jackson moved all his troops south-east, and on the 25th he was at Ashland, seventeen miles from Richmond. This withdrawal from the Valley was so skillfully managed that his absence from the scene of his late triumphs was unsuspected at Washington. On the contrary, something like a panic prevailed there, and the Government was afraid to permit McDowell to unite his forces with McClellan's lest it should uncover and expose the capital to Jackson's supposed movement on it.

Jackson's military operations were always unexpected and mysterious. In my personal intercourse with him in the early part of the war, before he had become famous, he often said there were two things never to be lost sight of by a military commander: "Always mystify, mislead and surprise the enemy, if possible; and when you strike and overcome him, never let up in the pursuit so long as your men have strength to follow; for an army routed, if hotly pursued,

MAP OF THE VIRGINIA CAMPAIGNS — MAY AND JUNE, 1862.

The crossed line and arrows indicate Jackson's movements in the Valley. On May 6 he was at Staunton; he defeated Milroy near McDowell on May 8; Banks at Front Royal, Newtown, and Winchester on May 23, 24, and 25; Frémont at Cross Keys on June 8; Shields at Port Republic on June 9.—ED.

becomes panic-stricken, and can then be destroyed by half their number. The other rule is, Never fight against heavy odds, if by any possible manœuvring you can hurl your own force on only a part, and that the weakest part, of your enemy and crush it. Such tactics will win every time, and a small army may thus destroy a large one in detail, and repeated victory will make it invincible."

His wonderful celerity of movement was a simple matter. He never broke down his men by too-long-continued marching. He rested the whole column very often, but only for a few minutes at a time, and he liked to see the men lie down flat on the ground to rest, saying, "A man rests all over when he lies down."

Jno. D. Imboden.

THE BATTLE OF GAINES'S MILL.

INCLUDING A SKETCH OF JACKSON'S MARCH TO THE FIELD, BY MAJOR R. L. DABNEY;
THE BATTLE OF MECHANICSVILLE (OR BEAVER DAM CREEK, OR ELLERSON'S MILL*), JUNE 26;
THE BATTLE OF GAINES'S MILL (OR THE CHICKAHOMINY), JUNE 27, 1862.

“W’AT WAR DEY FIGHTIN’ ’BOUT?”

HILL encamped, about noon on Monday, the 23d of June, 1862, on the Williamsburg road, about a mile from the battle-field of Seven Pines, in command of a division of the Confederate army, I received an order from General Lee to report immediately at his quarters on the Mechanicsville road. On approaching the house which the general occupied, I saw an officer leaning over the yard-paling, dusty, travel-worn, and apparently very tired. He raised himself up as I dismounted, and I recognized General Jackson, who, I had till that moment supposed, was confronting Banks and Frémont far down the Valley of Virginia. He said that he had ridden fifty-two miles since one o'clock that morning, having taken relays of horses on the road. We went together into General Lee's office. General Jackson declined refreshments, courteously tendered by General Lee, but drank a glass of milk. Soon after, Generals Longstreet and A. P. Hill came in, and General Lee, closing the door, told us that he had determined to attack the Federal right wing, and had selected our four commands to execute the movement. He told us that he had sent Whiting's division to reënforce Jackson,

and that at his instance the Richmond papers had reported “that large reënforcements had been sent to Jackson with a view to clearing out the Valley of Virginia and exposing Washington.” He believed that General McClellan received the Richmond papers regularly, and he (Lee) knew of the nervous apprehension concerning Washington.† He then said that he would retire to another room to attend to some office work, and would leave us to arrange the details among ourselves. The main point in his mind seemed to be that the crossings of the Chickahominy should be uncovered by Jackson's advance down the left bank, so that the other three divisions might not suffer in making a forced passage.

During the absence of General Lee, Longstreet said to Jackson: “As you have the longest march to make, and are likely to meet opposition, you had better fix the time for the attack to begin.” Jackson replied: “Daylight of the 26th.” Longstreet then said: “You will encounter Federal cavalry, and roads blocked by felled timber, if nothing more formidable: ought you not to give yourself more time?”‡ When General Lee returned, he ordered A. P. Hill to cross at Meadow Bridge, Longstreet at the Mechanicsville Bridge, and me to follow Longstreet. The conference broke up about nightfall.

It may be of interest to the student of history to know how Jackson managed to slip off so often and so easily. His plan was to press his infantry as near as possible to the enemy, without bringing on a general engagement; then to occupy these advanced points with dismounted cavalry pickets, and to start his “foot cavalry” in the other direction with all possible speed. His stealthy marches to the rear were made without consulting his highest officers, and even without their knowing his destination.§

* The usual spelling, Ellerson's Mill, is incorrect. Mr. J. H. Ellerson, whose father owned the mill, is living in Richmond.—EDITOR.

† I do not know how far the Federals were deceived by the announcement of reënforcements sent to Jackson, but during the seven days' battles I read in a Northern paper a letter from Strasburg, Va., of the 25th of June, stating that they were expecting Stonewall Jackson there, and were so well fortified that they would give him a warm reception. General Jackson's corps was then at Ashland, within twelve miles of Richmond. He certainly had slipped off without observation.—D. H. H.

‡ Longstreet's caution was justified by the event. Jackson's flank movement was delayed a day by cavalry and felled timber, and the delay seemed to Lee to make it necessary to fight the disastrous battle at Beaver Dam Creek.—EDITOR.

§ This was a source of annoyance to Loring in '61, and later on to Ewell. When Jackson's corps was so strangely left at Winchester after the battle of Sharpsburg, or Antietam, and General Lee had gone to the Rappahannock (we were making a feint every day of holding the gaps in the Blue Ridge, with strict orders not to bring on an engagement), I said to Jackson one day: “I am the next in rank, and should you be killed or captured in your many scouts around, I would not know what the corps was left for, or what it was expected

Another peculiarity of Jackson's was to select for his chief-of-staff, not a military man, but a Presbyterian clergyman, a professor in a theological seminary, and to clothe him with the power of carrying out his mysterious orders when he was temporarily absent. In this Jackson acted as did the greatest of all English commanders, Oliver Cromwell, who always surrounded himself with men of prayer. Jackson's confidence was well bestowed, and he found in the Rev. R. L. Dabney, D. D., a faithful, zealous, and efficient staff-officer. To him, now a professor in the State University of Texas, I am indebted for the following account of the unexpected appearance of Jackson on the Federal right wing before Richmond:

"General Jackson's forced march from Mount Meridian, in the neighborhood of Port Republic battle-field, began in earnest on Wednesday, June 18th, the general and a few of the troops having left the evening before. About midday on Thursday, the 19th, we were at Mechum's River Station, about ten miles west of Charlottesville, with the head of the column. The general called me into a room in the hotel, locked the door, and told me that he was about to go in advance of his corps by rail to Richmond to see the commander-in-chief; that the corps was going to Richmond to join in a general attack upon McClellan, but that he would return to his command before we got there; that I was to march the corps towards Richmond, following the line of railroad, as near as the country roads would permit, by Charlottesville and Gordonsville, General Ewell's division to form the head of the column with which I was personally to proceed; that strict precautions of secrecy were to be observed—which he then dictated to me. He then got on an express train and left us. I dined that day with General Ewell, and I remember that he complained to me with some bitterness of General Jackson's reserve.

"Here, now, the general has gone off on the railroad without intrusting to me, his senior major-general, any order, or any hint whither we are going; but Harman, his quartermaster, enjoys his full confidence, I suppose, for I hear that he is telling the troops that we are going to Richmond to fight McClellan."

"You may be certain, General Ewell," I replied, "that you stand higher in General Jackson's confidence than any one else, as your rank and services entitle you. As for

SKETCH OF STONEWALL JACKSON. (DRAWN FROM LIFE NEAR BALL'S BLUFF BY A. J. VOLCK, PROBABLY IN 1861.)

Major Harman, he has not heard a word more than others. If he thinks that we are going to Richmond, it is only his surmise, which I suppose every intelligent private is now making."

"The column reached Gordonsville, Saturday, June 21, about noon. To my surprise, on riding into town, I got an order to go to the general—at a private house, where he was lodging. On reaching Gordonsville, Thursday afternoon, he had been met by news which alarmed the outpost there: that a heavy Federal force was on the Rapidan, about sixteen miles away. He therefore had postponed going to Richmond until he could effectually clear up this rumor. The chief mode adopted was characteristic: it was to send out by night an intelligent private citizen, thoroughly acquainted with the Rapidan people and country, as his scout. This gentleman came back after thorough inquiry, with the news that the rumor was unfounded. About half an hour before sunset on Saturday, the general got into an express car with no one but me and the conductor, and came to Frederick's Hall Station in the county of Louisa, arriving about dawn on Sunday, the 22d. We spent the Sabbath there at the house of Mr. N. Harris, attending

to do." He then told me that he had suggested to General Lee, who had to move back to protect Richmond, that he could remain and remove our wounded and stores, and that his presence on McClellan's flank and rear would keep him from attacking Lee. In case of any casualty to himself, the removal was to go on till completed.—D. H. H

camp-preaching in the afternoon. At this house were Major-General Whiting and General Hood, then commanding a Texas brigade. At one o'clock that night General Jackson arose, took an orderly whom I had selected for him as trustworthy and well acquainted with the road, and started for Richmond with impressed horses. He had me wake up General Whiting and make *him* sign a pass and an impressment order (which no one under

we came into collision with McClellan's outposts. We were much mystified at first to know why the general should put a battery in position, and cannonade the bushes furiously for ten minutes only to drive away a picket. We found out afterwards this was his signal to you,* and in a little while the distant sound of your guns at Ellerson's mill told us that the ball had opened."

It will be seen from the narrative of Major

CONFEDERATE SKIRMISH-LINE DRIVEN IN BY UNION LINE OF BATTLE.
(DRAWN BY W. L. SHEPPARD AFTER THE PAINTING BY HIMSELF, OWNED BY R. A. WOOLDRIDGE, ESQ., BALTIMORE.)

[The original sketch for this picture was made from personal observation. It describes an incident of the "Peninsular Campaign"—*i. e.* of the retreat before McClellan's advance up the Peninsula, to which operations that name is confined at the South; at the North it is used to include also the subsequent movements down to McClellan's arrival on the James River.—EDITOR.]

the rank of major-general had a right to do). He had about fifty-two miles to ride to Richmond; to the Nine-mile bridge, near which General Lee was in person, I suppose the distance was as great, so that the ride occupied him, with the time lost in impressing relays of horses, about ten hours. He must have reached his rendezvous with General Lee and his three major-generals about noon on the 23d. If he rode into the city first, the meeting would have been a few hours later. He rejoined his corps at Beaver Dam Station on Tuesday (24th), and assembled the whole of it around Ashland Wednesday night, the 25th. About two hours by sun on the 26th

Dabney that General Jackson, who fought some of his most desperate battles on Sunday, would not start to Richmond till Sunday had passed. He had the pass and impressment order from General Whiting that he might not be known on the road; he wore no insignia of rank, and as he would have been known in Richmond, he did not go to that city. It was three P. M. on the 23d when I saw him at General Lee's headquarters. Major Dabney is mistaken in saying that the signal-guns were intended for me. A. P. Hill was farther up the Chickahominy, and he was to cross first, and being nearer to Jackson, could hear his guns better than those

* This account is written to General Hill.—EDITOR.

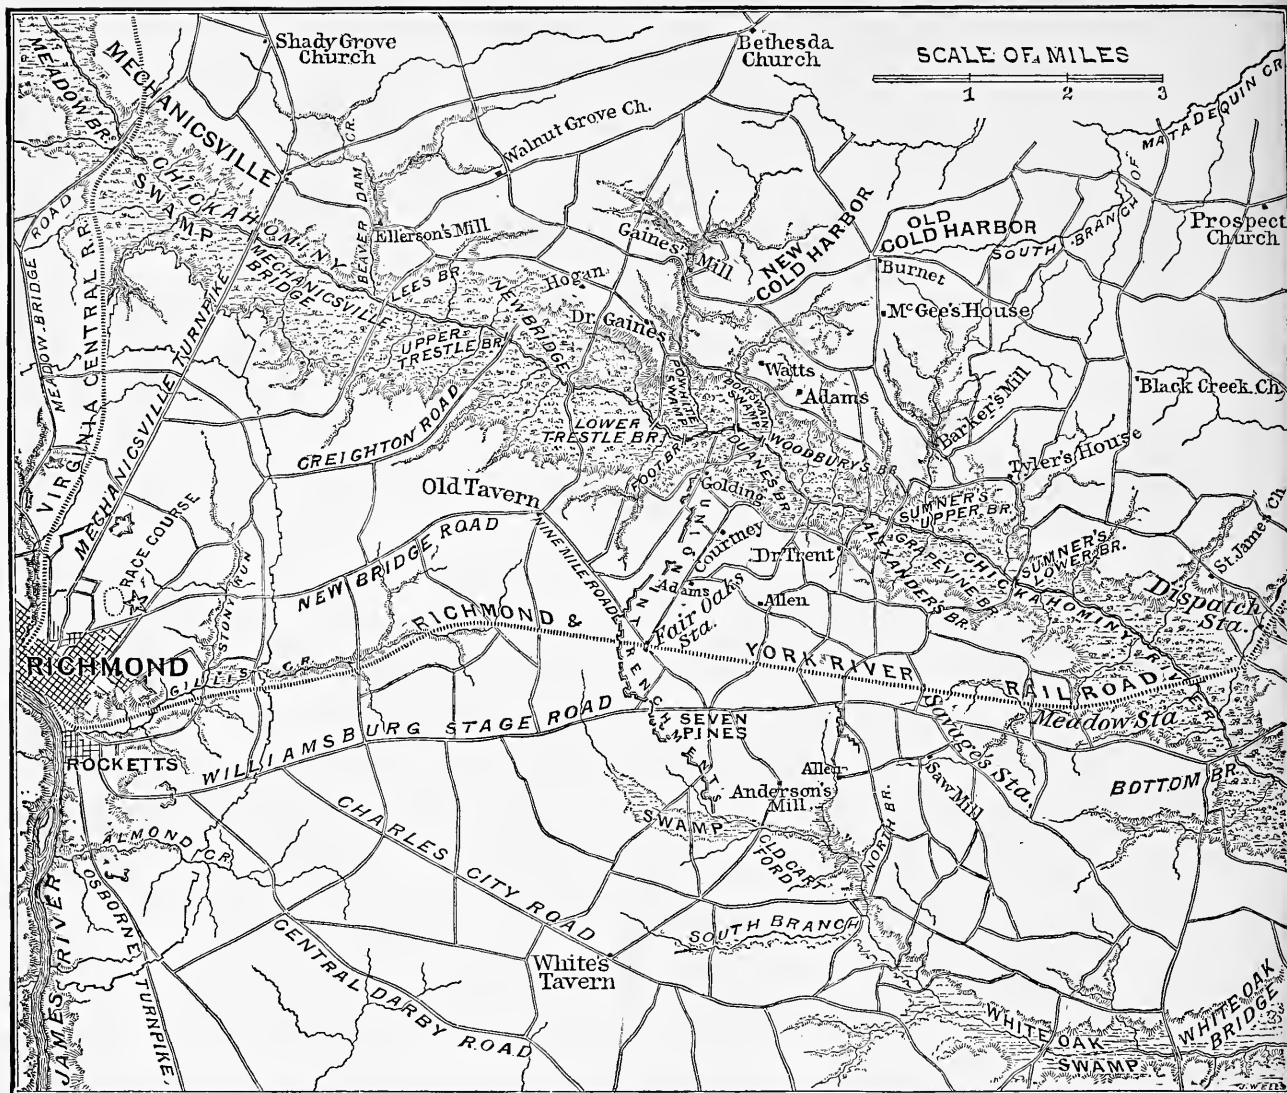

EXTERIOR LINE OF DEFENSES OF RICHMOND ON THE MECHANICSVILLE ROAD (LOOKING SOUTH-EAST).
(DRAWN BY W. L. SHEPPARD FROM HIS SKETCH MADE AT THE TIME OF MCCLELLAN'S ADVANCE.)

of us lower down the stream. On the 25th there was a brisk fight about King's school-house on the Williamsburg road, between Hooker's division and a portion of the brigades of Generals Wright and Robert Ransom. That night my division marched across to the neighborhood of Mechanicsville Bridge. To conceal the movement, our camp-fires were freshly lighted up by a detachment after the troops had left, and a company was sent some miles down the Charles City road to send up rockets, as though signaling an advance in that direction. General Lee's order issued on the 24th June says :

" At three o'clock Thursday morning, 26th instant, General Jackson will advance on the road leading to Pole Green Church, communicating his march to General Branch [seven miles above Meadow Bridge], who will immediately cross the Chickahominy, and take the road leading to Mechanicsville. As soon as the movements of these columns are discovered, General A. P. Hill with the rest of his division will cross the Chickahominy near Meadow Bridge. . . . The enemy being driven from Mechanicsville, and the passage across the bridge opened, General Longstreet with his division and that of General D. H. Hill will cross the Chickahominy at or near that point — General D. H. Hill moving to the support of General Jackson, and General Longstreet supporting General A. P. Hill — the four divisions keeping in communication with each other, and moving *en echelon* on separate roads, if practicable; the left division in advance, with skirmishers and sharpshooters extending their front, will sweep down the Chickahominy, and endeavor to drive the enemy from his position above New Bridge, General Jackson bearing well to his left, turning Beaver Dam Creek, and taking the direction towards Cold Harbor, etc."

General Jackson was unable to reach the point expected on the morning of the 26th. General A. P. Hill says: " Three o'clock P. M. having arrived, and no intelligence from Jackson or Branch, I determined to cross at once, rather than hazard the failure of the whole plan by longer deferring it."

Heavy firing was heard at three P. M. at Meadow Bridge, and the Federal outposts were seen fleeing towards Mechanicsville, pursued by A. P. Hill. We could see a line of battle drawn up at that village ready to receive Hill. My division being nearest the bridge, Longstreet ordered me to cross first. Some delay was made in repairing the bridge, and A. P. Hill became hotly engaged before we could get to his relief. At this time President Davis and staff hurried past us, going " to the sound of the firing." Ripley's brigade was pushed forward to the support of three batteries of artillery of Jones's battalion, and the two under Hardaway and Bondurant. The five batteries soon silenced the Federal artillery, and the whole plateau about Mechanicsville was abandoned to the Confederates, the Federals retiring across Beaver Dam Creek, which was strongly fortified. Our engineers seem to have had little knowledge of the country, and none of the fortifications on the creek. The maps furnished the division commanders were worthless. At a request from General Pender, who had been roughly handled in attacking works on the creek, Brigadier-General Ripley, of my divis-

MAP OF THE UPPER CHICKAHOMINY AND NEIGHBORING COUNTRY.

[During the battles of Mechanicsville and Gaines's Mill the Union army, except Porter's corps and the cavalry engaged in protecting McClellan's right flank and communications, was posted on the south side of the Chickahominy behind the line of intrenchments here shown. The divisions of Longstreet and the two Hills who had confronted McClellan on the different roads were withdrawn, in order to unite with Jackson's three divisions (coming from the Shenandoah) in the attack in force upon Porter's corps. Magruder's and Huger's divisions were left to engage the attention of the corps of Sumner, Keyes, Heintzelman, and Franklin. As will be seen, the attack of Lee's six divisions fell upon Porter's corps, which was reinforced during the battle by Slocum's three brigades of Franklin's corps.—EDITOR.]

ion, was directed to cooperate with him, and the attack was made about dark. The enemy had intrenchments of great strength and development on the other side of the creek, and had lined the banks with his magnificent artillery. The approach was over an open plain exposed to a murderous fire of all arms, and across an almost impassable stream. The result was, as might have been foreseen, a bloody and disastrous repulse. Nearly every field-officer in the brigade was killed or wounded. It was unfortunate for the Confederates that the crossing was begun before Jackson got in rear of Mechanicsville. The loss of that position would have necessitated the abandonment of the line of Beaver Dam Creek; as in fact it did, the next day. We were lavish of blood in those days, and it was thought to be a great thing to charge a battery of artillery or an earthwork lined with infantry. "It is magnificent, but it is not war," was the sarcastic remark of the

French general as he looked on at the British cavalry charge at Balaklava. The attacks on the Beaver Dam intrenchments, on the heights of Malvern Hill, at Gettysburg, etc., were all grand, but of exactly the kind of grandeur which the South could not afford.

A brisk cannonade was kept up on the morning of the 27th for an hour or more from the Federal artillery along the line of Beaver Dam, which was held by a thin line of skirmishers, the main force having retreated to Gaines's Mill and New Cold Harbor. A. P. Hill's division was ordered to pursue on to the mill, and my division to take the Bethesda Church road to join Jackson. The works on that road were turned by my division, and some sixty or seventy prisoners holding them were captured.

Major Dabney says:

"General Jackson continued his march on the morning of the 27th. When I overtook him he was dismounted in the turnpike road

MECHANICSVILLE FROM THE NORTH-WEST—SCENE OF THE OPENING OF THE SEVEN DAYS' BATTLES.
(DRAWN BY HARRY FENN AFTER A PHOTOGRAPH BY E. S. ANDERSON, RICHMOND, VA.)

[The cross-roads (Mechanicsville proper) are indicated by the two houses at the extreme right. The woods in the left distance show the line of Beaver Dam Creek at the crossing of the upper road from the town. A. P. Hill advanced from Meadow Bridge and along the road in the foreground, his troops deploying at this point on both sides of the road about 4 P. M. The house at the left center (Horn's) marks the location of the Union battery which opened upon Hill's troops as they came along this road, from which the Confederate artillery (McIntosh's and Pegram's) replied as they advanced. Anderson's brigade was sent to the left to flank the Union guns, which, together with the single regiment left in the town by General Porter, withdrew before the enemy to the strong position beyond the creek.—EDITOR.]

with his cap off before a gentleman sitting on a cedar-stump, who was speaking to him in a suppressed voice. An old acquaintance whom I met told me that this gentleman was General Lee. The conference soon ended, and the march was resumed—deflecting strongly to the east."

General Lee's object in pressing down the Chickahominy was to unmask New Bridge, and thus to establish close communication between the forces defending Richmond and the six divisions attacking the Federal right. A. P. Hill, who marched close to the Chickahominy, succeeded in driving off the Federal troops defending the creek at Gaines's Mill, and advanced until he developed their full line of

battle at New Cold Harbor, half a mile beyond. After waiting till 2:30 P. M. to hear from Longstreet,* he advanced his division without support to the attack of the intrenched position of the Federals. He kept up a struggle for two hours, was repulsed and driven back, and in turn repulsed his pursuers. His report says: "From having been the attacking I now became the attacked; but stubbornly and gallantly was the ground held. My division was thus engaged full two hours before assistance was received. We failed to carry the enemy's lines, but we paved the way for the successful attacks afterwards, in which attacks it was necessary to employ the whole of our army on that side of the Chickahominy."

* General Lee in his official report says: "The arrival of Jackson on our left was momentarily expected, and it was supposed that his approach would cause the extension of the enemy's line in that direction. Under this impression, Longstreet was held back until this movement should commence."—EDITOR.

PLAN OF THE BATTLE OF MECHANICSVILLE, JUNE 26.

a. a. a., Approach of D. H. Hill and Longstreet from Richmond; *b. b. b.*, Same, A. P. Hill; *c. c. c.*, Route of D. H. Hill to Old Cold Harbor the day after the battle to join Jackson's attack on Union left; *d. d. d.*, Route of A. P. Hill to New Cold Harbor, to attack Union center; *e. e. e.*, Route of Longstreet to Dr. Gaines's, to attack Union left. Of the five Confederate brigades engaged in this battle, one (Ripley's) was attached to the division of D. H. Hill and came up as a reinforcement to Pender, who, with Field, Archer, and Anderson, were part of the division of A. P. Hill, his other two divisions, Gregg and Branch, being held in reserve. The losses in their hopeless attack fell chiefly upon Archer, who made the first advance about 5 P. M., and later upon Pender and Ripley. Pegram's battery was badly cut up, losing forty-seven men and many horses. On the Union side, Martindale, Griffin, and Meade came up after the battle had begun. When firing ceased, about 9 P. M., Porter's troops held their position; but Jackson's approach on their right flank compelled its evacuation early in the morning.—EDITOR.

Longstreet came into action after four o'clock. He thus describes the difficulties before him: "In front of me the enemy occupied the wooded slope of Turkey Hill, the crest of which is fifty or sixty feet higher than the plain over which my troops must pass to make an attack. The plain is about a quarter of a mile wide; the farther side was occupied by sharpshooters. Above these, and on the slope of the hill, was a line of infantry behind trees, felled so as to form a good breastwork. The crest of the hill, some forty feet above the last line, was strengthened by rifle-trenches and occupied by infantry and artillery. In addition to this the plain was enfiladed by batteries on the other side of the Chickahominy. I was, in fact, in the very position from which the enemy wished us to attack him."

All was done that mortals could do by the two gallant divisions struggling against such disadvantages, but nothing decisive could be effected until the full Confederate forces could

CHARGE OF CONFEDERATES UNDER RIPLEY AND PENDER AT BEAVER DAM CREEK, JUST ABOVE ELLERSON'S MILL.

be brought into action. In the meanwhile, Jackson moved forward on what we afterwards found to be the Grapevine Bridge road, my division in advance. A few squads of Federal stragglers were picked up, and some wagons and ambulances were captured. One sutler, in his desperate desire to save his fancy stock, tried to dash his wagon through Anderson's brigade. He paid no attention to the orders to halt, or to the presented bayonets. Fortunately for him, his horses did not have so much at stake as he had in canned fruits and vegetables, and were quite willing to surrender. Some poor ragged graybacks got toothsome delicacies then, from which they had been long debarred, and of which before nightfall they had no need forever.

About 2 P. M. we reached the neighborhood of McGee's house, an elevated knoll, which was the Federal right, and from which a dense and tangled swamp extended westward in an irregular curve to Gaines's Mill. Bondurant's battery was brought up to feel the position. Jackson remained with it for a time after the firing began. The battery was badly crippled, and was withdrawn by my order when I perceived the superiority of the enemy's artillery — always the most effective arm of his service. So little was known of the condition of the battle and of the roads, that Jackson posted my division in the woods to the left of the road, and facing towards the firing at Gaines's Mill, in order to intercept the forces that Longstreet and A. P. Hill might drive in that direction! His report says: "Hoping that Generals A. P. Hill and Longstreet would soon drive the Federals towards me, I directed General D. H. Hill to move his division to the left of the road, so as to leave between him and the wood on the right of the road an open space, across which I hoped that the enemy would be driven. . . . But it soon becoming apparent from the direction and sound of the firing that General A. P. Hill was hard pressed, I ordered a general advance of my entire corps, which

began with General D. H. Hill on the left and extending to the right, through Ewell's, Jackson's, and Whiting's divisions . . . in the order named." The swamp was to be gotten through, filled with sharpshooters, and obstructed with felled timber and choked with brush-wood. The report continues: "In

THE BATTLE-FIELD OF BEAVER DAM CREEK AT ELLERSON'S MILL.—PRESENT ASPECT. (DRAWN BY HARRY PENN AFTER PHOTOGRAPH BY E. S. ANDERSON.)

[This view is taken from the left of the Union position on the east slope, looking up-stream, the ruins of Ellerson's Mill being shown in the middle ground. The house at the left is Dr. Cahin's. The road past the mill, bending at the bridge over the creek, follows the bed of an old mill-dam (not in use at the time of the fight) for a quarter of a mile, and turns again to the left to Mechanicsville, which is three-quarters of a mile farther, and, from the observer's point of view, directly beyond the Cahin house. The Confederate advance from Mechanicsville was by this road, and, by another which strikes the creek nearly a mile farther up. The Union position at this point was held by General Seymour, of McCall's division, with artillery in reinforcements, rifle-platoons, and abatis. The Confederates came across the open hills and down the slope and along the road (forming their flank to the Union artillery) to the line of the creek (shown by the trees below the bridge), but did not cross it. Their loss in this engagement was frightful. Dr. Cahin's son says that the slope of the hill was fairly covered with dead and wounded. The Cahin farm was occupied chiefly by Ripley's brigade of D. H. Hill's division, and by Pender's brigade of A. P. Hill's. The 4th Georgia alone lost 333 killed and wounded, and its efforts to re-form in the rear without officers are described as pathetic. "Good heavens!" said spectators, "is this all of the 4th Georgia?"—EDITOR.]

advancing to the attack, General D. H. Hill had to cross this swamp densely covered with tangled undergrowth and young timber. This caused some confusion, and a separation of regiments. On the farther edge of the swamp he encountered the enemy. The conflict was

CHARGE OF A SUTLER UPON ANDERSON'S BRIGADE AT GAINES'S MILL.

[At this time there were four brigade commanders of this name in the Confederate army: G. B. Anderson, in D. H. Hill's division, R. H. Anderson, in Longstreet's, Joseph R. Anderson, in A. P. Hill's, and G. T. Anderson, in Magruder's corps. The reference here is to the first.—EDITOR.]

fierce and bloody. The Federals fell back from the wood under the protection of a fence, ditch, and hill. Separated now from them by an open field, some four hundred yards wide, he promptly determined to press forward. Before doing so, however, it was necessary to capture a battery on his left which could enfilade his line upon its advance. . . . Again pressing forward, the Federals again fell back, but only to select a position for a more obstinate defense, when, at dark, under the pressure of our batteries,—which had then begun to play with marked effect upon the left, of the other concurring events of the field, and of the bold and dashing charge of General Hill's infantry, in which the troops of Brigadier-General C. S. Winder joined,—the enemy yielded the field and fled

in disorder." I have always believed that this was the first break in the Federal line; it disposed of Sykes's division of regulars, who had been so stubborn and so troublesome all day. The Comte de Paris says of their retreat: "Fearfully reduced as they are, they care less for the losses they have sustained than for the mortification of yielding to volunteers." The general advance of our whole line and their intrepid onset everywhere made the defeat of the regulars possible, but credit should be given to the troops that did it. We discovered that our line overlapped that of the Federal forces, and saw two brigades (afterwards ascertained to be under Lawton and Winder) advancing to make a front attack upon the regulars. Brigadier-Generals Samuel Garland and G. B. Anderson, commanding North Carolina bri-

GENERAL A. P. HILL. (FROM A PHOTOGRAPH BY COOK.)

gades in my division, asked permission to move forward and attack the right flank and rear of the division of regulars. The only difficulty in the way was a Federal battery with its infantry supports, which could enfilade them in their advance. Two regiments of Elzey's brigade, which had got separated in crossing the swamp, were sent by me, by way of my left flank, to the rear of the battery to attack the infantry supports, while Colonel Iverson, of the Twentieth North Carolina, charged it in front. The battery was captured and held long enough for the two brigades to advance across the open plain. "The effect of our appearance," says Garland's official report, "at this opportune juncture [upon the enemy's flank], cheering and charging, decided the fate of the day. The enemy broke and retreated, made a second brief stand, which induced my immediate command to halt under good cover of the bank on the roadside and return their fire, when, charging forward again, they broke and scattered in every direction." Their retreat was to the woods between the field and the river. Swinton* gives credit to Hood and Law for making the first break in the Federal line, and quotes from Jackson's

report: "Dashing on with unfaltering step in the face of those murderous discharges of canister and musketry, General Hood and Colonel E. M. Law at the head of their respective brigades rushed to the charge with a yell. Moving down a precipitous ravine, leaping ditch and stream, clambering up a difficult ascent, and exposed to an incessant and deadly fire from the intrenchments, these brave and determined men pressed forward, driving the enemy from his well selected and fortified position. In this charge, in which upward of a thousand men fell killed and wounded before the fire of the enemy, and in which fourteen pieces of artillery and nearly a regiment were captured, the Fourth Texas, under the lead of General Hood, was the first to pierce these strongholds and seize the guns." It is evident that Jackson means to compliment Hood for being the first to pierce the intrenchments on the Federal left. But the word "first" has been misleading as to the point where the break was first made in the Federal line.

General Lawton in his official report stated that after the forces were broken in front of him on our left, a staff-officer rode up and called for assistance to charge a battery on

* "Campaigns of the Army of the Potomac." By William Swinton. New York: Charles Scribner's Sons.

the left, and that after marching two or three hundred yards by the *right* flank, "the shouts of victory from our friends announced that the last battery had been taken and the rout complete." In a letter to me just received,

left. General Winder thought that we ought to pursue into the woods, on the right of the Grapevine Bridge road; but not knowing the position of our friends, nor what Federal reserves might be awaiting us in the woods, I

PRESENT ASPECT OF GAINES'S MILL, LOOKING EAST. (DRAWN BY HARRY FENN FROM A PHOTOGRAPH BY E. S. ANDERSON.)

[At the time of the battle, this building was of five stories, and was, it is said, one of the finest grist-mills in Virginia. The wooden structure, dove-tailed into the ruins, now covers but one pair of burrs. The mill was not injured in the fight, but was burned by Sheridan's cavalry in May, 1864, the fire extending to a dwelling-house which stood just beyond the mill. The main conflict was a mile farther to the south-east, but the ridge shown in the picture was the scene of a most gallant resistance to the Confederate advance by the Ninth Massachusetts regiment, acting as a rear-guard to Porter's corps. The road to New Cold Harbor and the battle-ground runs to the right of the picture. The mill-stream runs into Powhite Swamp, and thence into the Chickahominy.—EDITOR.]

General Lawton says: "I do believe that the first break was on the right of the Federal line, and I moved against that line in front. My knowledge of the position of the battery to be charged was derived solely from the lips of a staff-officer, who rode up to me at full speed on the field, and returned immediately to his chief. My recollection is, that very promptly after I heard the shouts of victory from our friends, the same messenger came again to request me to halt. . . . I cannot feel that my memory fails me when I say that you struck the enemy in flank, while Winder's command and mine moved directly on his front. The effect of these several attacks was promptly felt, and soon became conspicuous."

It was now quite dark, and I took the responsibility of halting all the troops on our

thought it advisable not to move on. General Lawton concurred with me. I had no artillery to shell the woods in advance, as mine had not got through the swamp. No Confederate officer on the field knew that the Federals had but one bridge over which to retreat, else all the artillery that could have been collected would have opened fire upon the Federal masses crowded into a narrow space in the woods, and there would have been a general advance of our line under cover of this fire. Winder was right; even a show of pressure must have been attended with great results. I made my headquarters at McGee's house, and ordered my artillery and infantry to occupy the hill around it. The artillery, however, did not get into position until sunrise next morning. Before the infantry was in place, we

F. J. Porter

(FROM PHOTOGRAPH BY BRADY.)

heard huzzaing on the bridge road, and understood by that that reënforcements had come up to cover the Federal retreat. They took up their position across the road and showed a determined front, but might have been broken by an artillery fire from our elevated plateau; unfortunately for us, there was no artillery to do this work.

Between nine and ten o'clock General Lawton and myself walked out alone to examine the line of battle across the road, afterwards discovered to be Meagher's Irish brigade. We got within thirty yards of the

Federals, and must have been seen, but we were not fired upon, probably because we were mistaken for a party of their own men sent up to get water at McGee's well. We met the party going back, and saw them go into their own lines. Not a word was spoken by them or by us. At such times, "Silence is golden."

In his attack upon General McClellan's right wing General Lee had 50,000 men.* General Fitz John Porter, who commanded the Federals at Cold Harbor, handled his 40,000 men with an ability unsurpassed on any field during the war. He had greatly the advantage

* Dabney, in his "Life of Jackson," puts the Confederate force at 40,000. Swinton estimates General Porter's forces at 30,000 and Lee's at 70,000 — an under- and an over-estimate respectively, I think.—D. H. H. But see page 319.—EDITOR.

in position, and he had improved this superiority with intrenchments, log breastworks, rifle-pits, and abattis. He had an immense preponderance in artillery, and that of the most superb character. Many of our field-batteries did not get across the swamp at all, and those which did get over were inferior in range and power to General Porter's. Artillery seems to have been a favorite arm with General McClellan, and he had brought it to the highest point of efficiency.

I do not know how much of our infantry straggled in the swamp. Ripley got lost, and his fine brigade was not in action at all. Of Colquitt's brigade, the Sixth and Twenty-seventh Georgia regiments were engaged; the other three regiments were not. Rodes, Garland, and Anderson kept their brigades well in hand and did brilliant service. (These three splendid officers were all killed, subsequently, in battle.) I do not know how many men the other five divisions lost by the difficulties of the swamp; but if their loss was proportional to mine, the Confederates outnumbered the Federals by only a few hundreds. However, it is hardly probable that their loss was so great, as my division had to go through the densest part of the swamp.

Riding in advance of his skirmish-line through the swamp attended by a few staff-officers, General Jackson found himself in the presence of fifteen or twenty Federal soldiers on outpost duty. He judged it the part of prudence to assume the offensive and charge upon them before they fired upon him. I am indebted to Major T. O. Chestney, then assistant adjutant-general of Elzey's brigade, for the following account:

"As Elzey's brigade was pressing forward to the line held by the Confederates at the bloody battle of Gaines's Mill, a squad of fifteen or twenty soldiers were encountered on their way to the rear. A tall fellow at the head of the little party drew special attention to himself by singing out to us at the top of his voice with an oath, 'Gentlemen, we had the honor of being captured by Stonewall Jackson himself' — a statement which he repeated with evident pride all along the line, as our men tramped past. We subsequently learned that his story was true. General Jackson, having ridden some distance in advance, had come suddenly upon the blue-coats, and with his characteristic impetuosity had charged among them and ordered them to surrender, which they made haste to do."

One of the saddest things connected with the miserable fratricidal war was the breaking up of ties of friendship and of blood. The troops opposing mine on that murderous field that day were the regulars of General George Sykes, a

Southerner by birth, and my room-mate at West Point,—a man admired by all for his honor, courage, and frankness, and peculiarly endeared to me by his social qualities. During the negotiations of the cartel for the exchange of prisoners, intrusted to General Dix and myself, I sent word to General Sykes, through Colonel Sweitzer, of General McClellan's staff, that "had I known that he was in front of me at Cold Harbor, I would have sent some of my North Carolina boys up to take him out of the *cold*." He replied through the same source: "I appreciate the sarcasm, but our time will be next and the tables will be turned." Alas! it was a true prophecy. About nine P. M. on the 27th, Major H. B. Clitz was brought into my room at the McGee house, headquarters for the night, wounded in the leg, and a prisoner. He was very young and boyish-looking when he entered West Point, and was a very great favorite with us of maturer years. It flashed upon my mind how, in the Mexican war, as his regiment filed past, I had almost a fatherly fear lest he should be struck; and now he was here, wounded by one of my own men! He was tenderly cared for by my medical director, Doctor Mott, and I was delighted to learn that he would not lose his leg. With a sort of shamefacedness, my staff gave him some of our coarse supper. Longstreet's inspector-general, much under the influence of liquor, got into quite a heated discussion with Major Clitz, in which the latter said, "You have outnumbered us to-day, but if McClellan is the man I take him to be, he'll pay you well for it before all is over." Malvern Hill impressed this remark upon my memory! I said to the Confederate, "You must not be rude to a wounded prisoner," and he apologized frankly for his abrupt language. The next morning General J. F. Reynolds was brought in as a prisoner. He had been my mess-mate in the old army for more than a year, and for half that time my tent-mate. Not an unkind word had ever passed between us. General Reynolds seemed confused and mortified at his position. He sat down and covered his face with his hands, and at length said: "Hill, we ought not to be enemies." I told him that there was no bad feeling on my part, and that he ought not to fret at the fortunes of war, which were notoriously fickle. He was placed in my ambulance and sent over to Richmond, declining a loan of Confederate money. General Reynolds had gone to sleep in the woods between the battle-ground and the Chickahominy, and when he awoke, his troops were gone and the bridge broken down.

Winder, Anderson, and Garland, probably the most promising of all our young brigadiers,

fell fighting for the cause they loved so well. Reynolds, one of the noblest of mankind, fell doing his duty on his side at Gettysburg. Sykes, as the friend of McClellan, never received the recognition which his knightly qualities demanded. Worst of all, Porter, who commanded on the field the most creditable to the Federal arms, received that condemnation so much worse than death to the proud soldier from the country he had served so ably and so loyally.

In these battles, the great want with the Confederates, strange as it may seem, was accurate knowledge of the country in their front. The map furnished me (and I suppose the six other major-generals had no better) was very full in regard to everything within

near Richmond, and of opening up communications with it as soon as possible. The crossing of the river by General A. P. Hill before hearing from Jackson precipitated the fight on the first day; and it having begun, it was deemed necessary to keep it up, without waiting for Jackson. The same necessity compelled Lee on the second day to attack his antagonist on his own strong and well-chosen position. Lee knew that McClellan depended upon the York River Railroad for his supplies, and by moving upon that road he could have compelled the battle upon his own selected ground, with all the advantages thereof. The lack of transportation, and the fear of the capture of Richmond while he was making this detour to the Federal rear, constrained him to

OLD COLD HARBOR TAVERN. (DRAWN BY W. TABER FROM A PHOTOGRAPH BY E. S. ANDERSON.)

Old Cold Harbor consists of one or two houses and a smithy. During the battle of Gaines's Mill the tavern was within the Confederate lines. Two years later, during the bloody engagement of General Grant's campaign, it was within the Union lines. The name is sometimes written Cool Harbor, Coal Harbor, or Cool Arbor; but Mr. Burnet, the present owner of the tavern, says that family tradition admits only Cold Harbor.—EDITOR.]

our own lines; but a red line on the east side of the Chickahominy and nearly parallel to it, without any points marked on it, was our only guide to the route on which our march was to be made. None of us knew of the formidable character of the works on Beaver Dam. The blood shed by the Southern troops there was wasted in vain, and worse than in vain; for the fight had a most dispiriting effect on our troops. They might have been halted at Mechanicsville until Jackson had turned the works on the creek, and all that waste of blood could have been avoided. Ripley's brigade was sent to the assistance of Pender, by the direct order, through me, of both Mr. Davis and General Lee. They both felt pressing upon them the vast importance of keeping

surrender the advantage of position to McClellan and his able lieutenant, General Porter, commanding in the field. Never was ground more wisely chosen or more skillfully arranged for defense.

During Lee's absence Richmond was at the mercy of McClellan; but Magruder was there to keep up a "clatter," as Swinton expresses it. No one was better fitted for such a work. When McClellan landed on the Peninsula, he had 118,000 men, and Magruder had 11,500 to cover a defensive line of fourteen miles (see "Official Records, War of the Rebellion," Vol. XI., Part III., pages 77 and 436). But "Prince John" (as Magruder was called) amused his enemy by keeping up a "clatter," and, it may be, amused himself as well. No one

"CAPTURED BY STONEWALL JACKSON HIMSELF." (SEE PAGE 306.)

ever lived who could play off the Grand Seignior with a more lordly air than could the Prince.* During the absence of Lee, he kept up such a clatter that each of McClellan's corps commanders was expecting a special visit from the much-plumed cap and the once-gaudy attire of the master of ruses and strat-

egy. He put on naturally all those grand and imposing devices which so successfully deceive the military opponent.

Just before we crossed the Chickahominy, I asked General Garland if he remembered what Napoleon said at Austerlitz when one of his marshals had begged permission to at-

* In ante-bellum days (so the old army story used to run) Magruder was a lieutenant of artillery at Rouse's Point. There his mess entertained some British officers, two of whom were scions of nobility. The visit having been expected, the mess had borrowed or rented gold plate and silver plate, cut-glass ware, rich furniture, and stylish equipages for driving the noble guests around. Prince John assured them that these were but the débris of the former splendor of the regimental mess. "Only the débris, my lord; the schooner bringing most of the mess plate from Florida was unfortunately wrecked." One of the dazzled and bewildered noblemen said to Prince John, on the second day of the gorgeous festival: "We do not wish to be impolitely inquisitive, but we have been so much impressed with this magnificence that we are constrained to believe that American officers must be paid enormously. What is your monthly pay?" Assuming an indifferent air, Prince John said: "Damned if I know," then, turning to his servant, he asked, "Jim, what is my monthly pay?" The servant was discreetly silent, it may be from a wink, or it may be that to remember sixty-five dollars was too heavy a tax upon his memory also.—D. H. H.

tack a column of the Austro-Russian army which was making a flank movement. Garland replied: "I, too, was just thinking that McClellan was saying to his officers, as Napoleon did, 'When your enemy is making a false movement, do not strike him till he has completed it'; and it may be that he will gobble up Richmond while we are away."

The fortifications around Richmond at that time were very slight. He could have captured the city with but little loss of life. The want of supplies would have forced Lee to attack him as soon as possible, with all the disadvantages of a precipitated movement. But the Federal commander seems to have contemplated nothing of the kind; and as he placed the continuance of the siege upon the hazard of Cold Harbor, he was bound to put every available man into that fight.

While we were lying all day idle on the 28th, unable to cross the Chickahominy, the

clouds of smoke from the burning plunder in the Federal camps and the frequent explosions of magazines indicated a retreat; but General Whiting kept insisting upon it that all this was but a *ruse de guerre* of McClellan preparatory to a march upon Richmond. I made to him some such reply as that once made to General Longstreet, when a cadet at West Point, by Professor Kendrick.

The professor asked Longstreet, who never looked at his chemistry, how the carbonic acid of commerce was made. Longstreet replied:

"By burning diamonds in oxygen gas."

"Yes," said Professor Kendrick, "that will do it; but don't you think it would be a *leetle* expensive?"*

"Don't you think," I said to Whiting, "that this *ruse* of McClellan is a *leetle* expensive?"

The old West Point yarn had a very quieting effect upon his apprehensions.

THE BATTLE OF GAINES'S MILL AND ITS PRELIMINARIES.

LOWE'S MILITARY BALLOON, IN THE SERVICE OF GENERAL McCLELLAN IN THE RICHMOND CAMPAIGN. †

THE events immediately preceding the "Seven Days' Battles on the Peninsula," in June, 1862, have been subjects of great

* Professor Kendrick would never contradict any one, but always modify the answer when wrong. The following is a specimen of his style of questioning. X. Y. Z. (whose name is now a household word) was on examination: Professor K. "What is its color?" X. Y. Z. "White, sir." Professor K. "Yes, you mean a kind of grayish white. In fact, you might call it coal black, might you not?" X. Y. Z. "Yes, sir, that's it."—D. H. H.

† The records give: Union army, 144 regiments, 60 batteries; Confederate, 187 regiments, 89 batteries.—F. J. P.

‡ Colonel Auchmuty, of New York City, who made many ascensions by this balloon from the camp near Doctor Gaines's before the battle, says that the Confederates had a Whitworth gun at Mrs. Price's, on the south side of the Chickahominy, with which they would fire at the balloon as it rose and descended. The usual height for observation was 1000 feet; and when lower than 300 feet high the balloon was within range of this gun. General Porter made no fewer than a hundred such ascensions.—EDITOR.

historical interest, and the causes which prompted certain movements connected with that campaign have given rise to much dispute and controversy. It is with the hope that a history of the part taken by my command during those days may shed new light upon the story of that eventful period, that the following narrative has been prepared. I have been compelled, however, to confine myself to facts within my own personal knowledge and to statements of the matters that influenced my actions, whether premeditated and by order, or the result of movements necessary to be taken by the exigencies of existing circumstances.

After the battle of Fair Oaks, during the greater part of the month of June, 1862, the Army of the Potomac, under General McClellan, and the Army of Northern Virginia, under General Lee, confronted each other, east of Richmond. The two armies were of nearly equal strength.† McClellan's forces, divided by the Chickahominy, were extended south of that stream, from New Bridge to White Oak Swamp, leaving north of the river only the Fifth Army Corps. The Confederate troops faced the Federal army throughout its length,

from White Oak Swamp to New Bridge and thence up the right bank of the Chickahominy, covering the important crossings at Mechanicsville and Meadow Bridge, north of the city.

South of the Chickahominy each army was secured against surprise in flank or successful attack in front by that swollen stream; by marshy lands and muddy roads; by redoubts studded with artillery and rifle-pits well manned, all flanked or covered by swamps, tangled thickets, and slashed timber. Notwithstanding the apparent quiet, both armies were actively engaged in the erection of those defensive works which permit large forces to be detached, at opportune moments, for aggressive action or for the defense of menaced positions. These preparations for offensive and defensive action, known to both commanders, plainly impressed on each the necessity of guarding against any errors in position, and the importance of preparing promptly to take advantage of any opening in his opponent's line which promised results commensurate with the risks involved.

It was apparent to both generals that Richmond could only be taken in one of two ways: by regular approaches or by assault. An assault would require superior forces, supported by ample reserves. It was equally apparent that an attack could readily be made from Richmond, because that city's well armed and manned intrenchments would permit its defense by a small number of men, while large forces could be concentrated and detached for offensive operations.

The faulty location of the Union army, divided as it was by the Chickahominy, was from the first realized by General McClellan, and became daily an increasing cause of care and anxiety to him; not the least disturbing element of which was the impossibility of quickly reënforcing his right wing or promptly drawing it to the south bank. That this dilemma was known to so intelligent and vigilant a commander as General Lee could not be doubted; and that it was certainly demonstrated to him by General J. E. B. Stuart's

dashing cavalry raid around the Union army, on June 14th, was shown in many ways.* One evidence of it was his immediate erection of field-works on his left, and his increasing resistance to the efforts of Union scouts to penetrate into the roads leading to Richmond from the north. This indicated that Lee was preparing to guard against the reënforcement of McClellan's right, and also against information reaching us of Confederate reënforcements from the north.

McClellan had been forced into this faulty position on the Chickahominy and held there by the oft-repeated assurances that McDowell's corps of 40,000 men, then at Fredericksburg, would be advanced to Richmond and formed on his immediate right, which would make that wing safe.† On the 27th of May, under promise that McDowell would join him at once, McClellan cleared his front of all opposition to his rapid march, by operations at Hanover Court House. If McDowell had joined McClellan then, it would have resulted in the capture of Richmond. That junction could also easily have been brought about immediately after the battle of Fair Oaks, and even then Richmond could have been taken. But the Confederate authorities so skillfully used Jackson, in the Valley of Virginia, as to draw off McDowell; while the fears of the Administration, then aroused for the safety of Washington, together with a changed policy, caused him to be held back from the Army of the Potomac; and, although orders were several times issued requiring McDowell to unite with McClellan, and assurances were given as late as June 26th that he would so unite, yet he never arrived, and the right wing of McClellan's army, then left exposed, became the object of attack. McClellan saw the coming storm, and guarded against it as best he could. Realizing the faultiness of his position, resulting from McDowell's withdrawal to the North, he desired to correct the error by changing his base from York River to the James, where he could be easily reënforced, and from which point his communications would be safe. This change could not be made so long as

* General Stuart's raid round the Union lines was begun on Wednesday, June 13 (1862), by an advance to the South Anna Bridge on the Richmond and Fredericksburg Railway. (See map on page 293.) Stuart had with him about 1200 cavalry and a section of the Stuart Horse Artillery, the principal officers under him being Colonel Fitzhugh Lee and Colonel W. H. F. Lee. Early Thursday morning they started east, and soon were having a brush with Union outposts at Hanover Court House. Thence they moved rapidly east to Old Church near the Tolopotomoy, where they had a skirmish and running fight with a detachment of Union cavalry. Stuart there decided to complete the circuit of the Union army by pushing forward to Tunstall's Station, nine miles farther east, and thence to the James. At Garlick's, on the Pamunkey, his forces destroyed two transports and a number of wagons. They captured Tunstall's on the York River Railway, and tried to obstruct the road and fired into a train laden with soldiers which dashed past them. After burning a railway bridge and a wagon-train, they proceeded by moonlight south to Jones's Bridge on the Chickahominy, the repairing of which delayed their march till 1 P. M. of Friday. Once across, they made their way without difficulty to Charles City Court House and reached Richmond *via* the River road early Saturday morning.—EDITOR.

† See Stanton's letter of May 18: "You are instructed to coöperate so as to establish this communication as soon as possible, by extending your right wing to the north of Richmond."—F. J. P.

McDowell's advance was to be expected, nor in any event could it be effected without great risk to the safety of his own army in the face of a vigilant and active foe of superior strength, and without seriously jeopardizing the success of the cause for which he was devoting all his energies. He, however, secured, by careful examination full information of the roads and the character of the country over which he would be obliged to move, if circumstances or policy should require a change of base, and as early as June 18th sent vessels loaded with supplies to the James River.

In the middle of June General McClellan intrusted to me the management of affairs on the north bank of the Chickahominy, and confided to me his plans, as well as his hopes and apprehensions. His plans embraced defensive arrangements against an attack from Richmond upon our weak right flank. We did not fear the results of such an attack if made by the forces from Richmond alone; but if, in addition, we were to be attacked by Jackson's forces, suspicions of whose approach were already aroused, we felt that we should be in peril. But as Jackson had thus far prevented McDowell from joining us, we trusted that McDowell, Banks, and Frémont, who had been directed to watch Jackson, would be able to prevent him from joining Lee, or, at least, would give timely warning of his escape from their front and follow close upon his heels.

With McClellan's approval, my command was distributed as follows:

Meade's brigade of McCall's division of Pennsylvania Reserves was posted at Gaines's house, protecting a siege battery controlling New Bridge; Reynolds's and Seymour's brigades held the rifle-pits skirting the east bank of Beaver Dam Creek and the field-works covering the only crossings near Mechanicsville and Ellerson's Mill. These field-works, well armed with artillery, and the rifle-pits, well manned, controlled the roads and open fields on the west bank of that creek, and were concealed by timber and brush from an approaching foe. The infantry outposts from the same division, and their supports, west of Mechanicsville to Meadow Bridge, were instructed, if attacked or threatened by superior forces, to fall back by side approaches to the rear of Reynolds, at the upper crossing, thus leaving the main approaches open to the fire of their artillery and infantry defenders.

North from Meadow Bridge to the Pamunkey Federal cavalry pickets kept vigilant watch, and protected detachments felling timber for obstructing the roads against the rapid march of any force upon the flank or rear of the right wing.

Cooke's cavalry, near Cold Harbor, guarded the right rear, and scouted towards Hanover Court House, while Morell's and Sykes's divisions were conveniently camped so as to cover the bridge-crossings and to move quickly to any threatened point.

Such was the situation on the 24th of June, when, at midnight, General McClellan telegraphed me that a pretended deserter, whom I had that day sent him, had informed him that Jackson was in the immediate vicinity, ready to unite with Lee in an attack upon my command. Though we had reason to suspect Jackson's approach, this was the first intimation we had of his arrival; and we could obtain from Washington at that time no further confirmation of our suspicions, nor any information of the fact that he had left the front of those directed to watch him in northern Virginia.

Reynolds, who had special charge of the defenses of Beaver Dam Creek and of the forces at and above Mechanicsville, was at once informed of the situation. He prepared to give our anticipated visitors a warm welcome. The infantry division and cavalry commanders were directed to break camp at the first sound of battle, pack their wagons and send them to the rear, and, with their brigades, to take specified positions in support of troops already posted, or to protect the right flank.

On the 25th the pickets of the left of the main army south of the Chickahominy were pushed forward under strong opposition, and gained, after sharp fighting, considerable ground, so as to enable the Second and Third Corps (Sumner's and Heintzelman's) to support the attack on Old Tavern intended to be made next day by the Sixth Corps (Franklin's). The result of the fighting was to convince the corps commanders engaged that there had been no reduction of forces in their front to take part in any movement upon our right flank.

Early on the 26th I was informed of a large increase of forces opposite Reynolds, and before noon the Confederates gave evidence of intention to cross the river at Meadow Bridge and Mechanicsville, while from our cavalry scouts along the Virginia Central Railroad came reports of the approach from the north of large masses of troops.

Thus the attitude of the two armies towards each other was changed. Yesterday, McClellan was rejoicing over the success of his advance towards Richmond. He was still assured of McDowell's junction. To-day, all the united available forces in Virginia were to be thrown against his right flank, which was not in a convenient position to be supported.

The prizes now to be contended for were: on the part of McClellan, the safety of his right wing, protection behind his intrenchments with the possibility of being able to remain there, and the giving of sufficient time to enable him to effect a change of base to the James; on the part of Lee, the destruction of McClellan's right wing, the drawing him from his intrenchments and attacking him in front, and thus to raise the siege of Richmond.

BATTLE OF MECHANICSVILLE.

THE morning of Thursday, June 25th, dawned clear and bright, giving promise that the day would be a brilliant one. The formation of the ground south of the Chickahominy opposite Mechanicsville, and west to Meadow Bridge, largely concealed from view the forces gathered to execute an evidently well-planned and well-prepared attack upon my command. For some hours, on our side of the river, the lull before the storm prevailed, except at Mechanicsville and at the two bridge-crossings. At these points our small outposts were conspicuously displayed for the purpose of creating an impression of numbers and of an intention to maintain an obstinate resistance. We aimed to invite a heavy attack, and then, by rapid withdrawal, to incite such confidence in the enemy as to induce incautious pursuit.

In the northern and western horizon vast clouds of dust arose, indicating the movements of Jackson's advancing forces. They were far distant, and we had reason to believe that the obstacles to their rapid advance, placed in their way by detachments sent for that purpose, would prevent them from making an attack that day. As before stated, we did not fear Lee alone; we did fear his attack, combined with one by Jackson, on our flank; but our fears were allayed for a day.

General McClellan's desire to make the earliest and quickest movements at that time possible, and his plans arranged for the accomplishment of that desire, as expressed to me, were substantially conveyed in the following dispatch of June 23d from his chief-of-staff:

"Your dispositions of your troops are approved by the commanding general. . . . If you are attacked, be careful to state as promptly as possible the number, composition, and position of the enemy. The troops on this side will be held ready either to support you directly or to attack the enemy in their front. If the force attacking you is large, the general would prefer the latter course, counting upon your skill and the admirable troops under your command to hold their own against superior numbers long enough for him to make the decisive movement, which will determine the fate of Richmond."

The position selected on Beaver Dam Creek for our line of defense was naturally very strong. The banks of the valley were steep, and forces advancing on the adjacent plains presented their flanks, as well as their front, to the fire of both infantry and artillery, safely posted behind intrenchments. The stream was over waist-deep and bordered by swamps. Its passage was difficult for infantry at all points, and impracticable for artillery, except at the bridge-crossing at Ellerson's Mill, and at the one above, near Mechanicsville.

Quite early in the day I visited General Reynolds, near the head of the creek, and had the best reasons not only to be contented, but thoroughly gratified, with the admirable arrangements of this accomplished officer, and to be encouraged by the cheerful confidence of himself and his able and gallant assistants, Seymour on his left, at Ellerson's Mill, and Simmons and Roy Stone in his front. Each of these officers commanded a portion of the Pennsylvania Reserves — all under the command of the brave and able veteran, McCall. These troops were about to engage in their first battle, and bore themselves then, as they did on trying occasions immediately following, with the cheerful spirit of the volunteer and the firmness of the veteran soldier — examples inspiring emulation in these trying "seven days' battles."

Part of the general details previously adopted was then ordered to be followed, and subsequently was enforced as near as practicable in all the battles in which my corps engaged: that under no circumstances should the men expose themselves by leaving their intrenchments, or other cover, merely to pursue a repulsed foe; nor, except in uneven ground, which would permit the fire of artillery to pass well over their heads, was infantry or cavalry to be posted in front of a battery, or moved so as to interfere with its fire. Bullet, shot, and shell were to be relied upon for both repulse and pursuit.

Sitting for hours near the telegraph operator at my quarters, prior to the attack, I listened to the constant and rapid "ticking" of his machine, and was kept informed, by the various intercommunicating messages at the headquarters of the army, of the condition of affairs in front of the three corps farthest to the left. Reports often came from them that the enemy's camps seemed to be largely deserted, confirming the information that the enemy had gathered in front of Franklin and myself. Yet, the following day, when I called for aid to resist the forces of Lee and Jackson at Gaines's Mill, known to be immensely superior to mine, the commanders of these three corps expressed the belief that

CONFEDERATE RETREAT THROUGH MECHANICSVILLE BEFORE ADVANCE OF McCLELLAN'S ARTILLERY, MAY 24TH. (FROM A SKETCH AT THE TIME.)

[These buildings, together with one house to the left (not shown in the picture), compose the town. The view is from the east, and the retreat is in the direction of the Mechanicsville Bridge. This was a month before the battle of Mechanicsville.—EDITOR.]

they were about to be attacked by bodies larger than their own, and objected to detaching any part of their troops.

From the cavalry scouts of Farnsworth, Stoneman, and Cooke, whose forces stretched, in the order named, from Meadow Bridge north to the Pamunkey, reports came that Jackson was advancing slowly upon my flank. I was also informed that the departure of Jackson from northern Virginia was suspected, but not positively known, at Washington; but that at this critical moment no assistance whatever could be expected from that vicinity.

Perhaps at this time the Administration had been crippled by its own acts, and could not respond to General McClellan's calls for aid. About April 1st, when our army began active operations in the field and recruiting should have been encouraged, the enrollment of troops was ordered to be stopped. The War Governor of Pennsylvania, notably, disregarded this order. His foresight was afterwards recognized at Antietam, when he was able to render valuable assistance. In the month of June, however, the policy had begun to change, and the troops in northern Virginia were being placed in charge of an officer called to Washington "to take command of Banks and Frémont, perhaps McDowell, take the field against Jackson, and eventually supersede McClellan." At the day the order was issued, June 27th, however, there was no enemy confronting that officer—Jackson having disappeared from northern Virginia, and being in my front at Gaines's Mill.

About two o'clock P. M. on the 26th, the

boom of a single cannon in the direction of Mechanicsville resounded through our camps. This was the signal which had been agreed upon, to announce the fact that the enemy were crossing the Chickahominy. The curtain rose; the stage was prepared for the first scene of the tragedy. At once tents were struck, wagons packed and sent to the rear to cross to the right bank of the Chickahominy. The several divisions were promptly formed, and took the positions to which they had previously been assigned. General McCall assumed command at Beaver Dam Creek; Meade joined him, taking position behind Seymour; Martindale and Griffin, of Morell's division, went, respectively, to the right and rear of Reynolds; Butterfield was directed to support General Cooke's, and subsequently Martindale's right, while Sykes was held ready to move wherever needed. Reynolds and Seymour prepared for action, and concealed their men.

About three o'clock, the enemy, under Longstreet, D. H. and A. P. Hill, in large bodies commenced rapidly to cross the Chickahominy, almost simultaneously at Mechanicsville, Meadow Bridge, and above, and pushed down the left bank, along the roads leading to Beaver Dam Creek. In accordance with directions previously given, the outposts watching the access to the crossings fell back after slight resistance to their already designated position on the east bank of Beaver Dam Creek, destroying the bridges as they retired. (See map on page 300.)

After passing Mechanicsville the attacking forces were divided, a portion taking the road to

Ellerson's Mill, while the larger body directed their march into the valley of Beaver Dam Creek, upon the road covered by Reynolds. Apparently unaware, or regardless, of the great danger in their front, this force moved on with animation and confidence, as if going to parade, or engaging in a sham battle. Sud-

ress. Seymour's direct and Reynolds's flank fire soon arrested them and drove them to shelter, suffering even more disastrously than those who had attacked Reynolds. Late in the afternoon, greatly strengthened, they renewed the attack with spirit and energy, some reaching the borders of the stream, but

UNION ARTILLERY AT MECHANICSVILLE SHELLING CONFEDERATE WORKS SOUTH OF THE CHICKAHOMINY.

[This sketch was made at the time—several days before the beginning of the Seven Days' Battles. It is here given to indicate the topography of the neighborhood. The road to Richmond crosses the stream by the Mechanicsville Bridge, the half-dozen houses composing the town being to the left of the ground occupied by the battery. It was by this road that the troops of D. H. Hill's and Longstreet's divisions crossed to join Jackson and A. P. Hill in the attack upon the right of McClellan's army.—EDITOR.]

denly, when half-way down the bank of the valley, our men opened upon it rapid volleys of artillery and infantry, which strewed the road and hill-side with hundreds of dead and wounded, and drove the main body of the survivors back in rapid flight to and beyond Mechanicsville. So rapid was the fire upon the enemy's huddled masses clambering back up the hill, that some of Reynolds's ammunition was exhausted, and two regiments were relieved by the Fourth Michigan and Fourteenth New York of Griffin's brigade. On the extreme right a small force of the enemy secured a foothold on the east bank, but it did no harm, and retired under cover of darkness.

The forces which were directed against Seymour at Ellerson's Mill made little prog-

only to be repulsed with terrible slaughter, which warned them not to attempt a renewal of the fight. Little depressions in the ground shielded many from our fire, until, when night came on, they all fell back beyond the range of our guns. Night put an end to the contest.

The Confederates suffered severely. All night the moans of the dying and the shrieks of the wounded reached our ears. Our loss was only about 250 of the 5000 engaged, while that of the Confederates was nearly 2000 out of some 10,000 attacking.*

General McClellan had joined me on the battle-field at an early hour in the afternoon. While we discussed plans for the immediate future, influenced in our deliberations by the gratifying results of the day, numerous and

* Union forces engaged, eleven regiments, six batteries. Confederate forces engaged, twenty-one regiments, eight batteries.—F. J. P.

* According to the official returns the total Union loss at Mechanicsville was 361, but little more than that of the Forty-fourth Georgia alone (335). The Confederate loss, exclusive of Field's and Anderson's brigades and of the batteries, is reported at 1589. General Longstreet is quoted by Mr. William Swinton as his authority for putting the aggregate at "between three and four thousand." ("Campaigns of the Army of the Potomac," p. 145.)—EDITOR.

unvarying accounts from our outposts and scouts toward the Pamunkey warned us of the danger impending on the arrival of Jackson, and necessitated a decision as to which side of the Chickahominy should be held in force. He, however, left me late at night, about one A. M. (27th), with the expectation of receiving information on his arrival at his own headquarters, from the tenor of which he would be enabled to decide whether I should hold my present position or withdraw to a well-selected and more advantageous one east of Gaines's Mill, where I could protect the bridges across the Chickahominy, over which I must retire if compelled to leave the left bank. He left General Barnard, of the Engineers, with me, to point out the new line of battle in case he decided to withdraw me from Beaver Dam Creek. The orders to withdraw reached me about three o'clock A. M., and were executed as rapidly as possible.

GAINES'S MILL, OR THE CHICKAHOMINY.

THE position selected for the new stand was east of Powhite Creek, about six miles from Beaver Dam Creek. The line of battle was semicircular, the extremities being in the valley of the Chickahominy, while the intermediate portion occupied the high grounds along the bank of a creek and curved around past McGee's to Elder Swamp. Part of the front was covered by the ravine of the creek. The east bank was lined with trees and underbrush, which afforded concealment and protection to our troops and artillery.

From the point where the line of the creek turns suddenly to the east, the front was a series of boggy swamps covered extensively with tangled brush. Near McGee's and beyond, the ground, elevated and drier, was filled with ravines swept by our artillery and infantry, who were covered by depressions in the ground. The high land embraced within the semicircle was cleared ground, but undulating, and often, with the aid of fences and ditches, giving concealment and cover, breast high, to both infantry and artillery.

Before sunrise of the 27th the troops were withdrawn from Beaver Dam Creek and sent to their new position east of Powhite Creek, destroying the bridges across it after them.

Some batteries and infantry skirmishers, left as a ruse at Beaver Dam Creek, by their fire so fully absorbed the attention of the foe that our purpose suddenly and rapidly to abandon the intrenchments seemed unsuspected. But when they discovered our withdrawal, their infantry pressed forward in small detachments, the main body and the artillery being delayed to rebuild the bridges. Seymour's brigade, the

last to start, under its skillful commander, with Tidball's and Robertson's well-managed Horse Batteries on its flanks, kept the enemy at a respectful distance and enabled all horse, foot and artillery, wagons and wounded, to reach, with little loss, their designated posts in the new position; my brave and efficient aide, Lieutenant Weld, however, was taken prisoner.

The siege guns were safely removed by hand from the works overlooking New Bridge and taken to the south bank of the Chickahominy, where, protected by Franklin's corps, they were posted and used with damaging effect upon the enemy as they advanced that afternoon to attack the left of our line.

Our new line of battle was well selected and strong, though long and requiring either more troops to man it than I had, or too great a thinning of my line by the use of the reserves. The east bank of the creek, from the valley of the Chickahominy to its swampy sources, was elevated, sloping, and timbered. The bed of the stream was nearly dry, and its west bank gave excellent protection to the first line of infantry posted under it to receive the enemy descending the cleared field sloping to it. The swampy grounds along the sources of the creek were open to our view in front for hundreds of yards, and were swept by the fire of infantry and artillery. The roads from Gaines's Mill and Old Cold Harbor, along which the enemy were compelled to advance, were swept by artillery posted on commanding ground.

Along the ground thus formed and close to its border were posted the divisions of Morell and Sykes—the latter on the right—Martin's Massachusetts Battery between—each brigade having in reserve, immediately in its rear, two of its regiments. Sections or full batteries of the Division artillery were posted to sweep the avenues of approach, and the fields on which these avenues opened. Wherever possible and useful, guns were placed between brigades and on higher ground, in front or rear, as judgment dictated. The unemployed guns were in reserve with their divisions. Batteries of Hunt's Reserve Artillery were in rear of the left, covered by timber from view of the enemy, but ready to move at a moment's call, or from their stand to pour their irresistible fire into the enemy's face in case they broke our line.

McCall's division formed a second line, near the artillery in reserve, in rear of Morell, and immediately behind the woods on the left. Reynolds, the first to leave Beaver Dam Creek, had gone to Barker's Mill to cover the approaches from Cold Harbor and Dispatch Station to Grapevine Bridge; but hearing the battle raging on our left, and having no enemy in his front,

UNION DEFENSES AT ELLERSON'S MILL. (DRAWN BY CHARLES KENDRICK FROM A SKETCH AT THE TIME BY A. R. WAUD.)

while Emory of Cooke's cavalry, with artillery, was near at hand to do the duty assigned to him, he hastened to join McCall, arriving opportunely in rear of Griffin's left.

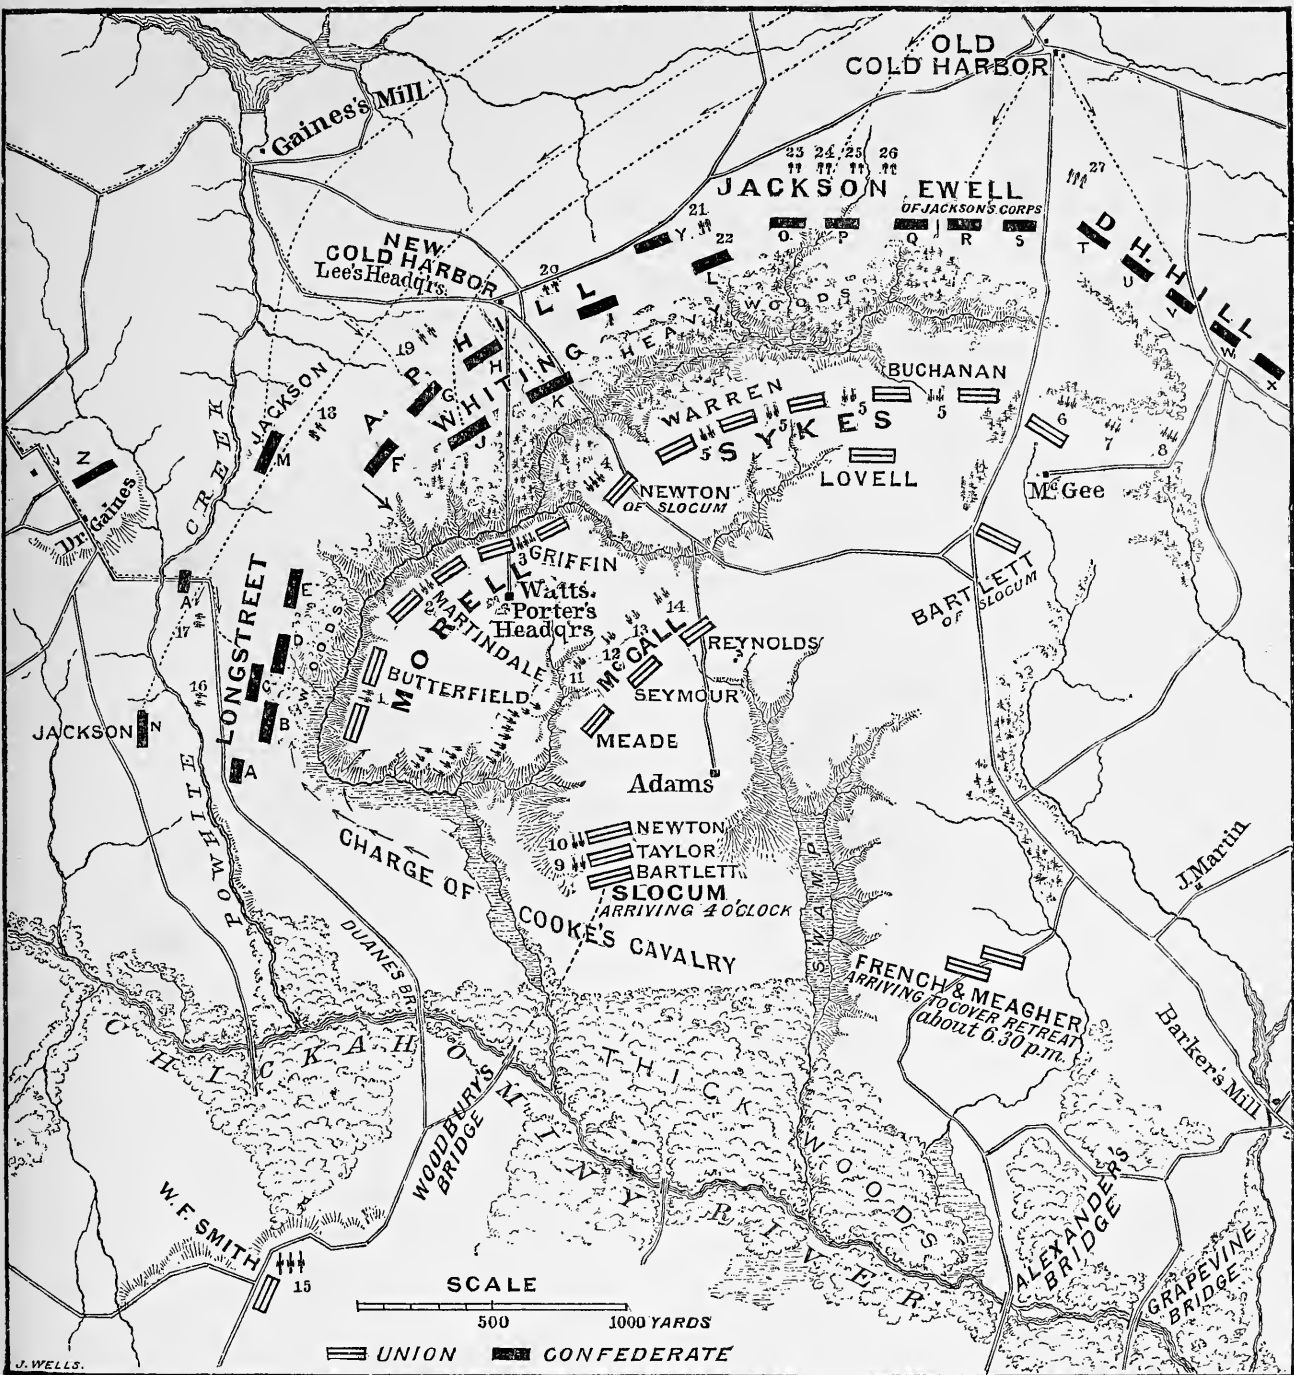

General Cooke was instructed to take position, with cavalry, under the hills in the valley of the Chickahominy — there with the aid of artillery to guard our left flank. He was especially enjoined to intercept, gather, and hold all stragglers, and under no circumstances to leave the valley for the purpose of coming upon the hill held by our infantry, or pass in front of our line on the left. Stoneman's detachment of cavalry and infantry, miles to the north, was no longer available. Fearing it might be cut off by Jackson, I sent Stoneman word to make his way as best he could to White House, and in proper time to rejoin the army — wherever it might be.

Believing my forces too small to defend successfully this long line, I asked General Barnard, when he left me, to represent to General McClellan the necessity of reënforcements to thicken and to fill vacant spaces in my front line. He himself promised me axes. This was my first request for aid, but none came in response. The axes did not arrive till near dark, and were useless — but with the few obtained early in the day from the artillery, and in the little time at command, trees were felled along a small portion of our front, and useful barriers were erected, which were filled in with rails and knapsacks.

While withdrawing from Beaver Dam, I had seen to my delight Slocum's division of Franklin's corps crossing the river to my assistance. McClellan had promised to send it, and I needed it; it was one of the best divisions of the army. Its able, experienced, and gallant commander and his brave and gifted subordinates had the confidence of their well-trained soldiers. They were all worthy comrades of my well-tried and fully trusted officers, and of many others on that field, subsequently honored by their countrymen. But to our disappointment, through some misunderstanding, the division was almost immediately recalled to Franklin. In response, however, to a later call, it returned at a time when it was greatly needed, and rendered invaluable services.

I fixed my headquarters at first at the Adams house; but early in the battle that locality became a hospital, and I advanced to the Watts house, on more elevated ground, whence I could see the greater part of the field and communicate readily with all parts of it.

Thus far, it will be seen, all plans were defensive; I had reason to believe that the enemy largely outnumbered me — three to one. Evidently it was their plan and their policy to crush me, if possible. Their boldness and confidence, I might add incaution, if not imprudence and rashness in exposure and attack,

MAP OF THE BATTLE-FIELD OF GAINES'S MILL, SHOWING APPROXIMATELY THE POSITIONS OF INFANTRY AND ARTILLERY ENGAGED. (THE TOPOGRAPHY FROM THE OFFICIAL MAP.)

Confederate brigades: A, A, Anderson (R. H.); B, Wilcox; C, Featherston; D, Pryor; E, Pickett; Z, Kemper; F, G, H, J, L, Y, line of A. P. Hill's six brigades at the opening of the battle, as follows: Archer, Field, Anderson (J. R.), Branch, Gregg, Pender; I, K, Hood and Law (Whiting's division of Jackson's corps, replacing Archer, Field, Anderson); M, N, O, P, Jackson's old division, as follows: Fulkerson (Third Va.), Cunningham (Second Va.), Lawton, and Winder; Q, R, S, Seymour, Trimble, and Elzey; T, U, V, W, X, line at first: Ripley, Colquitt, Rodes, Anderson (G. B.), Garland. General directions of approach are indicated by dotted lines.

Union batteries: 1, Allen; 2, 3, Weeden; 4, Martin; 5, 5, 5, Edwards; 6, Weed; 7, Tidball; 8, Kingsbury; 9, Hexamer; 10, Upton; 11, 12, 13, 14, Kerns, Easton, DeHart, Cooper; 15, Diederich, Knieriem, and Tyler; also Voegelée, Smead, Porter, and Robertson. Total, 124 guns.

Confederate batteries: 16, 17, 18, Longstreet's artillery; 19, Braxton; 20, Pegram; 21, Johnson; 22, Crenshaw; 23, Pelham; 24, Brockenbrough; 25, Carrington; 26, Courtney; 27, Bondurant; also other guns not here indicated.

At 2 o'clock P. M., after a sharp engagement between Gaines's Mill and New Cold Harbor, A. P. Hill made the first severe attack on the Union center and left, and after two hours' fighting was repulsed in such disorder that Longstreet was ordered up to relieve the pressure by a feint on the right, which he converted into an attack in force. Thus, up to four o'clock, the Confederate assault was mainly on the Union left center and left. About this hour D. H. Hill's division got fully into action, and Jackson's corps (consisting of Ewell's, Whiting's, and Jackson's divisions) was thrown in where needed from the direction of Old Cold Harbor. Major Dabney, Jackson's chief-of-staff, in a letter to General Hill, thus describes the movements of Jackson's corps: "The column," he says, "came on the eastern extension of Gaines's Mill road at Old Cold Harbor, and passing the old tavern a little way, soon ran afoul of McClellan's right wing, with infantry and artillery in position. Your division had taken the lead, and became, therefore, the left of our whole line of battle. Jackson put Ewell in position on your right. He seemed to think that A. P. Hill was to drive the enemy into his corps. But in a little while the state of the firing convinced him that Porter 'didn't drive worth a cent,' and he bestirred himself to let out his full strength. Then it was that, after ordering Ewell's advance, he wheeled on me and began to give instructions about putting in his six other brigades, which were then standing idle in the road by which we had come. I sent them in from left to right *en echelon*, each brigade to support its left-hand neighbor, and to move to the sound of the firing. The strangest divergences, however, took place in consequence of the coppices and woods and lack of guides. Law and Hood kept the proper relation to Ewell's right, and thus helped A. P. Hill's beaten division, attacked the enemy's center or left center, and about 6 P. M. drove it in. But Lawton, bearing too much by his own left, unwittingly crossed Hood's line of march and reinforced Ewell—a most timely providence, for Ewell's line was about done for. The Second Virginia brigade seems to have borne as much too far to the right, and at last, near sunset, found themselves behind Longstreet's extreme right,—the brigade of R. H. Anderson, whom they assisted in driving the enemy. The Third Virginia brigade brought up behind Longstreet's left, passing near Gaines's Mill, and near sunset participated in the victory. The Stonewall brigade, under Winder, bore too much to the left, and entered the fight on your right. Pickett's brigade, headed by the 'Old Ironsides' (Eighteenth Virginia), broke Porter's line just west of the Watts house." With regard to this break, General Law, in a letter to the Editor, says: "Whiting's division covered the ground on which J. R. Anderson's, Archer's, and Field's brigades had previously attacked. We passed over some of these men as we advanced to the assault. We carried the Federal line in our front, and Longstreet on our right, bringing up his reserves, again attacked and carried his front." At the last and successful advance the line from left to right was: Longstreet (Anderson, Pickett), Whiting (Hood and Law), Jackson (Winder and Lawton), Ewell (one or two brigades), and D. H. Hill (Rodes, Anderson and Garland). General Porter thinks the first break in his line was made by Hood from the direction indicated on the map by an arrow.

Of the Union reserves, McCall's division was put in on the line of Morell,—except a part of Reynolds's brigade, which went to the assistance of Warren; Slocum's division also went to the left,—except Bartlett's brigade, which was sent to the right of Sykes near the McGee house.—EDITOR.

THE BATTLE OF GAINES'S MILL. (FROM A PHOTOGRAPH OF THE PAINTING BY THE PRINCE DE JOINVILLE, 1862, MADE FROM PERSONAL OBSERVATION.)

Persons represented: 1. Gen. F. J. Porter, 2. Gen. G. W. Morell, 3. Gen. George C. Meade (on horseback in the distance), and the following aides-de-camp: 4. Comte de Paris, 5. Col. Radowitz, 6. Major Hammerstein, 7. Duc de Chartres, 8. Capt. Mason.

[The view is from the left of the Federal position, looking in a north-westerly direction up the Chickahominy, shown at the left. The out-buildings (on the right) belonged to the Watts house, which, during the thick of the fight, was the headquarters of General Fitz John Porter. The wooded ravine in the center of the picture was the point of contact of this part of the opposing lines. The horsemen in the swampy bottom-lands are Cooke's Union cavalry, whose charge up the valley, and then by a right wheel to the front of the Union batteries, is referred to by General Porter on page 333. General Longstreet's extreme right did not extend out of the woods; his left reached to a point about two-thirds across the picture, where it joined A. P. Hill's and, later, Whiting's division.—EDITOR.]

confirmed my belief that at first they deemed the task an easy one.

I, however, determined to hold my position at least long enough to make the army secure. Though in a desperate situation if not reinforced, I was not without strong hope of some timely assistance from the main body of the army, with which I might repulse the attack and so cripple our opponents as to make the capture of Richmond by the main body of the army, under McClellan, the result of any sacrifice or suffering on the part of my troops or of myself. I felt that the life or death of the army depended upon our conduct in the contest of that day, and that on the issue of that contest depended an early peace or a prolonged, devastating war—for the Union cause could never be yielded. Our brave and intelligent men of all grades and ranks fully realized this, and thousands of them freely offered up their lives that day to maintain the sacred cause, which they had voluntarily taken up arms to defend to the last extremity.

The Confederates, under Longstreet and A. P. Hill, following us from Mechanicsville, moved cautiously by the roads leading by Dr. Gaines's house to New Cold Harbor, and by 2 P. M. had formed lines of battle behind the crest of the hills east of Powhite Creek. These lines were parallel to ours, and extended from the valley of the Chickahominy through New Cold Harbor around Morell's front, so as nearly to reach Warren's brigade—the left of Sykes's division. At Gaines's Mill, Cass's gallant Ninth Massachusetts Volunteers of Griffin's brigade obstinately resisted

CAPTURE OF ABANDONED UNION GUNS AT THE BATTLE OF GAINES'S MILL.

A. P. Hill's crossing, and were so successful in delaying his advance, after crossing, as to compel him to employ large bodies to force the regiment back to the main line. This brought on a contest which extended to Morell's center and over Martin's front,—on his right,—and lasted from 12:30 to near 2 o'clock—Cass and his immediate supports falling back south of the swamps. This persistent and prolonged resistance gave to this battle one of its well-known names.*

Another column of the enemy, D. H. Hill's, from Beaver Dam Creek, and Jackson's column, from northern Virginia, with which it had united, came opposite my right front from the direction of Old Cold Harbor and deployed, connecting with A. P. Hill's on the left and extending to our right beyond McGee's. The advance column of these troops came a little earlier than those under Longstreet and A. P. Hill, but were more cautious and for some hours not so aggressive. Believing that they were passing on down the river to intercept our communications, and thinking that I might strike them to good advantage while in motion, I asked permission to follow, intending to attack with Sykes's division and Emory of Cooke's cavalry, leaving Morell and McCall to hold the other lines in check. Information, however, soon poured in, convincing me that this force was larger than any I could use against them,

and that still larger forces were forming to attack our left and center. This compelled me to keep my troops united and under cover, and also again to ask aid from the south bank of the Chickahominy. My first message to General McClellan was not delivered, as already stated; my second one was responded to by the speedy arrival of Slocum.†

Soon after two P. M., A. P. Hill's force, between us and New Cold Harbor, again began to show an aggressive disposition, independent of its own troops on its flanks, by advancing from under cover of the woods, in lines well formed and extending, as the contest progressed, from in front of Martin's battery to Morell's left. Dashing across the intervening plains, floundering in the swamps and struggling against the tangled brushwood, brigade after brigade seemed almost to melt away before the concentrated fire of our artillery and infantry; yet on others pressed, followed by supports as dashing and as brave as their predecessors, despite their heavy losses and the disheartening effect of having to clamber over many of their disabled and dead, and to meet their surviving comrades rushing back in great disorder from the deadly contest. For nearly two hours the battle raged, extending more or less along the whole line

* It is a curious fact that all the large engagements about Richmond in this campaign began after noon: Seven Pines about 1 o'clock; Mechanicsville from 3 to 4; Gaines's Mill at 12:30; Savage's Station at 4; White Oak Swamp at from 12 to 1; Glendale from 3 to 4; Malvern Hill after 1.—EDITOR.

† The forces in this battle were: Union, 50 regiments, 20 batteries (several of which were not engaged),—in all about 27,000 men; Confederate, 129 regiments, 19 batteries,—in all about 65,000.—F. J. P.

James Longstreet

to our extreme right. The fierce firing of artillery and infantry, the crash of the shot, the bursting of shells and the whizzing of bullets, heard above the roar of artillery and the volleys of musketry, all combined was something fearful, which only brave hearts, determined at all hazards to maintain the cause they deemed just, could withstand.

Regiments quickly replenished their exhausted ammunition by borrowing from their more bountifully supplied and generous companions. Some withdrew, temporarily, for ammunition, and fresh regiments took their places ready to repulse, sometimes to pursue, their desperate enemy, for the purpose of retaking ground from which we had been pressed and which it was necessary to occupy in order to hold our position.

The enemy were repulsed in every direction. An ominous silence reigned. It caused the inference that their troops were being gathered and massed for a desperate and overwhelming attack. To meet it, our front line was concentrated, reënforced, and arranged to breast the avalanche, should it come. I again asked for additional reënforcements. French and Meagher's brigades, of Sumner's corps, all that the corps commanders deemed they could part with, were sent forward by the commanding general, but did not arrive till near dark.

At 2 P. M., when I took my station beyond the Watts house, my anxieties and responsibilities had been substantially relieved, at least so far as related to the establishment of a line of battle, in which all engaged felt their power to resist attack. At that time the practicability of our defensive position, in charge of troops having implicit confidence in each other, had been demonstrated by the successful resistance for nearly two hours against the strong and persistent attacks upon our center and right. The troops were well shielded with their reserves within immediate call. Commanders of divisions, of brigades, and of batteries were in the midst of their men, all confident and determined to hold their posts to the utmost, to resist and drive back the enemy, prepared to call up their reserves, replenish ammunition and to communicate to me such needs as they could not fill, and to furnish all necessary information for my action. They had been left to their own judgment and energy, to determine in what manner they could accomplish the best results with the means at their command and with the least exposure.

From my post in advance of the Watts house, the field in front of Sykes was visible, and it was easily understood, by the sound of battle in the woods and by the fire of the enemy in his advance and repulse, that the

center and left still remained solid and undisturbed. All available means were used by which I could be kept informed so that I could provide, in the best possible manner, for the many rapid changes and wants suddenly springing up. The Prince de Joinville and his two nephews — the Comte de Paris and Duc de Chartres — and Colonels Gantt, Radowitz, and Hammerstein, from the commanding general's staff, joined me as volunteer aides. Each of these, with my own staff, Locke, Kirkland, Mason, Monteith, and McQuade exposed themselves to danger, not only quickly and cheerfully carrying every message, but often voluntarily throwing themselves where needed to direct, to lead, to encourage, and to rally.

During the greater part of the afternoon, D. H. Hill's troops, in detachments, were more or less aggressive on the right. The silence which followed the repulse, already referred to, lasted but a short time. The renewed attacks raged with great fierceness and fury, with slight intermission, along the most of our front, till after five o'clock. Large and numerous bodies of infantry from the direction of Old Cold Harbor, under cover of artillery, directed their attacks upon Sykes's division and Martin's battery; others, from the west side of Powhite Creek, were hurled in rapid succession against Martindale and Butterfield. These furious attacks were successfully repelled, but were immediately renewed by fresh troops. McCall's Pennsylvania Reserves, as needed, were pushed as rapidly as possible into the woods, in support of Martindale and Griffin, whose brigades for a long time bore the brunt of the attacks and whose regiments were relieved as soon as their ammunition was expended. All our positions were held against enormous odds, and the enemy was driven back by our fresh troops, successively thrown into action. At each repulse they advance new troops upon our diminishing forces, and in such numbers and so rapidly that it appeared as though their reserves were inexhaustible. The action extended along our entire line. At four o'clock, when Slocum arrived, all our reserves were exhausted. His brigades were necessarily separated, and sent where most needed. Newton's brigade, being in advance, was led to the right of Griffin, there to drive back the enemy and retake ground only held by the enemy for an instant. Taylor's brigade filled vacant spaces in Morell's division, and Bartlett's was sent to Sykes, just in time to render invaluable service, both in resisting and attacking.

On the right, near McGee's, the enemy captured one of our batteries, which had been doing them great damage by enfilading their lines and preventing their advance. They

gained thereby a temporary foothold by advancing some infantry; but, prompt to act, General Sykes directed its recapture, and a regiment with arms shifted to the right shoulder, and moving at a double quick, was soon in possession of the prize, which again renewed its damaging blows. At times, the enemy on the right would gain an advantage, but in such a case our infantry, supported by the fire of artillery, would move immediately at a rapid gait and regain the lost ground. This occurred frequently in Sykes's command and in the brigades serving near it, all of which were, more or less, in exposed ground. Not less deserving of praise were the divisions of McCall, Morell, and Slocum in their stubborn resistance to the oft-repeated and determined onslaughts of their assailants, who vastly outnumbered them.

About 6:30, preceded by a silence of half an hour, the attack was renewed all along the line with the same apparent determination to sweep us by the force of numbers from the field, if not from existence. The result was evidently a matter of life or death to our opponent's cause. This attack, like its predecessors, was successfully repulsed throughout its length. The sun had sunk below the horizon, and the result seemed so favorable that I began to cherish the hope that the worst that could happen to us would be a withdrawal after dark, without further injury — a withdrawal which would be forced upon us by the exhausted condition of our troops, greatly reduced by casualties, without food, and with little ammunition.

As if for a final effort, as the shades of evening were coming upon us, and the woods were filled with smoke, limiting the view therein to a few yards, the enemy again massed his fresher and re-formed regiments, and threw them in rapid succession against our thinned and wearied battalions, now almost without ammunition, and with guns so foul that they could not be loaded rapidly. In preparation for defeat, should it come, I had posted artillery in large force just in rear of our center and left, ready for any emergency — and especially to be used against a successful foe, even if his destruction involved firing upon some of our own retreating troops, as might have been necessary. The attacks, though coming like a series of apparently irresistible avalanches, had

thus far made no inroads upon our firm and disciplined ranks. Even in this last attack we successfully resisted, driving back our assailants with immense loss, or holding them beyond our lines, except in one instance, near the center of Morell's line, where by force of numbers and under cover of the smoke of battle our line was penetrated and broken; this at a point where I least expected it. This was naturally the weakest point of our line, owing to the closer proximity of the woods held by the enemy. Under this cover they could form, and with less exposure in time and ground than elsewhere, and launch their battalions in quick succession upon our men. I believed I had guarded against the danger by strongly and often reënforcing the troops holding this part of the line. Here the greater part of McCall's and Slocum's forces were used. Just preceding this break, to my great surprise, I saw cavalry, which I recognized as ours, rushing in numbers through our lines on the left, and carrying off with sudden fright the limbers of our artillery, then prepared to pour their irresistible fire into a pursuing foe. With no infantry to support, and with apparent disaster before them, such of the remainder of these guns as could be moved were carried from the field; some deliberately, others in haste, but not in confusion.

In no other place was our line penetrated or shaken. The right, seeing our disaster, fell back united and in order, but were compelled to leave behind two guns the horses of which had been killed. The troops on the left and center retired, some hastily, but not in confusion, often turning back to repulse and pursue the advancing enemy.* All soon rallied in rear of the Adams house behind Sykes and the brigades of French and Meagher sent to our aid, and who now, with hearty cheers, greeted our battalions as they retired and re-formed. We lost in all twenty-two cannon; some of these broke down while we were withdrawing, and some ran off the bridges at night while we were crossing to the south bank of the Chickahominy. The loss of the guns was due to the fact that some of Cooke's cavalry which had been directed to be kept, under all circumstances, in the valley of the Chickahominy, had been sent to resist an attack of the enemy upon our left. The charge, executed in the face of a withering fire of infantry and in the midst of our heavy cannonading, as well as that of

* We are informed by Colonel Auchmuty, then assistant adjutant-general of Morell's division, that there was no running or panic when the line broke. The men fell back in small groups, turning and firing as they went, and carrying many of the wounded with them. On the crest of the hill in the rear of the line of battle a stand was made, and from that point regimental organizations were preserved. Near the close of the war General Griffin said to Colonel Auchmuty that he regarded Gaines's Mill as the hardest-fought battle in his experience.

The same officer informs us that after the line of battle had been formed in the morning and while the attack was momentarily expected, the mail arrived from the North, and the newsboys went along the line crying the New York and Philadelphia papers.— EDITOR.

the enemy, resulted, as should have been expected, in confusion. The bewildered and uncontrollable horses wheeled about, and dashing through the batteries, satisfied the gunners that they were charged by the enemy. To this alone I always attributed the failure on our part to longer hold the battle-field and to bring off all our guns in an orderly retreat. Most unaccountably this cavalry was not used to cover our retreat or gather the stragglers, but was peremptorily ordered to cross to the south bank of the river.* I never again saw their commander.

At night I was called to General McClellan's headquarters, where the chiefs of corps, or their representatives, were gathered. The commanding-general, after hearing full reports, was of the opinion that the final result would be disastrous if we undertook longer to hold the north bank of the river with my command in the condition in which it was left by a hard fight and the loss of rest for two nights. In this opinion all concurred; and I was then instructed to withdraw to the south bank and destroy the bridges after me. The plans to move to the James River were then explained, together with the necessity for the movement, and the orders were given for the execution of those plans.†

My command was safely withdrawn to the south bank of the river, and the bridges were destroyed soon after sunrise on the 28th.

The Prince de Joinville and his two nephews, the Comte de Paris and the Duc de Chartres, were on the field as volunteer aides-de-camp, actively engaged in encouraging the men, carrying messages, and performing other duties of aides. Each of these officers was in the midst of flying musket-balls, and was liable to be struck at any moment.‡ At one time the Comte de Paris, regardless of himself, begged me to send his uncle to General McClellan with a message which would at once and permanently remove him from the dangers of the battle, since the family interests at stake were too important to permit him to be so exposed. I had shortly before asked Colonel Gantt, another of McClellan's aides, to hasten to that general and hurry up reënforcements, as our lines would soon be broken. The danger

was now imminent, and I asked the Prince to carry the same message, telling him that he was selected because of the speed of his horse. He turned as if to go, and I went to attend to the field. Soon the Comte returned, with tears in his eyes, and with choking utterance, expressive of his care and affection, begged me again to send away his uncle. This also I did. Scarcely had the Prince left the second time when our cavalry fell back on us as I have related, our line was broken, and our artillery rendered unserviceable. The Prince and Colonel Gantt afterwards told me that they did not leave, as I had directed, because all seemed favorable to us, and they thought I could not be in earnest or that I had greatly misjudged the situation. This shows how sudden the tide may turn in battle and on what little incidents success may depend.

The forces arrayed against us, and especially those which had thus far been launched upon my command, were the chosen of Southern manhood from Maryland to Texas. No braver or more spirited body of men was to be found among the Confederates, or any who more strongly believed in their own invincibility.§ Their general officers, from the chief down, had been selected for earnest devotion to their cause, and well-earned reputation for intelligent and energetic performance of duty in other fields. With few exceptions they had been my personal friends, and many of them my intimate associates. In the varied relations to them as subaltern, as instructor, as academical and regimental comrade, in social life, as competitor for honors in war and in garrison life, and engaged in watching those performing trying duty in Kansas, Utah, and elsewhere, I learned to know them well in all their qualifications, and to respect their decision under conviction of duty, when, to my regret, they left the cause of the Union.

Notwithstanding my friendship, my personal regard for these old friends and former comrades, which never varied, it was my duty to oppose them, when arrayed against the Union, to the utmost. At the earliest moment, when separation was attempted, and afterwards, my efforts were continuously directed against the success of their cause. One of the results of those efforts was manifested on this

* See "War of the Rebellion — Official Records," Vol. XI., Part II., pp. 43, 223, 273, 282.— F. J. P.

† At Gaines's Mill the Union loss was: Killed, 894; wounded, 3107; missing, 2836—total, 6837, or one in four engaged. On the Confederate side the losses of Jackson, Ewell, Whiting, and D. H. Hill were: Killed, 589; wounded, 2671; missing, 24—total, 3284. Of these, Whiting (*i. e.*, Hood's and Law's brigades) lost 1017. The losses of A. P. Hill and Longstreet for this battle are not reported separately, but a safe estimate from their losses in the campaign would probably bring the total considerably beyond the Union loss, that of the killed and wounded certainly much higher. Almost the whole of two Union regiments, the Eleventh Pennsylvania and the Fourth New Jersey, were captured.— EDITOR.

‡ See "The Princes of the House of Orleans," by General McClellan, in THE CENTURY for February, 1884.

§ The known presence of President Davis and General Lee, to oversee, direct, encourage, and urge, was another influential power in favor of the Confederates in this movement.— F. J. P.

battle-field. I was enabled, after great labor and care, to meet these friends and comrades in command of men, than whom there could be none more intelligent, better disciplined, braver, more confiding in each other, and more determined on success. They embraced soldiers from Maine, Michigan, Illinois, Pennsylvania, New York, and all New England—together with all the regular army, then at the East, from all parts of the country. Their commanders were not excelled by those in any other corps in ability, experience, or reliability; they had the highest confidence in each other, in the army, and in their own men, and were fully competent to oppose their able adversaries.

I have said we did not fear Lee alone at Beaver Dam Creek. Nor, though anxious, did we fear the combined attack of Lee and Jack-

son at Gaines's Mill. Defeat to us was necessarily great damage to them. Our flanks were secure and could not be turned; though fewer in numbers, the advantages of our position, combined with the firm discipline of our own brave men, overcame the odds. Our adversaries were forced to meet us face to face. All day they struggled desperately for success, and near night, after fearful destruction, broke our line at one point, just at a time when a most unforeseen mismanagement on our part aided to crown their labors with possession of the field. Still, our confidence was not broken; and, as we shall see in a succeeding paper, under like circumstances victory crowned our arms with success against the same opponents, strongly reënforced, at Malvern Hill.

Fitz John Porter.

MEMORANDA ON THE CIVIL WAR.

Sawing out a Channel above Island Number Ten.

THE Engineer Regiment of the West was an organization composed of twelve full companies of carefully selected workmen, chiefly mechanics, and officered by men capable of directing such skilled labor. Most of the officers and about six hundred of the men were engaged in the operations about New Madrid and

tions of that regiment I am not aware that any of its officers ever made a report beyond a verbal notification to the general in command that the work required of it was done. This narrative is therefore made entirely from memory, aided by reference to letters written to my family and not intended for publication.

It is perhaps proper to state here that the term "canal," as used in all the letters and reports relating to the opening of this waterway, conveys an entirely wrong idea. No digging was done except by way of slightly widening a large break in the levee, and those officers who speak of the men as "working waist-deep in the water" knew nothing at all of the matter.

The enemy held Island Number Ten and the left bank opposite, and the same bank from New Madrid down to Tiptonville, a ridge of high land between the back swamp and the river.* In rear of their positions was Reelfoot Lake and the overflow, extending from above them to a point below Tiptonville. Escape by land was impossible, the right bank below New Madrid and that town being occupied by General Pope. The gun-boats under Foote held the river above, and our heavy batteries commanded the only place of debarkation below. Having accomplished this much, the problem for General Pope to solve was to cross his army to make an attack, for which purpose he judged that two gun-boats, to be used as ferry-boats, would be sufficient. The general stood with me on the parapets of Fort Thompson (just captured) and pointed out his whole plan; and he was so confident that his letter to Foote would bring the boats that he directed me to go back to the fleet at Island Number Eight by dug-out across the overflow, and come down with them past the batteries, and a set of private signals was arranged between us then and there for use upon their appearing in sight.

I reached the flag-ship in the afternoon about dark, and that evening Foote called together all his com-

* The reader is presumed to be acquainted with the fuller map of the operations here referred to, printed on page 441 of the January CENTURY, with Admiral Walke's paper on the Western Flotilla. The above map shows the course of the channel as corrected by Col. Bissell.—Ed.

MAP OF THE MISSISSIPPI AT ISLAND NO. 10.
Showing (corrected) line of the channel cut by the Engineer Regiment.

Island Number Ten; to them should be given the credit of the success of the engineering operations of that campaign. In order to do this and to correct some erroneous impressions, I yield to the request of the editor of THE CENTURY MAGAZINE to give a brief account of the opening of the so-called "canal" above Island Number Ten, a work which was executed under my personal and general direction. In all the opera-

manders in council. One or two wanted to run the blockade, but the commodore flatly refused. He explained that his boats, since they were armored solely about the bows, were invincible fighting up-stream, but fighting down-stream were of little account; and that if one of them should be boarded and captured, she could be turned against us, and could whip the whole fleet and place Cairo, Louisville, and St. Louis at her mercy! One of the captains said that if he were allowed to go, he would stand in the magazine and blow the vessel out of water if the enemy got on board. Another, I think, was quite as emphatic, but Foote was firm.

I then, in a pleasant way, made a peremptory demand upon him for a gun-boat. As pleasantly, but still firmly, he refused; whereupon I started up, rather excited, and with considerable emphasis said: "General Pope shall have his boats, if I have to take them across the country."

The next day, with two of the tugs of the fleet, I explored the shore carefully on each side: first on the eastern shore, to see if the enemy were securely shut in, which I found to be the case; and then on the western, to see if St. James's Bayou, which emptied into the river seven miles above Island Number Eight, in any way communicated with St. John's Bayou, which debouched at New Madrid. Here I found no possible way across.

Early the next morning while standing on the levee, chagrined at my failure to obtain a gun-boat, and mindful of the strong language I had used before the officers of the fleet, and while waiting for the guide to get the dug-out ready to take me back to camp, I spied, directly opposite me across the submerged fields, an opening in the timber; and the thought flashed upon me that there was the place to take the transports through. This proved to be an old wagon-road extending half a mile into the woods; beyond and around was a dense forest of heavy timber. The guide said it was two miles to the nearest bayou. I asked him to make a map upon my memorandum-book, which he did, showing a straight cut to the first bayou and the general route of the bayous to New Madrid. This route we carefully explored, and I reached General Pope's headquarters about dark. When my report of the interview had reached Foote's refusal, the general gave vent to his disappointment and indignation. Some officer present making some suggestion about a "canal," I immediately pulled out my memorandum-book, and showing the sketch said the whole thing was provided for, and that I would have boats through in fourteen days.*

General Pope then gave me an order on the authorities at Cairo for steamboats and anything the regiment might need. That evening Captain Tweddale, Lieutenant Randolph, and I sat up till a late hour arranging all the details, including barges to be fitted with heavy artillery to be used as gun-boats, and the next morning they started with one hundred men

* The Records of the War Department, which I have just seen for the first time, contain a letter from General Pope to me, which I never before heard of (dated the day I was on my way back from the gun-boat with the plan fully matured), asking if I could not dig a canal, a "mere ditch of a foot wide which the water of the river would soon wash out," from a point one mile above Island Number Ten to a point one mile below. That land was at this time ten feet under water.—J. W. B.

for Cairo, to meet me at Island Number Eight with all the materials they could get the first day. Other officers and men started by the same route daily, until the 600 men of my force had returned, and my stock of supplies was complete. I returned in the dug-out through the selected channel, and in due time found at the proposed starting-point four stern-wheel steam-boats, drawing thirty to thirty-six inches of water, and six large coal-barges, besides one columbiad, three large siege-guns with carriages and ammunition, saws, lines, and all kinds of tools and tackle in great quantities, and fully two million feet of timber and lumber.

The way through the submerged corn-field and the half-mile of road was easy enough, but when we reached the timber the labor of sawing out a channel commenced. The one steamer which had a powerful steam capstan was put in the lead, and the others having hand capstans were fastened single file in the rear, and then the six barges in like order, so that the progress of the first controlled all the others. Captain Tweddale took charge of the cutting in front, while Lieutenant Randolph was fitting up the improvised gun-boats astern. About three hundred men were assigned to each, and they worked in relays without the slightest intermission from daybreak until dark.

First of all, men standing on platforms on small rafts cut off the trees about eight feet above the water. As soon as a tree was down, another set of men, provided with boats and lines, adjusted about it a line which ran through a snatch-block and back to the steam capstan, and hauled it out of the way; thus a partial cut was made forward, the lines always working more than two hundred feet ahead of the capstan, so as to leave plenty of room for the saws. It took about four sets of lines to keep pace with twelve saws.

When the space about the stumps allowed sufficient room, a raft about forty feet long was lashed to a stump, and the saw set at work in a frame attached by a pivot and working in an arc as shown in the sketch—two men working the saw at opposite ends by a rope, and a fifth on the farther side of the tree guiding its teeth into the tree. Where the stumps were too close, or irregular, three yawl-boats were used instead of the raft. No trouble was experienced with the stumps a foot or less in diameter. With the larger ones it was different; the elms spread out so much at the bottom that the saw almost always would run crooked and pinch. If it commenced running up, we notched the top and set the frame farther in; if down, we put in powerful tackle, and pulled the top of the stump over.

Here was where the ingenuity of the officers and men was exercised: as the saws were working four and a half feet beneath the surface, and the water was quite turbid, the question was how to ascertain what was interfering with the saw, and then to apply the remedy. But I found Captain Tweddale equal to the most obstinate stump. I think two and a half hours was the longest time ever expended upon any one, while about that number of minutes would dispose of some small ones when the saw was ready. In all it took eight days to cut the two miles.

When we reached the bayous the hard and wet work began. The river had begun to fall, and the water was running very rapidly. We had to get rid of great drift heaps from the lower side with our machinery all on

the upper side. Small pieces of drift would be disposed of by the yawl-boats, or a single line and snatch-block would take them right out; but sometimes a great swamp oak, three feet through, and as heavy as *lignum vitæ*, lying right across our channel a foot or so under water, would try our tackle. We had then to raise them up to the surface, and hold them there till they could be chopped in pieces. In one case it took eight lines from the four capstans to get one up.

In one of the bayous for about two miles the current was so swift that all the men who were out on logs, or in exposed places, had safety lines tied around them; and as the timber was slippery, some were indebted to these lines for their lives. During the whole work not a man was killed, injured, or taken sick.

While all this was being done in front of the boats, Lieutenant Randolph was at work with his detachment in the rear in improvising gun-boats to supply the lack of Foote's. The barges used were coal-barges, about eighty feet long and twenty wide, scow-shaped, with both ends alike. The sides were six inches thick, and of solid timber. The original plan was to use three of the steamboats with a barge on each side—the other steamer to be kept as a reserve. One columbiad and three thirty-two-pounders were mounted on platforms, and arrangements were made to use a considerable number of field-guns to be taken on board at New Madrid. Six hundred men of the Engineer Regiment, using one of the steamers with her two barges, were to land at break of day at the mouth of the slough about a mile below and opposite Fort Thompson, and with their intrenching tools dig a line of rifle-pits as soon as possible. About the same number of picked men were to be with them to help fight or dig, as occasion might require. The other two sections of the flotilla were to be filled with men, and landed just below, as best could be done when the resistance was developed. The reserve steamer with her men, not being incumbered with barges, could move rapidly and take advantage of any opening to land the force, which could by a flank movement aid any of the other parties; or if either of the other boats became disabled, it could help them along.

When about half-way through the channel, I left the flotilla and reported progress to General Pope.

Upon a reëxamination of the ground from Fort Thompson, he concluded that it would be best to make the leading boat a fighting boat that could not be disabled. So he telegraphed to Cairo and St. Louis for a great number of coal-oil barrels. These arrived through the channel about the time the boats reached the lower end of St. John's Bayou. In the mean time the steamer to be used was so bulkheaded with lumber that her engines and boilers were secure from damage from field-artillery, and the forward part of the hull, which projected beyond the barges, was bulkheaded off and filled with dry rails, to keep her from being disabled. There were no heavy guns and few field-guns opposed to us at this point. Upon the arrival of the barrels they were laid in two tiers all over the bottoms of two barges; the interstices were filled with dry rails, the whole well secured in place by a heavy floor. No shot could reach the hull of the steamer through these, and no number of holes could sink the barge with all this buoyant matter. On the steamer and barges protection was prepared for a large number of sharpshooters. Such a craft as that would have covered the debarkation of the Engineer Regiment, and protected them till they could dig rifle-pits and take care of themselves, and then it could have been used to cover the landing of the rest of the army.

The boats and barge gun-boats were kept concealed in the bayou, just back from New Madrid, for a day or two, till the soldiers could be prepared for the passage and attack. Meanwhile Foote concluded to risk the passage of the island with the *Carondelet* and afterward with the *Pittsburgh*, and the whole plan was changed; the gun-boats could move so much more rapidly that they were to silence the Confederate field-guns, while the transports, loaded with troops, could land wherever an opening could be found. The whole scheme was accomplished so successfully that I think not a man was killed or wounded, and the entire Confederate force surrendered. The barges were not used at all; nor did any of the Engineer Regiment cross: they were kept on the right bank, ready to be called in case of any disaster, which, fortunately, did not occur.

Several of the captured officers told me that after the gun-boats had run their batteries, nearly their

whole force was withdrawn from about Island Number Ten and kept concealed in the woods back of the practicable landing-places, and they were well prepared to pick off all the men that could possibly be landed from the gun-boats; the woods were so close to the bank that they probably could have done so; but when they saw the four transports, loaded with troops, steam out from the bayou, they knew that all hope was gone, and the word was given for each man to take care of himself. A few hundred did manage to

make their way through the swamps in the rear, but the most of them quietly yielded to the inevitable. So well had the movement been concealed that they had not the least idea of what was being done.

When the boats were about half-way through, Thomas A. Scott, the Assistant-Secretary of War, came on board from the gun-boat fleet. After a suitable inspection of the work, he returned and telegraphed to President Lincoln from Cairo that Island Number Ten would be taken within a certain time — and it was.

J. W. Bissell.

TOPICS OF THE TIME.

Abetting the Enemy.

ONE of the most stubborn and discouraging evils of current politics is revealed in the notorious fact that the rascals in either party may count with confidence upon the moral support of a good share of the reputable men in the other party. To this depth does partisanship daily descend. The average party man regards party success as so much more important than the public welfare, that he is quite willing the State should suffer at the hands of his opponents, if by this means a point can be made against them in the next campaign. There are "good men" in each party ready to promote corruption and chicanery in the other party,—men who, if any nefarious deed is proposed by the worst of their opponents, do not shrink from quietly aiding and abetting the iniquity. If the miscreants cannot be openly assisted without incurring responsibility for their own party, they will at least refrain from open opposition, hoping for the success of evil schemes and rejoicing at their consummation. Is it too much to say that the average partisan wishes the State to be injured by every act of his opponents, exults when they go wrong, and ill conceals his vexation when anything is done by them for the benefit of the country?

Such conduct we might expect from those mercenaries who make politics a trade, and it would not be strange if each party contained a large number of ignorant and inconsiderate persons who would be governed by these petty motives; but one is sometimes appalled at the extent to which intelligent citizens have fallen under the sway of such pernicious passions. The prospect of reform in politics grows dim when we contemplate the tacit alliance so widely established between the respectable men of each party and the malefactors of the other.

It too often occurs that wise and beneficent measures, proposed by one party, are treated with captious and sneering criticism, and even defeated, by the other for purely partisan reasons. In one of the State legislatures, a few weeks ago, a measure was introduced looking toward the restriction of intemperance by a certain method. The party in opposition held a caucus to determine its own action upon the question. Several of the legislators expressed themselves as favoring the method proposed; they believed it to be the best method of dealing with the evil; but they readily agreed to oppose the measure before them, for the avowed reason that they would not help the party

in power to do a good thing for the State. That party might gain some credit from the measure if it were adopted; and that party should gain no credit for patriotic action if they could help it. The measure, as they believed, would benefit the State, and the State was greatly suffering for some kind of legislation; but the State might continue to suffer; it should never be relieved by their opponents; no good should come to the State if they could help it, unless it came through their own party. This was exactly the purport of their reasoning. Inasmuch as the measure required a three-fifths vote, the minority were able to defeat it. The action of this caucus was reported in all the party organs, and the heroic conduct of these gentlemen who stood so firmly with their party, and who so nobly resisted the temptation to consider the welfare of the State, did not fail to receive its proper meed of praise. To none of these partisans did it appear that the men in question had acted otherwise than magnanimously; not a whisper of disapproval came from the ranks of their own party. Yet these men had violated the solemn obligation which they assumed in entering upon the duties of their office; they had deliberately done the State what they believed to be an injury in order that benefit might accrue to their political organization. The fact that such action should occur, and such considerations be openly urged at one of our great political centers, without exciting adverse comment, indicates in a somewhat striking manner the extent to which partisanship has degraded our politics.

Those partisans who rejoice over the blunders and sins of their opponents, and who deplore and obstruct their efforts to do well, have, of course, a reason for their conduct. They think that their own party practically monopolizes the virtue of the nation; that the other party is composed almost wholly of rogues; and that, therefore, patriotism is summed up in the support of their party. The good of the State is identified with the success of their party; if by abetting the evil-doing of their opponents they can maintain themselves in power, they will most effectually promote the public welfare. At the very best, then, these people are encouraging evil that good may come, and rejoicing in evil as a means of bringing good; this puts them into a class concerning whom we have high authority for saying that their "damnation is just."

But is not the notion too childish to be entertained by people of common sense, that either of the two great parties which so equally divide the voters of this

country contains all the integrity and purity of the nation? Can intelligent men of either party fail to see that there is a great deal of genuine patriotic purpose among their opponents? And is it not possible for people of fair common sense to rid themselves of partisan madness long enough to see that the country is best served by commending and supporting all that is good and opposing all that is evil on both sides. It is for the interest of the country that both parties should be incorrupt and trustworthy; he who wishes that only one party should possess any virtue is an enemy of his country.

He is equally an enemy of his party. Nothing is so good for a political party as an intelligent, sagacious, high-principled opposition. When one party lifts up its standards, the other party must hear and answer the challenge. On the other hand, the degradation of either party is an encouragement to its antagonist to relax its moral energies. The man who helps to smooth the way of his opponents toward iniquity may be sure that his own party will speedily follow in the same direction.

If consistency were a matter of great concern to partisans, it might also be pertinent to suggest that no great moral value can be attached to a protest against evil-doing at which the protestant has connived.

Great reforms are demanded in our politics, notably the complete reform of the civil service. There is good prospect of the success of some of these measures, if only decent men of both parties will stand up for decency and praise it wherever they see it, demanding and commending the thorough enforcement of the laws, whichever party is in power. If these reforms fail, the blame will lie at the doors of those otherwise highly moral and reputable citizens who prefer the success of their party to the welfare of their country.

The Causes of the Law's Delay.

THE remarks of a correspondent in the department of "Open Letters" seem to call for a further elucidation of the subject of "The Law's Delay." We shall not make much progress in alleviating the mischief indicated unless we recognize candidly at the outset that some delay, however burdensome, is necessary. The object of the law is to hear controversies for the purpose of ending them; and it must pause to hear them fully, if it is to end them finally. The rules of procedure, allowing opportunities for preparation and revision, are framed in view of the necessities made apparent by experience. They must in general be uniform for all causes in the same court.

But there are broader reasons why litigation must often move very slowly to its final conclusion. There are questions which are new, and on which a just conclusion can be developed or evolved only by years of contest. When railroads began to rival the water-courses as means of transportation, the question arose whether railroads must stop at navigable streams or navigation must stop at railroad bridges. To settle such a question for the continent is not in the power of any single decision. It is a question for the generation. It often occurs that the justice of a case is an unknown quantity; it has to be not merely ascertained, it has to be evolved, developed by a long contest. There are questions that ought not to be foreclosed

until everything that can be said on either side has been heard and reheard, nor until time has matured the reflection and promoted the judgment of those who are to pass upon it. There are many questions of public interest litigated which are beyond the possibility of immediate solution by an argument and a decision; and many questions solely of private right involve the same consideration of time.

Having thus conceded the absolute necessity of much irksome delay in any system of human justice, we are the better prepared to emphasize the injustice of unnecessary delay, and to inquire for its causes. There is a considerable class of cases in which the delay that burdens one party is purposely put upon him by the other. Delay is often a defense, and sometimes the only defense. We do not mean to say that this is in no case justifiable. Every lawyer of experience is familiar with cases where delay has been the only means he has had to defeat claims founded in fraud or on the destruction of evidence. But it is clear that, in general, contest by causing delay is so mischievous an obstruction of justice, that the courts ought to be astute to detect it and prompt to suppress it.

Apart from those cases in which delay is the desire of the client, and is paid for by him, the interests of the profession lie generally in the reasonably prompt dispatch of business, and the early and final termination of the client's controversy. It is as great a mistake to suppose that in America the profession on the whole profit by delay, as to suppose that they profit by panics and bankruptcy. That which is the most profitable to the profession is the employment called for by the prosperity of clients, by the putting through of litigation, and by new business enterprises. There are more complaints now from attorneys than from clients concerning the long calendars of untried cases, and the delays in the hearing of appeals. And wherever one of several courts in the same locality clears off its calendar, attorneys flock into it with new cases, all preferring the tribunal where they can soonest have a hearing.

For some causes of unnecessary delay the profession are responsible; for some, the courts; and for some, the legislature and the people.

Chief among those for which the profession are responsible are the inadequate standard of practical training in preparation for the bar, and the neglect of attorneys to take proper counsel in the early stages of litigation. The conduct of litigation differs in a curious way from most other business that is the subject of criticism. If a man is about to build a house, he goes to the highest authority first, and has his plans and specifications drawn to the minute details; and the builder, the contractors, the journeymen, and the laborers are all guided by the lines thus laid out for them. If a man is going to law, he has to take the lowest court first, and perhaps looks about for a young attorney who will not charge much. After the work is done and judgment got, the adversary takes it before a higher court for inspection; older counsel are engaged to argue the case before the court of last resort; and if the work is declared to have been done on the wrong lines, it is taken to pieces, and must be done over again. The chief prevention for such miscarriages of justice is in a more thoroughly trained bar. Too much emphasis can hardly be put upon this.

There should also be a more general adoption by the younger portion of the profession of the growing usage of consulting counsel as to the initiatory steps in all cases which may involve or raise doubtful questions. The counsel consulted should always be the one who is to try the case or argue the law, if need arises; and the expense of taking such advice is trivial to client or attorney as compared with the assurance of success it gives.

Among the causes for which the bench appears responsible is a lack of systematic attention and of promptness in determination. The judges are certainly the hardest-worked class of office-holders,—except members of Congress in session, and even they can “pair off.” The vacations between terms are not more than is needed for the examination of the law. A judge, to keep abreast of the times, must read about as much law in a year as a student in a law school, besides attending to his duty as a judge. But many judges who use their time fully do not use it to good advantage. When a judge who has the case fully before him allows himself to be turned aside from attention to it by the pressure of a later cause, he is only accumulating uncertainty and confusion of mind. A judge, to be a success, must have something of the talent at least, if not of the genius, of a governor, a commander, a ruler among men. Nothing breeds more rapidly than procrastination. Judicial procrastination propagates itself in the judicial mind; for every undecided cause is an obstacle to every other cause, and at last the mind itself becomes characteristically an undecided mind.

The neglect of thorough consultation by members of an appellate court is a fruitful cause of uncertainty in decisions, and hence of delay. If appellate courts would adopt one simple rule as to opinions, their labors would be much diminished, the value of the results much increased, and the respect their decisions command indefinitely enhanced, viz.: never to allow an opinion to be written until the court in consultation have determined on their decision, and on the reasons therefor; nor then, if those reasons can be fairly expressed by approving the opinion of the court below. The opinions of a court of last resort, to be respected in these days, must be not essays or arguments of one member, assented to by others, nor opinions written to avoid giving offense to counsel by implying that there was nothing to appeal for; but terse statements of the law applicable to the controversy, and the reasons of the law, in those cases, and those only, where the courts below have erred in their conclusion, or in the reasons for their conclusion.

The most serious causes of delay are those for which the legislatures and the people at large are responsible. A little examination will suffice to show that the indisposition of the people to provide an adequate judicial force has kept the judicial department of the government far behind the legislative, executive, and administrative branches in ability to keep up with business. The business of the courts increases faster than the population, in a sort of geometrical ratio, and the pecuniary amounts involved, too, are vastly larger than at the organization of the government; but the judicial force has been increased not half in proportion to the population. A comparison of a year's work of the Supreme Court of the United States then and now will show something of the

immense increase of labor which has characterized the growth of litigation, outrunning the force of the courts. On the other hand, the multiplication of offices, and the subdivision of labor and abundant provision of resources for the prompt transaction of business in all other departments of the State, contrast very strongly with the simple addition to the number of our judges. The difficulty is made far more embarrassing by the fact that the increase of provision for appeals is even less adequate than that for the courts of first instance. At the organization of the government there were in the whole country seventy-three judges, state and national, the importance of whose jurisdictions was sufficient to make their decisions a part of the body of the law, and therefore reported and respected as precedents. A very considerable proportion of these sat in courts of last resort. There are now over five hundred and thirty such judges, and the courts of last resort are held by relatively few of them. There are now about as many United States Circuit and District Court judges alone as there were judges in the whole country at the beginning.

The second cause for which the public are responsible is the pressure put upon such inadequate force for the more rapid dispatch of business. This is such that it is commonly understood in the profession that in some courts the papers in the cause will have little or no examination, and the decision must depend on what representation counsel make orally before the judge. In some other courts the pressure deprives the parties of an oral hearing, and printed papers, submitted with perhaps no explanations, are made to take the place of argument. It is only the most systematic arrangements, and by skilled clerical assistance and the utmost economy of time, that a judge with a long calendar, in some of our great cities, can get through the examination of the papers in the great masses of causes that are thrown upon his hands; and the disposition of some part of the press to measure the fidelity of a judge by the number of cases he disposes of in a given time would, if prevalent, be simply fatal to the maintenance of justice. Those of the community who understand the value of judicial deliberation should see to it that the judges are supported in taking all the time necessary for the just disposition of every cause, as faithfully as if there were no appeal. More thorough trial and deliberate decision in courts of first instance is the best remedy for the unnecessary delay and expense of multiplied appeals.

The periods allowed for the successive steps in litigation might in many instances be shortened by the legislature without injustice to suitors. The recent immense acceleration in the means of communication, and in the processes of business and even of thought, has not been accompanied, as it should be, with a corresponding acceleration of procedure. These changes can only be made by the legislatures; but in successive revisions of the statutes too little attention has been paid to this point.

There remains the more seriously pressing question of the overcrowded business of our courts of last resort, and the consequent long delay there between appeal and decision. The bar throughout the country are discussing this problem and seeking a remedy; but the public and the legislatures must take an interest in the

question, if we are to be relieved from the greatest causes of unnecessary delay. The one court of last resort is practically incapable, upon the present scheme of organization and practice, of hearing all the appeals that are brought. The proposal to relieve the Supreme Court of the United States by closing the doors of the Circuit Courts to large classes of cases is worthy of the "Circumlocution Office," whose grand art of public business was, How not to do it. This plan may be talked about, but will not be likely to be adopted so long as clients want actions brought and attorneys are ready to bring them. The creation of intermediate courts of appeal for the United States Judiciary would make its organization more like that of the State of New York, where two successive appeals have long been allowed; and that of England, where three are allowed. But there is nearly as much embarrassment from amount of business in the court of last resort in the State of New York, and in some others, as in that of the United States; and it is likely that intermediate appeals would not permanently relieve the latter court.

Three questions are worthy of the most careful consideration in view of these facts:

1. Should not courts of last resort be relieved from the determination of questions of fact? These questions occupy disproportionate time and settle no principle.

2. Should not the right of trial by jury be resettled (by constitutional amendment if necessary), so that a judgment need never be reversed merely because the finding was by the jury when it should have been by the judge, or by the judge when it should have been by the jury, so long as the appellate tribunal sees no error in the conclusion itself? A large part of the appeals now taken in jury-tried cases turn on this question; and new trials are ordered not because of a wrong conclusion, but because the conclusion came out of the wrong mouth.

3. Should not appellate courts be required to receive what evidence they hold to have been erroneously excluded below, or strike out what they hold to have been erroneously received, and render such a judgment as justice requires without awarding a new trial, save in those exceptional instances where justice cannot be done without it? A large part of the appeals now taken result in new trials of the whole cause, simply to let in or drop out evidence which may after all make no change in the result.

To these suggestions should be added this,— that the press, in discussing the ability of the courts to deal with business, should give more attention to the number of causes finally terminated, and the success or ill success of judges and attorneys engaged respectively in getting to an early end, than to the number of decisions rendered in a given month. The test of the law's delay is the length of time between the commencement of an action and its final cessation. The general interest of the profession and of the clientage and the aim of the judges are to bring each cause to as early an end as may be. Pressure on the bench to make as many decisions as possible in a given time tends, so far as it is yielded to, to engender appealable decisions and prolong litigation. If more publicity were given to the length of causes, and the statistics on this subject presented, it would probably be seen that while a great improvement has been made during the present generation in shortening litigation, there is room for much more. If the methods for further improvement can be agreed on, none will more gladly unite in carrying it out than the great body of the profession, who, as a general rule, find their success and the rewards of their ambition in accomplishing their business with as much promptitude as safety and security in its conduct allows.

OPEN LETTERS.

The Law's Delay.

"IF Saint Paul had lived in this age, he would have sent his Epistles to the columns of a theological review." THE CENTURY has provided a new channel of thought in its department of "Open Letters." There are obvious reasons for my sending this contribution here, and not to the columns of a law magazine.

In its administration the law has an important part of the world's work to do. Is it doing that work on those business principles—directness, promptness, efficiency—which men exact in the management of their private concerns, and on which they are insisting more and more in public affairs? Is legal procedure keeping pace in its improvement with other branches of the world's work?

It is time these questions were discussed at the bar of public opinion. Hitherto they have been left entirely to the lawyers who are "part of the thing to be reformed"; and the only "outsiders" who have taken hold of the subject are Jack Cade and Judge Lynch, whose remedy for inefficient law is lawlessness. The great reforms which Brougham, Romilly, and Cole-

ridge have wrought in English jurisprudence encountered the steady opposition of the bench and bar. The only evidence of sensibility to the great evil of the law's delay ever exhibited in any representative gathering of lawyers (so far as I can recall) was the motion of Mr. David Dudley Field, at the last meeting of the American Bar Association, for a special committee upon this subject.

The professional intellect becomes subdued to what it works in, like the dyer's hand. In the work of reform it needs a stimulus and pressure from without.

What are the facts of the case? The most conspicuous fact which the people of this country see in our judicial system—from its miry toes in the courts of *pie poudre* to its kingly crown in the Supreme Court—is not Justice, but the Injustice of Delay.

The suitor who undertakes to enforce a claim which is contested enters upon a Pilgrim's Progress in which innumerable obstacles confront him, and the Slough of Despond is inevitable. Strait is the gate and narrow (and long) is the way that leads to success, and few there be that find it. The law of civil procedure seems to be framed and administered upon

the maxim that it is better for ninety-nine persons to escape paying a demand which they owe than that one person should pay a demand which he does not owe. Hence it has built up a system of defenses and checks which illustrate the strategy of obstruction in its perfection. The result is that, unless a plaintiff has strong faith in his "expectation of life," or is in a situation to afford the luxury of an extended litigation, he is driven either to abandon his claim altogether or to agree with his adversary quickly.

The case of a defendant against whom an unrighteous demand is asserted is no better. He would fain have a speedy riddance of its vexation; but well may he stand aghast at the chronology by which its slow length will drag along, and buy his peace. If the demand be just, the law's delay invites the defendant to use its processes in order to obtain an extension of time. In all the instances mentioned, the inducements to "settle" or to litigate are wholly independent of the justice or injustice of the matter.

The disasters of legal delay affect not only the parties to a suit but the property involved. The story told of Lord Eldon, that, while he was "doubting" about an injunction against the sale of a cargo of ice, the ice melted, if not true, is typical of truth. "When the law comes down at last, she alights on ruins." The depredations upon a fund in court would hardly be possible if the fund were not kept there until the parties interested have ceased to watch or to care what becomes of it.

The present limits forbid more than a brief mention of some of the causes of the law's delay.

First. The preposterously long periods allowed between the successive steps of litigation. The legal time-table is the anomaly of the century. The losing party in a Federal Circuit Court has two years within which to decide whether he will take the case by writ of error to the Supreme Court. During this time his adversary enjoys that repose which is found under the Damocles' sword of an unsettled lawsuit, sweetened by the knowledge that, if taken to that august tribunal, it will hang over him three years longer.

Second. The utter insufficiency of judicial machinery to do the work of the courts. Obviously, an efficient administration of the law requires a judicial force competent to dispose of litigated business as rapidly as such business accumulates. But, to say nothing of the many cases that never come into court, because of the fact now stated, the dockets of our courts everywhere are almost hopelessly clogged; and our overworked (and underpaid) judges are struggling under ever-increasing strata of undone work. Compare the equipment, the cost, and the value of the judicial and legislative departments of the nation. To make a few laws, we send to Washington a mob of more than four hundred men. To administer not only the laws so made, but the vast system of law arising under the Constitution, statutes, and the common law, we provide for a judicial force of seventy. For the legislative branch the nation will pay this year \$3,416,388.77; for the judicial, \$425,372.01. It is a violation of the fundamental principle of our Constitution, by which the three departments of government are declared coördinate and equal, to cripple and starve the judicial department, to refuse the supply of men necessary to discharge its functions. If one of our Federal Circuit

judges had the hundred heads and hundred hands with which certain fables of antiquity sought to eke out the insufficiency of normal capacity, he could not discharge the duties that his office devolves upon him.

Third. The long intervals of masterly inactivity which come between the terms of court. This is partly a result of the inadequacy of judicial machinery. Instead of doing their work continuously, the courts can only have certain fixed terms at which all business must be done or left undone until the succeeding term. It is easy to see how the system of "terms" was developed by the English method of judges traveling "on circuit" to hold the courts; but the progress which has relieved the public from a dependence for their purchases upon the semi-annual rounds of that once-important person, the itinerant peddler, may be fairly expected to provide some better method of administering justice than that of sending out judges on the wing to hold a term of court once or twice a year.

It is on account of the long intervals between terms that continuances (which now constitute the chief means of the "postponement swindle") are so eagerly sought. In criminal cases they are respites, temporary pardons, rich in suggestions of still greater clemency. In civil cases they are judgments in favor of the defendant for six months or more, with increased probability of further extension at the close of the period. But they would be of small moment if they simply meant postponement until the grounds therefor ceased; until the sick witness or the interesting invalid, on whose account a continuance is asked, could "get well or something."

Fourth. The necessity of new trials or doing work over again, caused by the present system of requiring the jury to make the application of the law to the facts. This is more difficult than either to decide the law or determine the facts. In most cases, and in all complicated cases, certain facts affect and qualify others, so that the evidence will admit of various theories; and the judge gives in charge to the jury the different legal propositions which correspond therewith. The idea that untrained men, hearing the testimony for the first time, will be able to grasp it as a whole, and to appreciate the logical connections of different portions of it, then to remember a score of hypothetical instructions embodying the modifications and interdependences of legal principles, and then to apply the intricacies of the latter to the complications of the former, is the wildest of all legal fictions. The eager contests which learned lawyers make before the judge, in endeavoring to procure instructions to the jury which shall recognize the nice discriminations (of which they realize the significance) upon which the law of the case depends, have no parallel, except in the grotesque humor of Rabelais in representing Judge Bridoise as investigating with utmost deliberation the papers in cases which, nevertheless, he intended to decide by the chance of the dice. The conclusive presumption, however, is that the jury understands and applies every legal proposition charged by the court; and, hence, for every error therein there must be a new trial. Here is the germ of immortality in every case. The trial court and the higher court must play battledore and shuttlecock with all cases until every possibility of error in the charge of the judge is eliminated.

Now, the jury is a competent tribunal to determine

questions of fact. If these were separated and submitted to them in civil cases as separate issues, there would be few occasions for having this work done more than once. The truth of the evidence being ascertained, the higher court in its application of the law thereto would make an end of the case.

But my contention is not for the details of any plan. My insistence is only for that guarantee in Magna Charta against the sale or the denial or the *delay* of justice. If the sale of justice involves greater corruption and the denial of justice more open outrage than its delay, yet they result alike in the defeat of justice. To delay justice is but to deny it, by holding the promise to the ear and breaking it to the hope. To delay justice to one suitor is but to sell it to his adversary. All history and experience show that it has been the greatest of the three abuses, because being the least flagrant it has not provoked the same prompt redress which has been demanded against the other two. Bacon was disgraced for receiving gifts. Eldon was endured, while suitors languished and despaired, and estates wasted under accumulating costs.

No word is here uttered for judicial rashness, for mere mechanical pressure in legal administration, "for a *coup de main* in a court of chancery." The protest here made is not against the slow work of the law, but its long pauses of no work, its arrears of undone work, its insufficient equipments for work, its repetitions of work imperfectly done. The law's hurry would be no less an evil than the law's delay. Its true ideal is in Goethe's grand and beautiful image :

"Like a star, without haste, without rest,
Ever fulfilling its God-given hest."

Walter B. Hill.

"The Death of Tecumseh."

EDITOR OF THE CENTURY MAGAZINE.

SIR: I notice in the January number of your very interesting magazine an article by Benjamin B. Griswold relative to the killing of Tecumseh by Richard M. Johnson. It reminds me of an interview which I had with Noonday, Chief of the Ottawa tribe, about the year 1838. This chief was six feet high, broad-shouldered, well proportioned, with broad, high cheekbones, piercing black eyes, and coarse black hair which hung down upon his shoulders, and he possessed wonderful muscular power. He was converted to the Christian religion by a Baptist missionary named Slater, who was stationed about three miles north of Gull Prairie, in the county of Kalamazoo, Michigan. Just over the county line and in the edge of Barry County, this chief and about one hundred and fifty of his tribe were located and instructed in farming. A church was erected which answered for a school-house, and here, residing near them, I attended their church and listened to the teachings of Mr. Slater in the Indian dialect, and to the earnest prayers of this brave old chief. To get a history of any Indian who fought on the side of the British has ever been a difficult task; but through the Rev. Mr. Slater I succeeded, to a limited extent, in getting a sketch from this old chief of the battle of the Thames, in which he was engaged. I copy from a diary :

"After rehearsing the speech which Tecumseh

made to his warriors previous to the engagement and how they all felt, that they fought to defend Tecumseh more than for the British, he was asked :

"Were you near Tecumseh when he fell?"

"Yes; directly on his right."

"Who killed him?"

"Richard M. Johnson."

"Give us the circumstances."

"He was on a horse, and the horse fell over a log, and Tecumseh, with uplifted tomahawk, was about to dispatch him, when he drew a pistol from his holster and shot him in the breast, and he fell dead on his face. I seized him at once, and, with the assistance of Saginaw, bore him from the field. When he fell, the Indians stopped fighting and the battle ended. We laid him down on a blanket in a wigwam, and we all wept, we loved him so much. I took his hat and tomahawk."

"Where are they now?"

"I have his tomahawk and Saginaw his hat."

"Could I get them?"

"No; Indian keep them."

"How did you know it was Johnson who killed him?"

"General Cass took me to see the Great Father, Van Buren, at Washington. I went to the great wigwam, and when I went in I saw the same man I see in battle, the same man I see kill Tecumseh. I had never seen him since, but I knew it was him. I look him in the face and said, "Kene kin-a-poo Tecumseh," that is, "You killed Tecumseh." Johnson replied that he never knew who it was, but a powerful Indian approached him and he shot him with his pistol. "That was Tecumseh. I see you do it.""

Noonday finished his story of Tecumseh by telling of his noble traits, the tears meanwhile trickling down his cheeks. There is no doubt of the truth of his unvarnished tale.

NILES, MICHIGAN, December 24, 1884.

Color-Bedding.

THE smallest yard in the most obscure village has come to be adorned with its definite arrangement of coleus and centauria, and the desire for brilliantly colored combinations of leaves in a bed proves to be not only a fashion, but the genuine outgrowth of a positive hunger for rich color out-of-doors. The love of brilliant, positive color is evidently a deep-seated instinct in humanity. The Japanese has it, the East Indian has it, the Latin has it, and the North American Indian; so that we must recognize this employment of brilliantly colored leaf-plants in beds as simply the legitimate expression of a purely normal want of human nature. It lies deeper and is more comprehensive in its character than the love of trees and shrubs, for it adds to the love of plants as plants the more elemental instinct of the enjoyment of color as color, and nothing more.

It is well known to horticulturists that the most charming results can be obtained by arrangements of brilliant color in beds, produced with such choice greenhouse plants as dracænas, crotons, and the like; but for popular work of the kind we must recognize cheapness as an important factor. The tint, moreover, of

such color-plants must be brilliant, dominant, and distinct, a self-color as a general thing, *i. e.*, a color pure and unmixed throughout the surface of the leaf. Finally, the form of each sort of plant must be such as will compose and blend well with its neighbor, both in ultimate height and contour. Ability to endure successfully the heat and burning effects of a hot, dry summer, and a degree of cold in autumn that does not actually freeze, is also a desirable, if not necessary, faculty of plants that are to be widely used in bedding.

Coleus probably presents the best combination of the qualities needed. It is certainly a genus with excellent gifts for the performance of the duties of a brilliant-colored leaf-bedding plant. Its varieties are legion, most of them being mottled, spotted, and striped with combinations of different shades of red and green. Some are more hardy under the stress of changes of summer and autumn, and some have a more brilliant and positive self-color than others. *Verschaffeltii*, for instance, is such a bright example of reliable red self-color. It is the most popular of the coleuses. For yellow we have in the Golden Bedder or Golden Gem a rich pure self-color of most dominant and positive character. Then there are green coleuses suffused with yellow, that act well as foils to the red and yellow of other bedding plants, while their green thus combined contrasts distinctly with the green of the neighboring grass. Such a coleus is the strong-growing *Fitzpatrickii*. The cheapness of the coleus is all that could be reasonably required; it costs only a few cents apiece, and its peculiar contours make the different varieties blend and harmonize better, perhaps, than any other plants that are so diversely colored. For pearly white color we must turn to the *centauria*, and in most localities to *Centaurea gymnocarpa* as more bushy and free-growing. There are other cheap white-leaved plants, such as *Gnaphalium*, or everlasting, and *Cineraria maritima*, or dusty miller, etc., but none are so nearly white-leaved as the *centauria*. *Centaurias* do not like to be crushed in the middle of a bed, and should be therefore disposed on the outer border, where their drooping and curiously cut leaves hang gracefully and conspicuously. Several plants may be used successfully for bordering color-beds with red or yellow. Golden Feather (*Pyrethrum parthenifolium aureum*) and the different *alternantheras* are excellent for border positions, by virtue of their dwarf, compact growth and rich yellow and red color. I must not pause, however, to name any considerable number of the species and varieties suited to our purpose, as my intention is only to illustrate by a few prominent examples the principles that should govern a proper selection of such bedding plants.

The accompanying representation is of an actual bed executed for the Trinity Church Corporation in St. Paul's churchyard, and it is selected as a general illustration of the combinations of form and color that prove to be agreeable. Similar combinations of bedding plants may be also seen at Evergreens Cemetery, East New York, L. I.

It will be noticed that the outlines of such beds are irregular. The general direction of the lines is made to curve in such a way as to conform to the limitations of the buildings and paths which they adjoin. There is, moreover, a definite natural design, just as there is in the carved ornaments of some of the best architect-

tural structures. It is naturalistic, but not imitative. One fancies a resemblance to an oak or other leaf, but the beds are simply constructed on the leaf type, and not in any way imitated from actual foliage. Finger-like projections reach out into the surrounding turf, and are all the more pleasing for their boldness. It is evident that rein may be thus given in the most legitimate fashion to the most exuberant fancy, the colors of yellow, red, and white being used to enhance and perfect a beauty of line that may be indefinitely varied.

PLAN OF FLOWER-BED.

The beds may thus become streaked and spotted masses of tint, that will blend together like the wonderful shadings of autumn leaves, or those of the coleus itself. Following the suggestion of the leaf type, with its midrib and shading of subtle tint, we may readily conceive what jewels of glowing, changing beauty may in this way be devised for the emerald-green setting of the surrounding turf. It is charming also to notice the coves and bays, the armlets of the surrounding sea of grass that stretch up between the rich masses of color on either side. What an opportunity for the most lovely creations of the artist's fancy, and what an utter waste of such opportunities do we see around us. Such abortions, such crude and awkward attempts to marshal lines of color, of equal length and equal width, disposed in concentric circles, and other geometric forms! Look about the country, and behold what the gardening art of the nineteenth century generally accomplishes, with the lovely bedding materials just described. Half-moons, circles, ovals filled with these richly colored plants in the most commonplace and vulgar fashion. We might, indeed, often fancy ourselves considering, instead of an actual bed of coleus and *centauria*, the wonderful composition of some gigantic tart or candied confection, striped yellow, red, and white at regular intervals. Can we wonder that true plant-lovers sometimes come to abhor the name of bedding, and set the value of a cardinal flower, or "modest harebell," far above all such awkward attempts to use noble material in so-called ribbon gardening. We can hardly even blame simple lovers of nature if they come to despise, in some sort, the innocent coleus or *centauria* itself, and to speak of preferring its room to its company; for, seen in such conglomerations, its value seems very small. In this kind of ribbon gardening we must, of course, expect to find the imperfections of the work completed by the introduction of anchors, crosses, ovals, circles, and letters of a name in just that portion of the greensward where they will succeed most thoroughly in destroying

the openness, harmony, and repose of the landscape. Congruity of association forming no part of the method employed in designing such work, there is a complete failure to see that color-bedding should always be in relation to or flow out of a background of architectural structure or shrub group. It should be always remembered that a fundamental law of art ordains that all landscape-gardening combinations must invariably present an underlying unity of design. Buildings, trees, shrubs, plants, and grass should all be brought together in a balanced picture, the position of each growing out of its intended relations with some other. It follows, therefore, that color-bedding must come under the same general law of unity of design, and have its appointed place of artistic fitness in the landscape treatment of grounds in the neighborhood of buildings.

S. Parsons, Jr.

"Christianity and Popular Amusements."

EDITOR OF THE CENTURY MAGAZINE:

SIR: In a recent paper on "Christianity and Popular Amusements" statements were made about John Bunyan, which have been called in question. It was represented that the chief sins for which Bunyan's conscience smote him at the time of his conversion were certain innocent pastimes. This account was not strictly accurate. I must own that I had never read Bunyan's "Grace Abounding," and that I relied for my information concerning his life upon Macaulay, whose article in the "Cyclopædia Britannica" justifies my assertions. Says this writer: "It is quite certain that Bunyan was at eighteen what, in any but the most austere puritanical circles, would have been regarded as a young man of singular gravity and innocence. He declares, it is true, that he had let loose the reins on the neck of his lusts, that he had delighted in all transgressions against the divine law, and that he had been the ringleader of the youth of Elstow in all manner of vice. But when those who wished him ill accused him of licentious amours, he called on God and the angels to attest his purity. No woman, he said, in heaven, earth, or hell, could charge him with having made any improper advances to her. Not only had he been perfectly faithful to his wife, but he had even before his marriage been perfectly spotless. It does not appear, from his own confessions, or from the railings of his enemies, that he ever was drunk in his life. One bad habit he contracted, that of using profane language; but he tells us that a single reproof cured him so effectually that he never offended again. The worst that can be laid to the charge of this poor youth, whom it has been the fashion to represent as the most desperate of reprobates, is that he had a great liking for some diversions quite harmless in themselves, but condemned by the rigid precisians among whom he lived, and for whom he had a great respect. The four chief sins of which he was guilty were dancing, ringing the bells of the parish church, playing at tip-cat, and reading the history of Sir Bevis of Southampton. A rector of the school of Laud would have held such a young man up to the whole parish as a model." Farther on, in the account of Bunyan's conversion, Macaulay says: "His favorite amusements were one after another relinquished, though not without many painful struggles. . . . The odious vice of bell-ringing he renounced; but he still for a time ventured to go to the church tower and look on while others pulled the ropes. But soon the thought

struck him that if he persisted in such wickedness the steeple would fall on his head, and he fled from the accursed place. To give up dancing on the village green was still harder; and some months elapsed before he had the fortitude to part with his darling sin." These extracts, with the one quoted in the article referred to, respecting the crisis of his "conviction" in the midst of the game of tip-cat, will show that I had good ground for what I said, if Macaulay were to be trusted. But passages from Bunyan's autobiography put the matter in a somewhat different light. He alleges that from a child he "had but few equals . . . both for cursing, swearing, lying, and blaspheming the holy name of God." There is some redundancy in this self-accusation; two faults are mentioned—profanity and falsehood. The one he renounced on the first rebuke, as Macaulay has related; the other was, we may well believe, no malicious mendacity, but the exuberance of that story-telling propensity which made him John Bunyan. As to the remorse for the game of tip-cat, it does appear that it was on a Sunday that he was so stricken, and that part, at least, of his remorse was due to the violation of the Sabbath by his sport, which on that very day he had heard reproved in a sermon.

It is evident, therefore, that, misled by Lord Macaulay, I have extenuated somewhat the faults of young Bunyan. He was rather darker than I painted him, and had better reasons for remorse than I granted him. Nevertheless, a fuller examination convinces me that the substance of my contention is true, and that although Bunyan had other sins besides tip-cat and bell-ringing to answer for, yet he felt *these* to be sins, and sins that would send him to hell unless he forsook them. That the guilt of these games was aggravated in his conception when they were played on Sunday may be true; but he also felt them to be sinful in themselves, no matter on what day they were played; and he thought that his only chance of heaven was to abandon them altogether. They were sinful because they afforded him enjoyment, and any enjoyment not strictly religious was evil. This is the constant implication of his confession. After telling how the rebuke of the woman caused him to break off swearing, he adds: "All this while I knew not Jesus Christ, *neither did I leave my sports and plays.*" As Froude says: "Pleasure of any kind, even the most innocent, he considered to be a snare to him, and he abandoned it. He had been fond of dancing, but he gave it up. Music and singing he parted with, though it distressed him to leave them." This struggle occurred, let it be remembered, before he was twenty years of age.

In showing that Bunyan adopted these ascetic views of life, no contempt is cast on him. Such views were common in his time; they were a natural reaction from the laxity then prevailing in the Church of England. Those zealous persons who have rushed in to defend Bunyan from the charges of innocence brought against him in the article in the Cyclopædia, should remember that the writer of the article made exactly similar accusations against himself. This may serve to show that no disrespect was intended for the inspired tinker of Bedford.

MR. NEWRICH IN PARIS.

Mr. N. (who does not trust himself to the pitfalls of the Gallic tongue): "Waiter, sandwiches."

Waiter: "Bien, M'sieur; quatre?"

Mr. N.: "Oh! yes, I suppose *cat* is as good as anything we'll get in this forsaken country."

Impatience.

I.

EARTH, captive held
By Winter, deems him a foe—
That he can weld
Such fetters; deep down below
Her violets, close-celled,
Flutter to go.

II.

Earth, when she's free
To bud and blow,
And feel through every fiber of each tree
The strength to grow,
Will say, "'Twas Winter gave it me,"
And in the sunshine bless the snow.

Alice Ward Bailey.

Uncle Esek's Wisdom.

THE man who is proof against temptation is the only one who is safe,— but who is the man?

ONE reason why there is so little real happiness among mankind: we are more anxious to make others jealous of what we have than we are to enjoy it ourselves.

I HAVE known people whose failings were the most endurable things about them.

YOU cannot separate justice from mercy without injury to both.

THE world is full of pity and advice, and the bulk of it is worth about ten cents on the dollar.

HE who gets up every time he falls will get up by and by to stay.

LEARNING makes a man proud, but wisdom makes him humble.

VERY cunning people are like a pin, sharp at the point and small at the head.

GOD alone invents; man is simply a discoverer.

Uncle Esek.

The Curse.

(A WARNING TO EDITORS.)

WITH stately mien,
Above the noise and traffic of the town,
The office of the "Phoenix" Magazine
Looked proudly down.

And day by day
A Bard—a needy Bard of visage lean—
Besieged, with many a sweet and soulful lay,
That magazine.

But all in vain!
Larger and larger swelled the mournful ranks
Of those that bore inscribed these words of bane,
"Returned with thanks."

Yet patiently
And long that magazine's neglect he bore,
Until, at length, there came a time when he
Could bear no more.

In fierce despair
He sought that magazine's abode. Hard by,
Upon the curb he stood. A baleful glare
Was in his eye.

Then forth he burst
Into strange words. It was a sight, I ween,
To make the stoutest tremble: *for he CURSED*
That magazine!

It did not fall,
That tall and stately pile. As common men
View such things, there were no "results" at all;
At least, not *then*.

But mark the end.
Ere ten short years that haughty journal's pride
To fate and evil times was forced to bend.
In brief, it died!

For, ah! we know
A poet's curse, a grewsome thing it is,
And mickle is the power for weal or woe
In words of his.

O ye who sit
In calm, superior judgment on our verse,
Read this strange tale, 'twere well to ponder it:
Suppose we curse!

Robertson Trowbridge.

Humility.

YOU SAY, when I kissed you, you are sure I must
quite
Have forgotten myself. So I did; you are right.
No, I'm not such an egotist, dear, it is true,
As to think of myself when I'm looking at you.

Walter Learned.

In Parenthesis.

I READ the verses from my copy,
A bunch of fancies culled from Keats,
A rhyme of rose and drowsy poppy,
Of maiden, song, and other sweets:
The lines—so patiently I penned them,
Without one sable blot or blur—
I knew had music to commend them
And all their secret thoughts to her.

She heard the rhythmical romanza,
And made a comment there and here;
I read on to the final stanza,
Where timid love had made me fear.
A long parenthesis; the meter
Went lamely on without a foot,
Because the sentiment was sweeter
Than love emboldened me to put.

Alas, I tried to fill the bracket;
The truant thought refused to come!
The point,—to think the rhyme should lack it!
My wakeful conscience struck me dumb.
She took the little leaf a minute,—
Ah, what a happy time was this!
The bracket soon had something in it,—
I kissed her in parenthesis.

Frank Dempster Sherman.

Keys.

LONG ago in old Granada, when the Moors were
forced to flee,
Each man locked his home behind him, taking in
his flight the key.

Hopefully they watched and waited for the time to
come when they
Should return from their long exile to those homes
so far away.

But the mansions in Granada they had left in all
their prime
Vanished, as the years rolled onward, 'neath the
crumbling touch of time.

Like the Moors, we all have dwellings where we
vainly long to be,
And through all life's changing phases ever fast
we hold the key.

Our fair country lies behind us; we are exiles, too,
in truth.
For no more shall we behold her. Our Granada's
name is Youth.

We have our delusive day-dreams, and rejoice when,
now and then,
Some old heartstring stirs within us, and we feel
our youth again.

"We are young," we cry triumphant, thrilled with
old-time joy and glee.
Then the dream fades slowly, softly, leaving nothing
but the key!

Bessie Chandler.

No. 3.

GEORGE ELIOT'S COUNTY.

"MILLY'S GRAVE," IN CHILVERS COTON CHURCHYARD.

HERE can one get a more attractive idea of rural life than in a day's drive through what has been called "The Elizabethan side of Warwickshire?" We go along quiet roads beneath overshadowing elms, meeting here and there a heavy-wheeled wagon with its four massive horses,—the load piled up so high that the boughs snatch a passing toll of sweet new-made hay or golden wheat-ears. Then we come to a village clustering round its olive-green sandstone church, with square tower and rows of clerestory windows. The rectory with its bright garden, the staring new red-brick school, a substantial farmhouse or two with well-filled rick-yard and long-roofed out-buildings, speaking of solid ease and prosperity. And all about these more important dwellings, the homes of the poorer neighbors, old cottages black-timbered and white-paneled, or of ancient red brick that weather and time have toned with exquisite gradations of color—gray, pink, purple, yellow—streaked and splashed with green and brown lichen; their roofs of

dark tiles or warm thatch, a study in themselves for a painter, cushioned with rich moss that glows like lumps of emerald in the sun. To quote the words of our great Warwickshire novelist, whose connection with this county it is my object to trace :

"There was the pleasant tinkle of the blacksmith's anvil, the patient cart-horses waiting at his door; the basket-maker peeling his willow wands in the sunshine; the wheelwright putting the last touch to a blue cart with red wheels; here and there a cottage with bright, transparent windows showing pots full of blooming balsams or geraniums, and little gardens in front all double daisies or dark wallflowers; at the well, clean and comely women carrying yoked buckets, and towards the free-school small Britons dawdling on, and handling their marbles in the pockets of unpatched corduroys adorned with brass buttons." (*Felix Holt.*)

Then on again we go through deep lanes where the red sandstone peeps out below the high hedge; past wide-stretching woods where the ring of the woodman's axe hardly disturbs the "choir invisible" singing thanksgivings for sun and summer in the tree-tops above. The soft brown winter carpet of leaves gives place in spring to beds of pale primroses, or a May snowstorm of white-starred anemones; or where the tree-shadows lie deep, a cloud of heaven's own blue rests on the sprouting fern—a sheet of wild hyacinths.

Then we turn into one of the great high-roads, with its generous strip of green turf on either side, that tells of a hunting county and thought for horses' feet. And it leads us past the old posting inns, with small-paned bay-windows, and signs hanging from curiously wrought-iron supports; past sunny country houses where we catch a glimpse of young men and maidens playing tennis on the well-kept lawns; past noble parks where nodding antlers rise from the bracken, and the spotted deer bound away towards the great Elizabethan house,

that, like Charlecote, or Compton Winyates, or Broughton Castle, lies behind guardian avenues of elm and oak and lime. And then we see the Avon winding through its flat meadows, with "long lines of bushy willows marking the water-courses"; while over the far-away woods rises tower or spire of Warwick, or Coventry, or Stratford.

If our journey takes us away from these well-known spots, we travel along through wide-stretching pasture lands, where the white-faced Hereford cattle graze lazily, fattening themselves on the rich rank grass. They are kept from straying by enormous bull-finches—not birds, gentle reader, with glossy black heads and piping voices, but hawthorn hedge-rows twelve or fourteen feet high and half a dozen feet through. As we read in that exquisite introductory chapter to "Felix Holt":

"It was worth the journey only to see those hedge-rows, the liberal homes of unmarketable beauty, of the purple-blossomed ruby-berried nightshade, of the wild convulvulus climbing and spreading in tendrilled strength till it made a great curtain of pale-green hearts and white trumpets; of the many-tubed honeysuckle which, in its most delicate fragrance, hid a charm more subtle and penetrating than beauty. Even if it were winter the hedgerows showed their coral, the scarlet haws, the deep crimson hips, with lingering brown leaves to make a resting-place for the jewels of the hoar-frost."

And so we climb one of the isolated hills which rise out of the central plain—the Folden—like church-crowned islands in a green sea. We rest in a quiet vicarage, and look out of the windows across the garden gay with flowers, over the great pastures dotted with sheep and cattle, down to the canal that makes a long bend round the spin-

ney where a fox is always found, the silver water gleaming against the black-green foliage of the wood. And then the eye is carried away and away over endless interlacing lines of green tree-tops dividing the broad grass fields till they melt into one soft, harmonious, formless whole in the plain of Warwickshire, and the plain melts into the Malvern Hills, forty miles off, and the hills melt into the hazy sky.

It is a fair and peaceful scene as cloud-shadows flicker across the broad vale—one that you could find nowhere save in the heart "of what we are pleased to call Merry England." No wonder that Warwickshire is a little disposed to think itself the center of the universe. No wonder that its inhabitants are content to live on in it from one year's end to another, despite cold clay soils, piercing winds, and cloudy skies, not caring much what becomes of the rest of the world, provided they may go on in the same groove! A harmless failing, on which one looks leniently, for certainly it is a pleasant land, with kindly people in it.

Carping critics have said that our Warwickshire horizon is circumscribed—that the perpetual undulations of field and woodland preclude all breadth and distance in our views, that we have no water in the landscape, that our round-topped elms are monotonous, and last but not least, that we have no hills.

It is true that we have no hills, if by hills our critics mean mountains. It is true that in many parts of the county we cannot see beyond the big wood two or three miles ahead. But who can deny the beauty of those rich woods, remnants of the Forest of Arden—a beauty almost as great in winter as in summer? It is true we have no vast lakes

SOUTH FARM, ARBURY PARK—BIRTHPLACE OF GEORGE ELIOT.

A WARWICKSHIRE VILLAGE.

and few rivers. But if the Avon was enough for Shakspeare, should not its tranquil windings between the golden willow-globes satisfy us, the common herd? Our elms are round-headed. But then what elms they are—great forest trees growing in every hedge-row, softening and enriching every line in the landscape with a delicious succession of curves. And where can one find a district so full of sweet repose alike to eye and mind as ours—a perfect type of solid, settled English comfort?

It is true we have nothing magnificent, sublime, or awful in our midlands. But what scenery could one find better calculated to encourage a contemplative, introspective spirit? If George Eliot had been born and bred among lofty mountains, or by the shore of the cliff-girt sea, should we ever have made acquaintance with “the inimitable party in the ‘Rainbow’ parlour”—or listened to Mrs. Poyser’s quaint wisdom—or cried over the red slippers in Mr. Gilfil’s locked-up room—or watched Tom and Maggie catching tench in the Round Pool? We might have had pictures as graphic—as acute—as truthful. We should have had what one critic calls her “breadth of touch.” But I venture to think some of “the large-minded, equable spirit of contemplative thought” might have been wanting, had that great genius been trained in more exciting and grander surroundings.

As it is, the freshness, the sparkling brilliancy, the light touch of her earlier books seem to diminish in proportion as she drifts farther from the pure fresh influences and im-

pressions of early country life. And as she is drawn more and more into the maelstrom of modern thought, and the great, hurrying, restless outside world, in those “future years when”—to use her own words—“Adam Bede and all that concerns it may have become a dim portion of the past,” we see what one writer calls “the growing tendency to substitute elaborate analysis for direct representation.” It is not my intention to venture upon any criticism of the writings of this great author. Far abler hands than mine have undertaken that task. My object is simply to point out what she has done for her own county; and how, as long as the name of George Eliot is remembered, “Loamshire”—its scenery, its people, its ways, its speech—will be identified with all that is noblest, purest, most wholesome, and most beautiful in her writings.

The phases of country life she represents so vividly, so truthfully, are rapidly becoming “a dim portion of the past.” As the great factories of Coventry are sweeping away the hand-looms of “Milby,” so are board-schools and certificated school-masters sweeping away the rough Warwickshire dialect. But are they not sweeping away more than mere quaintness of speech? It seems to me that among the younger generation we shall look long before we find a Dolly Winthrop, a Mrs. Poyser, a Bartle Massey. We are too hurried nowadays, in the struggle for life that drives us before it like a relentless fate, to venture to be original, or to cultivate that quiet, God-fear-

ing spirit which makes us content with what the English Church catechism calls "that station of life to which it shall please God to call us." Now every one must be as good as his neighbor, "and better too." And this too often

raised in a greenhouse, the cackle of geese, and cluck of hens outside scratching amongst the straw of the farm-yard, the low of the cows as they wander slowly into their hovel to be milked, the stamp of the great cart-

A RIBBON-WEAVER.

leads men not upward to the mountain heights whence a clearer, nobler view is gained, but into the dead-level plain of a hard, sordid struggle after mere wealth, and vulgar envy of all whose success, or culture, or position is greater than their own.

Among the elder generation, thank God, some of the old spirit still exists. I know many a farmer's wife who, though proud of her position and at her ease with the finest lady in the land, is not ashamed to be found molding the golden butter with her own hands into half-pound pats for market, or to send savory pork pies and sausages of her own making to the rector's wife at pig-killing time,— when the village resounds with Piggy's dying wail, and small boys with round eyes full of anticipated joys, in the shape of "fry and trotters," indulge their love of the horrible by gloating over the "lovely carkiss." As you sit in one of those cozy farm-house parlors, with the old oak chairs in the chimney-corner, the bright geraniums in the window, that always grow so much better than any

horses staking home from plow on the rich red fallows, with a small boy perched proudly on the leader's back — you feel as if you were just reading a living chapter of George Eliot.

You can fancy yourself in good Mrs. Hackit's farm at Shepperton, and imagine the joy of Dickey Barton, the "stocky boy," and "the enlargement of his experience," under her hospitable roof-tree.

"Every morning he was allowed — being well wrapt up as to his chest by Mrs. Hackit's own hands, but very bare and red as to his legs — to run loose in the cow and poultry yard, to persecute the turkey-cock by satirical imitations of his gobble-gobble, and to put difficult questions to the groom as to the reasons why horses had four legs, and other transcendental matters. Then Mr. Hackit would take Dickey up on horseback when he rode round his farm, and Mrs. Hackit had a large plum cake in cut, ready to meet incidental attacks of hunger." (*Amos Barton.*)

Strolling into the village wood-yard, we almost expect Adam Bede, with gray-headed Gyp at his heels, to come out of the workshop to meet us. And its master, a single-hearted, high-minded man as ever lived, has

a capacity for suffering in his square-jawed, "roughly-hewn" face, that makes us fancy he might bear and forbear as did his prototype in Hayslope eighty years ago.

One phase, however, of "Loamshire" life which is found in George Eliot's earlier works, has already vanished from Warwickshire. It was in the natural course of things that it should die out, and a very tender memorial has she raised to what has become a thing of the past forever. Such a man as Mr. Gilfil is an impossibility in this latter half of the nineteenth century. In out-of-the-way parts of our county he may have lingered as long as anywhere. But few corners even of Warwickshire are now deprived of their daily paper, or are ten miles from a telegraph office. And where newspapers and telegrams can penetrate, there Mr. Gilfil, or Mr. Irwine, or even old Mr. Crewe in the brown Brutus wig, cannot long exist. They were a part, and not a wholly desirable part, of the old order of things. They are gone to their rest, and let us leave them in peace. But they did their work in their day; and one can afford now to think with a smile and a sigh of the dear old vicar and

"his large heap of short sermons rather yellow and worn at the edges, from which he took two every Sunday, securing perfect impartiality by taking them as they came, without reference to topics; and having preached one of these sermons at Shepperton in the morning, he mounted his horse and rode hastily with the other to Knebley, where he officiated in a wonderful little church, . . . with coats of arms in clusters on the lofty roof . . . and the twelve apostles, with their heads very much on one side, holding didactic ribbons, painted in fresco on the walls. . . . Here, in absence of mind to which he was prone, Mr. Gilfil would sometimes forget to take off his spurs before putting on his surplice, and only become aware of the omission by feeling something mysteriously pulling at the skirts of that garment as he stepped into the reading-desk."

Yes! this sort of thing cannot exist nowadays, and one hears people say, "Wretched old pluralist! I cannot take any interest in a man who could lead such a low life—with his gin and water, and his talk like a common farmer."

Ah! be merciful, and be just. Look a little closer at the picture, and you will see that "his slipshod chat and homely manners were but like the weather-stains on a fine old block of marble, allowing you still to see here and there the fineness of the grain and the delicacy of the original tint." For Mr. Gilfil was a gentleman born and bred, as well as a good man and true; and it was only in his later years that the weather-stains of sorrow and solitude partially obscured the fair surface of the marble. But his people—as are all English country folk—were quick to recognize that the Vicar was their superior in birth and breeding. When Mr. Gilfil died, thirty years ago, there was "general sorrow in Shepperton."

So his love-story begins—and there is the key-note of the whole picture. Whatever were his failings and shortcomings, he made his people not only love but respect him. Little Corduroys and Bessie Parrot, the flaxen-haired two-shoes, have

"a well-founded belief in the advantages of diving into the Vicar's pocket. Mr. Gilfil called it his wonderful pocket, because, as he delighted to tell the 'young shavers' and 'two-shoes,'—so he called all little boys and girls,—whenever he put pennies into it, they turned into sugar-plums or gingerbread or some other nice thing. . . . The farmers relished his society particularly, for he could not only smoke his pipe, and season the details of parish affairs with abundance of caustic jokes and proverbs, but, as Mr. Bond often said, no man knew more than the Vicar about the breed of cows and horses. . . . To hear him discussing the respective merits of the Devonshire breed and the short-horns, or the last foolish decision of the magistrates about a pauper, a superficial observer might have seen little difference, beyond his superior shrewdness, between the Vicar and his bucolic parishioners; for it was his habit to approximate his accent and mode of speech to theirs, doubtless because he thought it a mere frustration of the purposes of language to talk of 'shear-hogs' and 'ewes' to men who habitually said 'sharrags' and 'yowes.' Nevertheless, the farmers were perfectly aware of the distinction between them and the parson, and had not at all the less belief in him as a gentleman and a clergyman for his easy speech and familiar manners. . . . And in the most gossiping colloquies with Mr. Gilfil you might have observed that both men and women 'minded their words,' and never became indifferent to his approbation." (*Mr. Gilfil's Love-Story.*)

We may be glad that the reality is gone from among us. Yet surely we may look with kindly interest on the figure so tenderly drawn by the light and skillful hand of the great artist,—a part of those unrivaled *genre* pictures which we owe to the genius of George Eliot.

Let us now turn from her books to Warwickshire itself again, and see what were the early influences and surroundings from which our great authoress gained so deep an insight into country life.

Most travelers by the Scotch express only know Nuneaton merely as a stopping-place where, for an exorbitant sum, a cup of scalding and almost undrinkable tea or coffee, and other less hot and more potent refreshments, may be obtained. If business or pleasure led them outside the limits of the station, they would find

"a dingy town, surrounded by flat fields, lopped elms, and sprawling manufacturing villages, which crept on with their weaving-shops, till they threatened to graft themselves on the town."

That any business of importance could be conducted in the sleepy market-place seems beyond belief. Orchards appear unexpectedly in what one supposes to be the heart of the town; and nearly every street ends in a vista of green fields through which a tiny river crawls sluggishly, having caught the general

ASTLEY CHURCH, "THE LANTERN OF ARDEN," DESCRIBED
IN "MR. GILFIL'S LOVE-STORY."

tone of slowness that pervades the whole place. The grand old church, with its magnificent carved oak roof, and the pleasant rectory beside it, stand aloof in dignified seclusion at the end of Church street. Even the "hands" from the great factories, whose rows of wide windows and tall, red-brick chimneys look modern and business-like enough, have little of the dash and vigor of northern factory girls, and move quietly along the street with their red-checked shawls drawn over their heads.

Yet this dingy little town has become immortal! For it is none other than the "Milby," whose history, social, political, and theological, all readers of the "Scenes of Clerical Life" know as well as if they had lived in one of those quiet streets for years. In the great church old Mr. Crewe, the curate, preached his "inaudible sermons"; and at the parsonage hard by, Janet Dempster helped his wife to prepare the famous collation for the Bishop. Half-way up Church street—the Orchard street of the book—stands the house, its door and windows now painted white instead of green, out of which poor Janet was thrust by her drunken husband into the cold night. A few yards below we may see the passage up an archway which led to good Mrs. Pettifer's, where she took refuge. The Bull Inn in the

Bridge Way is supposed to be the original of the "Red Lion," where we are introduced to Mr. Dempster "mixing his third glass of brandy and water." And if we follow the street westwards we find ourselves at Stockingford, "a dismal district where you hear the rattle of the hand-loom, and breathe the smoke of coal-pits"—the "Paddiford Common" where Mr. Tryon worked himself to death.

About a mile from the market-place, along a scrambling street of small red-brick houses, broken up here and there by a railway bridge, or an orchard that in May glorifies the town with a cloud of white and pink blossoms, stands Chilvers Coton Church. Here we can easily recognize the substantial stone tower of "Shepperton Church, which looks at you through its intelligent eye, the clock." "The little flight of steps with their wooden rail running up the outer wall and leading to the school-children's gallery" is still intact. The school-children were sliding down the wooden rail when we saw it, as did their parents before them, to the no small detriment of their best clothes. For "Shepperton" when we visited

CHILVERS COTON CHURCH. THE STAIR TO THE
CHILDREN'S GALLERY.

GRIFF HOUSE.

it was "*en fête*." The singing-gallery with its inscriptions had gone the way of such structures; and a goodly congregation was streaming from all the neighborhood to witness the opening of a fine new organ — successor to that one, "not very much out of repair," which in its time had played the requiem of the bassoon and key-bugles of earlier days. The escutcheons still adorn the chancel walls, with "their blood-red hands, their death-heads and cross-bones, their leopard's paws and Maltese crosses." But all traces of the high pews, in which little Mary Anne Evans had to be bribed into quietness by slices of bread and butter, have vanished. In the quiet churchyard outside, one is shown poor "Milly's" grave. Over the wall stands the pretty parsonage where Mr. Gilfil sat in his solitary parlor with its horsehair-covered chairs, with his old setter Ponto. And one can fancy Martha once a quarter, drawing aside the blinds and thick curtains of the oriel-window that overhangs the garden, and letting light and air into "the locked-up chamber in Mr. Gilfil's house."

It was in a hamlet of Chilvers Coton, a

green and rural oasis between the looms and factories of Nuneaton and the coal-pits of Bedworth, that "George Eliot" was born. Her father, Mr. Evans, the well-known and highly respected land-agent, moved just before her birth from Staffordshire to South Farm, and six months after to Griff House, in which his son, Mr. Isaac Evans, now lives.

The road to Griff from Chilvers Coton leads up a long hill, over the railroad which has worked such magic changes in "Milby" and its neighborhood since the days of Mr. Gilfil. By the time the crest of the hill is reached, one forgets that looms exist, or that tall chimneys, belching forth evil black smoke, lie within a couple of miles. It is absolute country. Down in the hollow — "Griff Hollows" — made by the unused workings of an old stone quarry, stands an ancient house, now used as Mr. Evans's dairy beside the canal. The gentle cows press round the milking-shed, while an old turkey-gobbler struts with stiffly drooping wings and tail outspread among the humbler barn-door fowls, who seem quite unmoved by his impotent rage. On one side soft green turf and golden furze have half clothed the rugged red

THE MOAT IN
THE FIELD.

sandstone which peeps out here and there. On the other the walls of the quarry are crowned with a thick wood, beyond the canal where little Mary Anne and her brother wandered with rod and line, and watched

“The wide-arched bridge, the scented elder-flowers,
The wondrous watery rings that died too soon,
The echoes of the quarry, the still hours
With white robe sweeping on the shadeless noon.”
(*Brother and Sister. Poems.*)

The road ascends through a deep cutting overhung by trees which cling to the rocky bank wherever they can find roothold, while festoons of ivy catch every ray of sunlight on their glossy leaves. Past the wood, green fields stretch away on the right of the road; and beyond them, through the branches of fir, elm, oak, and birch trees, a glint of red brick tells us we have reached our goal, for there stands Griff House. The gardener runs out from his cottage across the road, opens the gate of the drive, and in a few moments we turn round a magnificent yew-tree and stop at the front door.

It is a pleasant, substantial house, built of warm red brick, with old-fashioned, small-paned casement windows. The walls are almost hidden by creepers, a glorious old pear-tree, roses and jessamine, and over one end a tangle of luxuriant ivy. Across the smooth green lawn and its flower-beds an old stone vase covered with golden lichen made a point of color beneath the silver stems of a great birch-tree. Outside the light iron fence a group of sheep were bleating below a gnarled and twisted oak. Behind them rose the rich purple-brown wood we had come through, and beyond the wood we caught glimpses of far-away blue distance, swelling uplands and wide-stretching valleys, with here and there a huge

chimney sending up a column of black smoke or white puff of steam. On the house-roof pigeons were cooing forth their satisfaction at the sunshine. From the yew-tree close by, a concert of

small chirping voices told that spring was coming, while a blackbird in the bushes made violent love to his mate, and wooed her with jovial, rollicking song.

Within, the house is much in the same state as in the days of Mary Anne Evans's girlhood. She went for a short time to school in Nuneaton, coming home from Saturday till Monday; but one week, in spite of her love of learning, the little maiden's heart failed her, and when the time came to start for school she had disappeared. After hours of search she was at last discovered hiding under the great four-post mahogany bed, which was shown us in its original place in the spare room. Upstairs in the roof is a large attic store-room, through which runs the main chimney-stack of the house; and any one who remembers Maggie Tulliver will easily recognize this as the favorite retreat where she revenged herself on the much-enduring fetich,

“grinding and beating the wooden head against the rough brick of the great chimneys that made two square pillows supporting thereof.” (*Mill on the Floss.*)

The gardens, the fields, every spot seems familiar to one from some exquisite and tender touch scattered here and there throughout the writings of our great Warwickshire

CORNER OF GRIFF HOUSE.

novelist. Thanks to the exceeding kindness of the family, we were allowed to walk

“Across the homestead to the rookery elms,
Whose tall old trunks had each a grassy mound;
So rich for us, we counted them as realms
With varied products: here were earth-nuts found,

“And here the Lady-fingers in deep shade;
Here sloping toward the Moat the rushes grew,
The large to split for pith, the small to braid;
While over all the dark rooks cawing flew.”

and plump, glossy fowls bustled to and fro to the sweet, old-fashioned kitchen garden. A long nut-tree walk runs its whole length, ending in an old arbor, which with its stone table recalls to one's mind the summer-house at Lowick, where Dorothea found Mr. Casaubon sleeping his last sleep. The stone dial of little Mary Anne's childish days still stands on the grass plat, and from a couple of blocks of stone in one corner we looked over the tall,

THE CANAL NEAR GRIFF HOUSE.

There were the elms, black with a parliament of rooks intent on building questions; and beneath them each year the earth-nuts still show their fernlike leaves.

The moat with its rushes, bounding one end of the field, formed part of the moat of Sudely Castle, which Cromwell razed to the ground with his cannon planted in the “Battery Field” the other side of The Hollow.

“Then came the copse where wild things rushed unseen,
And black-scathed grass betrayed the past abode
Of mystic gypsies, who still lurked between
Me and each hidden distance of the road.”

Down the meadow-path in Griff Hollows,
along the “brown canal,”

“Slowly the barges floated into view,
Rounding a grassy hill to me sublime.”

And beyond the Hollows, on a green ridge, stands “The College”—the workhouse to which poor Amos Barton “walked forth in cape and boa, with the sleet driving in his face.”

We wandered back across the rolling grass-clad ridge and furrows of the homestead—through a tiny paddock where three newborn lambs were bleating beside their mothers,

closely clipped garden hedge to the Arbury woods, a mile or two away, where little black-eyed Caterina found Anthony Wybrow lying dead in the rookery of “Cheverell Manor.”

A pleasant garden truly at all seasons of the year, with its huge apple and pear trees from which we can picture the brother plucking

“The fruit that hung on high beyond my reach.”

Even in that chill time, when winter has scarcely made up its mind to leave our cold midland counties, the snowdrops lift their heads as a hint it cannot stay much longer. There is a band of them a foot wide and some thirty paces long all the way up the nut-walk—tightly packed together as if they had not been disturbed for half a century. It would not be possible to find anything like these Griff snowdrops save in “one of those old-fashioned paradises which hardly exist any longer except as memories of our childhood.”

It was in early spring that we first made acquaintance with George Eliot's home, but the apple-trees had budded and blossomed, and summer had put on all its glory of green leaves and sweet flowers, ere we found our way to “Cheverell Manor.”

LIME AVENUE, WHERE ANTHONY WAS FOUND DEAD.

The gates of Arbury Park are only a quarter of a mile from Griff House; and as we drove through the fragrant woods, with a flash of sunshine lighting up feathery birch or sturdy oak, and penetrating into the dark hiding-places of spruce or pine boughs, we conjured up, with the help of our kind guides, visions of the grave little maiden roaming through these very plantations, and storing her busy brain with a thousand impressions which neither bricks and mortar, men, nor books in after life should be able to dim. The deer, feeding beside the lazy cows, scarcely moved as we drove through the herd beneath groups of stately trees in the park; and presently we came in full view of Cheverell Manor,

“the castellated house of grey-tinted stone, with the flickering sunbeams sending dashes of golden light across the many-shaped panes in the mullioned windows, and a great beech leaning athwart one of the flanking towers, and breaking, with its dark flattened

boughs, the too formal symmetry of the front; the broad gravel-walk winding on the right, by a row of tall pines, alongside the pool—on the left branching out among swelling grassy mounds, surmounted by clumps of trees, where the red trunk of the Scotch fir glows in the descending sunlight against the bright green of limes and acacias; the great pool, where a pair of swans are swimming lazily with one leg tucked under a wing, and where the open water-lilies lie calmly accepting the kisses of the fluttering light-sparkles; the lawn, with its smooth emerald greenness, sloping down to the rougher and browner herbage of the park, from which it is invisibly fenced by a little stream that winds away from the pool, and disappears under a wooden bridge in the distant pleasure-ground.”

It was all there, just as our great authoress had painted it with loving, lingering touch; and when we reached the house and, leaving the carriage, made our way with Mr. Bates's successor down to the garden, we half expected to see Lady Cheverell and Caterina carrying their cushions and embroidery across the swelling lawn, while the three gentlemen

ARBOR IN THE GARDEN.

sipped their claret within "the great Gothic windows of the dining-room."

To make the illusion more complete, a thunder-storm which had been gathering from all quarters of the heavens now approached with ominous growls and glitterings of lightning; and as the first drops of rain began to fall, we hurried down to "Mr. Bates's" cottage, under the same trees from which a smart shower fell on poor little Caterina when she ran down to Mosslands to find comfort in the companionship of the good old gardener. His successor, Mr. White, the courteous head-gardener of Arbury, gave us shelter from the storm. When the rain had abated, and he led us back over

"the pretty arched wooden bridge which formed the only entrance to Mosslands for any but webbed feet, the sun had mastered the clouds and was shining through the boughs of the tall elms that made a deep nest for the gardener's cottage—turning the rain-drops into diamonds."

A lovelier effect I have seldom seen than as we looked up a noble avenue of limes from the little bridge, on either side of the smooth waterway, which was all flecked with light and shade from the overarching trees, and broken into a thousand golden lines by the drops that fell from the tender green leaves.

We made our way along the well-kept paths through the rookery,—now, alas! deserted by its cawing tenants,—and Mr. White led us to a long grave-shaped green bed covered with ferns, which marks, so says tradition, the spot where Caterina saw something "lying among the dank leaves on the path three yards before her"; and forgetting her deadly purpose, and sinking on her knees beside it, she cried:

"Anthony, Anthony! speak to me—it is Tina—speak to me! Oh God, he is dead!"

It may be that no Anthony ever lay there dead; that no Caterina ever broke her tender heart for the heartless, worthless fellow. But so living are those creations of George Eliot's brain, that none of us could stand quite unmoved beside the green bed; and it was a relief to escape from the spot and come out of the damp shade into a blaze of sunshine and azalea-flowers in the American garden hard by, while the thunder muttered away in the distance.

Such was the early home and such the surroundings of George Eliot's girlhood. No wonder that in after years the memory of that sweet country life surged up amid the feverish work of the great world; and that she reverted to those scenes of her childhood with a fresh-

ARBURY HALL (CHEVERELL MANOR).

ness and indescribable tenderness which give a peculiar charm to the descriptive touches in her later books.

What a change, one would think, from that tranquil homestead of Griff to the close neighborhood of Coventry. Yet when at nineteen the change took place, it was a welcome one. Quiet country life could no longer satisfy the intellect that had developed itself unaided—almost unnoticed. She needed and craved for a wider sphere; and at last it came.

If you go through the quaint old city of Coventry, with its glorious spires, its "Peeping Tom," its huge factories, its narrow, irregular streets of timbered houses, you reach at last the road leading to the village of Foleshill, a mile or so outside the limits of the borough. Dirty coal-wharves and smoke-grimed houses, last remnants of the town, gradually give place to scattered cottages, dropped here and there among fields and hedge-rows, smoke-grimed too, but still green in summer. Then on the right comes a little brook with a pathway through some posts beside it. Three tall poplars in a garden fence overshadow it; and, through the trees behind, you catch a glimpse of two unpretending brown-stone, semi-detached houses, regular suburban villas, with the same carriage-drive winding up among the trees to each, the same grass-lawn with its beds of evergreens, the same little strips of garden at the back,—a mournful attempt to combine town and country; as uninspiring a spot as one can well conceive. To the first of these houses in 1841 came Mr. Evans, when he left Griff; and with him his grave, soft-voiced daughter, Mary Anne, or, as she now called herself, Marian.

"How often have I seen that pale, thoughtful face wandering along the path by the little stream," said one of her early friends, as we turned into the gate.

Her coming created quite a little sensation. "How pleasant to have that nice, clever Miss Evans among us," was the feeling of some of the neighbors; for even then she was known as a girl of remarkable power. But to her the change of residence was new life. Here for the first time she found herself within reach of the culture she had so passionately longed for, and longed for in vain, in the old home at Griff. Here her real education began. She perfected her knowledge of Latin and Greek by lessons from the Rev. T. Sheepshanks, then head-master of the Coventry Grammar School. From Signor Brezzi she took lessons in French, German, and Italian; and soon knew so much as to lead her teacher, he said, in the two former languages. Hebrew she taught herself unaided. Music lessons she also took from the organist of St. Michael's at

Coventry, although, as a critic says, who knew and loved her well, "it was her own fine musical taste which made her in after years an exquisite pianoforte player." Even as a girl she had been devoted to music; and an old farmer who married a relation of her mother's recalls with pride the fine times he had when "Mary Anne" accompanied his fiddle.

But here at Foleshill, more precious than all the Latin and Greek, French and German, sprang up a friendship which gave her the sympathy she had hitherto looked for in vain. When Marian Evans first entered Mr. Charles Bray's house, Rosehill, she found herself in an atmosphere of culture and liberal thought which at last satisfied the craving of her spirit, impatient of the narrow evangelicalism in which she had been bred. "In his family," to quote the same authority, "she found sympathy with her ardent love of knowledge, and with the more enlightened views that had begun to supplant those under which (as she described it) her spirit had been grievously burdened."

How perfectly could one realize the whole picture as loving lips described it. The walks across the fields, a short cut from Foleshill to Rosehill, now partially destroyed by railway and building lots, meeting half-way the quiet young lady in her bonnet and shawl and long dark ringlets; the gentle chiding for her extravagance in coming over the fields in silk stockings and thin shoes; the talks on the stile, her humor bubbling forth in that loving and genial companionship, grave and shy as she appeared at home and among strangers; or the walk up to Rosehill to meet on the bearskin, spread under the great acacia-tree, where men of mark gathered together to discuss all things in heaven and earth. If that bearskin could speak, what words of wit and wisdom might it not have repeated from Emerson, George Coombe, Robert Mackay, Thackeray, Herbert Spencer, and many more, who all

"listened with marked attention when one gentle woman's voice was heard to utter what they were quite sure was well matured before the lips were opened. Few if any could feel themselves her superior in general intelligence, and it was amusing one day to see the amazement of a certain Dr. L., who, venturing on a quotation from Epictetus to an unassuming young lady, was, with modest politeness, corrected in his Greek by his feminine auditor. One rare characteristic belonged to her, which gave a peculiar charm to her conversation. She had no petty egotism, no spirit of contradiction; she never talked for effect. A happy thought well expressed filled her with delight; in a moment she would seize the point and improve upon it, so that common people began to feel themselves wise in her presence, and perhaps years after she would remind them, to their pride and surprise, of the good things they had said."

The brown house is now much altered and enlarged; but its counterpart over the stone

balustrade is untouched and shows exactly what it was in Mr. Evans's day. Yet though the modest house has grown sideways and lengthways, the main building remains intact, and one is glad to know that its present occupants reverence the memory of those days of toil and thought. Mr. Evans's office is the only room which has been swallowed up by the new additions. It was close to the entrance, and in it his Saturday afternoons were spent, making up the accounts of his week's work. This fact was a source of some alarm to his daughter's young visitor, who told me he would often open the front door himself if she chanced to come on the last day of the week. His gruff welcome of "Come to see Mary Anne?" though kindly meant, never failed to make her quake in her shoes, from its grave, severe tone.

To the left were the dining-room and drawing-room, now thrown into one. In the former, over the sideboard, hung a print from Wilkie's famous picture of the "Distrain for Rent," a significant hint for a land-agent's house. In the little drawing-room Miss Evans sat in the corner by the fire to receive her visitors—the fire which she never allowed a maid to replenish. She always had a man-servant in to do it, for she could not bear, she said, to see a woman putting on coals.

Upstairs I was taken into a tiny room over the front door, with a plain square window. This was George Eliot's little study. Here to the left on entering was her desk; and upon a bracket, in the corner between it and the window, stood an exquisite statuette of Christ, looking towards her. Here she lived among her books, which covered the walls. Here she worked with ardor in the new fields of thought which her friendship with the Brays opened to her. And here, at the instigation of Mrs. Bray's brother, the late Charles Hennell, author of the "Inquiry concerning the Origin of Christianity," she undertook the translation of Strauss's "Leben Jesu." It was a tremendous task for a girl of twenty-five.

"The labor of rendering Strauss's masterpiece into clear, idiomatic English was by no means light, and her intimate friends of that time well remember the strain it entailed upon her,"

says the friend whom I have quoted before. But in scarcely more than a year the work was done. In 1846 the "Life of Jesus" appeared, and Strauss himself complimented the translator on her perfect success.

Out of the study opened her bedroom, looking over the little villa garden with its carriage-drive under the shady trees. But three of these trees remain—a weeping-lime, a venerable acacia, with the silvery sheen of a birch between them. In old days there were

many more—so many, indeed, as to render the house gloomy in the extreme. But they served to shut off all sight of the noisy road thirty yards away, though they could not shut off the sound of the busy coal-wharf farther on, whence foul and cruel words to horse and fellow-man floated up through the still summer air, and jarred painfully on that highly strung organization, as Miss Evans sat plunged in thought and work beside her window. It was one of the penalties of a nearer approach to the civilization she had so ardently longed for in her old country life at Griff. From the study you look on the exquisite spires of Coventry, or through the tree-stems on gently swelling fields with their row of hedge-row elms against the sky. It is not a locality to kindle much enthusiasm for nature or anything else. But depend upon it, that penetrating eye and mind saw more in these uninteresting surroundings than many of the vulgar herd could see in Alps or the "eternal city" itself. Who can forget the tender poetry she manages to find in the "dreary prose" of Milby? how she tells us the sweet spring came there, notwithstanding its smoke and weaving-shops?

"The elm-tops were red with buds; the church-yard was starred with daisies; the lark showered his love-music on the flat fields; the rainbows hung over the dingy town, clothing the very roofs and chimneys in a strange, transfiguring beauty. And so it was with the human life there, which at first seemed a dismal mixture of gripping worldliness, vanity, ostrich feathers, and the fumes of brandy; looking closer, you found some purity, gentleness, and unselfishness, as you may have observed a scented geranium giving forth its wholesome odors amidst blasphemy and gin in a noisy pot-house."

Next to her own bedroom came her father's—the largest room in the house. And as we opened the door, all thought of the famous author seemed to be lost in the memory of the devoted daughter; for—as her friend said with loving pride—"she was the most devoted daughter for those nine years that it is possible to imagine." Her father always spent three days in the week away from home; and those three days were Miss Evans's holidays, given up to her work and her friends. But on the evenings he was at home, not the most tempting invitation in the world would induce her to leave him.

"If I am to keep my father's house, I am going to do it thoroughly," she would say. And thoroughly she did try to do her duty, even to the matter of cooking on certain occasions. A friend recalls a visit one afternoon, when she found Marian in comical distress over her failures. The cook was ill, and Miss Evans undertook to manufacture a batter-pudding. "And when it came to table, it broke. To think that the mistress could not even make a batter-pudding!"

NUNEATON.

Trying years those must have been, when duty and inclination drew her in directly opposite directions; and the strong soul was worn and chafed by this perpetual struggle. Her friends felt this for her, and rejoiced when one year she set off with Mr. and Mrs. Bray for a little tour in the west of Scotland. But even this holiday was doomed to be cut short; for the day after she started, her father slipped in getting into bed and broke his leg. Great were the lamentations at Marian's absence—"and to think we cannot even telegraph for her—and that no letter can reach her!" Her friends who knew how she needed rest and change were secretly glad, and blessed the tardy posts and want of telegraphic communication. But when at last the news reached her, she returned instantly, and devoted herself to her father with redoubled zeal.

"I can see her trunk open all ready packed to start for St. Leonards in 1849, and how she hated to go, poor dear," her friend said, as we stood in the little bedroom. This was soon before her father's death, which took place at St. Leonards after two or three months of severe and trying illness—a terrible strain on his daughter, who never left his side. But when the end at last came her grief was unbounded, and she would have given worlds to have him back again. During a tour on the continent she made after her father's death with her friends the Brays, she could take but little pleasure in anything, so deep was her sense of loss.

She spent some months at Geneva after Mr. and Mrs. Bray's return to England, and then came back to be an inmate of their home at Rosehill for twelve months. This year was the last she spent in her native county. In 1851 she went to London to help Dr. Chapman in the work of the "Westminster Review," and except for short visits Warwickshire saw her no more.

Though far away, all her novels show how ever-present in her mind was the midland scenery in which her youth had been passed. And what has she not done for us, the dwellers in "Loamshire"? Well might she take the lines from Drayton's "Polyolbion" as the motto for one of her books:

"Upon the midlands now the industrious muse doth
fall,
The shires which we the heart of England well may
call.

"My native country thou, which so brave spirits hast
bred,
If there be virtues yet remaining in the earth,
Or any good of thine thou bred'st into my birth,
Accept it as thine own, whilst now I sing of thee,
Of all thy later brood the unworthiest though I be."

Our castles—our parks—were historical. Now our farm-houses—our "Rainbows"—our very cottages—have become immortal through the genius of George Eliot.

Rose G. Kingsley.

THE RISE OF SILAS LAPHAM.*

BY W. D. HOWELLS,

Author of "Venetian Life," "A Chance Acquaintance," "A Modern Instance," "A Woman's Reason," etc.

XXII.

THE morning postman brought Mrs. Lapham a letter from Irene, which was chiefly significant because it made no reference whatever to the writer or her state of mind. It gave the news of her uncle's family; it told of their kindness to her; her cousin Will was going to take her and his sisters ice-boating on the river, when it froze.

By the time this letter came, Lapham had gone to his business, and the mother carried it to Penelope to talk over. "What do you make out of it?" she asked; and without waiting to be answered, she said, "I don't know as I believe in cousins marrying, a great deal; but if Irene and Will were to fix it up between 'em—" She looked vaguely at Penelope.

"It wouldn't make any difference as far as I was concerned," replied the girl, listlessly.

Mrs. Lapham lost her patience.

"Well, then, I'll tell you what, Penelope!" she exclaimed. "Perhaps it'll make a difference to you if you know that your father's in *real* trouble. He's harassed to death, and he was awake half the night, talking about it. That abominable old Rogers has got a lot of money away from him; and he's lost by others that he's helped,"—Mrs. Lapham put it in this way because she had no time to be explicit,— "and I want you should come out of your room now, and try to be of some help and comfort to him when he comes home to-night. I guess Irene wouldn't mope round much, if she was here," she could not help adding.

The girl lifted herself on her elbow. "What's that you say about father?" she demanded, eagerly. "Is he in trouble? Is he going to lose his money? Shall we have to stay in this house?"

"We may be very *glad* to stay in this house," said Mrs. Lapham, half angry with herself for having given cause for the girl's conjectures, and half with the habit of prosperity in her child, which could conceive no better of what adversity was. "And I want you should get up and show that you've got

some feeling for somebody in the world besides yourself."

"Oh, I'll get *up*!" said the girl, promptly, almost cheerfully.

"I don't say it's as bad now as it looked a little while ago," said her mother, conscientiously hedging a little from the statement which she had based rather upon her feelings than her facts. "Your father thinks he'll pull through all right, and I don't know but what he will. But I want you should see if you can't do something to cheer him up and keep him from getting so perfectly down-hearted as he seems to get, under the load he's got to carry. And stop thinking about yourself awhile, and behave yourself like a sensible girl."

"Yes, yes," said the girl; "I will. You needn't be troubled about me any more."

Before she left her room she wrote a note, and when she came down she was dressed to go out-of-doors and post it herself. The note was to Corey:

"Do not come to see me any more till you hear from me. I have a reason which I cannot give you now; and you must not ask what it is."

All day she went about in a buoyant desperation, and she came down to meet her father at supper.

"Well, Persis," he said scornfully, as he sat down, "we might as well saved our good resolutions till they were wanted. I guess those English parties have gone back on Rogers."

"Do you mean he didn't come?"

"He hadn't come up to half-past five," said Lapham.

"Tchk!" uttered his wife.

"But I guess I shall pull through without Mr. Rogers," continued Lapham. "A firm that I didn't think *could* weather it is still afloat, and so far forth as the danger goes of being dragged under with it, I'm all right." Penelope came in. "Hello, Pen!" cried her father. "It ain't often I meet *you* nowadays." He put up his hand as she passed his chair, and pulled her down and kissed her.

"No," she said; "but I thought I'd come

down to-night and cheer you up a little. I shall not talk; the sight of me will be enough."

Her father laughed out. "Mother been telling you? Well, I *was* pretty blue last night; but I guess I was more scared than hurt. How'd you like to go to the theater to-night? Sellers at the Park. Heigh?"

"Well, I don't know. Don't you think they could get along without me there?"

"No; couldn't work it at all," cried the Colonel. "Let's all go. Unless," he added, inquiringly, "there's somebody coming here?"

"There's nobody coming," said Penelope.

"Good! Then we'll go. Mother, don't you be late now."

"Oh, I sha'n't keep you waiting," said Mrs. Lapham. She had thought of telling what a cheerful letter she had got from Irene; but upon the whole it seemed better not to speak of Irene at all just then. After they returned from the theater, where the Colonel roared through the comedy, with continual reference of his pleasure to Penelope, to make sure that she was enjoying it too, his wife said, as if the whole affair had been for the girl's distraction rather than his, "I don't believe but what it's going to come out all right about the children;" and then she told him of the letter, and the hopes she had founded upon it.

"Well, perhaps you're right, Persis," he consented.

"I haven't seen Pen so much like herself since it happened. I declare, when I see the way she came out to-night, just to please you, I don't know as I want you should get over all your troubles right away."

"I guess there'll be enough to keep Pen going for a while yet," said the Colonel, winding up his watch.

But for a time there was a relief, which Walker noted, in the atmosphere at the office, and then came another cold wave, slighter than the first, but distinctly felt there, and succeeded by another relief. It was like the winter which was wearing on to the end of the year, with alternations of freezing weather, and mild days stretching to weeks, in which the snow and ice wholly disappeared. It was none the less winter, and none the less harassing for these fluctuations, and Lapham showed in his face and temper the effect of like fluctuations in his affairs. He grew thin and old, and both at home and at his office he was irascible to the point of offense. In these days Penelope shared with her mother the burden of their troubled home, and united with her in supporting the silence or the petulance of the gloomy, secret man who replaced the presence of jolly prosperity there. Lapham had now ceased to talk of his troubles,

and savagely resented his wife's interference. "You mind your own business, Persis," he said one day, "if you've got any;" and after that she left him mainly to Penelope, who did not think of asking him questions.

"It's pretty hard on you, Pen," she said.

"That makes it easier for me," returned the girl, who did not otherwise refer to her own trouble. In her heart she had wondered a little at the absolute obedience of Corey, who had made no sign since receiving her note. She would have liked to ask her father if Corey was sick; she would have liked him to ask her why Corey did not come any more. Her mother went on:

"I don't believe your father knows *where* he stands. He works away at those papers he brings home here at night, as if he didn't half know what he was about. He always did have that close streak in him, and I don't suppose but what he's been going into things he don't want anybody else to know about, and he's kept these accounts of his own."

Sometimes he gave Penelope figures to work at, which he would not submit to his wife's nimbler arithmetic. Then she went to bed and left them sitting up till midnight, struggling with problems in which they were both weak. But she could see that the girl was a comfort to her father, and that his troubles were a defense and shelter to her. Some nights she could hear them going out together, and then she lay awake for their return from their long walk. When the hour or day of respite came again, the home felt it first. Lapham wanted to know what the news from Irene was; he joined his wife in all her cheerful speculations, and tried to make her amends for his sullen reticence and irritability. Irene was staying on at Dubuque. There came a letter from her, saying that her uncle's people wanted her to spend the winter there. "Well, let her," said Lapham. "It'll be the best thing for her." Lapham himself had letters from his brother at frequent intervals. His brother was watching the G. L. & P., which as yet had made no offer for the mills. Once, when one of these letters came, he submitted to his wife whether, in the absence of any positive information that the road wanted the property, he might not, with a good conscience, dispose of it to the best advantage to anybody who came along.

She looked wistfully at him; it was on the rise from a season of deep depression with him. "No, Si," she said; "I don't see how you could do that."

He did not assent and submit, as he had done at first, but began to rail at the impracticality of women; and then he shut some

papers he had been looking over into his desk, and flung out of the room.

One of the papers had slipped through the crevice of the lid, and lay upon the floor. Mrs. Lapham kept on at her sewing, but after a while she picked the paper up to lay it on the desk. Then she glanced at it, and saw that it was a long column of dates and figures, recording successive sums, never large ones, paid regularly to "Wm. M." The dates covered a year, and the sum amounted at least to several hundreds.

Mrs. Lapham laid the paper down on the desk, and then she took it up again and put it into her work-basket, meaning to give it to him. When he came in she saw him looking absent-mindedly about for something, and then going to work upon his papers, apparently without it. She thought she would wait till he missed it definitely, and then give him the scrap she had picked up. It lay in her basket, and after some days it found its way under the work in it, and she forgot it.

XXIII.

SINCE New Year's there had scarcely been a mild day, and the streets were full of snow, growing foul under the city feet and hoofs, and renewing its purity from the skies with repeated falls, which in turn lost their whiteness, beaten down, and beaten black and hard into a solid bed like iron. The sleighing was incomparable, and the air was full of the din of bells; but Lapham's turnout was not of those that thronged the Brighton road every afternoon; the man at the livery-stable sent him word that the mare's legs were swelling.

He and Corey had little to do with each other. He did not know how Penelope had arranged it with Corey; his wife said she knew no more than he did, and he did not like to ask the girl herself, especially as Corey no longer came to the house. He saw that she was cheerfuller than she had been, and helpfuller with him and her mother. Now and then Lapham opened his troubled soul to her a little, letting his thought break into speech without preamble or conclusion. Once he said:

"Pen, I presume you know I'm in trouble."

"We all seem to be there," said the girl.

"Yes, but there's a difference between being there by your own fault and being there by somebody else's."

"I don't call it his fault," she said.

"I call it mine," said the Colonel.

The girl laughed. Her thought was of her own care, and her father's wholly of his. She

must come to his ground. "What have you been doing wrong?"

"I don't know as you'd call it wrong. It's what people do all the time. But I wish I'd let stocks alone. It's what I always promised your mother I would do. But there's no use cryin' over spilt milk; or watered stock, either."

"I don't think there's much use crying about anything. If it could have been cried straight, it would have been all right from the start," said the girl, going back to her own affair; and if Lapham had not been so deeply engrossed in his, he might have seen how little she cared for all that money could do or undo. He did not observe her enough to see how variable her moods were in those days, and how often she sank from some wild gayety into abject melancholy; how at times she was fiercely defiant of nothing at all, and at others inexplicably humble and patient. But no doubt none of these signs had passed unnoticed by his wife, to whom Lapham said one day, when he came home, "Persis, what's the reason Pen don't marry Corey?"

"You know as well as I do, Silas," said Mrs. Lapham, with an inquiring look at him for what lay behind his words.

"Well, I think it's all tomfoolery, the way she's going on. There ain't any rhyme nor reason to it." He stopped, and his wife waited. "If she said the word, I could have some help from them." He hung his head, and would not meet his wife's eye.

"I guess you're in a pretty bad way, Si," she said pityingly, "or you wouldn't have come to that."

"I'm in a hole," said Lapham, "and I don't know where to turn. You won't let me do anything about those mills——"

"Yes, I'll let you," said his wife sadly.

He gave a miserable cry. "You know I can't do anything, if you do. Oh, my Lord!"

She had not seen him so low as that before. She did not know what to say. She was frightened, and could only ask, "Has it come to the worst?"

"The new house has got to go," he answered evasively.

She did not say anything. She knew that the work on the house had been stopped since the beginning of the year. Lapham had told the architect that he preferred to leave it unfinished till the spring, as there was no prospect of their being able to get into it that winter; and the architect had agreed with him that it would not hurt it to stand. Her heart was heavy for him, though she could not say so. They sat together at the table, where she had come to be with him at his belated meal. She saw that he did not eat, and

she waited for him to speak again, without urging him to take anything. They were past that.

"And I've sent orders to shut down at the Works," he added.

"Shut down at the Works!" she echoed with dismay. She could not take it in. The fire at the Works had never been out before since it was first kindled. She knew how he had prided himself upon that; how he had bragged of it to every listener, and had always lugged the fact in as the last expression of his sense of success. "Oh, Silas!"

"What's the use?" he retorted. "I saw it was coming a month ago. There are some fellows out in West Virginia that have been running the paint as hard as they could. They couldn't do much; they used to put it on the market raw. But lately they got to baking it, and now they've struck a vein of natural gas right by their works, and they pay ten cents for fuel where I pay a dollar, and they make as good a paint. Anybody can see where it's going to end. Besides, the market's overstocked. It's glutted. There wa'n't anything to do but to shut *down*, and I've *shut* down."

"I don't know what's going to become of the hands in the middle of the winter, this way," said Mrs. Lapham, laying hold of one definite thought which she could grasp in the turmoil of ruin that whirled before her eyes.

"I don't care what becomes of the hands," cried Lapham. "They've shared my luck; now let 'em share the other thing. And if you're so very sorry for the hands, I wish you'd keep a little of your pity for *me*. Don't you know what shutting down the Works means?"

"Yes, indeed I do, Silas," said his wife tenderly.

"Well, then!" He rose, leaving his supper untasted, and went into the sitting-room, where she presently found him, with that everlasting confusion of papers before him on the desk. That made her think of the paper in her work-basket, and she decided not to make the careworn, distracted man ask her for it, after all. She brought it to him.

He glanced blankly at it and then caught it from her, turning red and looking foolish. "Where'd you get that?"

"You dropped it on the floor the other night, and I picked it up. Who is 'Wm. M.'?"

"'Wm. M.'?" he repeated, looking confusedly at her, and then at the paper. "Oh, —it's nothing." He tore the paper into small pieces, and went and dropped them into the fire. When Mrs. Lapham came into the room in the morning, before he was down, she found a scrap of the paper, which must have fluttered to the hearth; and glancing at it she saw that the words were "Mrs. M." She

wondered what dealings with a woman her husband could have, and she remembered the confusion he had shown about the paper, and which she had thought was because she had surprised one of his business secrets. She was still thinking of it when he came down to breakfast, heavy-eyed, tremulous, with deep seams and wrinkles in his face.

After a silence which he did not seem inclined to break, "Silas," she asked, "who is 'Mrs. M.'?"

He stared at her. "I don't know what you're talking about."

"Don't you?" she returned mockingly. "When you do, you tell me. Do you want any more coffee?"

"No."

"Well, then, you can ring for Alice when you've finished. I've got some things to attend to." She rose abruptly, and left the room. Lapham looked after her in a dull way, and then went on with his breakfast. While he still sat at his coffee, she flung into the room again, and dashed some papers down beside his plate. "Here are some more things of yours, and I'll thank you to lock them up in your desk and not litter my room with them, if you please." Now he saw that she was angry, and it must be with him. It enraged him that in such a time of trouble she should fly out at him in that way. He left the house without trying to speak to her.

That day Corey came just before closing, and, knocking at Lapham's door, asked if he could speak with him a few moments.

"Yes," said Lapham, wheeling round in his swivel-chair and kicking another towards Corey. "Sit down. I want to talk to you. I'd ought to tell you you're wasting your time here. I spoke the other day about your placin' yourself better, and I can help you to do it, yet. There ain't going to be the outcome for the paint in the foreign markets that we expected, and I guess you better give it up."

"I don't wish to give it up," said the young fellow, setting his lips. "I've as much faith in it as ever; and I want to propose now what I hinted at in the first place. I want to put some money into the business."

"Some money!" Lapham leaned towards him, and frowned as if he had not quite understood, while he clutched the arms of his chair.

"I've got about thirty thousand dollars that I could put in, and if you don't want to consider me a partner — I remember that you objected to a partner — you can let me regard it as an investment. But I think I see the way to doing something at once in Mexico, and I should like to feel that I had something more than a drummer's interest in the venture."

The men sat looking into each other's eyes. Then Lapham leaned back in his chair, and rubbed his hand hard and slowly over his face. His features were still twisted with some strong emotion when he took it away. "Your family know about this?"

"My uncle James knows."

"He thinks it would be a good plan for you?"

"He thought that by this time I ought to be able to trust my own judgment."

"Do you suppose I could see your uncle at his office?"

"I imagine he's there."

"Well, I want to have a talk with him, one of these days." He sat pondering awhile, and then rose, and went with Corey to his door. "I guess I sha'n't change my mind about taking you into the business in that way," he said coldly. "If there was any reason why I shouldn't at first, there's more now."

"Very well, sir," answered the young man, and went to close his desk. The outer office was empty; but while Corey was putting his papers in order it was suddenly invaded by two women, who pushed by the protesting porter on the stairs and made their way towards Lapham's room. One of them was Miss Dewey, the type-writer girl, and the other was a woman whom she would resemble in face and figure twenty years hence, if she led a life of hard work varied by paroxysms of hard drinking.

"That his room, Z'rilla?" asked this woman, pointing towards Lapham's door with a hand that had not freed itself from the fringe of dirty shawl under which it had hung. She went forward without waiting for the answer, but before she could reach it the door opened, and Lapham stood filling its space.

"Look here, Colonel Lapham!" began the woman, in a high key of challenge. "I want to know if this is the way you're goin' back on me and Z'rilla?"

"What do you want?" asked Lapham.

"What do I want? What do you s'pose I want? I want the money to pay my month's rent; there ain't a bite to eat in the house; and I want some money to market."

Lapham bent a frown on the woman, under which she shrank back a step. "You've taken the wrong way to get it. Clear out!"

"I *won't* clear out!" said the woman, beginning to whimper.

"Corey!" said Lapham, in the peremptory voice of a master,—he had seemed so indifferent to Corey's presence that the young man thought he must have forgotten he was there,—“is Dennis anywhere round?"

"Yissor," said Dennis, answering for him-

self from the head of the stairs, and appearing in the wareroom.

Lapham spoke to the woman again. "Do you want I should call a hack, or do you want I should call an officer?"

The woman began to cry into an end of her shawl. "I don't know what we're goin' to do."

"You're going to clear out," said Lapham. "Call a hack, Dennis. If you ever come here again, I'll have you arrested. Mind that! Zerrilla, I shall want you early to-morrow morning."

"Yes, sir," said the girl meekly; she and her mother shrank out after the porter.

Lapham shut his door without a word.

At lunch the next day Walker made himself amends for Corey's reticence by talking a great deal. He talked about Lapham, who seemed to have, more than ever since his apparent difficulties began, the fascination of an enigma for his book-keeper, and he ended by asking, "Did you see that little circus last night?"

"What little circus?" asked Corey in his turn.

"Those two women and the old man. Dennis told me about it. I told him if he liked his place he'd better keep his mouth shut."

"That was very good advice," said Corey.

"Oh, all right, if you don't want to talk. Don't know as I should in your place," returned Walker, in the easy security he had long felt that Corey had no intention of putting on airs with him. "But I'll tell you what: the old man can't expect it of everybody. If he keeps this thing up much longer, it's going to be talked about. You can't have a woman walking into your place of business, and trying to bulldoze you before your porter, without setting your porter to thinking. And the last thing you want a porter to do is to think; for when a porter thinks, he thinks wrong."

"I don't see why even a porter couldn't think right about that affair," replied Corey.

"I don't know who the woman was, though I believe she was Miss Dewey's mother; but I couldn't see that Colonel Lapham showed anything but a natural resentment of her coming to him in that way. I should have said she was some rather worthless person whom he'd been befriending, and that she had presumed upon his kindness."

"Is that so? What do you think of his never letting Miss Dewey's name go on the books?"

"That it's another proof it's a sort of charity of his. That's the only way to look at it."

"Oh, *I'm* all right." Walker lighted a cigar

and began to smoke, with his eyes closed to a fine straight line. "It won't do for a book-keeper to think wrong, any more than a porter, I suppose. But I guess you and I don't think very different about this thing."

"Not if you think as I do," replied Corey steadily; "and I know you would do that if you had seen the 'circus' yourself. A man doesn't treat people who have a disgraceful hold upon him as he treated them."

"It depends upon who he is," said Walker, taking his cigar from his mouth. "I never said the old man was afraid of anything."

"And character," continued Corey, disdaining to touch the matter further, except in generalities, "must go for something. If it's to be the prey of mere accident and appearance, then it goes for nothing."

"Accidents will happen in the best-regulated families," said Walker, with vulgar, good-humored obtuseness that filled Corey with indignation. Nothing, perhaps, removed his matter-of-fact nature farther from the commonplace than a certain generosity of instinct, which I should not be ready to say was always infallible.

That evening it was Miss Dewey's turn to wait for speech with Lapham after the others were gone. He opened his door at her knock, and stood looking at her with a worried air. "Well, what do you want, Zerrilla?" he asked, with a sort of rough kindness.

"I want to know what I'm going to do about Hen. He's back again; and he and mother have made it up, and they both got to drinking last night after I went home, and carried on so that the neighbors came in."

Lapham passed his hand over his red and heated face. "I don't know what I'm going to do. You're twice the trouble that my own family is, now. But I know what I'd do, mighty quick, if it wasn't for you, Zerrilla," he went on relentlessly. "I'd shut your mother up somewheres, and if I could get that fellow off for a three years' voyage ——"

"I declare," said Miss Dewey, beginning to whimper, "it seems as if he came back just so often to spite me. He's never gone more than a year at the furthest, and you can't make it out habitual drunkenness, either, when it's just sprees. I'm at my wit's end."

"Oh, well, you mustn't cry around here," said Lapham soothingly.

"I know it," said Miss Dewey. "If I could get rid of Hen, I could manage well enough with mother. Mr. Wommel would marry me if I could get the divorce. He's said so over and over again."

"I don't know as I like that very well," said Lapham, frowning. "I don't know as I want you should get married in any hurry

again. I don't know as I like your going with anybody else just yet."

"Oh, you needn't be afraid but what it'll be all right. It'll be the best thing all round, if I can marry him."

"Well!" said Lapham impatiently; "I can't think about it now. I suppose they've cleaned everything out again?"

"Yes, they have," said Zerrilla; "there isn't a cent left."

"You're a pretty expensive lot," said Lapham. "Well, here!" He took out his pocket-book and gave her a note. "I'll be round to-night and see what can be done."

He shut himself into his room again, and Zerrilla dried her tears, put the note into her bosom, and went her way.

Lapham kept the porter nearly an hour later. It was then six o'clock, the hour at which the Laphams usually had tea; but all custom had been broken up with him during the past months, and he did not go home now. He determined, perhaps in the extremity in which a man finds relief in combating one care with another, to keep his promise to Miss Dewey, and at the moment when he might otherwise have been sitting down at his own table he was climbing the stairs to her lodging in the old-fashioned dwelling which had been portioned off into flats. It was in a region of depots, and of the cheap hotels, and "ladies' and gents'" dining-rooms, and restaurants with bars, which abound near depots; and Lapham followed to Miss Dewey's door a waiter from one of these, who bore on a salver before him a supper covered with a napkin. Zerrilla had admitted them, and at her greeting a young fellow in the shabby shore-suit of a sailor, buttoning imperfectly over the nautical blue flannel of his shirt, got up from where he had been sitting, on one side of the stove, and stood infirmly on his feet, in token of receiving the visitor. The woman who sat on the other side did not rise, but began a shrill, defiant apology.

"Well, I don't suppose but what you'll think we're livin' on the fat o' the land, right straight along, all the while. But it's just like this. When that child came in from her work, she didn't seem to have the spirit to go to cookin' anything, and I had such a bad night last night I was feelin' all broke up, and s'd I, what's the use, anyway? By the time the butcher's heaved in a lot o' bone, and made you pay for the suet he cuts away, it comes to the same thing, and why not *git* it from the rest'rant first off, and save the cost o' your fire? s'd I."

"What have you got there under your apron? A bottle?" demanded Lapham, who stood with his hat on and his hands in his

pockets, indifferent alike to the ineffective reception of the sailor and the chair Zerrilla had set him.

"Well, yes, it's a bottle," said the woman, with an assumption of virtuous frankness. "It's whisky; I got to have *something* to rub my rheumatism with."

"Humph!" grumbled Lapham. "You've been rubbing *his* rheumatism too, I see."

He twisted his head in the direction of the sailor, now softly and rhythmically waving to and fro on his feet.

"He hain't had a drop to-day in *this* house!" cried the woman.

"What are you doing around here?" said Lapham, turning fiercely upon him. "You've got no business ashore. Where's your ship? Do you think I'm going to let you come here and eat your wife out of house and home, and then give money to keep the concern going?"

"Just the very words I said when he first showed his face here, yist'day. Didn't I, Z'rilla?" said the woman, eagerly joining in the rebuke of her late boon companion. "You got no business here, Hen, s'd I. You can't come here to live on me and Z'rilla, s'd I. You want to go back to your ship, s'd I. That's what I said."

The sailor mumbled, with a smile of tipsy amiability for Lapham, something about the crew being discharged.

"Yes," the woman broke in, "that's always the way with these coasters. Why don't you go off on some them long v'y'ges? s'd I. It's pretty hard, when Mr. Wommel stands ready to marry Z'rilla and provide a comfortable home for us both,—I hain't got a great many years more to live, and I *should* like to get some satisfaction out of 'em and not be beholden and dependent all my days,—to have Hen, here, blockin' the way. I tell him there'd be more money for him in the end; but he can't seem to make up his mind to it."

"Well, now, look here," said Lapham. "I don't care anything about all that. It's your own business, and I'm not going to meddle with it. But it's my business who lives off me; and so I tell you all three, I'm willing to take care of Zerrilla, and I'm willing to take care of her mother——"

"I guess if it hadn't been for that child's father," the mother interpolated, "you wouldn't been here to tell the tale, Colonel Lapham."

"I know all about that," said Lapham. "But I'll tell you what, Mr. Dewey, I'm not going to support *you*."

"I don't see what Hen's done," said the old woman, impartially.

"He hasn't done anything, and I'm going to stop it. He's got to get a ship, and he's

got to get out of this. And Zerrilla needn't come back to work till he does. I'm done with you all."

"Well, I vow," said the mother, "if I ever heard anything like it! Didn't that child's father lay down his life for you? Hain't you said it yourself a hundred times? And don't she work for her money, and slave for it mornin', noon, and night? You talk as if we was beholden to you for the very bread in our mouths. I guess if it hadn't been for Jim, you wouldn't been here crowin' over us."

"You mind what I say. I mean business this time," said Lapham, turning to the door.

The woman rose and followed him, with her bottle in her hand. "Say, Colonel! what should you advise Z'rilla to do about Mr. Wommel? I tell her there ain't any use goin' to the trouble to git a divorce without she's sure about him. Don't you think we'd ought to git him to sign a paper, or something, that he'll marry her if she gits it? I don't like to have things going at loose ends the way they are. It ain't sense. It ain't right."

Lapham made no answer to the mother anxious for her child's future, and concerned for the moral questions involved. He went out and down the stairs, and on the pavement at the lower door he almost struck against Rogers, who had a bag in his hand, and seemed to be hurrying towards one of the depots. He halted a little, as if to speak to Lapham; but Lapham turned his back abruptly upon him, and took the other direction.

The days were going by in a monotony of adversity to him, from which he could no longer escape, even at home. He attempted once or twice to talk of his troubles to his wife, but she repulsed him sharply; she seemed to despise and hate him; but he set himself doggedly to make a confession to her, and he stopped her one night, as she came into the room where he sat—hastily upon some errand that was to take her directly away again.

"Persis, there's something I've got to tell you."

She stood still, as if fixed against her will, to listen.

"I guess you know something about it already, and I guess it's set you against me."

"Oh, I guess not, Colonel Lapham. You go your way, and I go mine. That's all."

She waited for him to speak, listening with a cold, hard smile on her face.

"I don't say it to make favor with you, because I don't want you to spare me, and I don't ask you; but I got into it through Milton K. Rogers."

"Oh!" said Mrs. Lapham contemptuously.

"I always felt the way I said about it — that it wa'n't any better than gambling, and I say so now. It's like betting on the turn of a card; and I give you my word of honor, Persis, that I never was in it at all till that scoundrel began to load me up with those wild-cat securities of his. Then it seemed to me as if I ought to try to do something to get somewhere even. I know it's no excuse; but watching the market to see what the infernal things were worth from day to day, and seeing it go up, and seeing it go down, was too much for me; and, to make a long story short, I began to buy and sell on a margin — just what I told you I never would do. I seemed to make something — I did make something; and I'd have stopped, I do believe, if I could have reached the figure I'd set in my own mind to start with; but I couldn't fetch it. I began to lose, and then I began to throw good money after bad, just as I always did with everything that Rogers ever came within a mile of. Well, what's the use? I lost the money that would have carried me out of this, and I shouldn't have had to shut down the Works, or sell the house, or —"

Lapham stopped. His wife, who at first had listened with mystification, and then dawning incredulity, changing into a look of relief that was almost triumph, lapsed again into severity. "Silas Lapham, if you was to die the next minute, is this what you started to tell me?"

"Why, of course it is. What did you suppose I started to tell you?"

"And — look me in the eyes! — you haven't got anything else on your mind now?"

"No! There's trouble enough, the Lord knows; but there's nothing else to tell you. I suppose Pen gave you a hint about it. I dropped something to her. I've been feeling bad about it, Persis, a good while, but I hain't had the heart to speak of it. I can't expect you to say you like it. I've been a fool, I'll allow, and I've been something worse, if you choose to say so; but that's all. I haven't hurt anybody but myself — and you and the children."

Mrs. Lapham rose and said, with her face from him, as she turned towards the door, "It's all right, Silas. I sha'n't ever bring it up against you."

She fled out of the room, but all that evening she was very sweet with him, and seemed to wish in all tacit ways to atone for her past unkindness.

She made him talk of his business, and he told her of Corey's offer, and what he had done about it. She did not seem to care for his part in it, however; at which Lapham was

silently disappointed a little, for he would have liked her to praise him.

"He did it on account of Pen!"

"Well, he didn't insist upon it, anyway," said Lapham, who must have obscurely expected that Corey would recognize his own magnanimity by repeating his offer. If the doubt that follows a self-devoted action — the question whether it was not after all a needless folly — is mixed, as it was in Lapham's case, with the vague belief that we might have done ourselves a good turn without great risk of hurting any one else by being a little less unselfish, it becomes a regret that is hard to bear. Since Corey spoke to him, some things had happened that gave Lapham hope again.

"I'm going to tell her about it," said his wife, and she showed herself impatient to make up for the time she had lost. "Why didn't you tell me before, Silas?"

"I didn't know we were on speaking terms before," said Lapham sadly.

"Yes, that's true," she admitted, with a conscious flush. "I hope he won't think Pen's known about it all this while."

XXIV.

THAT evening James Bellingham came to see Corey after dinner, and went to find him in his own room.

"I've come at the instance of Colonel Lapham," said the uncle. "He was at my office to-day, and I had a long talk with him. Did you know that he was in difficulties?"

"I fancied that he was in some sort of trouble. And I had the book-keeper's conjectures — he doesn't really know much about it."

"Well, he thinks it time — on all accounts — that you should know how he stands, and why he declined that proposition of yours. I must say he has behaved very well — like a gentleman."

"I'm not surprised."

"I am. It's hard to behave like a gentleman where your interest is vitally concerned. And Lapham doesn't strike me as a man who's in the habit of acting from the best in him always."

"Do any of us?" asked Corey.

"Not all of us, at any rate," said Bellingham. "It must have cost him something to say no to you, for he's just in that state when he believes that this or that chance, however small, would save him."

Corey was silent. "Is he really in such a bad way?"

"It's hard to tell just where he stands. I suspect that a hopeful temperament and fondness for round numbers have always caused

him to set his figures beyond his actual worth. I don't say that he's been dishonest about it, but he's had a loose way of estimating his assets; he's reckoned his wealth on the basis of his capital, and some of his capital is borrowed. He's lost heavily by some of the recent failures, and there's been a terrible shrinkage in his values. I don't mean merely in the stock of paint on hand, but in a kind of competition which has become very threatening. You know about that West Virginia paint?"

Corey nodded.

"Well, he tells me that they've struck a vein of natural gas out there which will enable them to make as good a paint as his own at a cost of manufacturing so low that they can undersell him everywhere. If this proves to be the case, it will not only drive his paint out of the market, but will reduce the value of his Works—the whole plant—at Lapham to a merely nominal figure."

"I see," said Corey dejectedly. "I've understood that he had put a great deal of money into his Works."

"Yes, and he estimated his mine there at a high figure. Of course it will be worth little or nothing if the West Virginia paint drives his out. Then, besides, Lapham has been into several things outside of his own business, and, like a good many other men who try outside things, he's kept account of them himself; and he's all mixed up about them. He's asked me to look into his affairs with him, and I've promised to do so. Whether he can be tided over his difficulties remains to be seen. I'm afraid it will take a good deal of money to do it—a great deal more than he thinks, at least. He believes comparatively little would do it. I think differently. I think that anything less than a great deal would be thrown away on him. If it were merely a question of a certain sum—even a large sum—to keep him going, it might be managed; but it's much more complicated. And, as I say, it must have been a trial to him to refuse your offer."

This did not seem to be the way in which Bellingham had meant to conclude. But he said no more; and Corey made him no response.

He remained pondering the case, now hopefully, now doubtfully, and wondering, whatever his mood was, whether Penelope knew anything of the fact with which her mother went nearly at the same moment to acquaint her.

"Of course, he's done it on your account," Mrs. Lapham could not help saying.

"Then he was very silly. Does he think I would have let him give father money? And

if father lost it for him, does he suppose it would make it any easier for me? I think father acted twice as well. It was very silly."

In repeating the censure, her look was not so severe as her tone; she even smiled a little, and her mother reported to her father that she acted more like herself than she had yet since Corey's offer.

"I think, if he was to repeat his offer, she would have him now," said Mrs. Lapham.

"Well, I'll let her know if he does," said the Colonel.

"I guess he won't do it to you!" she cried.

"Who else will he do it to?" he demanded.

They perceived that they had each been talking of a different offer.

After Lapham went to his business in the morning the postman brought another letter from Irene, which was full of pleasant things that were happening to her; there was a great deal about her cousin Will, as she called him. At the end she had written, "Tell Pen I don't want she should be foolish."

"There!" said Mrs. Lapham. "I guess it's going to come out right, all round;" and it seemed as if even the Colonel's difficulties were past. "When your father gets through this, Pen," she asked impulsively, "what shall you do?"

"What have you been telling Irene about me?"

"Nothing much. What should you do?"

"It would be a good deal easier to say what I should do if father didn't," said the girl.

"I know you think it was nice in him to make your father that offer," urged the mother.

"It was nice, yes; but it was silly," said the girl. "Most nice things are silly, I suppose," she added.

She went to her room and wrote a letter. It was very long, and very carefully written; and when she read it over, she tore it into small pieces. She wrote another one, short and hurried, and tore that up too. Then she went back to her mother, in the family room, and asked to see Irene's letter, and read it over to herself. "Yes, she seems to be having a good time," she sighed. "Mother, do you think I ought to let Mr. Corey know that I know about it?"

"Well, I should think it would be a pleasure to him," said Mrs. Lapham judicially.

"I'm not so sure of that—the way I should have to tell him. I should begin by giving him a scolding. Of course, he meant well by it, but can't you see that it wasn't very flattering? How did he expect it would change me?"

"I don't believe he ever thought of that."

"Don't you? Why?"

"Because you can see that he isn't one of

that kind. He might want to please you without wanting to change you by what he did."

"Yes. He must have known that nothing would change me,—at least, nothing that he could do. I thought of that. I shouldn't like him to feel that I couldn't appreciate it, even if I did think it was silly. Should you write to him?"

"I don't see why not."

"It would be too pointed. No, I shall just let it go. I wish he hadn't done it."

"Well, he has done it."

"And I've tried to write to him about it—two letters: one so humble and grateful that it couldn't stand up on its edge, and the other so pert and flippant. Mother, I wish you could have seen those two letters! I wish I had kept them to look at if I ever got to thinking I had any sense again. They would take the conceit out of me."

"What's the reason he don't come here any more?"

"Doesn't he come?" asked Penelope in turn, as if it were something she had not noticed particularly.

"You'd ought to know."

"Yes." She sat silent awhile. "If he doesn't come, I suppose it's because he's offended at something I did."

"What did you do?"

"Nothing. I—wrote to him—a little while ago. I suppose it was very blunt, but I didn't believe he would be angry at it. But this—this that he's done shows he was angry, and that he wasn't just seizing the first chance to get out of it."

"What have you done, Pen?" demanded her mother sharply.

"Oh, I don't know. All the mischief in the world, I suppose. I'll tell you. When you first told me that father was in trouble with his business, I wrote to him not to come any more till I let him. I said I couldn't tell him why, and he hasn't been here since. I'm sure I don't know what it means."

Her mother looked at her with angry severity. "Well, Penelope Lapham! For a sensible child, you *are* the greatest goose I ever saw. Did you think he would come here and see if you wouldn't let him come?"

"He might have written," urged the girl.

Her mother made that despairing "Tchk!" with her tongue, and fell back in her chair. "I should have *despised* him if he had written. He's acted just exactly right, and you—you've acted—I don't know *how* you've acted. I'm ashamed of you. A girl that could be so sensible for her sister, and always say and do just the right thing, and then when it comes to herself to be such a *disgusting* simpleton!"

"I thought I ought to break with him at once, and not let him suppose that there was any hope for him or me if father was poor. It was my one chance, in this whole business, to do anything heroic, and I jumped at it. You mustn't think, because I can laugh at it now, that I wasn't in earnest, mother! I *was*—dead! But the Colonel has gone to ruin so gradually, that he's spoilt everything. I expected that he would be bankrupt the next day, and that then *he* would understand what I meant. But to have it drag along for a fortnight seems to take all the heroism out of it, and leave it as flat!" She looked at her mother with a smile that shone through her tears, and a pathos that quivered round her jesting lips. "It's easy enough to be sensible for other people. But when it comes to myself, there I am! Especially, when I want to do what I oughtn't so much that it seems as if doing what I didn't want to do *must* be doing what I ought! But it's been a great success one way, mother. It's helped me to keep up before the Colonel. If it hadn't been for Mr. Corey's staying away, and my feeling so indignant with him for having been badly treated by me, I shouldn't have been worth anything at all."

The tears started down her cheeks, but her mother said, "Well, now, go along, and write to him. It don't matter what you say, much; and don't be so very particular."

Her third attempt at a letter pleased her scarcely better than the rest, but she sent it, though it seemed so blunt and awkward. She wrote:

DEAR FRIEND:

I expected when I sent you that note, that you would understand, almost the next day, why I could not see you any more. You must know now, and you must not think that if anything happened to my father, I should wish you to help him. But that is no reason why I should not thank you, and I do thank you, for offering. It was like you, I will say that.

Yours sincerely,

PENELOPE LAPHAM.

She posted her letter, and he sent his reply in the evening, by hand:

DEAREST:

What I did was nothing, till you praised it. Everything I have and am is yours. Won't you send a line by the bearer, to say that I may come to see you? I know how you feel; but I am sure that I can make you think differently. You must consider that I loved you without a thought of your father's circumstances, and always shall.

T. C.

The generous words were blurred to her eyes by the tears that sprang into them. But she could only write in answer:

"Please do not come; I have made up my mind. As long as this trouble is hanging over us, I cannot see you. And if father is unfortunate, all is over between us."

She brought his letter to her mother, and told her what she had written in reply. Her mother was thoughtful awhile before she said, with a sigh, "Well, I hope you've begun as you can carry out, Pen."

"Oh, I shall not have to carry out at all. I shall not have to do anything. That's one comfort—the only comfort." She went away to her own room, and when Mrs. Lapham told her husband of the affair, he was silent at first, as she had been. Then he said, "I don't know as I should have wanted her to done differently; I don't know as she could. If I ever come right again, she won't have anything to feel meeched about; and if I don't, I don't want she should be beholden to anybody. And I guess that's the way she feels."

The Coreys in their turn sat in judgment on the fact which their son felt bound to bring to their knowledge.

"She has behaved very well," said Mrs. Corey, to whom her son had spoken.

"My dear," said her husband, with his laugh, "she has behaved *too* well. If she had studied the whole situation with the most artful eye to its mastery, she could not possibly have behaved better."

The process of Lapham's financial disintegration was like the course of some chronic disorder, which has fastened itself upon the constitution, but advances with continual reliefs, with apparent amelioration, and at times seems not to advance at all, when it gives hope of final recovery not only to the sufferer, but to the eye of science itself. There were moments when James Bellingham, seeing Lapham pass this crisis and that, began to fancy that he might pull through altogether; and at these moments, when his adviser could not oppose anything but experience and probability to the evidence of the fact, Lapham was buoyant with courage, and imparted his hopefulness to his household. Our theory of disaster, of sorrow, of affliction, borrowed from the poets and novelists, is that it is incessant; but every passage in our own lives and in the lives of others, so far as we have witnessed them, teaches us that this is false. The house of mourning is decorously darkened to the world, but within itself it is also the house of laughing. Bursts of gayety, as heartfelt as its grief, relieve the gloom, and the stricken survivors have their jests together, in which the thought of the dead is tenderly involved, and a fond sense, not crazier than many others, of sympathy and enjoyment beyond the silence, justifies the sunnier mood before sorrow rushes back, deploring and despairing, and making it all up again with the conventional fitness of things. Lapham's adversity had this quality in common

with bereavement. It was not always like the adversity we figure in allegory; it had its moments of being like prosperity, and if upon the whole it was continual, it was not incessant. Sometimes there was a week of repeated reverses, when he had to keep his teeth set and to hold on hard to all his hopefulness; and then days came of negative result or slight success, when he was full of his jokes at the tea-table, and wanted to go to the theater, or to do something to cheer Penelope up. In some miraculous way, by some enormous stroke of success which should eclipse the brightest of his past prosperity, he expected to do what would reconcile all difficulties, not only in his own affairs, but in hers too. "You'll see," he said to his wife; "it's going to come out all right. Irene'll fix it up with Bill's boy, and then she'll be off Pen's mind; and if things go on as they've been going for the last two days, I'm going to be in a position to do the favors myself, and Pen can feel that *she's* makin' a sacrifice, and then I guess may be she'll do it. If things turn out as I expect now, and times ever *do* get any better generally, I can show Corey that I appreciate his offer. I can offer him the partnership myself then."

Even in the other moods, which came when everything had been going wrong, and there seemed no way out of the net, there were points of consolation to Lapham and his wife. They rejoiced that Irene was safe beyond the range of their anxieties, and they had a proud satisfaction that there had been no engagement between Corey and Penelope, and that it was she who had forbidden it. In the closeness of interest and sympathy in which their troubles had reunited them, they confessed to each that nothing would have been more galling to their pride than the idea that Lapham should not have been able to do everything for his daughter that the Coreys might have expected. Whatever happened now, the Coreys could not have it to say that the Laphams had tried to bring any such thing about.

Bellingham had lately suggested an assignment to Lapham, as the best way out of his difficulties. It was evident that he had not the money to meet his liabilities at present, and that he could not raise it without ruinous sacrifices, that might still end in ruin after all. If he made the assignment, Bellingham argued, he could gain time and make terms; the state of things generally would probably improve, since it could not be worse, and the market, which he had glutted with his paint, might recover and he could start again. Lapham had not agreed with him. When his reverses first began, it had seemed easy for him to give up everything, to let the people he owed take all,

so only they would let him go out with clean hands; and he had dramatized this feeling in his talk with his wife, when they spoke together of the mills on the G. L. & P. But ever since then it had been growing harder, and he could not consent even to seem to do it now in the proposed assignment. He had not found other men so very liberal or faithful with him; a good many of them appeared to have combined to hunt him down; a sense of enmity towards all his creditors asserted itself in him; he asked himself why they should not suffer a little too. Above all, he shrank from the publicity of the assignment. It was open confession that he had been a fool in some way; he could not bear to have his family—his brother the judge, especially, to whom he had always appeared the soul of business wisdom—think him imprudent or stupid. He would make any sacrifice before it came to that. He determined in parting with Bellingham to make the sacrifice which he had oftenest in his mind, because it was the hardest, and to sell his new house. That would cause the least comment. Most people would simply think that he had got a splendid offer, and with his usual luck had made a very good thing of it; others who knew a little more about him would say that he was hauling in his horns, but they could not blame him; a great many other men were doing the same in those hard times—the shrewdest and safest men; it might even have a good effect.

He went straight from Bellingham's office to the real-estate broker in whose hands he meant to put his house, for he was not the sort of man to shilly-shally when he had once made up his mind. But he found it hard to get his voice up out of his throat, when he said he guessed he would get the broker to sell that new house of his on the water side of Beacon. The broker answered cheerfully, yes; he supposed Colonel Lapham knew it was a pretty dull time in real estate? and Lapham said yes, he knew that, but he should not sell at a sacrifice, and he did not care to have the broker name him or describe the house definitely unless parties meant business. Again the broker said yes; and he added, as a joke Lapham would appreciate, that he had half a dozen houses on the water side of Beacon on the same terms; that nobody wanted to be named or to have his property described.

It did, in fact, comfort Lapham a little to find himself in the same boat with so many others; he smiled grimly, and said in his turn, yes, he guessed that was about the size of it with a good many people. But he had not the heart to tell his wife what he had done, and he sat taciturn that whole evening, without even going over his accounts, and went

early to bed, where he lay tossing half the night before he fell asleep. He slept at last only upon the promise he made himself that he would withdraw the house from the broker's hands; but he went heavily to his own business in the morning without doing so. There was no such rush, anyhow, he reflected bitterly; there would be time to do that a month later, probably.

It struck him with a sort of dismay when a boy came with a note from the broker, saying that a party who had been over the house in the fall had come to him to know whether it could be bought, and was willing to pay the cost of the house up to the time he had seen it. Lapham took refuge in trying to think who the party could be; he concluded that it must have been somebody who had gone over it with the architect, and he did not like that; but he was aware that this was not an answer to the broker, and he wrote that he would give him an answer in the morning.

Now that it had come to the point, it did not seem to him that he could part with the house. So much of his hope for himself and his children had gone into it that the thought of selling it made him tremulous and sick. He could not keep about his work steadily, and with his nerves shaken by want of sleep, and the shock of this sudden and unexpected question, he left his office early, and went over to look at the house and try to bring himself to some conclusion there. The long procession of lamps on the beautiful street was flaring in the clear red of the sunset towards which it marched, and Lapham, with a lump in his throat, stopped in front of his house and looked at their multitude. They were not merely a part of the landscape; they were a part of his pride and glory, his success, his triumphant life's work which was fading into failure in his helpless hands. He ground his teeth to keep down that lump, but the moisture in his eyes blurred the lamps, and the keen, pale crimson against which it made them flicker. He turned and looked up, as he had so often done, at the window-spaces, neatly glazed for the winter with white linen, and recalled the night when he had stopped with Irene before the house, and she had said that she should never live there, and he had tried to coax her into courage about it. There was no such façade as that on the whole street, to his thinking. Through his long talks with the architect, he had come to feel almost as intimately and fondly as the architect himself the satisfying simplicity of the whole design and the delicacy of its detail. It appealed to him as an exquisite bit of harmony appeals to the unlearned ear, and he recognized the difference between this fine work and the obstreperous pretentious-

ness of the many overloaded house-fronts which Seymour had made him notice for his instruction elsewhere on the Back Bay. Now, in the depths of his gloom, he tried to think what Italian city it was where Seymour said he had first got the notion of treating brick-work in that way.

He unlocked the temporary door with the key he always carried, so that he could let himself in and out whenever he liked, and entered the house, dim and very cold with the accumulated frigidity of the whole winter in it, and looking as if the arrest of work upon it had taken place a thousand years before. It smelt of the unpainted woods and the clean, hard surfaces of the plaster, where the experiments in decoration had left it untouched; and mingled with these odors was that of some rank pigments and metallic compositions which Seymour had used in trying to realize a certain daring novelty of finish, which had not proved successful. Above all, Lapham detected the peculiar odor of his own paint, with which the architect had been greatly interested one day, when Lapham showed it to him at the office. He had asked Lapham to let him try the Persis Brand in realizing a little idea he had for the finish of Mrs. Lapham's room. If it succeeded, they could tell her what it was, for a surprise.

Lapham glanced at the bay-window in the reception-room, where he sat with his girls on the trestles when Corey first came by; and then he explored the whole house to the attic, in the light faintly admitted through the linen sashes. The floors were strewn with shavings and chips which the carpenters had left, and in the music-room these had been blown into long irregular windrows by the draughts through a wide rent in the linen sash. Lapham tried to pin it up, but failed, and stood looking out of it over the water. The ice had left the river, and the low tide lay smooth and red in the light of the sunset. The Cambridge flats showed the sad, sodden yellow of meadows stripped bare after a long sleep under snow; the hills, the naked trees, the spires and roofs had a black outline, as if they were objects in a landscape of the French school.

The whim seized Lapham to test the chimney in the music-room; it had been tried in the dining-room below, and in his girls' fire-places above, but here the hearth was still clean. He gathered some shavings and blocks together, and kindled them, and as the flame mounted gayly from them, he pulled up a nail-keg which he found there and sat down to watch it. Nothing could have been better; the chimney was a perfect success; and as Lapham glanced out of the torn linen sash he said to himself that that party,

whoever he was, who had offered to buy his house might go to the devil; he would never sell it as long as he had a dollar. He said that he should pull through yet; and it suddenly came into his mind that, if he could raise the money to buy out those West Virginia fellows, he should be all right, and would have the whole game in his own hand. He slapped himself on the thigh, and wondered that he had never thought of that before; and then, lighting a cigar with a splinter from the fire, he sat down again to work the scheme out in his own mind.

He did not hear the feet heavily stamping up the stairs, and coming towards the room where he sat; and the policeman to whom the feet belonged had to call out to him, smoking at his chimney-corner, with his back turned to the door, "Hello! what are you doing here?"

"What's that to you?" retorted Lapham, wheeling half round on his nail-keg.

"I'll show you," said the officer, advancing upon him, and then stopping short as he recognized him. "Why, Colonel Lapham! I thought it was some tramp got in here!"

"Have a cigar?" said Lapham hospitably. "Sorry there ain't another nail-keg."

The officer took the cigar. "I'll smoke it outside. I've just come on, and I can't stop. Tryin' your chimney?"

"Yes, I thought I'd see how it would draw, in here. It seems to go first-rate."

The policeman looked about him with an eye of inspection. "You want to get that linen window, there, mended up?"

"Yes, I'll speak to the builder about that. It can go for one night."

The policeman went to the window and failed to pin the linen together where Lapham had failed before. "I can't fix it." He looked round once more, and saying, "Well, good-night," went out and down the stairs.

Lapham remained by the fire till he had smoked his cigar; then he rose and stamped upon the embers that still burned with his heavy boots, and went home. He was very cheerful at supper. He told his wife that he guessed he had a sure thing of it now, and in another twenty-four hours he should tell her just how. He made Penelope go to the theater with him, and when they came out, after the play, the night was so fine that he said they must walk round by the new house and take a look at it in the starlight. He said he had been there before he came home, and tried Seymour's chimney in the music-room, and it worked like a charm.

As they drew near Beacon street they were aware of unwonted stir and tumult, and presently the still air transmitted a turmoil of sound, through which a powerful and incessant throb-

bing made itself felt. The sky had reddened above them, and turning the corner at the Public Garden, they saw a black mass of people obstructing the white perspective of the snowy street, and out of this mass a half dozen engines, whose strong heart-beats had already reached them, sent up volumes of fire-tinged smoke and steam from their funnels. Ladders were planted against the façade of a building, from the roof of which a mass of flame burnt smoothly upward, except where here and there it seemed to pull contemptuously away from the heavy streams of water which the firemen, clinging like great beetles to their ladders, poured in upon it.

Lapham had no need to walk down through the crowd, gazing and gossiping, with shouts and cries and hysterical laughter, before the burning house, to make sure that it was his.

"I guess I done it, Pen," was all he said.

Among the people who were looking at it were a party who seemed to have run out from dinner in some neighboring house; the ladies were fantastically wrapped up, as if they had flung on the first things they could seize.

"Isn't it perfectly magnificent!" cried a pretty girl. "I wouldn't have missed it on any account. Thank you *so* much, Mr. Symington, for bringing us out!"

"Ah, I thought you'd like it," said this Mr. Symington, who must have been the host; "and you can enjoy it without the least compunction, Miss Delano, for I happen to know that the house belongs to a man who could afford to burn one up for you once a year."

"Oh, do you think he would, if I came again?"

"I haven't the least doubt of it. We don't do things by halves in Boston."

"He ought to have had a coat of his non-combustible paint on it," said another gentleman of the party.

Penelope pulled her father away toward the first carriage she could reach of a number that had driven up. "Here, father! get into this."

"No, no; I couldn't ride," he answered heavily, and he walked home in silence. He greeted his wife with, "Well, Persis, our house is gone! And I guess I set it on fire myself;" and while he rummaged among the papers in his desk, still with his coat and hat on, his wife got the facts as she could from Penelope. She did not reproach him. Here was a case in which his self-reproach must be sufficiently sharp without any edge from her. Besides, her mind was full of a terrible thought.

"Oh, Silas," she faltered, "they'll think you set it on fire to get the insurance!"

Lapham was staring at a paper which he

held in his hand. "I had a builder's risk on it, but it expired last week. It's a dead loss."

"Oh, thank the merciful Lord!" cried his wife.

"Merciful!" said Lapham. "Well, it's a queer way of showing it."

He went to bed, and fell into the deep sleep which sometimes follows a great moral shock. It was perhaps rather a torpor than a sleep.

XXV.

LAPHAM awoke confused, and in a kind of remoteness from the loss of the night before, through which it loomed mistily. But before he lifted his head from the pillow, it gathered substance and weight against which it needed all his will to bear up and live. In that moment he wished that he had not wakened, that he might never have wakened; but he rose, and faced the day and its cares.

The morning papers brought the report of the fire, and the conjectured loss. The reporters somehow had found out the fact that the loss fell entirely upon Lapham; they lighted up the hackneyed character of their statements with the picturesque interest of the coincidence that the policy had expired only the week before; heaven knows how they knew it. They said that nothing remained of the building but the walls; and Lapham, on his way to business, walked up past the smoke-stained shell. The windows looked like the eye-sockets of a skull down upon the blackened and trampled snow of the street; the pavement was a sheet of ice, and the water from the engines had frozen, like streams of tears, down the face of the house, and hung in icy tags from the window-sills and copings.

He gathered himself up as well as he could, and went on to his office. The chance of retrieval that had flashed upon him, as he sat smoking by that ruined hearth the evening before, stood him in such stead now as a sole hope may; and he said to himself that, having resolved not to sell his house, he was no more crippled by its loss than he would have been by letting his money lie idle in it; what he might have raised by mortgage on it could be made up in some other way; and if they would sell, he could still buy out the whole business of that West Virginia company, mines, plant, stock on hand, good-will, and everything, and unite it with his own. He went early in the afternoon to see Bellingham, whose expressions of condolence for his loss he cut short with as much politeness as he knew how to throw into his impatience. Bellingham seemed at first a little dazzled with

the splendid courage of his scheme; it was certainly fine in its way; but then he began to have his misgivings.

"I happen to know that they haven't got much money behind them," urged Lapham. "They'll jump at an offer."

Bellingham shook his head. "If they can show profit on the old manufacture, and prove they can make their paint still cheaper and better hereafter, they can have all the money they want. And it will be very difficult for you to raise it if you're threatened by them. With that competition, you know what your plant at Lapham would be worth, and what the shrinkage on your manufactured stock would be. Better sell out to them," he concluded, "if they will buy."

"There ain't money enough in this country to buy out my paint," said Lapham, buttoning up his coat in a quiver of resentment. "Good-afternoon, sir." Men are but grown-up boys, after all. Bellingham watched this perversely proud and obstinate child fling petulantly out of his door, and felt a sympathy for him which was as truly kind as it was helpless.

But Lapham was beginning to see through Bellingham, as he believed. Bellingham was, in his way, part of that conspiracy by which Lapham's creditors were trying to drive him to the wall. More than ever now he was glad that he had nothing to do with that cold-hearted, self-conceited race, and that the favors so far were all from his side. He was more than ever determined to show them, every one of them, high and low, that he and his children could get along without them, and prosper and triumph without them. He said to himself that if Penelope were engaged to Corey that very minute, he would make her break with him.

He knew what he should do now, and he was going to do it without loss of time. He was going on to New York to see those West Virginia people; they had their principal office there, and he intended to get at their ideas, and then he intended to make them an offer. He managed this business better than could possibly have been expected of a man in his impassioned mood. But when it came really to business, his practical instincts, alert and wary, came to his aid against the passions that lay in wait to betray after they ceased to dominate him. He found the West Virginians full of zeal and hope, but in ten minutes he knew that they had not yet tested their strength in the money market, and had not ascertained how much or how little capital they could command. Lapham himself, if he had had so much, would not have hesitated to put a million dollars into

their business. He saw, as they did not see, that they had the game in their own hands, and that if they could raise the money to extend their business, they could ruin him. It was only a question of time, and he was on the ground first. He frankly proposed a union of their interests. He admitted that they had a good thing, and that he should have to fight them hard; but he meant to fight them to the death unless they could come to some sort of terms. Now, the question was whether they had better go on and make a heavy loss for both sides by competition, or whether they had better form a partnership to run both paints and command the whole market. Lapham made them three propositions, each of which was fair and open: to sell out to them altogether; to buy them out altogether; to join facilities and forces with them, and go on in an invulnerable alliance. Let them name a figure at which they would buy, a figure at which they would sell, a figure at which they would combine,—or, in other words, the amount of capital they needed.

They talked all day, going out to lunch together at the Astor House, and sitting with their knees against the counter on a row of stools before it for fifteen minutes of reflection and deglutition, with their hats on, and then returning to the basement from which they emerged. The West Virginia company's name was lettered in gilt on the wide low window, and its paint, in the form of ore, burnt, and mixed, formed a display on the window shelf. Lapham examined it and praised it; from time to time they all recurred to it together; they sent out for some of Lapham's paint and compared it, the West Virginians admitting its former superiority. They were young fellows, and country persons, like Lapham, by origin, and they looked out with the same amused, undaunted, provincial eyes at the myriad metropolitan legs passing on the pavement above the level of their window. He got on well with them. At last, they said what they would do. They said it was nonsense to talk of buying Lapham out, for they had not the money; and as for selling out, they would not do it, for they knew they had a big thing. But they would as soon use his capital to develop it as anybody else's, and if he could put in a certain sum for this purpose, they would go in with him. He should run the works at Lapham and manage the business in Boston, and they would run the works at Kanawha Falls and manage the business in New York. The two brothers with whom Lapham talked named their figure, subject to the approval of another brother at Kanawha Falls, to whom they would write, and who would telegraph his answer, so that Lapham

could have it inside of three days. But they felt perfectly sure that he would approve; and Lapham started back on the eleven o'clock train with an elation that gradually left him as he drew near Boston, where the difficulties of raising this sum were to be overcome. It seemed to him, then, that those fellows had put it up on him pretty steep, but he owned to himself that they had a sure thing, and that they were right in believing they could raise the same sum elsewhere; it would take all of it, he admitted, to make their paint pay on the scale they had the right to expect. At their age, he would not have done differently; but when he emerged, old, sore, and sleep-broken, from the sleeping-car in the Albany depot at Boston, he wished with a pathetic self-pity that they knew how a man felt at his age. A year ago, six months ago, he would have laughed at the notion that it would be hard to raise the money. But he thought ruefully of that immense stock of paint on hand, which was now a drug in the market, of his losses by Rogers and by the failures of other men, of the fire that had licked up so many thousands in a few hours; he thought with bitterness of the tens of thousands that he had gambled away in stocks, and of the commissions that the brokers had pocketed whether he won or lost; and he could not think of any securities on which he could borrow, except his house in Nankeen Square, or the mine and works at Lapham. He set his teeth in helpless rage when he thought of that property out on the G. L. & P., that ought to be worth so much, and was worth so little if the road chose to say so.

He did not go home, but spent most of the day shinning round, as he would have expressed it, and trying to see if he could raise the money. But he found that people of whom he hoped to get it were in the conspiracy which had been formed to drive him to the wall. Somehow, there seemed a sense of his embarrassments abroad. Nobody wanted to lend money on the plant at Lapham without taking time to look into the state of the business; but Lapham had no time to give, and he knew that the state of the business would not bear looking into. He could raise fifteen thousand on his Nankeen Square house, and another fifteen on his Beacon street lot, and this was all that a man who was worth a million by rights could do! He said a million, and he said it in defiance of Bellingham, who had subjected his figures to an analysis which wounded Lapham more than he chose to show at the time, for it proved that he was not so rich and not so wise as he had seemed. His hurt vanity forbade him to go to Bellingham now for help or advice; and if he could

have brought himself to ask his brothers for money, it would have been useless; they were simply well-to-do Western people, but not capitalists on the scale he required.

Lapham stood in the isolation to which adversity so often seems to bring men. When its test was applied, practically or theoretically, to all those who had seemed his friends, there was none who bore it; and he thought with bitter self-contempt of the people whom he had befriended in their time of need. He said to himself that he had been a fool for that; and he scorned himself for certain acts of scrupulosity by which he had lost money in the past. Seeing the moral forces all arrayed against him, Lapham said that he would like to have the chance offered him to get even with them again; he thought he should know how to look out for himself. As he understood it, he had several days to turn about in, and he did not let one day's failure dishearten him. The morning after his return he had, in fact, a gleam of luck that gave him the greatest encouragement for the moment. A man came in to inquire about one of Rogers's wild-cat patents, as Lapham called them, and ended by buying it. He got it, of course, for less than Lapham took it for, but Lapham was glad to be rid of it for something, when he had thought it worth nothing; and when the transaction was closed, he asked the purchaser rather eagerly if he knew where Rogers was; it was Lapham's secret belief that Rogers had found there was money in the thing, and had sent the man to buy it. But it appeared that this was a mistake; the man had not come from Rogers, but had heard of the patent in another way; and Lapham was astonished in the afternoon, when his boy came to tell him that Rogers was in the outer office, and wished to speak with him.

"All right," said Lapham, and he could not command at once the severity for the reception of Rogers which he would have liked to use. He found himself, in fact, so much relaxed towards him by the morning's touch of prosperity that he asked him to sit down, gruffly, of course, but distinctly; and when Rogers said in his lifeless way, and with the effect of keeping his appointment of a month before, "Those English parties are in town, and would like to talk with you in reference to the mills," Lapham did not turn him out-of-doors.

He sat looking at him, and trying to make out what Rogers was after; for he did not believe that the English parties, if they existed, had any notion of buying his mills.

"What if they are not for sale?" he asked. "You know that I've been expecting an offer from the G. L. & P."

"I've kept watch of that. They haven't made you any offer," said Rogers quietly.

"And did you think," demanded Lapham, firing up, "that I would turn them in on somebody else as you turned them in on me, when the chances are that they won't be worth ten cents on the dollar six months from now?"

"I didn't know what you would do," said Rogers, non-committally. "I've come here to tell you that these parties stand ready to take the mills off your hands at a fair valuation—at the value I put upon them when I turned them in."

"I don't believe you!" cried Lapham brutally, but a wild, predatory hope made his heart leap so that it seemed to turn over in his breast. "I don't believe there are any such parties to begin with; and in the next place, I don't believe they would buy at any such figure; unless—unless you've lied to them, as you've lied to me. Did you tell them about the G. L. & P.?"

Rogers looked compassionately at him, but he answered, with unvaried dryness, "I did not think that necessary."

Lapham had expected this answer, and he had expected or intended to break out in furious denunciation of Rogers when he got it; but he only found himself saying, in a sort of baffled gasp, "I wonder what your game is!"

Rogers did not reply categorically, but he answered, with his impartial calm, and as if Lapham had said nothing to indicate that he differed at all with him as to disposing of the property in the way he had suggested: "If we should succeed in selling, I should be able to repay you your loans, and should have a little capital for a scheme that I think of going into."

"And do you think that I am going to steal these men's money to help you plunder somebody in a new scheme?" answered Lapham. The sneer was on behalf of virtue, but it was still a sneer.

"I suppose the money would be useful to you too, just now."

"Why?"

"Because I know that you have been trying to borrow."

At this proof of wicked omniscience in Rogers, the question whether he had better not regard the affair as a fatality, and yield to his destiny, flashed upon Lapham; but he answered, "I shall want money a great deal worse than I've ever wanted it yet, before I go into such rascally business with you. Don't you know that we might as well knock these parties down on the street, and take the money out of their pockets?"

"They have come on," answered Rogers, "from Portland to see you. I expected them some weeks ago, but they disappointed me. They arrived on the *Circassian* last night; they expected to have got in five days ago, but the passage was very stormy."

"Where are they?" asked Lapham, with helpless irrelevance, and feeling himself somehow drifted from his moorings by Rogers's shipping intelligence.

"They are at Young's. I told them we would call upon them after dinner this evening; they dine late."

"Oh, you did, did you?" asked Lapham, trying to drop another anchor for a fresh clutch on his underlying principles. "Well, now, you go and tell them that I said I wouldn't come."

"Their stay is limited," remarked Rogers. "I mentioned this evening because they were not certain they could remain over another night. But if to-morrow would suit you better——"

"Tell 'em I sha'n't come at all," roared Lapham, as much in terror as defiance, for he felt his anchor dragging. "Tell 'em I sha'n't come at all! Do you understand that?"

"I don't see why you should stickle as to the matter of going to them," said Rogers; "but if you think it will be better to have them approach you, I suppose I can bring them to you."

"No, you can't! I sha'n't let you! I sha'n't see them! I sha'n't have anything to do with them. *Now* do you understand?"

"I inferred from our last interview," persisted Rogers, unmoved by all this violent demonstration of Lapham's, "that you wished to meet these parties. You told me that you would give me time to produce them; and I have promised them that you would meet them; I have committed myself."

It was true that Lapham had defied Rogers to bring on his men, and had implied his willingness to negotiate with them. That was before he had talked the matter over with his wife, and perceived his moral responsibility in it; even she had not seen this at once. He could not enter into this explanation with Rogers; he could only say, "I said I'd give you twenty-four hours to prove yourself a liar, and you did it. I didn't say twenty-four days."

"I don't see the difference," returned Rogers. "The parties are here now, and that proves that I was acting in good faith at the time. There has been no change in the posture of affairs. You don't know now any more than you knew then that the G. L. & P. is going to want the property. If there's any difference, it's in favor of the Road's having changed its mind."

There was some sense in this, and Lapham felt it—felt it only too eagerly, as he recognized the next instant.

Rogers went on quietly: "You're not obliged to sell to these parties when you meet them; but you've allowed me to commit myself to them by the promise that you would talk with them."

"'Twa'n't a promise," said Lapham.

"It was the same thing; they have come out from England on my guaranty that there was such and such an opening for their capital; and now what am I to say to them? It places me in a ridiculous position." Rogers urged his grievance calmly, almost impersonally, making his appeal to Lapham's sense of justice. "I *can't* go back to those parties and tell them you won't see them. It's no answer to make. They've got a right to know *why* you won't see them."

"Very well, then!" cried Lapham; "I'll come and *tell* them why. Who shall I ask for? When shall I be there?"

"At eight o'clock, please," said Rogers, rising, without apparent alarm at his threat, if it was a threat. "And ask for me; I've taken a room at the hotel for the present."

"I won't keep you five minutes when I get there," said Lapham; but he did not come away till ten o'clock.

It appeared to him as if the very devil was in it. The Englishmen treated his downright refusal to sell as a piece of bluff, and talked on as though it were merely the opening of the negotiation. When he became plain with them in his anger, and told them why he would not sell, they seemed to have been prepared for this as a stroke of business, and were ready to meet it.

"Has this fellow," he demanded, twisting his head in the direction of Rogers, but disdainingly to notice him otherwise, "been telling you that it's part of my game to say this? Well, sir, I can tell you, on my side, that there isn't a slipperier rascal unhung in America than Milton K. Rogers!"

The Englishmen treated this as a piece of genuine American humor, and returned to the charge with unabated courage. They owned now, that a person interested with them had been out to look at the property, and that they were satisfied with the appearance of things. They developed further the fact that they were not acting solely, or even principally, in their own behalf, but were the agents of people in England who had projected the colonization of a sort of community on the spot, somewhat after the plan of other English dreamers, and that they were satisfied, from a careful inspection, that the resources and facilities were those best calculated to develop the

energy and enterprise of the proposed community. They were prepared to meet Mr. Lapham—Colonel, they begged his pardon, at the instance of Rogers—at any reasonable figure, and were quite willing to assume the risks he had pointed out. Something in the eyes of these men, something that lurked at an infinite depth below their speech, and was not really in their eyes when Lapham looked again, had flashed through him a sense of treachery in them. He had thought them the dupes of Rogers; but in that brief instant he had seen them—or thought he had seen them—his accomplices, ready to betray the interests of which they went on to speak with a certain comfortable jocosity, and a certain incredulous slight of his show of integrity. It was a deeper game than Lapham was used to, and he sat looking with a sort of admiration from one Englishman to the other, and then to Rogers, who maintained an exterior of modest neutrality, and whose air said, "I have brought you gentlemen together as the friend of all parties, and I now leave you to settle it among yourselves. I ask nothing, and expect nothing, except the small sum which shall accrue to me after the discharge of my obligations to Colonel Lapham."

While Rogers's presence expressed this, one of the Englishmen was saying, "And if you have any scruple in allowin' us to assume this risk, Colonel Lapham, perhaps you can console yourself with the fact that the loss, if there is to be any, will fall upon people who are able to bear it—upon an association of rich and charitable people. But we're quite satisfied there will be no loss," he added savingly. "All you have to do is to name your price, and we will do our best to meet it."

There was nothing in the Englishman's sophistry very shocking to Lapham. It addressed itself in him to that easy-going, not evilly intentioned, potential immorality which regards common property as common prey, and gives us the most corrupt municipal governments under the sun—which makes the poorest voter, when he has tricked into place, as unscrupulous in regard to others' money as an hereditary prince. Lapham met the Englishman's eye, and with difficulty kept himself from winking. Then he looked away, and tried to find out where he stood, or what he wanted to do. He could hardly tell. He had expected to come into that room and unmask Rogers, and have it over. But he had unmasked Rogers without any effect whatever, and the play had only begun. He had a whimsical and sarcastic sense of its being very different from the plays at the theater. He could not get up and go away in silent contempt; he could not tell the Eng-

lishmen that he believed them a pair of scoundrels and should have nothing to do with them; he could no longer treat them as innocent dupes. He remained baffled and perplexed, and the one who had not spoken hitherto remarked:

"Of course we sha'n't 'aggle about a few pound, more or less. If Colonel Lapham's figure should be a little larger than ours, I've no doubt 'e'll not be too 'ard upon us in the end."

Lapham appreciated all the intent of this subtle suggestion, and understood as plainly as if it had been said in so many words, that if they paid him a larger price, it was to be expected that a certain portion of the purchase money was to return to their own hands. Still he could not move; and it seemed to him that he could not speak.

"Ring that bell, Mr. Rogers," said the Englishman who had last spoken, glancing at the annunciator button in the wall near Rogers's head, "and 'ave up something 'ot, can't you? I should like to wet me wistle, as you say 'ere, and Colonel Lapham seems to find it rather dry work."

Lapham jumped to his feet, and buttoned his overcoat about him. He remembered with terror the dinner at Corey's where he had disgraced and betrayed himself, and if he went into this thing at all, he was going into it sober. "I can't stop," he said, "I must be going."

"But you haven't given us an answer yet, Mr. Lapham," said the first Englishman with a successful show of dignified surprise.

"The only answer I can give you now is, *No*," said Lapham. "If you want another, you must let me have time to think it over."

"But 'ow much time?" said the other Englishman. "We're pressed for time ourselves, and we hoped for an answer—'oped for a hanswer," he corrected himself, "at once. That was our understandin' with Mr. Rogers."

"I can't let you know till morning, anyway," said Lapham, and he went out, as his custom often was, without any parting salutation. He thought Rogers might try to detain him; but Rogers had remained seated when the others got to their feet, and paid no attention to his departure.

He walked out into the night air, every pulse throbbing with the strong temptation. He knew very well those men would wait, and gladly wait, till the morning, and that the whole affair was in his hands. It made him groan in spirit to think that it was. If he had hoped that some chance might take the decision from him, there was no such chance, in the present or future, that he could see. It was for him alone to commit this rascality—if it was a rascality—or not.

He walked all the way home, letting one car after another pass him on the street, now so empty of other passing, and it was almost eleven o'clock when he reached home. A carriage stood before his house, and when he let himself in with his key, he heard talking in the family-room. It came into his head that Irene had got back unexpectedly, and that the sight of her was somehow going to make it harder for him; then he thought it might be Corey, come upon some desperate pretext to see Penelope; but when he opened the door he saw, with a certain absence of surprise, that it was Rogers. He was standing with his back to the fire-place, talking to Mrs. Lapham, and he had been shedding tears; dry tears they seemed, and they had left a sort of sandy, glistening trace on his cheeks. Apparently he was not ashamed of them, for the expression with which he met Lapham was that of a man making a desperate appeal in his own cause, which was identical with that of humanity, if not that of justice.

"I some expected," began Rogers, "to find you here——"

"No, you didn't," interrupted Lapham; "you wanted to come here and make a poor mouth to Mrs. Lapham before I got home."

"I knew that Mrs. Lapham would know what was going on," said Rogers, more candidly, but not more virtuously, for that he could not, "and I wished her to understand a point that I hadn't put to you at the hotel, and that I want you should consider. And I want you should consider me a little in this business, too; you're not the only one that's concerned, I tell you, and I've been telling Mrs. Lapham that it's my one chance; that if you don't meet me on it, my wife and children will be reduced to beggary."

"So will mine," said Lapham, "or the next thing to it."

"Well, then, I want you to give me this chance to get on my feet again. You've no right to deprive me of it; it's unchristian. In our dealings with each other we should be guided by the Golden Rule, as I was saying to Mrs. Lapham before you came in. I told her that if I knew myself, I should in your place consider the circumstances of a man in mine, who had honorably endeavored to discharge his obligations to me, and had patiently borne my undeserved suspicions. I should consider that man's family, I told Mrs. Lapham."

"Did you tell her that if I went in with you and those fellows, I should be robbing the people who trusted them?"

"I don't see what you've got to do with the people that sent them here. They are rich people, and could bear it if it came to

the worst. But there's no likelihood, now, that it will come to the worst; you can see yourself that the Road has changed its mind about buying. And here am I without a cent in the world; and my wife is an invalid. She needs comforts, she needs little luxuries, and she hasn't even the necessaries; and you want to sacrifice her to a mere idea! You don't know in the first place that the Road will ever want to buy; and if it does, the probability is that with a colony like that planted on its line, it would make very different terms from what it would with you or me. These agents are not afraid, and their principals are rich people; and if there was any loss, it would be divided up amongst them so that they wouldn't any of them feel it."

Lapham stole a troubled glance at his wife, and saw that there was no help in her. Whether she was daunted and confused in her own conscience by the outcome, so evil and disastrous, of the reparation to Rogers which she had forced her husband to make, or whether her perceptions had been blunted and darkened by the appeals which Rogers had now used, it would be difficult to say. Probably there was a mixture of both causes in the effect which her husband felt in her, and from which he turned, girding himself anew, to Rogers.

"I have no wish to recur to the past," continued Rogers, with growing superiority. "You have shown a proper spirit in regard to that, and you have done what you could to wipe it out."

"I should think I had," said Lapham. "I've used up about a hundred and fifty thousand dollars trying."

"Some of my enterprises," Rogers admitted, "have been unfortunate, seemingly; but I have hopes that they will yet turn out well—in time. I can't understand why you should be so mindful of others now, when you showed so little regard for me then. I had come to your aid at a time when you needed help, and when you got on your feet you kicked me out of the business. I don't complain, but that is the fact; and I had to begin again, after I had supposed myself settled in life, and establish myself elsewhere."

Lapham glanced again at his wife; her head had fallen; he could see that she was so rooted in her old remorse for that questionable act of his, amply and more than fully atoned for since, that she was helpless, now in the crucial moment, when he had the utmost need of her insight. He had counted upon her; he perceived now that when he had thought it was for him alone to decide, he had counted upon her just spirit to stay his own in its struggle to be just. He had not

forgotten how she held out against him only a little while ago, when he asked her whether he might not rightfully sell in some such contingency as this; and it was not now that she said or even looked anything in favor of Rogers, but that she was silent against him, which dismayed Lapham. He swallowed the lump that rose in his throat, the self-pity, the pity for her, the despair, and said gently, "I guess you better go to bed, Persis. It's pretty late."

She turned towards the door, when Rogers said, with the obvious intention of detaining her through her curiosity:

"But I let that pass. And I don't ask now that you should sell to these men."

Mrs. Lapham paused, irresolute.

"What are you making this bother for, then?" demanded Lapham. "What *do* you want?"

"What I've been telling your wife here. I want you should sell to *me*. I don't say what I'm going to do with the property, and you will not have an iota of responsibility, whatever happens."

Lapham was staggered, and he saw his wife's face light up with eager question.

"I want that property," continued Rogers, "and I've got the money to buy it. What will you take for it? If it's the price you're standing out for——"

"Persis," said Lapham, "go to bed," and he gave her a look that meant obedience for her. She went out of the door, and left him with his tempter.

"If you think I'm going to help you whip the devil round the stump, you're mistaken in your man, Milton Rogers," said Lapham, lighting a cigar. "As soon as I sold to you, you would sell to that other pair of rascals. I smelt 'em out in half a minute."

"They are Christian gentlemen," said Rogers. "But I don't purpose defending them; and I don't purpose telling you what I shall or shall not do with the property when it is in my hands again. The question is, Will you sell, and, if so, what is your figure? You have got nothing whatever to do with it after you've sold."

It was perfectly true. Any lawyer would have told him the same. He could not help admiring Rogers for his ingenuity, and every selfish interest of his nature joined with many obvious duties to urge him to consent. He did not see why he should refuse. There was no longer a reason. He was standing out alone for nothing, any one else would say. He smoked on as if Rogers were not there, and Rogers remained before the fire as patient as the clock ticking behind his head on the mantel, and showing the gleam of its pendu-

lum beyond his face on either side. But at last he said, "Well?"

"Well," answered Lapham, "you can't expect me to give you an answer to-night, any more than before. You know that what you've said now hasn't changed the thing a bit. I wish it had. The Lord knows, I want to be rid of the property fast enough."

"Then why don't you sell to me? Can't you see that you will not be responsible for what happens after you have sold?"

"No, I *can't* see that; but if I can by morning, I'll sell."

"Why do you expect to know any better by morning? You're wasting time for nothing!" cried Rogers, in his disappointment. "Why are you so particular? When you drove me out of the business you were not so very particular."

Lapham winced. It was certainly ridiculous for a man who had once so selfishly consulted his own interests to be stickling now about the rights of others.

"I guess nothing's going to happen over-night," he answered sullenly. "Anyway, I sha'n't say what I shall do till morning."

"What time can I see you in the morning?"

"Half-past nine."

Rogers buttoned his coat, and went out of the room without another word. Lapham followed him to close the street-door after him.

His wife called down to him from above as he approached the room again, "Well?"

"I've told him I'd let him know in the morning."

"Want I should come down and talk with you?"

"No," answered Lapham, in the proud bitterness which his isolation brought, "you couldn't do any good." He went in and shut the door, and by and by his wife heard him begin walking up and down; and then the

rest of the night she lay awake and listened to him walking up and down. But when the first light whitened the window, the words of the Scripture came into her mind: "And there wrestled a man with him until the breaking of the day. . . . And he said, Let me go, for the day breaketh. And he said, I will not let thee go, except thou bless me."

She could not ask him anything when they met, but he raised his dull eyes after the first silence and said, "I don't know what I'm going to say to Rogers."

She could not speak; she did not know what to say, and she saw her husband, when she followed him with her eyes from the window, drag heavily down toward the corner, where he was to take the horse-car.

He arrived rather later than usual at his office, and he found his letters already on his table. There was one, long and official-looking, with a printed letter-heading on the outside, and Lapham had no need to open it in order to know that it was the offer of the Great Lacustrine & Polar Railroad for his mills. But he went mechanically through the verification of his prophetic fear, which was also his sole hope, and then sat looking blankly at it.

Rogers came promptly at the appointed time, and Lapham handed him the letter. He must have taken it all in at a glance, and seen the impossibility of negotiating any further now, even with victims so pliant and willing as those Englishmen.

"You've ruined me!" Rogers broke out. "I haven't a cent left in the world! God help my poor wife!"

He went out, and Lapham remained staring at the door which closed upon him. This was his reward for standing firm for right and justice to his own destruction: to feel like a thief and a murderer.

(To be continued.)

W. D. Howells.

REPENTANT.

THIS summer breeze fraught with repentant sighs,
Once a fleet force no heavenly law could bind,—
Now wandering earthward in a gentler guise,
Is but the ghost of some fierce winter wind.

William H. Hayne.

ROBERSON'S MEDIUM.

IT was Rowney Mauve who described Roberson as being like one of his own still-lives; a lot of queer stuff badly composed and out of drawing, and with his perspective all wrong. And I regret to add that it was Miss Carmine, when she heard this description and recognized its accuracy, who giggled. To say that Violet Carmine was a pickle is presenting a statement of the case that is well within bounds.

The arrival of this somewhat erratic young person in New York was unexpected, and had a rather dramatic touch about it. On a warm evening in September, while yet the dying splendor of sunset hung redly over the Jersey Highlands, Mr. Mangan Brown was sitting in a wicker chair on the veranda of his own exceedingly comfortable house in West Eleventh street. He was in the perfectly placid frame of mind that is the right of a man who has dined well and who is smoking a good cigar. In another wicker chair, similarly placid, similarly smoking a good cigar, sat Vandyke Brown. And between the two sat Rose: whose nature was so sweet at all times, that even after-dinner cigars (supposing that she had been inclined to smoke them, and she was not) could not have made it one particle sweeter. These three people were very fond of each other; and they were talking away pleasantly about nothing in particular, and were gently light-hearted, and were having a deal of enjoyment in a quiet way, as they sat there beneath their own vine and ailanthus-tree, in the light of the mellow after-glow left when the sun went down. Their perfect peacefulness can be likened only to that of a tropical calm; and, therefore, the unities of the situation were preserved, though its placidity was shattered, when the calm was broken by what with a tolerable degree of accuracy may be described as a tropical storm.

Out of a coupé that stopped with a flourish in front of Mr. Mangan Brown's gate de-

scended a tall young woman with a good deal of color in her cheeks, and a good deal of black hair, and a pair of exceptionally bright black eyes. She carried a cage, in which was a large white cockatoo, in one hand, and with the other she opened the gate in a decisive sort of way, as though she had a right to open it; and in a positive, proprietary fashion she traversed the walk of flags to the veranda steps. Mr. Mangan Brown arose from his wicker chair—somewhat reluctantly, for he was very comfortable—and advanced to meet her.

"You must be my cousin Mangan. I am very glad to see you, Cousin Mangan. Won't you take the parrot, please?" and the young person held out the cage in her left hand, and also extended her right hand with the obvious purpose of having it shaken.

Mr. Mangan Brown did his best to discharge simultaneously the two duties thus demanded of him; but as this involved crossing his hands in an awkward sort of way, the result was not altogether graceful. "My name is Mangan Brown," he said diplomatically.

"Of course it is," answered the young woman, with a smile that showed what a charming mouth and what prodigiously fine teeth she had. "And my name is Violet Carmine. Don't you think Violet rather a pretty name, Cousin Mangan? My mamma gave it to me out of a novel. And don't you think that I speak very good English? I haven't a strawberry-mark on my left arm nor anything like that, you know, to prove it, but I am your cousin—your second cousin once removed—just as much as though I had strawberry-marks all over me. Don't look at me in that doubtful sort of way, Cousin Mangan; it makes me feel quite uncomfortable. I'm sure if I am willing to believe in you, you might be willing to believe in me. But here's papa's letter; just read that, and then you'll believe in me, I'm sure."

Mr. Mangan Brown, who was rather dazed by this assault, took the letter and began to read it.

"You're cousins too, I suppose," said Miss Carmine, turning to Van and Rose. "Long cousin, won't you please go out to the carriage and pay the man and bring in my things? As to you, you dear little blue-eyed cousin, I think that you are simply delightful, and I know that I shall love you with all my heart, and I must kiss you right away," and this Miss Carmine did, with a fervor that was quite in keeping with the energy of her manner and words.

"I am very glad to see you, my dear," said Mr. Mangan Brown, who had finished the letter. "This is my nephew, Vandyke Brown, and this is his wife, my niece Rose; and I am sure that we all will do our best to make you comfortable while you stay with us. If I was not quite so cordial as I might have been just now, you must understand that your sudden arrival rather took me by surprise, you know. Rose, take your cousin Violet up to Caledonia's room and make her comfortable. Van will carry up her bag."

"And Rose, dear," said Miss Carmine, precisely imitating Mr. Mangan's tone and manner, "take your cousin Violet to where she will get something to eat, please. I assure you that she is almost starving." In her own proper voice she continued: "You sweet little blue-eyed thing, it was worth while coming all the way from Mexico just to have a sight of you. You are a lucky fellow, Van. I don't believe you half deserve her. Tell the truth, now, do you? But of course he'll say yes, Rose, so we need not wait for his answer. Take me along, dear, and let me wash myself and get some food. You really have no idea how hungry I am!" And Miss Carmine, with her arm around Rose's waist, vanished through the open door.

"Cool sort of hand, this cousin of ours," said Van to Mr. Mangan, when the bag and the parrot had been carried upstairs and Van had come down again to the veranda. "And who is she, anyway? She really is our cousin, I suppose."

"Yes," said Mr. Mangan, in a tone that did its best to be cheerful, "there is no doubt about the relationship; though it certainly is rather a distant one. Her great-grandfather Carmine married the sister of my grandfather, Bone Brown. Carmine had a cochineal plantation in San Domingo, and he was killed in the time of the insurrection. In fact, his slaves burnt him. His son got away and went over to Mexico, and the family has been there ever since. The present Carmine, Violet's father, has a big *hacienda* somewhere or another. We have a consignment of hides from him every year, and that's pretty much all that I know about him—except that in one of his letters he once said that he had married an American and was bringing up his daughters—I don't think he had any sons—on the American plan, teaching them to be self-confident, and that sort of thing. And," continued Mr. Mangan, reflectively, "if this young person is a fair specimen of the family, I should say that his educational methods had been, ah, quite a remarkable success."

"Yes," answered Van dryly, "I think they have. But to what fortunate circumstance

do we owe the pleasure of her descent upon our inoffensive household?"

"Don't be inhospitable, Van; I'm sure she's a nice girl, though she certainly is a little—a little odd, perhaps. Why, her father writes that he has sent her up to see something of American life under my care,—he seems to take it for granted that I am married, and have a lot of daughters,—and when her visit is ended (he suggests that she shall stay with us for a year, or for six months at the least), he wants me to come down to his place with all my family, and stay a year or so with him. It's Mexican, I suppose, visiting in this fashion. I always have understood that they do not make much account of time down there."

"But how on earth did she get here? Surely she did not come up alone?"

"Really, Van," said Violet, stepping out upon the veranda briskly, just in time to hear these questions—"Really, Van, you don't look stupid, but I think you must be. I came, sir, in a delightful Pullman car, and the Señor and Señora Moreno—I wonder if they can be distant relations of yours, Cousin Mangan? it's the same name, you know—and all the thirteen, no, the fourteen, little Morenos and their nurses and servants brought me. We just filled the car nicely. And oh! we did have such a good time! Did you ever go anywhere in a Pullman car, Cousin Mangan? If you didn't, you don't know at all how nice it is. Not a bit like the horrid *diligencia*, you know. And we did have such fun! I had my dear Pablo—he's the parrot, you know; and the Señora Moreno had a—I don't know what the English name is: it's a bird that whistles and sings wonderfully; and little Joséfita had a yellow kitten; and at Chihuahua each of the seven boys bought a dear little dog. When Pablo was screaming, and the bird was whistling, and the kitten was fighting with all the little dogs at once, really we could not hear ourselves speak. It was so funny that we were laughing every bit of the time."

"And, Cousin Mangan, Señor Moreno wanted to come here with me, and give me into your hands. But I wouldn't let him, and they all stopped at a little hotel quite near here, where Spanish is spoken; for Señor Moreno does not speak a word of English, and I have done all the talking for him ever since we left Paso del Norte,—you have no idea what nice things the conductors and people have said to me about my English,—and I begged Señor Moreno to let me come in the carriage myself. I wanted to surprise you, you see. *Have* I surprised you, Cousin Mangan? Tell me truly, *have* I?"

And Mr. Mangan Brown answered, in a

tone that Miss Carmine possibly thought unnecessarily serious: "Yes, my dear, I believe that I may say with perfect truth — you have!"

NATURALLY, so quiet a household as was this — Mr. Mangan Brown's — was a good deal upset by having interjected into it such a whirlwind of a young woman as was this Miss Violet Carmine. The household was quieter than ever, of course, now that Miss Caledonia and Verona were married off. The wedding, by the way, was a prodigious success. Mr. Mangan Brown gave away the brides successively, with a defiant one-down-and-t'other-come-on air that was tremendously effective; and young Orpiment went through with the ceremony gallantly; and Mr. Gamboge, who was badly scared, most certainly would have said, "Under these circumstances Mr. Orpiment would have said, 'I will,'" if Miss Caledonia, being on the look-out for precisely this emergency, had not pinched him; and Miss Caledonia looked so young and so pretty in her gray silk and new back-hair that nobody ever would have thought her a day over forty; and Verona just looked like the lovable, dignified angel that she was.

But while Miss Carmine found no difficulty in filling with her belongings the two rooms lately occupied by Miss Caledonia and Verona, it cannot be said that she herself filled precisely the place in the household which had been filled by these its departed members. Mr. Mangan tried loyally to make the best of his Mexican kinswoman, but even he found her at times — as he deprecatingly admitted to Rose — a little wearing. He tried to convince himself that Pablo's violent remarks in the Spanish tongue at atrocious hours of the morning did not disturb him; he tried to believe that he admired the spirited playfulness of the seven little Moreno boys when they came to visit their countrywoman, and with their countrywoman and their seven Chihuahua dogs raced in and out of the parlor windows and up and down the veranda steps and all over the flower-beds in the front garden; and he tried to think that his kinswoman's habitual tendency toward the violent and the unexpected did not annoy him. But it is certain that his efforts in these and in various other directions were not at all times successful. And yet when Violet was not doing something outrageous, — which, to be sure, was not often, — she was such a frank, affectionate body that not to love her was quite impossible.

"It's not herself, it's her extraordinary education that's at fault, Van," Mr. Mangan declared, in extenuation of her expedition with

Rowney Mauve and without a chaperon to Coney Island. "She's a good little thing, but what with her queer life on her father's *hacienda*, and the queer doctrines which her father and mother have got into her head, it's no wonder that her notions of propriety are a little eccentric."

Being lectured about her Coney Island trip, Violet manifested only astonishment. "Why, Cousin Mangan, I thought that here in America girls could do just as they pleased. That's what mamma has always told me. I'm sure that *she* did what she pleased when she was a girl. And mamma was very carefully brought up, and moved in very elegant society, you know. Grandpapa, you know, sold outfits at Fort Leavenworth to people going across the Plains; and he did a splendid business, too, in the Santa Fé trail. That was before the railroad, of course. Were you ever along the Santa Fé trail before the Atchison road was built, Cousin Mangan? It was a splendid trip to make. Mamma came out that way to Santa Fé in 1860 with grandpapa. They had a lovely time; just as full of excitement as possible. They had one fight with Indians before they were fifty miles out from Council Grove, and another just as they struck off from the Arkansas, and another at the crossing of the Cimarron; and they were caught in a tremendous snow-storm in the Raton mountains; and in fording the Pecos they lost a wagon and its team of six mules, and grandpapa was so angry with the head-teamster for his carelessness that he just picked him up bodily and chucked him in after the mules, and then shot at him when he tried to swim ashore; and mamma used to say, in her droll way, that they never knew whether that teamster died of drowning or shooting.

"It was in Santa Fé, you know, that papa met mamma and fell in love with her. It was very romantic. Mamma had made a bet with one of the officers of the garrison that she could ride a mustang that never had been broken; and it ran away with her, — which mamma did not mind a bit, of course, — and just as she was waving her handkerchief to the men to show that she was winning the bet, she found that the mustang was heading right for the edge of the bluff, — she was riding on the *mesa*, close by old Fort Marcy, — and as she couldn't turn him, she knew that they both were going to have their necks broken. And then papa, who was with the officers, saw her danger and galloped up just in time to lift her right out of the saddle, while both horses were running as hard as ever they could run; and papa managed to turn his horse on the very edge of the bluff, and the mustang went over the bluff and was

done for. Of course, after he had saved her life this way, and after he had fought a duel with the officer that mamma bet with, because he said that mamma had not won the bet after all, mamma had to marry him. They had a lovely wedding in the old church of San Miguel, and all the officers were there,—the officer whom papa wounded was ever so nice about it and came on crutches,—and all the best people of the town were there too, and they had a splendid banquet at the Fonda afterwards. You see, there was no trouble about their being married, for mamma was born in the church. Her mother's folks, the Smalts, were German Catholics, and, of course, her father was a Catholic too, for he was Don Patricio O'Jara, you know. The O'Jaras are a very noble family, Cousin Mangan; some of them once were kings, mamma says.

"And because she belonged to such a grand family, and because grandpapa was so rich, mamma moved in the very highest circles of Leavenworth society, you see; and I am sure that she went around with young gentlemen just as much as she pleased, for she has told me so, often. So what was the harm in my going to Coney Island with Mr. Mauve, Cousin Mangan? And we did have *such* a lovely time! Now you aren't angry with me, are you? Then kiss me, and say you're not—so. That's a dear! And now we never will say another word about the horrid place again."

Rowney Mauve, of course, knew that the Coney Island expedition was all wrong; and he had the grace to profess to be sorry when Van took it on himself to give him a lecture about it. Rowney was a rather weak vessel, morally,—as he admitted with a charming frankness, when anybody spoke to him on the subject,—and he never made any very perceptible effort to strengthen himself. It wasn't his ambition to be a whited sepulchër, he would say, with an air of cheerful resignation that, in its way, was quite irresistible. But after all, he was not half a bad fellow at bottom. His besetting sin was his laziness. Unless he had some scheme of pleasure on hand—when he would rouse up and work like a beaver—he was about as lazy as a man well could be. Had he ever buckled down to work, there was the making of a first-rate painter in him. Two or three landscapes, which by some extraordinary chance he had finished, had been quite the talk of the town and had sold promptly. But there he stopped.

"Of course, old man, I know that I could sell a lot of pictures if I painted them," he would say when Van upbraided him for his laziness. "But what's the good of it? I don't need the money. I've got more now than I know

what to do with." And then he would add in the high moral key, and with the twinkle in the corners of his blue eyes that always came there in nice appreciation of his own humbug: "And I don't think it's right, Van, you know, to sell my pictures and so take the bread out of the mouths of the men who need it. No, I prefer to be, as that cheerful old father-in-law of yours once said to me, when he sent his 'Baby's First Steps' to the Young Geniuses' exhibition, and the Young Geniuses cracked it right back at him,—'a willing sacrifice for Art's great sake to other men's success.' That's a noble sentiment, isn't it? And now, what do you say to joining me on board the yacht to-morrow and sliding down to Saint Augustine for a week or two? There are some types among those stunning Minorcan girls down there, that will make you a bigger swell in art than ever, if you will catch them in time for the spring exhibition." The fact of the matter was that Rowney Mauve, in the matter of laziness, simply was incorrigible.

In connection with Miss Carmine, however, not the least trace of Rowney's laziness was perceptible. In her service he was all energy. Why, he even went so far as to finish one of his numerous unfinished pictures because—when Van and Rose brought her to his studio one day—she took a fancy to it and told him that she would like to see it completed! Among the people who knew him, this outburst of zealous labor was regarded as being little short of miraculous; and Rowney, who was rather given to contemplative consideration of his own actions, could not help at first feeling that way about it himself. As the result of careful self-analysis, however, he came to the conclusion that his sudden access of energy was not the result of a miracle, but of love!

Being really in love was a new experience for Rowney, and he did not quite understand it. At one time or another he had been spoons on lots of girls; but being spoons and being genuinely in love, as he now perceived, were conditions of the heart which bore no relation to each other whatever. Looking at his case critically, he was satisfied that his decline and fall had begun on that October day, now four months past, when he and Miss Carmine had defied the proprieties by going down together to Coney Island. They had seen the races—which Violet enjoyed immensely—and had had a capital little lunch; and after the lunch they had taken a long walk on the deserted beach toward Far Rockaway. Rowney knew all the while, of course, that they hadn't any business whatever to be off alone on a cruise of this nature; and his knowledge, I am sorry to say, made him regard the cruise in

the light of a lark of quite exceptional jollity. Violet, not having the faintest suspicion that she was anything less than a model of American decorum, simply was in raptures. With a delightful frankness she repeatedly told Rowney what a good time she was having, and how like it was to the good times that her mother, the scion of the royal house of O'Jara, used to have in company with the young Chesterfields of Fort Leavenworth society.

Altogether, it had been an original sort of an experience for Rowney; and for this easy-going young gentleman original experiences had an exceeding great charm. Looking back, therefore, in the light of subsequent events, upon that particular day, he decided that it was the Coney Island expedition that had sapped the foundations of his previously well-fortified heart. Anyhow, without regard to when it began, he felt satisfied in his own mind that he was in love now — right over head and ears!

Roberson, whose studio was just across the passage, happened to drop in upon him at the very moment that he had arrived at this, to him, astonishing conclusion. Roberson was not a very promising specimen of a confidant, but Rowney was so full of his discovery that before he could check himself he had blurted out: "Old man, I've been and gone and done it! I'm in love!"

"No? Are you though, really?" said Roberson, in his funny little mincing way. "Why, that's very interesting. And who are you in love with?"

By this time Rowney had perceived the absurdity, not to say the stupidity, of taking Roberson into his confidence. So he laughed and answered:

"With my own laziness, of course. I've been thinking what a precious ass I have been making of myself in working over this confounded picture. Now that it's finished, I don't know what to do with it, and I've wasted a solid month that I might have devoted to scientific loafing. And it's because I see my folly and am determined to be wise again that I've fallen in love with my own laziness once more."

"Oh!" said Roberson, in a tone of disappointment, "I thought that you were in earnest; and I was ever so glad, for I really am in love, Rowney, in love awfully! And — and I thought that if you were in love too, you'd like to hear about it. Wouldn't you like to hear about it, anyway?"

"Of course I would, old man. Just wait till I fill my pipe — I can be more sympathetic over a pipe, you know. Now crack away," Rowney continued, as he settled him-

self comfortably in a big chair and pulled hard at his pipe to give it a good start. "Now crack away, my stricken deer. Though the herd all forsake thee, thy home is still here, you know. Rest on this bosom and tell your tale of sorrow. Are you very hard hit, Roberson?"

"Oh, I am, indeed I am," groaned Roberson. "You see, it's — it's this queer Mexican girl who is staying with the Browns —"

"The dickens it is!" exclaimed Rowney, suddenly sitting bolt upright in his chair, and glaring at Roberson through the smoke as though he wanted to glare his head off.

"Don't, please don't look at me like that, Mauve. Surely there's no reason why you should be angry with me."

"N-no," answered Rowney, slowly, "I don't think there is." And then, as he sank back in the chair, and his ferocious expression gave place to a quiet grin, he added briskly, "No, I'm sure there's not. I was surprised, that's all. I always look like that when I'm a good deal surprised."

"Well, I must say I'm glad I don't surprise you often. You have no idea how savage you looked, old fellow. I'm not easily frightened, you know," — and the little man put on a look of inoffensive defiance as he spoke, that gave him something the air of a valorously disposed lamb, — "but I do assure you that the way you looked at me gave me quite a turn. Just let me know, won't you, when you feel yourself beginning to be surprised the next time, so that I may be prepared for it?"

"I'll do better than that, Roberson; I'll promise not to let you surprise me. And now go ahead with the love-story, old man; I'm quite ashamed of myself for having interrupted you so rudely."

"There isn't any more yet to tell," said Roberson dolefully. "I wish there was."

"Nonsense, man! Why, that isn't any love-story at all. There *must* be more of it. What have you said to her? What has she said to you?"

"Nothing," answered Roberson dismally; "that's just it, you see. That's what makes me so low in my mind over it. I haven't said anything, and she hasn't said anything. If either of us had said anything, I'd know better where I was. But neither of us has spoken, and so I don't know where I am at all — not the least bit in the world." Roberson hid his face in his hands and groaned.

Presently he went on again: "I have made efforts to speak, Rowney; I've made repeated efforts — but, somehow, they've none of them come to anything. Indeed, I've never had but one fair chance; for, every time, just as I've got to the point when I was ready to say something, — something that really would have

a meaning to it, you know,—something has happened to stop me.”

“And what stopped you that one time when something didn't happen to stop you?”

“You mustn't think me weak, Rowney, but—but the truth is that I was so dreadfully upset that what I wanted to say wouldn't come at all. We were sitting on the veranda,—the moon was shining, and all the rest were inside listening to Mrs. Orpiment who was singing. I couldn't have had a better chance, you see.”

“I should think not!” growled Rowney.

“But the more I tried, the more the right words wouldn't come. And what do you suppose I ended by asking her?”

“If she didn't think you were an intolerable idiot. And, of course, she said ‘Yes.’”

“Don't be hard on me, Mauve. You've no idea what a trying situation it was. No; what I ended by asking her was, What was the food most commonly eaten in Mexico? I didn't say it in just a commonplace way, you know. I threw a great deal of feeling into my voice, and I looked at her beseechingly. And—and I think, old fellow, that she knew that my words meant more than they expressed, for there was a strange tremor in her own voice as she answered, ‘Tortillas and frijoles’; and as soon as she had uttered those brief words she got up and rushed into the parlor as though something were after her. This was a very extraordinary thing for her to do, and it shows to my mind that she did not dare to trust herself with me for a moment longer. And I am the more confirmed in this opinion by the fact that when I followed her, in a minute or two,—for at first I was too much surprised by her sudden departure to stir,—I found her leaning upon Mrs. Brown's shoulder in hysterics—laughing and crying all at once, I solemnly assure you. Don't you think there's hope for me in all this, Rowney? Don't you think that her saying ‘Tortillas and frijoles’ in that strange, tremulous tone, and then having hysterics after it, meant more than I could understand at the time?”

“Yes,” answered Rowney decidedly, “I think it did. To be quite frank with you, Roberson, I don't think that you fully understand just what she meant even yet.”

“Oh, thank you, thank you, Mauve. You don't know how much good you are doing me by your kind, encouraging words.”

Rowney's conscience did prick him a little when Roberson said this—but only a little, for his resentment of what he styled in his own mind Roberson's confounded impudence in venturing to make love to Violet, was too keen for him to give the unlucky little man mercy in the least degree.

For a while there was silence. Mauve pulled

away steadily at his pipe, and Roberson stared gloomily into vacancy, and gently wrung his hands. At last he spoke:

“Rowney, do you believe that there is anything in—in spiritualism?”

“There's dollars in it if you only can make it go. Why? Are you thinking of taking it up as a profession? It's rather a shady profession, of course, but you ought to make more out of it than you do out of your still-life stuff. The properties wouldn't take much capital to start with. Two rooms in an out-of-the-way street,—Grove street would do nicely,—some curtains, and a table—that's all you'd need to begin with. If things went along well, and you found that there was a paying demand for materializations, then you'd have to get some costumes. And what awfully good fun it will be,” Rowney continued, as he warmed up to the subject. “Do you know, I've a great mind to go in with you. It will be no end of a lark.”

“Oh, you don't understand me at all, Mauve. I don't want to be a medium. What I mean is, do you believe in the reality of spiritual manifestations?”

Rowney was about to say “Spiritual fiddlesticks,” but checked himself, and answered diplomatically, “Well, you see I have no experience in that line, and so my opinion isn't worth having. Have you ever tackled the spirits yourself, Roberson?”

“Ye-es,” answered Roberson hesitatingly, “I have.”

“And what sort of a time did you have with them?”

“Well—but you won't laugh at me, will you, Mauve? I'm really in earnest, you know; and if you only want to make a joke of it, I won't go on.”

“Don't you see how serious I am?”

“Well, some of the spirits did tell me very wonderful things. Do you remember that picture that I painted a year ago last winter,—peas and asparagus and Bermuda potatoes and strawberries grouped around a shad,—that I called ‘The First Breath of Spring’? I don't think that you can have forgotten it, for it was a noble work. Well, the spirit of Jan Weenix told me to paint that picture, and promised me that it would bring me fortune and fame.”

“Why, I saw it in your studio only yesterday, with a lot of other stuff piled up in a corner. Not much fame or fortune there, apparently. If that's the sort of game that the spirits come on you, I should say that they talk like Ananias and Sapphira.”

“Hush! Don't speak that way, please. We never know what Form hovers near.” (Roberson said this so earnestly that, invol-

untarily, Rowney glanced over his shoulders.) "It is true that the promise made by the spirit of Jan Weenix has not yet been fulfilled; but you know there's no telling at what moment it will be. Every time that I hear a strange step on the stairs, I say to myself, 'He comes! The Purchaser comes—and with him come Fortune and Fame!' And though I'm bound to admit I haven't seen the least sign of him yet, that only assures me that I have so much the less time to wait for his coming.

"Yes, I believe in the spirits thoroughly, Mauve. Every action of my life for years past has been guided by them. And I believe that it is because I have not their guidance in this great matter of my love that I am going all wrong."

"What's the reason they won't guide you now? Have you had a row with 'em?"

"I do wish that you wouldn't speak in that irreverent way. No; the trouble is that the medium whom I have been in the habit of consulting for years has—has gone away. In point of fact," Roberson blushed a little, "he has been arrested for swindling. It is a great outrage, of course, and I am desperately sorry for him. But I am more sorry for myself. You see, getting a new medium is a very difficult matter. It is not only that he must be a good medium intrinsically, but he must possess a nature that easily becomes *en rapport* with mine. When I began this conversation it was in the faint hope that you also might be a believer and might be able to help me in my quest; but I see now that this hope has no foundation. I must search on, alone; and until I find what I require I shall toss aimlessly upon the ocean of life like a rudderless ship in a storm. Don't think me ungrateful, old man, because I am so melancholy. Your sympathy has cheered me up ever so much. Indeed, I haven't been so light-hearted since I don't know when." And with tears in his eyes and sorrow stamped upon every line of his face, Roberson gently minced his way out of the room.

"I say, Roberson," Rowney called after him, "I've a notion that I know a medium who is just the very card you want. I'll look him up, and if he's what I think he is, I'll pass him along to you."

"Oh, thank you, thank you very much, Mauve," said Roberson, putting his head in at the door again. "It's ever so good of you to think of taking this trouble on my account. But if you will find me a new medium,—a good one, you know, that I can trust implicitly,—you really will make a new man of me;" and uttering these hopeful words, Roberson closed the door.

For an hour or more Rowney Mauve con-

tinued to sit and smoke in the big chair. During this period he grinned frequently, and once he laughed aloud. When at last he stood up and knocked the ashes from his third pipe, it was with the satisfied air of a man who has formulated an Idea.

At the outset of this narrative the fact has been mentioned that Violet Carmine was a pickle. The additional fact may be appropriately mentioned here that a residence of five months in the stimulating atmosphere of New York had not by any means tended to make her less picklesome. Except in the case of Mr. Mangan Brown, who stood by her loyally, she was the despair of the Eleventh street household, and she was not favorably commented upon abroad. After that dinner at the Gamboges',—when Violet flirted so outrageously with young Orpiment that even Verona's placid spirit was ruffled,—Mrs. Gamboge said to Mr. Gamboge, in the privacy of their own chamber, that she was very sure that this wild Mexican-Irish girl would bring all their gray hairs down in sorrow to the grave. Mr. Gamboge, who had rather a soft spot in his heart for Violet, and to whom the mystery of Miss Caledonia's back-hair was a mystery no longer, glanced shrewdly at the toilet-table, grinned in a manner that was highly exasperating, and made no reply. Mr. Gamboge regretted his adoption of this line of rejoinder; but Mrs. Gamboge—having suffered peace to be restored when she found herself in possession of the India shawl for which her heart had panted all winter long—inclined to the opinion that brutality was not without its compensating advantages, after all.

And being a pickle, Violet threw herself heart and soul into the part assigned to her by Rowney Mauve in the realization of his Idea.

"It's delightful, Rowney." ("Mamma always used to call her gentlemen friends at Fort Leavenworth by their first names, Cousin Mangan. I am sure that you might let me do what mamma did," Miss Carmine had observed with dignity when Mr. Mangan had suggested to her one day that this somewhat unceremonious mode of address might be modified advantageously.)

"It's delightful, Rowney. Really, I didn't think that you had the wit to think of doing anything so funny. Of course, I'll keep as dark about it as possible. If that sweet little Rose were to get wind of it, I believe she'd faint; and funny little old Cousin Caledonia would have a fit; and Van would be seriously horrified and disagreeable. And even Cousin Mangan, who is the dearest dear that ever was, wouldn't like it, and he'd end by coaxing me out of it, I'm sure. And I don't want

to be coaxed out of it, Rowney, for it will be the best bit of fun that I ever had anything to do with. But I'll have to have somebody along, you know. And I'll tell you who it will be — that nice Rose d'Antimoine! She's just as bad as they all say I am — I don't think that I'm very bad, Rowney; do you? — only she's sly, and knows how to pretend that she isn't. May I tell her about it, and ask her to take a hand? You'd better say 'Yes,' for unless she comes in I'll stay out, you know."

Rowney, who though acquainted only with the society of young American women, was unacquainted with the natural young American woman's instinct of self-preservation, which is most shrewdly manifested in her determination always to have one of her sex with her in her escapades, was rather staggered by this proposition, and was disposed to raise objections to it. But Miss Carmine gave him to understand in short order that his objections could not be entertained for a moment. He would do what she wanted, she told him decidedly, or he would not do anything at all; and Rowney, not altogether unwillingly, for he did not want to get Violet into a scrape, gave in. Therefore, the aid of Madame d'Antimoine was sought, and was given with effusion, for marriage had not tended to make her take a view of life much more serious than that which she had entertained when her scandalous flirtation with the "Marquis" had driven poor Jaune almost to extremities. So these three lively young people laid their reprehensible heads together — and if Roberson's ears did not burn, it was no fault of theirs.

It was the morning after this conference that Rowney Mauve dropped in upon Roberson in his studio.

"Oh, I'm glad to see you, Mauve," said Roberson. "I was just wishing for somebody to come in to tell me about this thing. I'm not satisfied with it exactly, and yet I don't know what there is wrong about it, either. I must explain, though, what I'm driving at. I call it 'The Real and the Ideal' — though I've been thinking that possibly 'High Life and Low Life' will be better. On this side, you see, I have a pile of turnips and a cabbage and a mackerel, and on this side a vase of roses and a glass globe with gold-fish in it. The idea's capital — contrast, and that sort of thing, you know. But somehow the picture don't seem to come together. I've changed the composition two or three times, but I don't seem to get what I want. I do wish that you'd give me your advice about it. What you honestly think, you know."

"To tell the truth, Roberson, the way you've got it now, — the things all along in a row

like that, — it looks a good deal like ninepins after the first ball has cracked into 'em."

"No? does it though? Why, I do believe you're right, Mauve. I've been thinking myself that perhaps the things were too scatterry. And yet, I think there's a good effect in the way that they rise gradually from this one turnip here on the left to the roses on the right. I can't paint out those roses again, they're too good. Don't you think that they're better than Lambdin's? I do. But I might move the globe of gold-fish over to the left, and then have the mackerel and the vegetables along in a row between it and the roses. How do you think that would do? I've got to do something in a hurry, for the mackerel I am using for a model is beginning to smell horribly. I hope you don't find it very bad. I put carbolic acid over it this morning. Oh, dear! Mauve, I don't seem to be able to do anything in these days, now — now," and Roberson's voice became lower, and had a tone of awe in it, "that I no longer have a Guide, you know."

"That's just what I came to speak to you about, Roberson."

"Goodness gracious! Mauve, you don't mean to say that you have — that you have found a Medium?" exclaimed Roberson in great excitement, springing up from his chair, and dropping his palette and maulstick with a clatter.

"That is just what I do mean to say, old man; but I wish that you wouldn't jump around so. It disturbs the atmosphere, and fans the fish, you know."

"Oh! I beg your pardon. Just wait a minute and I'll put some more carbolic acid on it. But tell me about him. Is he really a good medium? Have you tested him? Is he knocks, or voice, or a slate? is he —"

"He isn't a 'he' at all; he's a she."

"A 'she'?"

"Yes; a woman medium, you know."

"Oh," said Roberson, doubtfully, and with less brightness in his face, "I've never tried a woman medium. Do you think they're apt to be as good as men?"

"Not as a rule," Rowney answered, in the grave, careful tone of one who had given the subject a very thorough investigation and whose decision was final. "No, not as a rule; but, as an exception, yes. Dugald Stewart, in his admirable chapter on clairvoyance, — spiritualism hadn't come up in his day, you know, — says that 'the delicate, super-sensitive nerve-fiber of women renders them far more keenly acute to psychic influences than are men. It is for this reason that women, and women only, have given us trustworthy evidences of clairvoyant phenomena.' The eminent Professor Crookes, during his re-

cent exhaustive and most fruitful experiments upon the element to which he has given the name of psychic force, has arrived at a conclusion which substantially is identical with that arrived at by the great Scotch philosopher. He says, clearly and positively: 'While the majority of my experiments with women have been failures, it is a notable fact that of all my experiments, the only ones which have been completely and entirely satisfactory have been those in which the operating force was a woman; and from this fact I conclude that only in the exquisitely sensitive nervous structure of women can proper *media* for the most interesting, most astonishing class of psychic phenomena be found.' Now, what can you say in opposition to this positively expressed opinion of the great English scientist? Surely, Roberson, you will not have the temerity, not to say the downright impudence, to set up your opinion, based only on your own meager experience, against that of this profound investigator,—against the dictum of the man who has invented the Radiometer?"

Roberson was greatly astonished, as well as greatly impressed, by this eloquent and learned outburst; and he was a good deal puzzled later, when his most diligent search through the works of the authors named failed to discover the passages, or anything at all like them, that Rowney had quoted.

"What a wonderful fellow you are, Mauve!" he said admiringly. "I had no idea that you had gone into the matter in this serious way."

"Well, when I set out to know anything, I do like to know it pretty thoroughly," Rowney answered airily. "But I hope that what I've said has weakened your prejudice against women mediums. A man of your strong intellect, Roberson, has no right to entertain a prejudice like that. Of course, though, if you don't believe in women mediums, we will say no more about this one that I have found for you."

"Oh, please don't speak that way, Mauve; I see that I have been very foolish, and I want to meet this one very much indeed. Who is she?"

"She's a Theosoph."

"A what?"

"A Theosoph—a member of that wonderful and mysterious Oriental Cult that Madame Polavatsky has expounded so ably. But of course you know all about Theosophism."

"I—I know about it in a general way, you know. It's something like animal magnetism, isn't it?"

"Yes, it's something of that general nature"—Rowney found that he was getting

into rather deep water himself, and he floundered a little in getting out of it. "Yes, it's like animal magnetism in a general sort of way. And having this magnetic basis, you see, of course it affords a wonderfully perfect channel for communication with the spirit world."

"Of course," Roberson assented.

"And this particular medium," Rowney continued, speaking with confidence again, now that the awkward turn in the conversation was safely past, "is without exception the most extraordinary medium that even Theosophism has produced. She does everything that ordinary mediums do, and some most astonishing things that they don't. Of course you've seen materializations, Roberson?"

"Oh, yes, repeatedly."

"But of people who were dead?"

"Of course."

"Well, this Theosoph will show you, will actually show you, materializations of the living!"

"You don't say!" said Roberson, greatly interested.

"It's a fact, I assure you. This has never been done before, and even she has been able to do it only recently—after twelve years of study among the oldest Pajamas of the Cult in India. It's wonderful! And, what is more, she can materialize inanimate objects—can make things in distant places appear visibly before your eyes. Of course she can do the trance business, and knocks, and slate-writing, and all that sort of thing, you might say, with one hand."

"Wonderful!—Wonderful!" exclaimed Roberson.

"Right you are, my boy. She is the most wonderful medium that the world, at least the Western world, has ever known. She is—she is what a Colorado newspaper person would call a regular daisy, and no mistake!"

"And when can I see her, and where? Oh, Mauve, my heart is beginning to brighten again. I'm sure that she will set me in the right way again about my pictures and—about Violet, you know."

It was with some difficulty that Rowney restrained his strong desire to box Roberson's ears for this free use of Miss Carmine's name. But he did restrain himself, and answered: "You shall see her this very night, and in my studio. She is here in New York only for a day or two,—she starts for India again at the end of this week,—and has no regular place for her séances, so I have arranged with her to come to my studio this evening at eight o'clock. Will that suit you?"

"Yes, yes; and thank you a thousand times, Mauve. I shall be grateful to you all my life for what you have done."

"Will you, though? Don't be too sure about that," said Rowney, with a queer smile. "Good-bye till eight o'clock. Phew! how that fish does speak for itself!"

EGYPTIAN darkness reigned in Rowney Mauve's studio when Roberson entered it at eight o'clock that evening. Roberson did not more than half like this gloom and mystery. Rowney, leading him to a seat, felt that he was trembling. "Has the Indian lady come yet?" he asked in a shaky voice.

"The Theosoph? Yes, here she is. Permit me to present to you, Madam, an earnest seeker after truth."

"It is well," was answered in a deep voice, that quavered as though with suppressed emotion. "What seeks this earnest seeker?"

"Now crack away and ask about the picture. You'd better begin with that, and take the other matter afterward," Rowney whispered.

"Mustn't I call up an advising spirit first? That's the usual way of beginning a séance, you know."

"Oh, of course; that's what I meant you to do," Rowney answered, in some slight confusion.

"Is the spirit of Jan Weenix present?" asked Roberson.

There was a regular volley of raps, and then the deep voice answered, "He is!"

("It is; there is no sex in spirits," murmured Rowney; *sotto voce*.)

"I am ever so glad to meet you again," Roberson said, quite in the tone of one who greets an old friend after a long separation. "I'm dreadfully muddled about this new picture of mine—'High Life and Low Life,' you know. Won't you please tell me what I must do to get it right?"

"Behold it as the great Weenix himself has painted it!" and the deep voice was deeper, and also shakier, than ever.

"Now you will see one of the wonderful materializations that I told you about," Rowney whispered. "Only the most highly gifted even of the Theosophs can do this sort of thing. Look!"

In one corner of the room there appeared a soft, hazy glow, covering a space of about three feet square. The haze passed slowly away, and as the brightness increased a picture became visible. It was Roberson's picture, sure enough; but the composition had been modified materially. The rose-bush was in the center; on one side of it was the glass globe filled with vegetables; on the other side was the mackerel, standing straight up on its tail; while the four gold-fish, standing on their tails and touching fins, were circling around it in a waltz.

"Oh!" was all that Roberson could say on beholding this astonishing rearrangement of his work.

"Now, isn't that wonderful?" Rowney asked impressively.

"Ye-es, it certainly is," Roberson answered, with hesitation. "At least, it's very wonderful as a materialization; indeed, I never saw anything like it. But—but really, you know, Mauve, this arrangement of the picture is a most extraordinary one. Is it possible, do you think, that a malignant spirit has obtained control of the medium? You know that does happen sometimes."

"Like getting the wrong fellow at the telephone?" suggested Rowney.

"Precisely," Roberson answered.

"And what do you do then? With the telephone you ring for the exchange again and swear at them. But that wouldn't do with the spirits, I suppose."

"Of course not," said Roberson, a good deal horrified. "No; the proper thing to do when this happens is to drop all attempts to communicate with the spirit that has been called, and the effort of which to come has been frustrated, and to continue the séance with others less susceptible to malignant influences."

"With the Theosophs the custom differs a little. Being more potent than ordinary mediums, they usually insist upon the attendance of the spirit called. Still, it might be well in this case to adopt the plan that you mention. Suppose you go right ahead and demand a materialization of Miss Carmine and then have things out with her?"

"You don't mean to say that the medium can do that?"

"Indeed I do. Didn't I tell you that these Theosophs could materialize living people? You don't seem to understand, Roberson, what a tremendous power is here at our command. But I'll manage it for you." And Rowney continued, in a deep, solemn tone, "Madam, I conjure you to compel the visible presence of the spirit of Violet Carmine!"

As Rowney ceased speaking, the materialized picture vanished, the hazy light disappeared, and profound darkness came again. Then the phenomenon of the gradual appearance of the light was repeated; but this time they beheld behind the misty veil, not Roberson's reconstructed picture, but the wraith of Violet herself! Oddly enough, the beautiful apparition seemed to be doing its best not to laugh.

Roberson was so overpowered by this astounding sight that he was speechless. It was monstrous, this awful power that could subject a living being to its sway, so far be-

yond anything that he ever had encountered in the course of his spiritual investigations, that a great fear seized him. Cold perspiration started upon his forehead and his knees shook.

"Well, you goose, now that I'm here, haven't you anything to say for yourself? Can't you even ask me about what people eat in Mexico?" Voice, tone, and manner were Violet's to the life. It was too much for Roberson. His demoralization was complete.

"Mauve! Mauve! for heaven's sake help me to get away! This is no ordinary medium. It is the very Power of Evil that we have invoked!"

"That's a pretty compliment to pay a lady, now, isn't it?" and the apparition spoke with a certain amount of sharpness. "As I didn't come here to be called bad names, I shall leave; and the next time that you have a chance to speak to me, you will be apt to know it, my lad!" With these decisive words, Miss Carmine's wraith faded away, and the misty light slowly vanished into darkness.

"Oh, take me away! take me away!" moaned Roberson feebly. In his terror he had sunk down in a little heap of misery upon the floor.

"All right, old man. Just wait half a minute, though, until I speak a word to the Theosoph."

Roberson heard Rowney cross the room, perceived a momentary gleam of light,—such as might come when a curtain that conceals a lamp is quickly raised and quickly dropped again,—and then came the sound of whispering. Roberson's fear was leaving him a little now; but in the darkness, without Rowney to guide him, he did not dare to stir. Suddenly the whispering, becoming less guarded, was audible.

"You sha'n't! Go away!"

"I shall! I can't help it! You've no idea what a lovely ghost you made!"

Then there was a sound of a scuffle, that ended in a crash, and there, seen in a blaze of light over the fallen screen, was Rowney Mauve in the very act of kissing Violet Carmine. The whole apparatus of the trick was disclosed. In the part of the screen that remained standing was the square hole where the picture had been visible; and the gradual coming and going of the light, and its mistiness, were accounted for by the dozen or so of gauze curtains, arranged to draw back one by one. And there was the picture itself— even more shocking when seen clearly than when hidden by the misty veil. On the outer side of the screen, where she could manage the curtains, stood Rose d'Antimoine.

As he sat there on the floor and perceived by these several disclosures how careful the

preparations had been for making a fool of him, and as he painfully realized how admirably well he had been fooled, fear ceased to hold possession of Roberson, and in its place came spiteful rage.

"It's a nasty, mean trick that you have played on me; and I'll get even with you for it, see if I don't! You ought to be ashamed of yourselves, every one of you; and I'll make you ashamed, too, before I get through with you."

"Oh, come, now, old fellow, it was only a joke, you know. Don't be unreasonable about it and raise a row."

"You may think it a joke, Mauve, to have these ladies here at your studio at night, and to go on in that scandalous way with Miss Carmine; but I don't think that either Mr. d'Antimoine or Mr. Brown will see much of a joke in it! Oh, you'll all repent this! I'll teach you to play tricks! I'll fix you, you mean things!" Roberson's voice, never a deep one, rose to a shrill treble as he delivered these threats, and in a perfect little whirl of fury he rushed out of the room.

The fact must be admitted that the three conspirators, being thus delivered over into the hands of their intended victim, were pretty badly crest-fallen. They knew that Roberson certainly had it in his power to make things exceedingly unpleasant for them; and they knew, too, that he certainly intended to use his power to the very uttermost. Decidedly the outlook was not a cheerful one. As they left the studio and the wreck of their spirit-raising apparatus, they all three were in a chastened and melancholy frame of mind.

"THERE'S been a dreadful rumpus, Rowney," Violet said when, as they had agreed, they met in the friendly shelter of Madame d'Antimoine's drawing-room the next afternoon. "That mean little Roberson has told everybody everything, and — and hot water's no name for it! Mr. and Mrs. d'Antimoine have had a regular squabble, though they've made things up now; and Rose has been crying till her lovely blue eyes are all swollen and ugly; and Van is in a perfect Apache rage; and Verona is dignifiedly disagreeable; and little Mrs. Gamboge got so excited and indignant that her back-hair all went crooked and nearly came off, and she had to go upstairs and fix it; and dear little Mr. Gamboge looks solemnly at me, and I heard him say as I came by the parlor door, 'I am sure that Mr. Orpiment would not have hesitated to characterize such conduct as highly reprehensible.' And the wo-worst of all, Rowney," and Violet's voice broke, and her eyes had tears in them, "is that Cousin Mangan won't

"IT'S A NASTY, MEAN TRICK!"

get comfortably angry and have it out with me, but is just miserable and mopes. All that he said to me was, 'Mr. Roberson has told me something that I have been very sorry to hear, my child,' and his voice didn't sound right, and I know that he wanted to cry. Oh, Rowney, I'm the most wretched girl in the world!"

Rowney was feeling pretty low in his mind already, and this frank avowal of her misery by Violet made him feel a great deal lower; and he was cut the more keenly because neither by her words nor her manner did she imply that he was the cause of it — as he most certainly was.

"I am very, very sorry," he said.

"Yes, I'm sure you are, Rowney; and it's ever so good of you, you dear boy. You see — you see," and Violet blushed delightfully, "what upsets them all so is your — your kissing me that way. Of course I know that you didn't mean anything by it, and I'm sure I don't see why they make such a fuss about it. Mamma has told me that several of her gentlemen friends at Fort Leavenworth used to kiss her whenever they got a chance, and that she always used to box their ears whenever they did it. Now I wonder," Violet continued, struck by a happy thought, "I wonder if it's because I didn't box your ears that they all object to it so? Because if it is, you know, I might do it yet! Shall I?" and she looked at him half inquiringly, half with a

most bewitching sauciness. The comfort of telling her troubles to so sympathetic a listener was having a very reviving effect upon her. She certainly did not look at all like the most wretched girl in the world now.

Rowney moved a little closer to her — they were sitting on the sofa — and took her hand in his. "Violet!"

She started. He never had called her Violet before. But she did not take away her hand.

"Violet!" Rowney's voice had not its usual mocking tone, but was quite grave, and had a strange ring of tenderness in it. "My little girl, there's just one way for me to get you out of the scrape that I've got you into, and that's to marry you. May I?"

"Oh, Rowney! Do you mean to run away with me?"

"Well, I hadn't exactly contemplated running away with you, I confess," said Rowney, grinning a little in spite of himself.

"Hadn't you, though?" Violet answered, with a touch of disappointment. "Why, grandpapa ran away with grandmamma, and they had a lovely time. Colonel Smalt, that was grandmamma's father, you know, started right out after them with dogs and a shot-gun, and chased them for two whole days. And at last they came to a river that they had to swim their horses across, and the Colonel, who was close behind them, swam after them. And his horse was dead beat, and couldn't

swim; and the Colonel would have been drowned if grandpapa had not come back and rescued him. And the Colonel insisted upon fighting grandpapa right there in the water, and he did cut him pretty badly; and it was not until grandpapa held him under water until he was nearly drowned that the Colonel gave in. And then grandpapa carried him safely ashore, and after that, of course, they were the best of friends. Wasn't it all delightful? I've heard mamma say again and again how much she was disappointed because papa did not run away with her. So don't you think, don't you really think, Rowney, that you'd better run away with me, dear?"

"And have Mr. Mangan Brown and Van and Mr. Gamboge galloping after us, and swimming the Hudson, and peppering us with shot-guns?"

"Yes! yes! Oh, *do* do it, Rowney. It would be such splendid fun, and would be so very romantic!"

"All right. If you really want to run away, I'd just as lief have things arranged that way as any other, and it certainly will save a lot of trouble. But don't count too much on the shot-guns, for I don't think it probable that Mr. Mangan Brown and Mr. Gamboge will come out strong in that direction; it isn't exactly their line. And now let me have a kiss; just one to — to make it a bargain, you know."

And Madame d'Antimoine, coming in at this moment, assumed an air of stately benevolence and said, "Ah, my children, is it thus? Let me then give to you the blessing, as is done by the good mamma in the play!"

Mr. Mangan Brown did not adopt the shot-gun policy. Indeed, this policy was rendered quite impracticable by the fact that Rowney and Violet, immediately upon accomplishing their marriage, did their running away on board of Rowney's yacht — a mode of departure that Violet approved of rapturously, because, as she said with much truth, "it was so like eloping with a real pirate." But Mr. Mangan felt pretty dismal over it, and wrote a very apologetic account of his stewardship to Señor Carmine. He tried to make the best of things, of course, pointing out that in the matters of family and fortune Rowney really was quite a desirable son-in-law; but even after he had made the best of it, he could not help admitting to himself that the situation was one that a prudent parent scarcely could be expected very heartily to enjoy. And he was most agreeably surprised, therefore, a

month or so later, when Señor Carmine's letter escaped from the Mexican post-office and came to him laden with olive-branches instead of the thunderbolts which he had feared. Violet's father was not angry; on the contrary, he seemed to be highly pleased with "the excellent match" that his daughter had made, and expressed his unqualified approval of the "spirited way" in which she had made it. "She has done honor to herself, to her mother, and to the education that she has received," Señor Carmine declared, "and we are very grateful to you for giving her the opportunity that she has so well improved." The letter concluded with a most urgent invitation for Mr. Mangan to come down for six months or a year, and to bring with him Mr. and Mrs. Gamboge, Van and Rose, Verona and young Orpiment, and Monsieur and Madame d'Antimoine — with all of whom, this hospitable Mexican gentleman wrote, he had made a very pleasant acquaintance in his daughter's letters. And inclosed in this communication was a note, signed Brigida O'Jara de Carmine, of which the theme was a breezy laudation of the love that defies conventionalities and laughs at locksmiths and is the true parent of romance!

"Well, since they take it this way," said Mr. Mangan Brown, with a great sigh of relief, as he laid down the letters, "I must say that I'm glad she's gone. At my time of life close association with such a — such a very volcanic young woman as Violet is — is rather overwhelming. It's like being the Czar of Russia and having the leading Nihilist right in the house with me. And it is a great comfort, just when I thought that everything was ending shockingly, to find that everything has ended pleasantly. For — except that Violet has left that confounded parrot behind her — everything *has* ended pleasantly, after all."

And only Roberson, among those who had enjoyed the rather mixed pleasure of Miss Carmine's acquaintance during her sojourn in New York, dissented from the optimistic view of the situation thus formulated by Mr. Mangan Brown. In this matter Roberson was not optimistic: he was a pessimist of the deepest dye. When he came to know what a boomerang his revenge had turned out to be, he forswore both love and spiritualism, and settled down to art with the stony calmness of despair. And it is a notable fact — though a fact not unparalleled — that the longer he painted the more abominably bad his still-lives were!

[This etching corresponds with Dr. Oliver Wendell Holmes's recollection and with some ancient examples.]

I.

EQUIPAGES AND TRAVEL.

IN the first half of the seventeenth century there were many in England who regarded coaches as novel and ostentatious superfluities, that were, moreover, particularly injurious to the muddy roads of the time. In America, until the eighteenth century was well under way, traveling by coach, beyond the immediate vicinity of the greater towns was rendered almost impossible by the innumerable river-mouths and estuaries that intersected the belt of inhabited territory along the coast. Foot-passengers traversed the narrow streams by means of tree-trunks felled across them; wider rivers could be passed only by finding a canoe at some plantation upon the bank. On some main thoroughfares there were regular ferries, at which the traveler might count on getting over in a canoe, provided he could find the ferryman; but he could only get his saddle-horse over by leading him, swimming alongside. Even after wheeled vehicles were used, it was often necessary in ferrying to take them apart, or to straddle the carriage into

two canoes lashed together, or to let the wheels hang over the side of a small boat, or to tow the carriage behind through the water, and to carry the horse with his fore feet in one, and his hind feet in the other of two canoes bound together. The German immigrants appear to have introduced the ferry-boat running with pulleys upon a rope stretched across the river—the boat being set obliquely to the current, and propelled by the force of the stream against the gunwales.

The Virginia planter of the richer sort, who was said to live with more show and luxury “than a country gentleman in England on an estate of three or four thousand pounds a year,” showed a strong liking for the stately six-horse coach, with postilions; but it was not until 1720 that wheeled carriages were recognized in the legal price-list of the Virginia ferries. In the other colonies, also, the coach was valued as a sign of official or family dignity, and some of the richer Carolinians carried “their luxury so far as to have carriages, horses, coachmen, and all, imported from England”; but in Carolina, and everywhere north of Virginia, the light open

"chair" or the covered chaise was generally preferred. These were better suited to the roughness and sinuosity of the roads than the coach. The chaise was a kind of two-wheeled gig, having a top, and drawn sometimes by one, and sometimes by two horses; the chair had two wheels, but no top; the sulky, which was much used, differed from the chair chiefly in having room for but one person. All these seem to have been hung on straps, or thorough-braces, instead of springs. Boston ladies in the middle of the eighteenth century took the air in chaises or chairs, with negro drivers. Boston gentlemen also affected negro attendants when they drove their chairs or rode on saddle-horses. But in rural regions, from Pennsylvania northward, ladies took delight in driving about alone in open chairs, to the amazement of European travelers, who deemed that a paradise in which women could travel without protection. Philadelphians were fond of a long, light, covered wagon, with benches, which would carry a dozen persons in an excursion to the country. Sedan-chairs were occasionally used in the cities. The Dutch introduced sleighs into New York at a very early date; but sleighs for pleasure, though known in Boston about 1700, only came into general use in the northern provinces at a somewhat later period. The first stage wagon in the colonies was run from Trenton to New Brunswick, twice a week, during the summer of 1738. It was a link in the tedious land and water journey from Philadelphia to New York, and travelers were promised that it would be "fitted up with benches, and covered over, so that passengers may sit easy and dry."

American wheeled vehicles belonged almost entirely to the eighteenth century; the primitive, and always the commonest, means of land travel in the colonies was the saddle-

horse. At the time of the beginning of American settlement English peers were wont to carry their spouses behind them on horseback from London to their country-seats, and even princesses rode on pillions, wearing caps of waxed linen to shelter their heads from the rain. In the eighteenth century the English were accounted the only European people that were fond of traveling in the saddle. In like manner American colonists, especially during the first hundred years or more, rode on horseback to church, to picnics, to weddings, to funerals, and on journeys, often carrying their wives behind them. Sometimes two or three children were stacked on in front of the saddle. One horse was often made to carry two men. By the "ride-and-tie" method, a horse was yet further economized; one man, or a man and woman, would ride a mile or two, and then leave the animal by the roadside for another person or persons to mount when they should come up with him, the first party going on afoot until their alternates had ridden past them, and left the horse tied again by the roadside. Two men and their wives sometimes went to church with one horse, by this device. Where a saddle could not be had, a sheep-skin or a bear-skin served instead. A lady when alone rode on a side-saddle; when behind a gentleman she sat on a pillion, which was a cushion buckled to the saddle. A church surrounded on all sides by saddle-horses tied to the trees and fences reminded the traveler of the outskirts of an English horse-fair. Stories are told of Virginians walking two miles to catch a horse to ride one, and of Marylanders walking six or eight miles for a horse to ride five miles to church.

The planter in the Chesapeake region was well-nigh inseparable from his steed; traveling, church-going, visiting, fighting, hunting, and even sometimes fishing, were done on

BROOKLYN FERRY-HOUSE AND FERRY-BOATS. SITE OF THE PRESENT FULTON FERRY, FROM A VIEW OF NEW YORK IN 1746.

AN AMERICAN SLEIGH OF THE EIGHTEENTH CENTURY.

horseback. The scouts and rangers against the Indians, the Indian traders, the lawyers, the doctors, the parsons, and the peddlers of the southern colonies were all mounted. Comparatively few of the colonists except peddlers ever journeyed by land so far as to reach a neighboring province. The badness of the roads made travel irksome, if not dangerous, and pious people wrote "Laus Deo" in their almanac diaries when they got back with whole bones from a twenty-mile ride into the country. The taverns, whose signs hung on "a kind of gallows" across the road, bearing the portrait of some king or great man, were almost as formidable obstacles to travel as the rough roads and dangerous ferries. Innkeepers in many cases persisted in lodging two strangers in the same bed, often without changing the linen used by its previous occupants, and the beds for guests were frequently all included in one large room. From these roadside inns the hospitality of the colonists sometimes afforded a deliverance. In the South especially travelers were often able entirely to avoid the wretched and extortionate "ordinaries," as they were called.

When a magistrate or other dignitary made a journey, gentlemen of each town escorted him a few miles on the way, usually bidding him adieu at some stream or boundary. "Not one creature accompanies us to the ferry," writes Judge Sewall with indignation on one occasion. Fifty horsemen escorted Whitefield into Philadelphia in 1745, and eight hundred mounted gentlemen went out to meet one of the proprietors of Pennsylvania. Indeed, it

COACH, SUPPOSED TO BE THAT OF RIP VAN DAM. (FROM A PRINT OF THE OLD DUTCH CHURCH IN NEW YORK, 1731.)

was but common courtesy for a company of gentlemen to meet, a long way off, a governor or a commissioner from another province, and to form a voluntary guard of honor, bringing him in great state to his destination, with no end of wine, punch, and other "treats" on the way, and no end of dinners and dances after his arrival.

II.

COURTSHIP AND MARRIAGE.

THE traveler Josselyn gives us a glimpse of seventeenth-century "gallants," promenading with their sweethearts, on Boston Common, from a little before sunset till the nine o'clock bell gave warning of the lawfully established bed-time. This picture of twilight and love lends a touch of human feeling to the severely regulated life of the Puritan coun-

ENGLISH SADDLE OF THE STUART PERIOD. (FROM MEYRICK'S "ANCIENT ARMOUR.")

try. But even love-making in that time was made to keep to the path appointed by those in authority. Fines, imprisonments, and corporal punishment were the penalties denounced in New England against him who should inveigle the affections of any "maide, or maide servant," unless her parents or guardians should "give way and allowance in that respect." Nor were such laws dead letters. In all the colonies sentiment was less regarded than it is now. The worldly estate of the parties was weighed in even balances, and there were sometimes conditional marriage treaties between the parents, before the young people were consulted. Judge Sewall's daughter Betty hid herself in her father's coach for hours one night, to avoid meeting an unwelcome suitor approved by her father. Sometimes marriage agreements between the parents of the betrothed extended even to arrangements for bequests to be left to the young people, as "incorridgement for a livelihood." The newspapers of the later period, following English examples, not only praised the bride, but did not hesitate to mention her "large fortune," that people might know the elements of the bridegroom's happiness.

But if passion was under more constraint from self-interest among people of the upper class, it was less restrained by refinement in

the seventeenth and eighteenth centuries than it is in our time. There was a good deal of stiff external formality in good society, but far less of real modesty in all classes than in modern times. The New England law-givers declare that great evils had resulted from certain social recreations, which would be regarded as quite harmless now; and the large number of offenses against sexual morality, brought to light in the proceedings of churches and courts of law in all the colonies, make one suspect that this was not a merely puritanic scruple. The books, the newspapers, the plays, even the law and court proceedings, and the very sermons of the colonial time, manifest a comparative coarseness and lack of reserve in thought and feeling. The smallness of most of the houses, the numerousness of families, the rustic manners of a new country, the rude, untempered physical life begotten of hardy living, the primitive barbarism lingering in the race, and the prevailing laxity of morals in the mother country, all tended to promote an irregularity that could not be corrected by the most stringent secular and ecclesiastical discipline. There were many illegitimate births in all the colonies, nor was the evil confined to families of the lower order. Puritan churches often exacted a public apology from their members for such sins, and the not infrequent spectacle of a young girl making confession of her offense in meeting probably spread the contagion it was meant to arrest. Beyond the influence of the more strenuous religious movements, such as puritanism, quakerism, and what may be comprehensively called Whitefieldism, men were under com-

BEEKMAN FAMILY COACH OF THE COLONIAL PERIOD, IN THE POSSESSION OF GERARD BEEKMAN, ESQ.

paratively slight restraints from society. In the South a taste for gallant adventures, though very hurtful to a woman, was quite as likely to be beneficial as otherwise to the standing of a gentleman.

The mode of courtship known as bundling or tarrying — the very name of which one hesitates to write to-day — was prevalent in certain regions of New England, especially in the Connecticut Valley. The practice existed in many parts of Europe, and is said still to linger in Wales. It was no doubt brought from England by early immigrants. That it could flourish throughout the whole colonial age, alongside a system of doctrine and practice so austere as that enforced by New England divines and magistrates, is but one of many instances of the failure of law and restraining precept to work a refinement of manners. That during much more than a century after the settlement this practice found none to challenge it on grounds of modesty and moral tendency, goes to show how powerful is the sanction of traditional custom. Even when it was attacked by Jonathan Edwards and other innovators, the attempt to abolish it was met by violent opposition and no end of ridicule. Edwards seems to think that as “among people who pretend to uphold their credit,” it was peculiar to New England; and there appears to be no evidence that it was practiced elsewhere in America, except in parts of Pennsylvania, where the custom is a matter of court record so late as 1845, and where it probably still lingers in out-of-the-way places among people both of English and of German extraction.

A CHAISE OF THE EIGHTEENTH CENTURY. (FROM “L’ART DU MENUISIER-CARROSSIER,” 1771.)

A certain grossness in the relations of the sexes was a trait of

AMERICAN STAGE-COACH OF 1795, FROM "WELD'S TRAVELS." (PROBABLY SIMILAR IN FORM TO THOSE OF THE LATER COLONIAL PERIOD.)

eighteenth-century life, not confined to rustics and people in humble stations. In the "Journal of a Young Lady of Virginia," the writer complains more than once of the freedoms of certain married gentlemen of her acquaintance, "who seized me and kissed me a dozen times in spite of all the resistance I could make." Miss Sarah Eve, of Philadelphia, has likewise recorded in a private journal her objections to the affectionate salutations bestowed on her in company by a Dr. S. "One hates to be always kissed," she says, "especially as it is attended with so many inconveniences; it decomposes the œconomy of one's *handkerchief*, it disorders one's *high Roll*, and it ruffles the serenity of one's countenance." Perhaps it was the partial default of refined feeling that made stately and ceremonious manners seem so proper to the upper class of that day; such usages were a fence by which society protected itself from itself. But eighteenth-century proprieties were rather thin and external; they had an educational value, no doubt, but conventional hypocrisies scantily served to hide the rudeness of the Englishmen of the time.

Marriage ceremonies and festivities in America differed but little from those which prevailed in the mother country. The widest divergence was in New England, where the Puritans, abhorring the Catholic classification

which put marriage among the sacraments, were repelled to the other extreme, and forbade ministers to lend any ecclesiastical sanction to a wedding. But the earliest New Englanders celebrated a public betrothal, or, as they styled it, "a contraction," and on this occasion a minister sometimes preached a

CUT-PAPER VALENTINE OF 1764. (VIRGINIA.)

sermon. A merely civil marriage could hardly continue long in a community where the benedictions of religion were sought on so many other occasions; where the birth of a child, the illness and the recovery of the sick, birthday anniversaries, the entrance into a new house, and even the planning of a bridge, gave occasion for prayer and psalm-singing. Indeed, a marriage performed as at first by a magistrate was accompanied by psalms sung by the guests and by prayers; and as the seventeenth century drew to its close, the Puritan minister resumed the function of solemnizing marriages.

The Quakers, of course, were married without intervention of parson or magistrate, by "passing the meeting." Even in the colonies in which the Church of England was established, marriages usually took place in private houses,—a divergence from English usage growing out of the circumstances of people in a new country. But it was everywhere enacted that the banns should be published. This was in some places done at church service, as in England, or by putting a notice on the court-house door. In New England the publication was sometimes made at the week-day lecture, at town-meeting, or by affixing a notice to the door or in the vestibule of the meeting-house, or to a post set up for this express purpose. Publication seems to have been sometimes evaded by ingenuity. The Friends in Pennsylvania took care to enjoin that the notice should be posted at a meeting-house, "with the fair publication side outward." The better sort of people in some of the colonies were accustomed to buy exemption from publishing the banns, by paying a fee to the governor for a license, and the governor's revenue from this source was very considerable. Ministers in remote places sometimes purchased a supply of licenses signed in blank and issued them at a profit.

English colonists in the hardest pioneer surroundings took a patriotic pride in celebrating what was called "a merry English wedding." The festivities in different places varied only in detail; in all the colonies a genteel

TANKARD PRESENTED ON HER WEDDING DAY TO SARAH RAPELJE, THE FIRST WHITE PERSON BORN IN NEW NETHERLANDS. NOW IN POSSESSION OF MISS SARAH A. JOHNSON OF BROOKLYN. (SEE "CENTURY MAGAZINE," APRIL, 1885, PAGE 889.)

wedding was a distressingly expensive and protracted affair. There was no end of eating, and drinking, and dancing, of dinners, teas, and suppers. The guests were often supplied with one meal before the marriage, and then feasted without stint afterward. These festivities, on one ground or another, were in some places kept up two or three days, and sometimes even much longer. The minister finished the service by kissing the bride; then all the gentlemen present followed his example; and in some regions the bridegroom meanwhile went about the room kissing each of the ladies in turn. There were brides who received the salutations of a hundred and fifty gentlemen in a day. As if this were not enough, the gentlemen called on the bride afterward, and this call was colloquially known as "going to kiss the bride." In some parts of the Puritan country kissing at weddings was discountenanced, but there were other regions of New England in which it was practiced with the greatest latitude and fervor. In Philadelphia the Quaker bride, having to "pass the meeting" twice, had to submit to a double ordeal of the sort, and the wedding expenses, despite the strenuous injunctions of yearly meetings, were greatly increased by the twofold festivity.

I have seen no direct evidence that the colonial gentry followed the yet ruder English wedding customs of the time. But provincials loyally follow the customs of a metropolis, and I doubt not a colonial wedding in good society was attended by observances as indecorous as those of a nobleman of the same period. Certainly stocking-throwing and other such customs long lingered among the backwoodsmen of the colonies, as did many other ancient wedding usages. Among the German immigrants, the bride did not throw her shoe for the guests to scramble for as she entered her chamber, after the manner of the noble ladies of Germany in other times; but at a "Pennsylvania Dutch" wedding the guests strove by dexterity or craft to steal a shoe from the bride's foot during the day. If the groomsmen failed to prevent this, they were obliged to redeem the shoe from the bosom of the lucky thief with a bottle of wine. The ancient wedding sport known in parts of the British Islands as "riding for the kail," or "for the broose,"—that is, a pot of spiced broth,—and elsewhere called "riding for the ribbon," took the form among the Scotch-Irish in America of a dare-devil race over perilous roads to secure a bottle of whisky with a ribbon about its neck, which awaited the swiftest and most reckless horseman on his arrival at the house of the bride's father. There were yet other practices,—far-reaching shadows of the usages of more barbarous ages, when brides were carried off by force. A wedding party in the backwoods as it approached the bride's house would sometimes find its progress arrested by wild grape-vines tied across the way, or great trees felled in the road in sport or malice by the neighbors. Sometimes, indeed, they would be startled by a sudden volley with blank cartridges fired by men in ambuscade. This old Irish practice, and other such horse-play, was most congenial to woodsmen and Indian-fighters, in whom physical life overflowed all bounds.

A custom, no doubt of very ancient origin, prevailed in some Massachusetts villages, by which a group of the non-invited would now and then seize the bride and gently lead her off to an inn or other suitable place of detention until the bridegroom consented to redeem her by providing entertainment for the captors. But in the staidest parts of New England puritanism succeeded in suppressing or modifying some of the more brutal wedding customs of the time. Sack-posset was eaten, perhaps even in the bridal chamber, but it was taken solemnly with the singing of a psalm before and a grace afterward. The health and toasts to posterity, which had been, according

to immemorial usage, drunk in the wedding chamber after the bedding of the bride and groom, were omitted, and in their place prayers were offered that the children of the newly married might prove worthy of a godly ancestry. Old English blood and rude traditions would now and then break forth; it was necessary in 1651 to forbid all dancing in taverns on the occasion of weddings, such dancing having produced many "abuses and disorders."

Where church-going was practiced, as in New England, the "coming out groom and bride" on the Sunday after the wedding was a notable part of the solemnities. In Sewall's diary one may see the bride's family escorting the newly married pair to church, marching in double file, six couples in all, conscious that they were the spectacle of the little street, and the observed of all in the church.

The eccentric custom, known in England, of a widow's wearing no garment at her second marriage but a shift, from a belief that by her surrendering before marriage all her property but this, her new husband would escape liability for any debts contracted by her or her former husband, was followed in a few instances in the middle colonies. One Pennsylvania bridegroom saved appearances by meeting the slightly clad bride half-way from her own house to his, and announcing in the presence of witnesses that the wedding clothes which he proceeded to put on her with his own hands were only lent to the widow for the occasion.

III.

FUNERAL CUSTOMS.

IN 1655 the Virginia Assembly, in order to check the waste of powder at drinking frolics, and to prevent false alarms, ordained that no person should "shoot guns at drinkeing (marriages and funeralls onely excepted)." And indeed the colonial funeral deserved to rank as a festive occasion—a time of much eating and a great deal of drinking. Whole pipes of Madeira with several hogsheads of beer were consumed at single funerals in New York, to say nothing of the food eaten and the tobacco smoked by the friends and neighbors who made a day of it, and now and then also a night of it, in honor of the departed. In Pennsylvania five hundred guests were sometimes served with punch and cake at a funeral; the refreshments were distributed not only in the house, but to guests standing all up and down the road. The cost of the wine at one funeral in Virginia came to more than four thousand pounds of tobacco. In more than

one colony, legislative interference was required to keep the friends of the deceased from eating and drinking his widow and orphans out of house and home. South Carolinians excelled in the sumptuousness of their funerals, as they did in all other forms of hospitality and social ostentation; a profusion of all kinds of liquors, tea, coffee, and other articles were distributed at their cheerful obsequies. In New England funeral festivities were more moderate in the matter of eating and drinking. Cake and cheese were distributed, and tables were sometimes spread in Massachusetts, and wine or beer was served as on other solemn occasions; but feasting at such times appears not to have been so general as in the middle and southern colonies, where funerals were sometimes occasions of disgraceful drunkenness and riot. A New Jersey governor provided in his will against the occurrence at his funeral of rudeness, "that may be occasioned By To Much Strong Lickquor"; and a Virginia clergyman took the bold course of wholly forbidding the distribution of liquors at his burial.

But meats and drinks, though costly, were not always the chief expense at a funeral. The "underbearers," who carried the coffin, walking with their heads and shoulders covered with the pall-cloth, were provided with plain gloves. This pall was hired for the occasion; its corners were upheld by persons of social dignity who were the pall-bearers, and who were provided with gloves of a costlier kind. Gloves were also given to the minister, and often to a great many of the friends. The present of a pair of gloves was an approved form of invitation to a funeral, though in some places invitation cards with wide black borders were used. Among the Dutch at Albany, one hears of a "special" invitation to a funeral being given by sending to the house of the person invited "a linen scarf, a pair of silk gloves, a bottle of old Madeira, and two funeral cakes." At one Massachusetts funeral seven hundred pairs of gloves were sent, at another a thousand, and three thousand at yet another. So many gloves were received by persons of wide social connections, that a considerable revenue was derived from the sale of them. Mourning rings were one of the heaviest charges at an upper-class funeral; they were sent to the minister and pall-bearers, and sometimes to a wide circle of friends. One Boston minister estimated the rings and gloves he received as worth fifteen pounds per annum. Two hundred rings were distributed at a funeral in Boston in 1738. Scarfs, often of silk, were given to the pall-bearers, ministers, and others, and they were worn for a considerable time after the

funeral as a badge of respect for the dead. Families sometimes dissipated a large portion of their estates in funeral pomp. As early as 1656 the Virginia Assembly began to struggle with this pernicious extravagance, and some of the other colonial legislatures, as well as voluntary associations of the people, sought at various times to abate funeral expenses; but the solemn pledge against the use of funeral scarfs and gloves embodied in the Articles of Association prescribed by the first Congress in 1774, shows how well the old customs had held their own against the reformers.

In New England the tolling of a "death-bell" as an announcement immediately after the decease of any person came in probably with the introduction of bells. The earliest New Englanders had no religious service of any sort at a funeral; they followed the corpse and filled the grave in silence, lest they should "confirm the popish error, . . . that prayer is to be used for the dead or over the dead." But eulogistic verses, or ingenious laudatory anagrams of the name of the deceased, were often pinned to the bier, and by degrees some towns deviated from the general practice by having suitable prayers at the house before the burial of the dead, or a short speech at the grave. Another custom, probably confined to New England, was that of presenting to friends at the funeral suitably serious books as memorials of the occasion. Funeral sermons there were, but these were not preached at the time of burial. In some of the southern colonies a clergyman's fee for a funeral sermon was fixed by law. In following the coffin to the grave, great formality was observed; some man of dignity "led" the chief mourner. If the cortège had far to go, and the chief mourner was a widow, she sometimes rode on horseback behind her escort. The funeral of the Philadelphia printer-poet, Aquilla Rose, in 1723, was on this wise:

"A worthy merchant did the widow lead,—
And these both mounted on a stately steed.

Thus was he carried—like a king—in state,
And what still adds a further lustre to 't,
Some rode well mounted, others walked afoot."

At the funeral of a young child the bier was sometimes borne by girls clad in white, and wearing long white veils. Now and then, among people attached to the English Church, a funeral took place by torch-light, but night burials were never common in the colonies. There was an early custom of firing volleys at the grave of a person of great distinction or of high rank, and this even where the per-

son buried was a lady. A barrel and a half of powder was consumed in the endeavor to do proper honor to Winthrop, the chief founder of Massachusetts.

IV.

SPORTS OF THE WOODS AND WATERS.

THE abundant supply of game in the forest and of fish in the waters was the supreme good fortune of the pioneer and his chief bane. The poorest need rarely lack for fresh meat, but the fascination of the chase was destructive to habits of industry. Mechanics deserted their trades and many of the lower classes neglected to provide for their families, falling into a savage's hand-to-mouth way of depending on the dog, the gun, the trap, and the fishing-line for a living. The agriculture of the colonies was lowered in character from the perpetual temptation offered by well-stocked woods and virgin streams; in North Carolina the evil was so great that the woods became at length infested by hunters who led a half-savage life in defiance of law. Deer were most sought for, and many were the ways of making war on them. The settlers early learned a favorite Indian method of hunting them. A hunter inclosed himself in a deer-skin, so as to peer out of the breast of a mock stag at his game, and, thus disguised, was able to get almost into the midst of the unsuspecting herd. Sometimes a horse was trained to walk gently by his master's side, shielding the man from sight. As the woods were full of horses, the deer took no alarm until the rifle had brought down its victim. Trees were felled to tempt the deer to browse upon the tender twigs, while the hunter lay in wait behind the boughs. Night-hunting was then as now a common method; a negro with a flaring torch went before the sportsman, who killed the dazed animal while it was looking into the light; or the hunter floated up to his game in a canoe with a blazing fire in the middle of it. In the Carolinas and the up-country of Virginia, deer were run down with dogs by sportsmen on horseback; but along the coast the frequent bays and rivers rendered dogs and horses of no avail. The Virginians drove sharp stakes where the deer were accustomed to leap into a field of peas; on these stakes they would find the animals impaled in the morning. The great iron traps set for deer in New Jersey and Pennsylvania were found dangerous to men. A favorite way of capturing these creatures in Pennsylvania, and of ridding the land of bears and wolves at the same time, was to get up a

"drive." The name and the method of procedure resembled the "drift of the forest" in England, by which all the animals in waste or common ground were brought together and their ownership settled. In Pennsylvania a ring of men surrounded a great tract of country, and then in exact order, carefully regulated, drew inward toward a center, inclosing deer, bears, wolves, turkeys, and other game, shooting the animals as they made desperate efforts to escape. New England swamps were "beat up" for wolves in a similar way. The excitement of such a day of slaughter, increasing to the very last, may be easily imagined. A more common and destructive device was that of "fire-hunting." A band of men would set fire to the leaves around a circle of five miles or more; this fire, running inwards from all sides, drove the frightened deer and other game to the center, where they were easily slaughtered by the hunters outside the blazing circle. This mode of hunting was at length forbidden in several of the colonies, partly because it was dangerous to property, and partly because, as wild creatures grew scarce, it became desirable to preserve the game from extermination. The slaughter and waste of venison was excessive at the first coming of fire-arms. One planter's household in Maryland was said to have had eighty deer in ninety days, and dry bread was at length thought preferable to a meat of which everybody was tired.

The South Carolinians made the deer-hunt a prime social pastime. For this they gathered regularly at club-houses, from which they started the chase, running the deer with hounds; the sportsmen following with tremendous swiftness on horseback, regardless of underbrush and more dangerous obstacles. Little lads rode pell-mell with the rest, and boys of ten years could show trophies from deer they had killed. Foxes were also hunted by men on horseback, especially in Virginia and Maryland, where the traditions of English country gentlemen were preserved. But there was little that resembled the English sport; the American deer or fox hunter endured fatigues and discomforts, and exposed himself to perils, never dreamed of by an English sportsman of that time, whose worst dangers were ditches and hedge-rows, and whose stags were carted home alive to be chased another day. One of the many devices for taking foxes in New England was to bait them with a sledge-load of heads of the cod-fish, the hunter shooting them from behind a paled fence. One man sometimes killed ten in a night. Wolves were caught on mackerel hooks, bound together with thread, wrapped with wool and dipped in tallow. Other colonial

methods of capturing wolves were by pits lightly covered so as to let them fall in; by pens of logs slanting inward, open at the top and baited within; and by traps and spring-guns. Smaller "vermin," opossums, raccoons, and such like, were hunted then as now by small boys, negroes, and mongrel dogs. Squirrels were prized above most other sorts of game, and were also shot as pernicious consumers of the farmers' grains; matches were made between groups of men, and squirrel scalps were counted at night to decide which party had won. The wild turkey is the prince of all game birds. The colonists hunted it not chiefly for sport, but for its delicious meat; and for taking it they "had many pretty devices besides the gun," such as traps that would catch a whole flock at once. Fires built at night near their roosting-trees so bewildered the turkeys, that one might shoot at them more than once before they would take wing.

The flight of migrating pigeons at certain seasons, darkening the very sky with their multitude, is a phenomenon little known in this generation to people east of the Alleghany mountains; and inconceivable to one who has not seen it. But in colonial days such flocks were seen all along the coast. Cotton Mather, with characteristic fondness for the improbable, suggested to the Royal Society that these birds migrated to and fro between the earth and a satellite near at hand, but invisible. Their abundance at certain seasons was a great relief to the poor in the more settled regions. They were shot down with guns fired into the wide flocks without definite aim; they were taken in nets, they were beaten off their roosts at night by negroes and others with poles, and they were knocked down with sticks as they flew low over the house-tops in Philadelphia. In the Boston market they were sometimes sold at a rate as low as a cent a dozen. Waterfowl in their season were almost as abundant as the pigeons.

There were many other beasts and birds captured and killed by other devices. But these will serve to show what life in all but the most densely settled regions was,—a school, not of industry, but rather of happy-go-lucky vagabondage. It was also a rare school for soldiers. The rustic colonists were accustomed from boyhood to make war on the creatures of the forest by cunning, courage, and marksmanship. With hardship and woodcraft they were familiar from childhood. A traveler in the colonies about 1774 says: "As all the country people are brought up to the Use of Fire Arms from Meer Children, they in general handle a Musket more dextrously and with greater ease than almost

any other Set of People in the World." It was this training that made them more than a match for Indians, and superior to British veterans in fighting against the French in the woods. In the rebellion against the imperial power, it was their habitual endurance of the fatigues of the march and the privations of the camp, with their deadly marksmanship, that made them so formidable. These life-long hunters were never raw troops, and in a crisis like that which culminated at Bennington and Saratoga, the farm-houses poured out riflemen and soldiers ready-made by all the training of their lives. When beaten from towns and forts in the Carolinas, the soldiers became partisan rangers, living in the recesses of the familiar forests, and picking off an English officer with as little ruth as they felt in shooting a stag, and with much more exultation.

It would be tedious, if it were possible, to describe the various methods used by the colonists for taking fish. Beverley, about 1700, mentions "Trolls, Casting-Netts, Setting-Netts, Hand-fishing and Angling," as well as "Spill-yards," which last were long lines "staked out in the River, and hung with a great many Hooks on short strings, fasten'd to the main Line, about three or four Foot asunder." Seines were widely used, and seem to have been also known as sieves or "sives" in some places. Weirs were in use, and these were rather an improvement on Indian devices than an introduction of the English "hedges."

The New Englanders went in multitudes, as the Indians before them had been wont to do, to the falls of the rivers to intercept the ascending shad and salmon. The vast crowds of men gathered at the fishing season made a sort of merry-meeting, and there was much drunkenness and reveling. From these assemblages men went away with their horses laden with fish. Shad were too plentiful; incredible stories are told of three thousand taken at a haul; they sold for from one to two cents apiece of our present money, and were held so cheap that the salmon were sometimes picked out of a net and the shad rejected. Well-to-do people only ate shad on the sly, lest they should be suspected of not having a good supply of pork.

The colonists may have brought the art of spearing fish "with a harping iron or gigg" from the mother country, where in some places trout were thus taken by torchlight, but it is more likely that in this they took lessons from the expert savages. The Virginians and Marylanders had a method all their own: riding their horses into the water on the shoal beaches of their rivers, they speared fish torch in hand, much as a Centaur might have done. Hardly

less picturesque were the Connecticut River fishermen when they waded into the water holding a flaring torch of birch-bark, while they caught lampreys by seizing them in their mittened hand.

Notwithstanding all the wholesale ways of fishing which were practiced without remorse and with small hinderance from the laws, one catches now and then a glimpse of a quiet angler of the true Izaak Walton breed. Such was the Virginia historian Beverley, who gently intimates rather than boasts of his success in saying: "I have set in the shade at the Heads of the Rivers Angling, and spent as much time in taking the Fish off the Hook as in waiting for their taking it." In the same restful tone the colonial historian of New York digresses to let us know that the long, lazy summer voyage by sloop from New York to Albany was "exceedingly diverting to such as are fond of angling."

v.

THE TURF AND OTHER OUTDOOR AMUSEMENTS.

AMERICAN hunting and fishing took on American forms; but horse-racing, a sport at that time peculiar to Englishmen, followed in the main the fashions of the English turf. The Virginians probably had something like a horse-race as soon as there were horses in the plantation. The races run in the colonies were of two sorts. The first was a regular formal race, over a set course, for a silver bowl, tray, tankard, or other piece of plate. Such great events, whose results convulsed the good society of the little provinces, had their chief capitals at the race-courses in the vicinity of New York, Annapolis, Williamsburg, and Charleston. There were other courses, notably one at Philadelphia after 1760, but these were the chief. To each of these came at stated seasons all the gay world of the neighborhood in apery of the English aristocracy, enjoying themselves like children in imitating their betters, and rejoicing in the patriotic belief that they were planting the institutions of Old England on a new continent. And indeed every form of gayety, revelry, pomp, and pleasure-getting known to English people flourished in the American racing seasons, and in the latest years of the colonies the races on this side the ocean came to rival those of England in the speed of the horses, the character of the attendance, and the extravagance of the betting. The circular courses were a mile in length, and were traversed four times in each heat. Where two four-mile heats out of three were needed to

win a race, endurance was a prime requisite in a horse. The horses of Virginia, the best in the colonies, achieved a four-mile heat "in eight or nine minutes"; the imported horse Flimnap ran the first four-mile heat of his race with Little David at Charleston, in 1773, in eight minutes and seventeen seconds. Successful horses became heroes of popular admiration, and were followed by applauding crowds and discussed in drawing-rooms by the ladies, who were ardent partisans in the contests of the turf. Roger, a famous South Carolina horse, was retired from the course by a formal announcement in the "Gazette," accompanied by a poetic eulogy of his virtues and achievements.

On the prosperity of these great races the well-being of fashionable society seemed somehow to depend, and to attend them was a kind of duty for every man of the world and every lady of social pretensions. But there were innumerable less formal races, which were run merely for the sport to be gotten out of them. In North Carolina and the up-country of Virginia quarter-races were much esteemed, and a breed of horses was cherished with no remarkable staying qualities, but capable of running a quarter of a mile at a tremendous speed. "Quarter-courses" usually consisted of two parallel paths, and were run by two horses at a time; as each horse was required to keep to his own track, and the race was short, there was little skill in the riding; it was merely a question of initial velocity. But these thundering dashes, where all was staked on a few seconds of exalted effort, delighted the common people, who traveled long miles to witness them, and to see the chance excitement of "fist-fights," and other accidents, that were sure to fall out in an excited crowd. The infatuated Marylanders took advantage of every great assemblage of people, even of Quaker yearly meetings, to test the speed of their horses. But the horse-race, a sport so closely bound to English traditions, began to suffer a change when practiced on quarter-courses, at county courts, at fairs, by cross-road taverns, and at Quaker yearly meetings. Those peculiarly American forms of the race, the trotting-match and the pacing-match, had come into being, if not into vogue, long before the expiration of the colonial period.

Another peculiarly English sport, of which some of the colonists were inordinately fond, was the cock-fight, which found its chief home in Maryland, Virginia, and North Carolina, where men would travel fifty miles to see a main, and where they brought choice gamecocks from England. The delight taken in this inhuman sport by those of the highest social standing and the best education, is only

one of a thousand marks of the lack of compassion in the man of that time, who did not like to kill a wolf outright, but kept him in order to "have some sport with his dogs" in baiting him to death, or dragged him alive, tied to a horse's tail. Says Wood, in "New England's Prospect," "No ducking ponds can afford more delight than a lame cormorant and two or three lusty dogges." This love of fierce and cruel sport was in the fiber, and had the sanction of ancient usage and aristocratic example. Bears and bulls were baited in England, and an important vote in Parliament was lost in 1699 by the absence of members at the baiting of a tiger by dogs. Even horses were baited to death by dogs in England; this cruelty, shown in drawings of the fourteenth century, was relished as late as 1667. Englishmen on both sides of the sea cultivated some of the tastes of beasts of prey.

Holy days, parish wakes, and other such outlets for the animal spirits of the populace, having been omitted or suppressed in New England, the militia training became a sort of substitute. Even this was sometimes sanctified by prayer, and by psalm-singing at such length as once provoked remonstrance from the rank and file; but it was also cheered by "a noble dinner," for the Puritans were by no means poor livers. In 1675 we find many Boston gentlemen and gentlewomen dining in tents on the common, at a training; there were also "great firings" during the day, so that it made quite a good old English frolic. Now and then the irksomeness of military drill and manœuvre was turned into play by a sham-fight—one party rigging themselves up like Indians, to be ignominiously defeated at the close of a battle of blank cartridges. Training-day prevailed everywhere except in Quaker latitudes, and it was more a time of merry-making than of any efficient military drill. Byrd tells of the militia of a county in southern Virginia "exercising in a pasture," and says there were "women enough in attendance to form a more invincible corps."

There were usually other amusements than evolutions and the manual of arms at a militia muster in the country. Running, leaping, wrestling, cudgel, stool-ball, nine-pins, quoits, fencing, and back-sword or single-stick were practiced. But the favorite competition on training-days was in shooting at a mark for a silk handkerchief or other prize, or a wager. In New England in the seventeenth century this was directly connected with the military training; for they shot in cold blood at what appears to have been an image or outline of a man, and there were grave debates as to who had won the prize, the one who had shot the

target in the neck or he who lodged a fatal ball in the bowels.

Target-shooting was by no means confined to days of training. In a country where marksmanship was a means of livelihood and of defense from ever-impending danger, it became the kind of skill most highly valued, and the manliest sort of distinction. So unerring was the aim of Virginia up-countrymen, that one of them would volunteer to hold a board nine inches square in his fingers or between his knees, while a comrade a hundred paces off shot through it. A British officer, prisoner during the revolution, was pounced upon by a wildcat, and would have been killed had not his companion in the hunt, a Virginia rifleman, shot the brute without hurting the officer. In New York the eve of Christmas and the eve of New Year's Day were always celebrated by shooting at turkeys. In South Carolina marksmanship was the supreme accomplishment; target-shooting took the place of the auction and the raffle. A beef was often distributed by shooting for it at a target no larger than a silver dollar. The best shot got the best cut, and so on down; but those whose shots failed of coming near to the center were quite ruled out.

The fairs held in some of the middle and southern colonies took old English forms; the very ancient court of pipowder, for the trial of disputes and offenses arising at the fair, was established in some of them. People attending the fairs were usually exempted from arrest for offenses or debts, and all kinds of old English sports were used to attract a crowd. A beaver hat worth eight pounds and a pair of boots were prizes in a foot-race at a fair in South Carolina. A live goose was often hung head downward; whoever, riding at full speed, plucked the well-greased head from the goose, was declared victor and carried off the fowl. A greased pig was given to him who could catch it and hold it by the tail, and the ludicrous efforts of one and another to do this caused great hilarity. A laced hat was hung on top of a greased pole, to be the property of any one who could climb up and take it. Then there were sack-races and other forms of rude fun suited to an age of great animal spirits and little refinement. The excitement of the rabble was increased whenever a strapping young woman entered the foot-race or engaged in a wrestling match. To all these delights bull-baiting was sometimes added. Traveling shows of various sorts increased the attractiveness of the fair. The advertisement of a fair on Long Island in 1728 closes with this climax: "It is expected that the Lyon will be there to be seen."

A catalogue of the outdoor sports in that out-

door age would be tedious. There was no end of noise; guns were fired at weddings and at funerals, at "merry-meetings" or drinking bouts, on training-days, and, except in New England, at Christmas and New Year's, as well as on every special occasion of rejoicing besides. Guns often welcomed a distinguished person on arrival, and the din of guns was the last public adieu. People of all ranks loved active sports. Golf and foot-ball obstructed the streets of some of the towns. By a sort of natural selection, the sports now and then took their cue from the laborious occupations of the people. The whalers on Nantucket strove to excel in an ancient English sport called "pitching the bar," while the Maine and New Hampshire lumbermen liked above all things to match, yoke against yoke, their great yellow oxen in drawing loads as a test of strength. There were among the farming people sharp competitions in reaping with the sickle, boisterous corn-shuckings, wood-choppings, and wood-hauling matches.

In all those amusements that require ice and snow, such as sleighing, coasting, and skating, the Dutch were foremost, having brought their liking for such sports from the fatherland. The wide descent of State street in Albany was long a famous resort of young people with sleds, and it was no doubt the original home of the coasting frolic in America. The maze of ponds, marshes, and watered meadows on Manhattan Island made a noble skating-park; marketmen even brought back-loads of provisions into New York on skates. But skating, which was introduced from Holland to England by Charles II., was known in Boston before 1700. At the close of the colonial time Philadelphians prided themselves on their graceful skating and their famous swimming.

Whichever way we turn, we are impressed with the love which the colonists of every grade had for the out-of-doors. Houses chafed them. New York and Philadelphia followed if they did not go ahead of London in the proportionate number of their suburban "gardens" or places of pleasure resort. Some of these commanded delightful prospects of the rivers and bays, and "entertained gentlemen and ladies in the genteelest manner." To the tea-garden came the town-people, sometimes to eat a breakfast in the dewy coolness of the morning, or to take a lunch on butter, crackers, and cheese, with dried beef, ham, pickled salmon, and bread, or to eat hot rolls with coffee, or, better still, "soft waffles with tea," in the freshness of a summer twilight. Certain gardens were noted for their mead; the "Tea-water Pump Garden" in New York was famous not so much for its tea or its water

as for its punch. There were also gardens of a more public sort which, following the example of the Vauxhall and Ranelagh of London, entertained their guests with concerts, "weather permitting."

Suburban taverns were much resorted to. The New Yorkers especially affected fish-dinners at an inn perched on Brooklyn Heights; they were also fond of driving in chaises to a bi-weekly turtle-feast at a retreat on the shores of East River, taking pains to come back over what was known as the Kissing Bridge, "where," as a traveler of the time tells us, "it is part of the etiquette to salute the lady who has put herself under your protection." To eat and drink with zest and to be ardently gallant to the ladies were two cardinal traits of gentlemanliness.

Philadelphians amused themselves in much the same way. They had fishing-clubs and club-houses at convenient places on the rivers; they rejoiced in what were playfully termed "feeding parties"; they incessantly drove into the country in wagons, as though the little city of the time were already too strait for them. Albany people went on all-day picnics, or alighted in a surprise-party at some settler's cabin "in the bush," where feasting and dancing filled the day. Norfolk, though but inconsiderable as a city, had its "Old Pleasure House" by the seaside; and everywhere town-people delighted in suburban excursions. The country people were, perhaps, equally fond of moving about. The Long Islanders mounted their horses,—each horse carrying its couple, a man in the saddle and a woman on the croup,—and, taking with them wine, and cream, and sugar, feasted like gypsies on the wild berries which grew in such plenty as to dye the fields red. Joyous, excursion-loving, simple-minded were the men and women of that time; fond above all things of society, of the fresh air, of excitement, and of eating and drinking. The barbecue had great attractions for the people of the middle and southern colonies; indeed, the ox or pig, roasted whole, even had a considerable political influence in some of the provinces.

VI.

HOLIDAYS AND FESTIVALS.

ONE of the curious effects of the migration of English to America was the weakening of the hold of the old English festivals. All the church days were sedulously disregarded in New England, and elsewhere they suffered some decay. The unfamiliar aspect of the seasons may have had something to do with

this; the decline of the religious spirit, and the exigencies of the first years in a new country, had no doubt even more influence. In 1719 the Virginia clergy tell the Bishop of London that their parishioners observe "no Holy days except those of Christmas day and Good Friday, being unwilling to loose their dayly labour." There was probably a revival of interest in the church festivals in the later years of colonial dependence, when English ways were more in fashion with the rich. Outside of New England Christmas was always observed, but with something less than the old English fervor, and with a good deal less than the old English disorder. On eastern Long Island, which was as distinctly Puritan as Connecticut, the Yule log continued to be burned at Christmas until the open fire-place disappeared; and the custom of hanging up the children's stockings on Christmas eve, and filling them with cakes made in images of little boys, continued there in spite of Puritan prejudices against all church days. In New England, the English custom of counting March the first month was in use until the change from old to new style; but the Puritans probably had a preference for the continental mode of counting. As early as 1697 a "levet" was sounded under Judge Sewall's window on the morning of the 1st of January; and on January 1st, 1700, old style, which he seems to have regarded as the beginning of 1701, he caused to be recited by the town bell-man a poem of his own on the opening of the eighteenth century.

New Year's Day was celebrated among the New York Dutch by the calls of the gentlemen on their lady friends; it is perhaps the only distinctly Dutch custom that afterward came into widespread use in the United States. New Year's Day, and the church festivals kept alike by the Dutch and the English, brought an intermission of labor to the New York slaves, who gathered in throngs to devote themselves to wild frolics. The Brooklyn fields were crowded with them on New Year's Day, at Easter, at Whitsuntide, or "Pinxter," as the Dutch called it, and on "San Claus Day"—the feast of St. Nicholas.

It was complained in 1724 that the Virginians paid little attention to the two anniversaries of the gunpowder treason—the 5th of November and the 30th of January. But the former of these was celebrated in some of the northern colonies by fire-works, by burning an effigy of Guy Fawkes, or by carrying about the village two hideous pumpkin faces, supposed to represent the Pope and the devil, and then consigning them to a bonfire. The pale shadow of this old celebration reaches to our time; boys in some New England coast

towns still light their bonfires on the 5th of November, though quite unable to tell what for. In the region about New York forgetfulness has gone further; stacks of barrels are burned, not on the 5th, but on the evening of the November election day, by lads both Catholic and Protestant, none of whom have any interest in the gunpowder plot, or any suspicion that they are perpetuating in disguise a custom handed down to them from ancestors loyal to the throne and Parliament of England.

Like most things that come to stay, the autumn thanksgiving feast of New England grew so gradually that its development is not easily traced. Days occasionally set apart for thanksgiving were known in Europe before the Reformation, and were in frequent use among Protestants afterward. The early New Englanders appointed fasts and thanksgivings on proper occasions without reference to the season. Some of the first thanksgivings were for harvests, for the safe arrival of ships with provisions, and for the success of the arms of the Protestants in Germany. There were also fast days and thanksgiving days kept by single churches, and private fasts and private thanksgivings set apart by individuals and observed in retirement. Public thanksgiving for the harvest, and for the other blessings of a year that was near its end, occurred frequently in the autumn and easily became customary. Christmas and other church festivals had been severely put down; the very names of the months were at first changed to numeral designations, "not out of any pevish humour of singularity, . . . but of purpose to prevent the Heathenish and Popish observation of Dayes, Moneths and Yeares, that they may be forgotten among the people of the Lord." But custom is stronger than precept, and when the Thanksgiving holiday became annual, it borrowed many of the best and most essential features of the old English Christmas. It was a day of family reunion on which the Puritans ate turkey and pumpkin pies instead of boars' heads and plum-pudding. Thanksgiving Day was long in settling down to its present fixity of season; it is even on record that one prudent town took the liberty of postponing its celebration of the day for a week in order to get molasses with which to sweeten the pumpkin pies.

VII.

SOCIAL LIFE WITHIN DOORS.

CLUBS were more affected by gentlemen in colonial times than they are now, but the club of that day was not a rich corporation possessing

a club-house with luxurious up-fittings, a restaurant and a library, parlors, billiard rooms, and art galleries. It was simply a company of gentlemen meeting on a given evening of each week at a tavern. Some clubs could not get enough of the tavern by meeting weekly. "The Governor's Club" of Philadelphia, presumably made up of men of the highest fashion, were accustomed in 1744 to assemble every night at a tavern, "where they pass away a few hours in the Pleasure of Conversation and a Cheerful Glass."

This club appears to have had a great personage for its center and nucleus, but a common basis of association in the colonial clubs was origin, and this naturally enough, for the immigrants of various nationalities had not yet had time to assimilate. New York had its Irish club, its French club, and so on. Each of these met weekly at the tavern at six in the evening. Even general society was divided into groups by the patriotic attachments and clannish feelings of the immigrants and their children. In a center of fashion like Annapolis or Philadelphia, for example, the Scots' Society gave a ball, or held "an assembly" in the language of the time, on St. Andrew's Day; while the "English Society," as it was called, had its festivals on the King's birthday, and on St. George's; the Welsh "Society of Ancient Britons" danced to St. David with leeks in their hats, and the Irish to St. Patrick of blessed memory. The young gentlemen of American nativity found themselves without a patron saint or a holiday; but with American notions of congruity, they canonized, by their own authority, King

GOLD SNUFF-BOX OF RALPH IZARD, ESQ., NOW IN POSSESSION OF DR. G. E. MANIGAULT OF CHARLESTON.

Tammany, a Delaware chief long dead, and celebrated his feast on the old English May-day, which they ushered in with bell-rings, as though it were a veritable saint's day. These lively native Americans danced at their assemblies with bucks' tails dangling from their hats; some of them were accustomed to enter the ball-room painted and dressed like savages, and to entertain the ladies and gentlemen with the spectacle of an Indian dance and the music of a whooping war-song.

The savages themselves were not more fond of dancing than the colonists who came after them. Dancing-schools were forbidden in New England by the authorities, but dancing could not be repressed in an age in which the range of conversation was necessarily narrow, and the appetite for physical activity and excitement almost insatiable. From the most eastern forest settlements of Maine to the southern frontier of Georgia, people in town, village, and country were everywhere indefatigably fond of dancing. Fiddlers were sure of employment; but failing a fiddler, the dance might go on without him, some one volunteering to

SILVERWARE FROM THE BULL PRINGLE MANSION, CHARLESTON, S. C.

guide the dancing by humming the tunes. In less fashionable companies, when music could not be had to dance by, such ancient, jolly, and unreserved plays as rimming-the-thimble, cut-and-tailor, grinding-the-bottle, dropping-the-glove, brother-I-am-bobbed, threading-the-needle, wooing-a-widow, and so on, were substituted.

In centers of fashion, like Boston, New York, Philadelphia, Annapolis, Williamsburg, and Charleston, there were regular assemblies where one might meet "handsome, well-dressed, compleat gentlemen," and "a brilliant appearance of lovely well-dressed women," according to the testimony of eye-witnesses. The richness of the costumes at these balls was set off by the stateliness of the ceremonies. The account-book of the Philadelphia Assembly of 1748 has been preserved; we can see there how wine was provided by the hog-head; tea and coffee two pounds at a time. Card-tables were set out for those who preferred gaming to dancing, and the playing of ladies and gentlemen, often for high stakes, added to the excitement of the evening. Early in the eighteenth century Virginia families remote from the capital held regular assemblies in the several county court-houses. But dancing did not wait upon formal assemblies or invited parties; night after night, week in and week out, the young people sojourning in a Virginia planter's house could dance with unflagging enjoyment. Among New Englanders, in the later colonial times, the

launching of a ship, the raising of a house, the assembling of a county court, and the ordination of a minister were good occasions for dancing, as were many other public and private festivities. Winter parties gathered in sleighs and drove merrily to some neighboring village, where they at once took possession of the inn and spent the evening in vigorous dancing. Not even in old age did the New Englanders quite give up the pleasures of the dance, if we may believe a careful Italian traveler who knew them just after the close of the Revolution; and the South Carolinians held their places in the ball-room to almost as late a period.

Fashionable assemblies and parties in the little provincial capitals began their evenings with the graceful and formal minuet. For this minuet a gentleman sometimes craved the honor of a lady's hand by a note written a week in advance of the time. After the minuet came the country dances, but less fashionable people loved livelier movement. The Virginians were famous for their animated jigs; Pennsylvanians and the Scotch-Irish everywhere were infatuated with the "hip-sesaw." But whatever the dance or the assembly, the lady appears to have been assigned for the entire evening to one partner, with whom she did the greater part of her dancing.

Gaming was a vice almost universal. Young men often lost large estates in a short time by reckless betting at cards and billiards, and the lower orders followed them afar off by wasting time and money at truck and shuffle-board. Raffles were common, and lotteries were an approved resort for raising money to build bridges or churches and to accomplish other laudable things. The ladies of New York were considered virtuous above many others of their sex because of the moderation of their gambling.

VIII.

WOMEN IN SOCIETY.

IN such a society as this we are examining, women were chiefly esteemed for their good health, sprightliness, beauty, and housewifery.

As in all new countries, women were scarce, and the demand exceeded the supply. Few remained unmarried; and she was usually an irretrievable old maid who passed twenty without a husband. The education of girls was of the slightest; the female mind was thought quite unsuited to bear more than the rudiments of reading and writing. But there were various "fine works," such as the making of needlework cornucopias, the painful elaboration of shell-work, and the making of flowers from silk cuttings, that were taught to girls of wealth as a mark of upper-class breeding. Battledore was thought very suitable to young ladies of leisure. Some were able to accompany their own singing upon the guitar; the virginal, the spinet, and the harpsichord—quaint ancestors of our piano—were known to some of the most musical among people of wealth. Just before the beginning of the Revolution there began to be found in a very few houses an instrument hardly less primitive than these, which is set down in some of the diaries of the day as a "forte-pianer."

If some of our foremothers were intelligent and thoughtful, it was rather by natural gift than from instruction. Men of cultivation seem to have found it a little irksome to get down to the level of topics deemed sufficiently simple for the understanding of women. "Conversation with ladies," says William Byrd, "is like whipped syllabub, very pretty, but nothing in it." The most accomplished gentlemen of that time thought it necessary to treat their lady friends to flattery so gross that it would not be bearable now. Byrd, great lord that he was, repaid his lady friends for courteous and hospitable entertainment at their houses by kissing them at his departure, and excused himself for leaving one gentleman's house by assuring the lady that her beauty would spoil his devotions if he remained.

IX.

THE THEATER.

Of the drama proper we have no distinct record until near the middle of the eighteenth century. Shows there were in plenty; and so show-hungry were the people that it took little to make an exhibition. "The Lyon, the king of Beasts," was carried from place to

place in 1728, on a cart drawn by four oxen, with as much noise as though he had been a whole menagerie. In 1732 the cub of a polar bear was brought to Boston by a whaler, and put on exhibition. His arrival was heralded in the gazettes of the various colonies. A lonesome camel went the rounds in 1740. There were also exhibitions of legerdemain; there were various performances on the slack and tight rope by men and women and little

SILVERWARE OF THE COLONIAL PERIOD, BELONGING TO THE FAMILY OF THE LATE SENATOR BARNWELL OF SOUTH CAROLINA.

boys, with fetters on their feet, with wheelbarrows ahead of them, and so on; there was a woman that spun around like an animated top, while eight swords were pointed at her eyes, mouth, and heart. A solar microscope, a camera obscura, ingenious shell-work, "eight prospects of London," a musical clock, and puppets representing Joseph's dream, were shown at various times, to say nothing of such monstrosities as the remarkable cat with "one head, eight legs, and two tails."

As early as 1724 there was a variety show in a booth on Society Hill in Philadelphia, to which there were sold tickets for the stage, pit, and gallery. Corams and jigs to be danced on the rope, and other feats, were prominently advertised, and the sixth item on the programme reads: "You are entertained with the comical humor of your old friend Pickle Herring." This show was evidently a reproduction of one of the half-acrobatic, half-dramatic performances in the booths at the great London fairs, and the "comical humor" of "Pickle Herring" was no doubt one of those little plays called "drolls." Such shows were probably well known, since there was a "play-house" in New York in 1733, and a "theatre" at Charleston in 1735, many years before

the earliest mention we have of the production of any regular drama in the colonies. But it is not impossible that there were vagabond players in the English settlements from an early period. Mention is made of "a play" at Williamsburg on the King's birthday in 1718.

The origin of the first group of actors of whose performance any record has yet been discovered is as obscure as though the players had come out of the ground. From a private

out of Boston for the rest of the colonial period. Murray and Kean's company in New York were a sorry lot; the actors were mostly taken from other callings; one of the actresses was a "redemptioner," or indentured servant, the proceeds of whose benefit were appropriated to buy her freedom. The members of the company appear to have left debts and a bad reputation behind. For such a troupe a frequent change of air is desirable.

SPINET IN THE ROOMS OF THE PENNSYLVANIA HISTORICAL SOCIETY.

diary we hear of them performing "Addison's Cato," in Philadelphia, in 1749, to the great disgust of the Quakers and those in authority, who took measures in the following January to prevent their continuing a course calculated to "draw money from inconsiderate people." It was probably this hostile action which sent "Murray & Kean," the managers of this venture, to New York, where they set up in a wooden building in Nassau street, in which, in 1750, they essayed, among other things, "The Historical Tragedy of King Richard III., wrote originally by Shakspeare, and alter'd by Colley Cibber, Esq." About the same time "two young Englishmen," probably the same adventurers, stirred up a lively hornet's-nest by producing "Otway's Orphan," with the help of amateurs, in a Boston coffee-house. Prompt and severe legislation put down this attempt of stage-players to gain an entrance to New England, and kept the drama

In this same year "The New York Company," as it styled itself, played in Williamsburg, Virginia, and its members were just opening a new brick theater at Annapolis in 1752, when the arrival from England of what was doubtless the first well-organized company of players in the colonies seems to have dissipated this makeshift troupe.

In 1752, when the English theater, led by Garrick, was in the most brilliant period of its history, William Hallam, of the Goodman's Fields theater, sent to America his brother, Lewis Hallam, at the head of a company of actors, twelve in all, who were to open their colonial career at Williamsburg. The Hallams probably chose the capital of Virginia because the inhabitants of that colony were known to be rich, leisurely, and society-loving people, with enough of refinement to enjoy plays, and with few religious scruples against anything that tended to make life pleasant to the upper

must have proved a disappointment to them. There were not more than a thousand people, white and black, in the village. The buildings, except the capitol, the college, and the so-called "palace" of the governor, were insignificant, and there were only about a dozen "gentlemen's" families resident in the place. In the outskirts of the town a warehouse was fitted up for a theater. The woods were all about it, and the actors could shoot squirrels from the windows. When the time arrived for the opening of the theater, the company were much disheartened. It seemed during the long still hours of the day that they had come on a fool's errand to act dramas in the woods. But as evening drew on, the whole scene changed like a work of magic. The roads leading into Williamsburg were thronged with out-of-date vehicles of every sort, driven by negroes and filled with gayly dressed ladies, whose gallants rode on horseback alongside. The treasury was replenished, the theater was crowded, and Shakspeare was acted on the continent probably for the first time by a trained and competent company. The "Merchant of Venice" and Garrick's farce of "Lethe" were played; and at the close the actors found themselves surrounded by groups of planters congratulating them, and after the Virginia fashion offering them the hospitality of their houses.

When the "season" at Williamsburg was over, the company got "a character" from the Governor of Virginia, and proceeded to play in the new brick theater in the gay and luxurious little capital of Maryland. From Annapolis a tour was

classes. Long before this period, and long afterward, the reading aloud of plays, romances, and operas was a pastime in Virginia country houses on rainy days, Sunday afternoons, and when no fiddler could be had in the evening.

Twenty-four plays had been selected and cast before Lewis Hallam and his company left London on the "Charming Sally," no doubt a tobacco-ship returning light for a cargo. On her unsteady deck, day after day, during the long voyage, the actors diligently rehearsed the plays with which they proposed to cheer the hearts of people in the New World. Williamsburg

made to other places among the drama-loving Marylanders, and in 1753, a year after their arrival in Virginia, Hallam's company reached New York. So far the actors had found their career in the colonies open and their success easy. But New England, except Rhode Island, was double-barred against them, and to gain admittance to Philadelphia required strenuous importunity and careful diplomacy. From this time forward to the Revolution, under the

management of the senior Lewis Hallam, and then of Douglass, Mrs. Hallam's second husband, the company held exclusive possession of the American stage. They ranged from Newport to Charleston, and diversified their journeys by excursions to the West Indies.

The theaters built by this company in the colonial cities were, for the most part, little more than inclosed sheds, and were generally painted red. The scenery was very indifferent. At the opening in Williamsburg in 1752, the local music-master, with a harpsichord, furnished the music. By the time they arrived in New York, the next year, a violinist had been imported, who was also a dancer; orchestra and ballet were thus comprised in one man. Of the earliest actors we know little, except that the first Lewis Hallam was an excellent low comedian, and his wife a woman of beauty and an actress of more than ordinary merit. Their son, Lewis Hallam the second, who on the opening night at Williamsburg made his *début* as a lad of twelve

by breaking down in a part that gave him but one line to speak, early became, and long remained, the leading actor on this side of the sea. He was "a veritable Garrick" on the American stage, though he had but a tolerant reception at Covent Garden. His articulation was not so good as his acting; he was accused of mouthing and ranting, but the critic who lays this charge concedes that he was "thorough master of all the tricks of his trade." His versatility was considerable: Josiah Quincy's sentence, "Hallam has merit in every character he acts," is sustained by the general tradition. As Mungo in "The Padlock," he is thought to have been the first to portray negro character from observation. The American company, as it was constituted before the Revolution, succeeded better in comedy than tragedy, and its members were accounted by an intelligent Englishman "equal to the best actors in the provincial English theatres" of the time.

The seats were classified into boxes, pit, and gallery. Some of the boxes were placed in such proximity to the stage as to be virtually a part of it. The boxes could only be entered from the stage, and seats were sometimes sold on the stage itself. Gentlemen made free to go behind the scenes, and to loiter in full view on the stage, showing their gallantry by disturbing attentions to the actresses. Managers were ever publishing notices that no one would be admitted behind the scenes, and were ever allowing their rule to be broken by those whose position in society entitled them to do lawless things without rebuke. Smoking was allowed in the theater, and liquors were served to people in the pit.

Play-bills were distributed to places of business and to residences on the day before the performance. Seats were reserved for ladies by sending negro slaves as early as three or four o'clock in the afternoon to occupy them until their mistresses arrived; in 1762 a system of reserving seats in the boxes was introduced. When an actor received a benefit, he offered tickets at his lodgings, that he might have the opportunity of receiving personally the favors of friends and admirers; the beneficiary actor or actress was even expected to show respect for leading ladies and gentlemen by waiting on them at their houses to crave their patronage. Plays began at six o'clock, and gentlemen were entreated to come early, as "it would be a great inconvenience" to these gentlemen "to be kept out late." In the early years of this century, and no doubt before the Revolution, Shakspeare's and other plays were ruthlessly cut down in New York theaters, in order not to break over this habit

of keeping early hours, the only virtuous practice that was universally prevalent in that age.

In all communities where Puritanism or Quakerism was strong, the opposition to the theater was very violent. To soften this hostility and maintain the liberty of playing, the actors gave benefits to many objects — to the poor of various cities, to a charity school, to buy an organ for a college chapel, to assist in building a hospital in New York, and to the Pennsylvania Hospital, the managers of which institution were roundly abused for accepting money from such a source. The actors pleaded their own cause in various prologues; they took a peculiar “benefit of clergy” once by reciting a prologue written for them by a clergyman, and again by acting a play written by a Scotch divine. On the return of the company to New York from the West Indies, in 1758, the opposition broke out in that city, which had been their northern stronghold, and it was only after a severe struggle that the manager succeeded in getting permission to play. Religious feeling had been wrought to a high tension in the middle of the eighteenth century by the labors of Whitefield, Edwards, Tennent, and other famous revivalists. Much of the opposition had its source in a puritanic aversion to amusements, but it was greatly reënforced by the licentious freedom of some of the pieces relished by the play-goers of that time, a freedom that would be intolerable in any decorous place of amusement to-day. Nor did the loud dressing and irregular lives of some of the players help the standing of the drama with serious people who judged by other than artistic standards.

The managers adopted many ingenious devices for avoiding the legal impediments thrown in their way in several places. One ruse was to advertise a play, as Douglass did in Newport, as “a series of moral dialogues in five parts,” giving a syllabus of the good instruction to be got out of “Othello,” for example. Another device was to announce the opening of a “Histrionic Academy.”

The southern colonists were exceedingly fond of the theater, and of all kindred gayeties. Virginians of the highest standing, not content with seeing plays at the theater, and reading them for home amusement, organized amateur companies of their own. In South Carolina it was a sort of article of faith with the upper classes that town life should atone for the irksomeness of time spent “in the swamps.” They not only welcomed the American company when it came, but they conducted a series of fashionable concerts, paying in 1773 a salary of fifty guineas the season to a French-horn player, and ten times as much for a first violinist.

The American theater had after a while to

LEWIS HALLAM THE SECOND.
(FROM A MINIATURE, BY PERMISSION OF MR. EDWIN BOOTH.)

contend with a new and unlooked-for enemy. The movement in the colonies against the encroachments of the British Parliament involved an underlying movement toward democratic equality. Nearly all modern democratic movements, especially those of the eighteenth century, have been characterized by what may be called a political Puritanism — an overflow of the reforming spirit. It was this which made some of the French revolutionists so austere in matters of dress and food. In America the outburst against the stamp-act in 1765 brought the destruction, by a New York mob, of a theater building. This curious logic of feeling was not confined to the vulgar. The patriot Josiah Quincy, though capable of enjoying and admiring Hallam's acting, yet declares that he would oppose the introduction of the theater in any State of which he was a citizen. When at length the revolutionary storm broke, the theater was one of the first things to go down. The Articles of Association, by which the Continental Congress of 1774 sought to pledge the colonists to put themselves into a state of warlike self-denial, contain a promise to “discountenance and discourage” “all horse-racing and all kinds of gaming, cock-fighting, exhibitions of shews, plays, and other expensive diversions and entertainments.” Peyton Randolph, president of the Congress, wrote a letter to Douglass, the head of the American company, inclosing the resolution. If this had been law, a loop-hole might have been found; but the manager who should have disregarded the expressed wish of the Congress at this time would have looked the lightning in the face. The actors sailed for the West Indies, to return northward, like migratory birds of song, when storms should have blown over.

MAP OF THE COUNTRY BETWEEN RUSSIA AND BRITISH INDIA.

FIGURES WITH NAMES OF PLACES GIVE THEIR HEIGHTS IN FEET ABOVE SEA LEVEL.

THE GATE OF INDIA.

FROM their northern dominions, securely protected at the rear by eternal ice and snow, and desert wilderness, the Russian Tsars have watched for a hundred years the growth of the world's commerce, and contemplated the scheme of out-flanking the whole of Europe, to reach one of its greatest sources of wealth — India.

As long ago as the time of Alexander the First and Napoleon the First, a project was entertained by the two of sending an army of 35,000 men, through Persia, by way of Herat, into India. Whether the Russian policy of the last fifty years has really contemplated an ultimate descent into India, or whether its object is, as she protests, merely the necessity of keeping the Turcomans in subjection, her military forces in that region have steadily increased, and steadily pushed their outposts farther south-eastward.

But there is another view of this south-eastward movement. Russia in Europe has a population of about 86,000,000, comprising at least one quarter of the entire population of Europe, besides 9,000,000 in Asia. For the growth in numbers, intelligence and energy of this vast population there is no outlet in any direction but to the south-east. To the northward there is nothing but ice and snow. To the southward and south-westward are the denser populations and the great standing armies of western Europe. To the east is the vast level expanse of Siberia, which, though a fertile country south of the latitude of St. Petersburg, and capable of supporting a population equal to that of western Europe, is too far from the sea or any great navigable water, too remote from the world's great markets to induce a movement of population in that direction. Russian energy, therefore, finds no sufficient field of expansion except on this line to the south-eastward, which may lead either to India or to the Arabian Sea. In the last half-century the other nations of western Europe have built up great and prosperous colonies in all parts of the world. But the Russian population, more distant from the seas, has felt the pressure of circumstances similar to those which in ancient times drove the Huns from the very regions lately traversed by the Russians,— a pressure which precipitated the swarms of Huns upon imperial Rome, and which may yet precipitate the Russians from Bokhara upon Cabool, or even, as feared by the Turkish generals, from Armenia upon Constantinople.

From St. Petersburg it is 1200 miles by rail to Odessa. The latter place is also connected by rail with the general railway system of Europe. Draw a line on the map straight south-eastward from Odessa to the nearest point of India, on the lower Indus, and it falls near to Batoum on the Black Sea, Baku and Michaelovsk on the Caspian, and Herat and the Bolan Pass in Afghanistan. On three-fifths of this great line of over 2800 miles, communication has been opened in the last five years by the completion of the Batoum-Baku railroad, and the Trans-Caspian railroad, and by steamers on the Black and Caspian Seas, until it is now only eight days' journey from St. Petersburg to Kezil Arvat, within 450 miles of Herat. How much farther than Kezil Arvat the railroad has really progressed in the last year or so, is carefully concealed by the Russian officials, who will allow no inquisitive foreign travelers to proceed that far. But two years ago there was a tramway from Kezil Arvat to Askabad, which may have already been turned into a railroad.

But in case the route across the Black Sea was impracticable, owing to the presence of an enemy's fleet, there is a nearly all-rail route around the Black Sea. This is by rail from, say, Moscow, *via* Koslow and Rostov to Vladikavkas on the northern slope of the Caucasus, 1063 miles; from Vladikavkas over the Caucasus by the wagon road in the Dariel Pass, 133 miles to Tiflis; thence to Baku by rail 305 miles; thence across the Caspian 220 miles to Michaelovsk, and thence 300 miles by rail to Askabad on the Persian frontier, which is only 300 miles from Herat. The whole distance of 2000 miles from Moscow to Askabad could be traversed by troops in ten days. In April, also, the Russian Government authorized the extension of the railroad from Vladikavkas 150 miles to Petrovsk on the Caspian Sea. When this line is completed, as it probably will be this summer, the entire distance from Moscow to Askabad will be 1800 miles, all of which will be railroad except the 400 by sea from Petrovsk to Michaelovsk.

There has also been a project to build a railroad from Kezil Arvat, about 300 miles eastward to Khiva. This would give Russia direct railroad connection with Turkestan, and steamers could ply on the Oxus from Khiva to Bokhara.

England, uneasy at these expanding schemes and this steady progress, has built a railroad from Kurachee on the lower Indus, 450 miles

north-westward, up into the mountains to the Afghan border, at the Bolan Pass. Russia has steadily protested that she has no designs upon India, and has invited England to extend her Kurachee railroad 600 miles farther to Herat, and so make a nearly all-rail route by which the trading Englishman could go from England to India, 4500 miles, in nine or ten days.

The quickest present route is through France and Italy to Brindisi, and thence by the Red Sea to Bombay, about 5500 miles in about twenty days; or by steamer all the way, *via* Malta, Alexandria, and the Red Sea, 6000 miles, in about twenty-four days. The Russian route would undoubtedly be a great economy of time and distance, but as two-thirds of it would lie through Russian territory, John Bull regards it with great distrust, and every once in a while prepares to stop the "Russian advance toward India," by force of arms. Last March the attempt to settle the boundary between Russia and Afghanistan at last brought the Russians and English face to face, on the western border of a mountain country, which is likely to be the theater of any war between Russia and England; because, within its territory are the few mountain passes — at the utmost four or five — which are the only means of access to India anywhere on its entire land boundary of nearly 2500 miles. Of these the Khyber Pass is the chief, and after this the Bolan. The others are the Kurm, the Gomal, and the Saki Sarwar. These are the gates of which Herat is called the key, though possession of the key does not by any means imply a passage through them, but only the access to their vicinity.

Strictly speaking, both England and Russia are trespassers on the territory of the Ameer of Afghanistan, who is an independent potentate. The war between England and Afghanistan in 1878 was brought about by the Ameer receiving an Embassy from Russia and refusing to receive one from the Viceroy of India. It resulted in a loss of many thousands of British soldiers in the various battles in the passes, and, finally, in the placing of Abdurrahman on the throne with an annual subsidy from England, instead of Shere Ali, without one. The war, however, was too recent not to have left in the minds of many of the present Afghan soldiers bloody memories, which would be revived by the presence of some of the very British officers as allies who, seven years ago, were enemies. It has even been a Russian boast that the Ameer was alone, among the Afghans, in desiring British alliance. From the beginning of the Russo-Afghan dispute, England, therefore, had stood in the embarrassing position of an ally who mis-

trusts the friendship of the people whose territory she is undertaking to defend. Under these circumstances it is not probable that any British force will take the risk of putting five or six hundred miles of deserts and mountains between itself and its base of supplies, to fight the Russians in western Afghanistan. Whatever fighting there may be in Afghanistan between British and Russians, will necessarily be nearer to Cabool.

Within a radius of about 400 miles from the city of Cabool, lies one of the strangest, wildest, most diversified, and historically interesting countries in the world. Here the great mountain ranges of the Himalaya, the Soliman, the Beloor Taugh, and the Siah Coh, which traverse the vast continent of Asia from China to Persia, and from Siberia to the Indian Ocean, are all converged into a titanic jumble. Within this territory are embraced portions of the tropical plains of India, the bleak steppes of Tartary, and the high plateau of Iran. These are separated from one another by such bewildering mazes of snow-clad, impassable mountains, that soldiers and travelers have called it "an awful country." "Awful," or awe-inspiring, indeed it is; a maze of mountains full of surprises to the explorer, who finds here not only different climates, but different tribes having different customs and in some cases speaking different languages.

Almost in the center of this district, and within about a hundred miles of the city of Cabool, are the peaks of Hindoo Coosh, Coonde, Soliman, Suffaid Coh, Siah Coh, and many others, varying in height from 16,000 to 20,000 feet above the sea level. How these compare with others in better-known parts of the world, may be seen when it is said, that, of the great peaks of the Swiss Alps, the Matterhorn has an altitude of only 14,856 feet, and Mont Blanc only 15,670 feet. If the whole mountain system of the United States, from the Atlantic to the Pacific, with all the greatest peaks, were crowded into the area of the States of New York and Pennsylvania, it would be a region much less rugged, less elevated and difficult, than that within a radius of 300 miles from the city of Cabool. The city itself, though surrounded by high mountains, is 6400 feet above the sea. The city of Ghuznee, ninety miles to the south of it, is at an elevation of 7,700 feet, and the entire road between the two averages 8,000 feet, one of the passes, the Lion's Mouth, being at an elevation of 9,000 feet. Heavy snows lie on the city of Ghuznee, sometimes until the end of March, while 200 miles to the east is the tropic valley of the Indus. The group of these four great captains, Hin-

doo Coosh, Coonde, Suffaid Coh, and Soliman, represents almost in the limit of one view nearly all the important mountain ranges on the continent: From the peak of Hindoo Coosh, seventy-five miles north-west of Cabool, the range of the same name extends nearly 1000 miles eastward at an average height of 18,000 or 19,000 feet, in one unbroken, treeless wall of stone. In all that distance there is not a pass that leads over an altitude less than 12,000 feet above the sea. That of Kawah, the most easterly one yet discovered (about longitude 70° east), is at an altitude of 13,500 feet, and even the Bamian Pass, 100 miles farther west, which leads entirely around the western end of Hindoo Coosh, is at an altitude of about 9,000 feet. Nor is there any break in this tremendous barrier, even at the end of 1,000 miles eastward from the peak of Hindoo Coosh, for there the range is developed into that of Himalaya, which is higher still, thus making an impassable barrier along the northern border of India, from Afghanistan to Burmah. From the peak to Coonde northward, extends the range of Beloor Taugh, the "Cloudy Mountains," which form part of the western rampart of that vast high plateau of Central Asia, called the plain of Pamir, the "Roof of the World." About eighty miles south of Coonde is the peak of Suffaid Coh, the "White Mountain,"—so called by the natives from its continual cap of snow,—and from here southward into Beloochistan, extends the range of Soliman,—not so lofty in its whole extent as the Hindoo Coosh, but still at various points reaching up into the thin atmosphere, beyond the range of vegetation and animal life.

But this vital knot in the mountain system of Asia is also the place where the two great elevated plateaux of the continent find their only point of approximation. Here the plateau of Pamir almost connects with that of Iran. Here, too, the lower-lying, habitable plains of Tartary and the Caspian, come closest to the warmer plains of Hindostan—indeed, nothing separates them but this very knot of mountains, traversed by a pass about 300 miles long from Hindoo Coosh through Cabool and Peshawer to the Indus. From the two sides of Hindoo Coosh the streams run into the Caspian Sea and the Indian Ocean; while from the snows on the eastern side of Beloor Taugh run rivers that after many hundreds of miles are lost in the sands and solitudes of the great Mongolian Desert in China. Such is this one culminating point of all the great physical features of Asia.

The Khyber Pass is a deep gorge, but in many places comparatively a mere crack or crevice. Down this for a distance of about 150

miles rushes the Cabool River, delayed and placid for a while near Gundamut, about the upper end of this 150 miles, and again near Jellalabad farther down, and still again in the plain of Peshawer, but rapid and torrent-like between each of these places. Jellalabad is on a mountain as compared to Peshawer, and Gundamut is on a mountain as compared to Jellalabad. Between the plain of Peshawer and the higher one of Jellalabad is the Khyber Pass, a deep ravine about thirty miles long, shut in by cliffs that in some places present walls 600 or 700 feet high.

The Emperor Baber in his first journey eastward from Cabool (1504), coming from his bleak plains of Tartary, was struck with wonder not only at the greatness, but the suddenness of the change in the face of nature, and afterwards wrote in his commentaries: "I had never before seen the hot climates or the Indian country. When I came to the Pass, I saw another world; the grass, the trees, the birds, the animals, the tribes of men,—all was new; I was astonished." "The road"—says Mr. Elphinstone, in his account of his embassy to Cabool in 1808—

"is often along the bed of torrents, and is extremely dangerous in the event of sudden falls of rain from the hills. In quiet times the Khybers have stations in different parts of the pass to collect an authorized toll from passengers, but in times of trouble they are all on the alert. If a single traveler attempts to make his way through, the noise of his horse's feet sounds up the long narrow valleys, and soon brings the Khybers in troops from the hills and ravines. But if they expect a caravan, they assemble in hundreds on the side of a hill, and sit patiently with their matchlocks in their hands, watching its approach."

This Khyber Pass is indeed the "Gate of India," for the road through it and over the Bamian Pass, 150 miles north-westward, near the mountain of Hindoo Coosh, is the only route practicable for artillery across that vast wall of mountains anywhere between Burmah and Beloochistan, a distance of nearly 2300 miles, which covers nearly the whole land boundary of India from the Bay of Bengal to the mouth of the Indus. This mountain wall is a great ethnological barrier which in all ages has separated widely different races of men, and in all the ages prior to the eighteenth century, whatever of conquest or commerce or immigration came to disturb or change India, either for better or for worse, flowed and ebbed through this narrow gate of the Khyber Passes, crossing the Indus where the Cabool rushes into it with wild commotion near the fort of Attock. The little district which embraces these mountain passes vertebrates the whole history of mankind down to the time of the discovery of the route to India by the Cape of Good Hope;

and if its rocky walls possessed the phonographic power of preserving and repeating the sounds which they have once echoed, they would tell the history of the world. For up and down this narrow ravine in the Khybeer Hills, under the shadows of its forests of pine, and oak, and wild olive, have passed either the armies or the emissaries of almost every important nation in Europe and Asia.

It was about the beginning of the eighteenth century that the British East India Company, after a struggling and precarious existence of a hundred years, had just begun to be a political power in India. The Emperor Arungzebe, the last great sovereign of the Mogul empire, was dead (1707), and the Mahratta chiefs of Central India were endeavoring to build anew the Hindoo empire on the ruins of that of the Moguls, which, though still keeping up the semblance of state, was fast crumbling away. It is at about this period that the character of Indian history seems to change. It is here that the European and the modern are joined on to the Oriental and the old. But history enables us to conjure up visible phantoms of the men who traversed these mountain passes in the olden time, and around these the past may be galvanized into life again:

It is the year 1738, and Nadir Shah with all his army, has crossed the Indus, ravaged all the north-western provinces of India, and, finally, captured the capital, Delhi, and made the Mogul a prisoner. After occupying Delhi for some months, and ordering a massacre of many thousands of people, he has marched back, carrying with him a booty to the value of 100,000,000 dollars, in which is the famous Koh-i-noor diamond. Nadir Shah, the man whose father was only a maker of sheepskin caps at Kelat, with grim humor proposed as a token of friendship to the fallen Mogul monarch that they should exchange turbans — because in the turban of the latter he saw the great diamond, which is presumed to be worth somewhere between five and ten millions of dollars.

Nine years later (1750) the passes resound to the tramp of another great army going to invade India. It is Ahmed Shah Abdalli, the founder of the Afghan empire. He is of the native Afghan tribe of Abdallis, of which he has changed the name to Durannees, and calls himself "Ahmed Shah Duranny." He goes down to cross the Indus at Attock — where every conqueror before and after him has crossed. Making only a flying invasion this time, he will cross again next year with a larger army; and still again a third time in 1752, and then will capture and plunder the oft-captured capital city of Delhi, and carry off the treasure which seems ever to accumulate

there. And now, again a fifth time, in 1760, with an army of over 40,000 horsemen, and 2000 camels, he clatters down the passes to cross the Indus at Attock, and in the Punjab is "joined by three of the native princes, swelling his whole army to 41,800 horse, 38,000 foot, with some eighty pieces of artillery." "This" — says a Persian writer (Casa Raja Pundit) who was present at the battle of Paniput — "I know to have been precisely the state of the Mussulman army, but the irregulars who accompanied these troops were four times that number, thus swelling Ahmed's army to above 300,000."

This is the last great invasion of India by an Oriental army, Oriental not only in its numbers, but in its *personnel*: there are Afghan horsemen, dressed like Persians in gay-colored clothes and low sheep-skin caps, armed with Persian hilted swords, some with matchlocks, the stocks of which are strange-looking hooks, shaped like a sickle, and intended to go under the arm; and some with short blunderbusses, with extremely thin barrels and diminutive stocks. The housings of their horses are of leopard and lion skins. There are great numbers of camels, on each of which are mounted two musketeers, armed with larger blunderbusses, and several hundred camels on which are mounted pieces of light cannon, and "shuternels," or swivels.

To oppose this army is that of the Mahratta king, Biswas-rao, who has within a few months nearly overturned the feeble Mogul government, and is now entrenched with 55,000 horse, 15,000 foot, and a vast number of irregular and independent troops, and camp followers on the fatal field of Paniput, where the empire of India has twice before in former years (1526 and 1556) been lost and won.

Setting his army down before this entrenched camp, the stern Mussulman, Ahmed, — whose orders, says the Persian writer, "were everywhere obeyed like destiny," — directs a little red tent to be pitched for him half a "cos" in advance of his camp, and to this every morning before sunrise he goes out to pray, and then with a troop of horse rides forty or fifty miles every day to visit every post of the army. After three months of investment, with all supplies cut off, the Mahrattas in despair march out of their lines on the 7th of January, 1761, and opening fire with all their artillery, thus announce their resolve to give battle and die; for well they know that if vanquished they will find no quarter.

The Persian vakeel, or news-writer, — Casa Raja Pundit, — telling the story of that terrible battle, which lasted from noon till sunset, says: "Of every description of people, men, women and children, there were 500,000 souls

in the Mahratta camp, of whom the greatest part were killed or taken prisoners." The headless body of the Mahratta king was found and recognized only by his jewels."

This great battle put an end not only to the Mahratta power, but also to the Mogul government and left anarchy in all India. But now these Duraunee Afghans, after having done such terrible work, were tired of the plains of India, and having mutinied against even their stern Ahmed, obliged him to abandon his project of seizing the empire of India, and to lead them back with their plunder to their mountains about Cabool.

But now again the curtain is lifted on another era of the past — the Middle Ages. It is the year 1398, and through the snows on the lofty Pass of Kawah, seventy-five miles north of Cabool, a cloud of Tartar horsemen under Timour are descending on the city. Everything gives way before them, and as they swarm down through the rocky passes below Jellalabad they collect such a multitude of prisoners — whom they are afraid to liberate lest they should have to fight them again on their return — that by the time they have reached the historic crossing-place of the Indus at Attock, the number of captives is over 100,000. And still as they go on across the plains of the Punjaub the number increases until, just before the great battle near Delhi, Timour orders all the fighting men among the captives (over 100,000) to be slaughtered, so that in case of necessity for retreat the Cabool passes may not be closed by these captives flying back in advance to their native cliffs and valleys.

A hundred and twenty-eight years after Timour comes his descendant Baber, who having conquered Cabool and from that city as a base of operations has already crossed the Indus at Attock four times in twenty years, crosses now a fifth time (1525) with a greater army than ever before, and goes down to fight the *first* great battle of Paniput and capture Delhi, and thus establish that great empire of the Moguls in Hindostan which will last for nearly 300 years.

But again the scene shifts to an era anterior to that of the Moguls. It is the year 977, and Sebuctagi, the Persian Sultan of Ghuzni, after reducing Cabool, has marched down through these passes with such an overwhelming army that, though the Brahmin Jeypul opposed him at the crossing at Attock with an army of 200,000 foot and 100,000 horse, Jeypul's army has been completely routed.

After Sebuctagi comes his son Mahmood the "Scourge of India," the most zealous Mohammedan bigot of his time, — the meaning of whose name, "Mahmood," according to

Gibbon, is "The slave of the slave of the slave of the Prophet," — and who invaded India twelve times in twenty-five years, and each time except the last advancing by way of Cabool and the Khyber passes.

It was about the year 700 that, to use an Oriental metaphor, "the star of Islam first shone on the plains of Hind," and though there is scarcely even an outline of the event, there is enough to show that it came from the direction of Cabool. Down in the plains of India, 130 miles northwest from Delhi, is a place called Hisar, of which the ancient name was *A'si*, "a sword," and "often," says an old description of the place (referring to the eighth century), "did the warriors of the mountains of Cabool find their graves before A'si."

But now the figures of a still earlier time come into view, and in that long era from the seventh century all the way back to the first, and even beyond it to the time when Christianity and Mohammedanism were as yet unborn, there are indistinct outlines of armies of Tartars and Persians and Afghans trooping down these Khyber passes to their conquests and plunder in India. And intermingled with these are long caravans, partly of traders and partly of religious pilgrims, from Thibet, Tartary, and China, and even from Siberia, going down to worship at the numberless holy places of Buddhism in India; to seek for the ruins of the sacred city of Kapilavastu, where Buddha was born, or to look upon the sacred Bo-tree where he was enlightened by celestial wisdom, so that he was able to solve the mystery of this mortal life. In the valley of Bamian, where all these swarms of pilgrims going in and of missionaries going out, crossing the mountains by the Bamian Pass, there are great rock-cut temples like those of Abu Simbul in Egypt. Here stand two gigantic statues, male and female, the former 160 and the latter 130 feet high, inside of which are winding stairs by which the pilgrims may ascend to the heads of the statues, and look out of their eyes toward the holy land; and on the rocks down near Peshawer and Attock are engraved the edicts of Dharmaroska, the great Buddhist king of northern India, inculcating the practice of virtue, the construction of roads and hospitals, and abolishing capital punishment. But among all this throng of pilgrims — some in their garments of rags, adopted to indicate their humility, and some in their sacred yellow robes sprinkled with dust — which pours in and out the passes for nearly a thousand years down to the seventh century, we recognize but two figures distinctly: Fa-Hien, who came from China in the fourth century, and Hiuen-Thsang, who came from the same

country early in the seventh century,—the latter to find that while Buddhism was spreading so rapidly in all the rest of Asia, it was as rapidly declining in India, and that the green banner of the Prophet of Islam had already been seen east of the Indus.

But now once again the Genius of the Past waves his wand, and the head of a column of horse comes around a turn in the road. The foremost riders are men of fair complexion, except for the weather bronze of two or three years' campaigning. Their dress and arms are different from any of those of later days. They wear close-fitting, long-sleeved jackets of woolen cloth, and tight-fitting pantaloons of the same. They wear either breastplates of brass, or cuirasses made of many plates of the same which come down to the waist, and in some cases below. Greaves of thick leather cover the front part of their legs. On their heads are high helmets, some of leather and some of brass, with strong stiff visors. The tops of their helmets are ornamented with stiff, closely cut hair from their horses' manes. They carry short straight swords of brass. Upright behind the right shoulder of each are two spears, the butts of which rest in sockets by the right foot. Their sheep-skin over-jackets and cloaks hang behind them on their horses. These men are Greeks, the advance guard of a great army of Macedonians, Greeks, Phrygians, Bactrians, and men of all the countries of Asia Minor. The time is the year 327 before Christ, and the man who directs the march of this great army is Alexander the Great. He will go down to cross the Indus at Attock, and push his conquest as far east as the Hyphasis (Sutlej), where his Macedonians, appalled at the distance from their homes and the recklessness with which he plunges farther into the unknown world of the Orient, refuse to follow.

Two hundred years earlier (525 B. C.), there is a misty outline of an invasion by an army of Darius, king of Persia.

And still the swarms of human beings seem as great in the ancient as in the later days, and away back in the past, beyond the reach of chronology, tradition shows an out-pouring of an Aryan race from the plains of Tartary, downward through these passes, to conquer and extinguish the aboriginal "dark race" of India.

Notwithstanding these oft-recurring tidal waves of invasion, there was a constant current of commerce flowing through the Bamian and Khyber passes—almost the only connection indeed that India had with the outer world. From the earliest times recorded in history, the routes of trade between the Levant and India had been by way of Baalbec and Balkh to these passes. In the latter part of

the thirteenth century the Genoese, having assisted Michael Paleologus to recapture Constantinople, were given such commercial privileges as made them masters of the Black Sea. From here they soon pushed their factories and trading-posts to the eastern shores of the Caspian, and by the way of Balkh and Cabool carried on an extensive trade with India until they were shut out of the Black Sea by the Turks in 1453. But even yet the commercial usages of the traders on the Caspian recall the commercial supremacy of the Genoese.

One of the most remarkable things in connection with all this tide of conquest and immigration that has flowed through these mountain passes is that it has always been inward. There has never been any considerable movement of people out of India. No army of Hindoos or of any other race that had become naturalized there ever went out to conquer other countries. The Aryans went in from the north to conquer the aborigines and establish the Hindoo empire. The Persians and Arabs went in from the west to conquer the Hindoos and establish the Musulman empire; and again the Tartars went in to establish the Mogul empire, which in turn faded away under the attacks of the Persians, the Afghans, and the British. At one time, indeed, the Mogul emperors did include Afghanistan in their dominions, but it was before the Tartar spirit had succumbed to the opiate influence of India. What came out of India—and particularly by way of this its historic gate—was measureless wealth, and one great religion; wealth which for ages set the rest of the world in a tumult of contention between the nations to have control of its source, and a religion which, though it has almost faded out in India itself, still causes one-third of the human race to turn their thoughts to India as the land of Buddha's birth and death.

But the historic interest which is concentrated around this Oriental gate, in the mountain passes of Afghanistan, also extends to the Afghans themselves; their traditions of their own origin are among the most curious of all peoples in Asia. They claim their descent from the Israelites, and say they are the representatives of a part of the lost ten tribes of Israel, who never returned from the Assyrian captivity, into which they were carried by their conqueror, Tiglath-pileser, in the year 721 B. C. All the Afghan accounts of their own nation begin with the recital of the principal events in Hebrew history, from Abraham down to the time of the Assyrian captivity. These traditions do not differ very essentially from the biblical accounts of the same events, except in some cases, in which both accounts are evidently of an apocryphal

and mythical character. The Afghans claim that they are descended from Melic Talut (King Saul); that Melic Talut had two sons, Berkia and Imria, that the son of Berkia was called Afghan, from whom are descended the Afghans, and the son of Imria was called Usbee. Their traditions, however, are here at variance with the biblical genealogies, which do not mention any such sons of Saul. The Afghan tradition also brings King Saul into notice, in a mythical account of an event which is differently described in the Bible (I Samuel, chap. v). The Afghan account—published in the researches of the Asiatic Society of Bengal in 1787—is as follows:

“In a war which raged between the children of Israel and the Amalekites, the latter, being victorious, plundered the Jews and obtained possession of the ark of the covenant. Considering this the god of the Jews, they threw it into the fire, which did not affect it. They afterwards attempted to cleave it with axes, but without success. Every individual who treated it with indignity was punished by some misfortune for his temerity. They then placed it in their temple, but all their idols bowed to it. At length they fastened it upon a cow, which they turned loose in the wilderness.”

Melic Talut—continues the Afghan tradition—restored the ark, and was consequently made King of Israel.

Tiglath-pileser, who took the whole of Israel into captivity, distributed them among the north-east provinces of his empire. From the time of this captivity, ten of the tribes drop out of the biblical history. But the Afghan account is that a portion of these “lost tribes” withdrew to the mountains of Ghore, in the present Afghanistan, and another portion to the vicinity of Mecca, in Arabia.

This claim of the Afghans to have descended from the Jews was regarded with respect by many distinguished Oriental scholars, among whom was Sir William Jones, the founder of the Asiatic Society of Bengal.

As another evidence of the probability of their Jewish descent, the Afghan historians all claim that the children of Israel, both in Ghore and in Arabia, preserved their knowledge of the Unity of God. “When the select of creatures, Mohammed, appeared upon earth,” says the Afghan tradition, “his fame reached the Afghans, who sought him in multitudes.”

The tribal nomenclature of the Afghans is as copious, in proportion to the numbers of the people, as that of the aborigines of America,—with names, indeed, that in many cases strangely recall the sound of those of America. There are the Durannees, Ghiljis, Sheerannees, Vizerees, Berdurannees, Eusofzys, Turcolannees, Khybeers, and a host of others. The dominant tribe is the Durannees, whose country—without any exact boundary lines—embraces a large part of western Afghanistan, and whose principal cities are Herat and Candahar. The total number of this tribe has probably never been above a million souls, and yet by their ascendancy of the other tribes they once founded a government at Candahar, which was obeyed from the Caspian to the Ganges. The Ghiljis, which are the second in numbers, control all the Cabool Valley above Jellalabad. About the year 1000, A. D., they established, under their Sultan Mahmood of Ghuznee, an empire which extended from the Tigris to the Ganges, and from the Jaxartes to the Persian Gulf, a territory as great as the United States. The other tribes are remarkable chiefly for the great diversity of their customs and degrees of civilization. Some, like the Khybeers, are dwellers in the hills and mountain gorges, which they seldom leave, while others, like the Naussers, are wandering pastoral people, who have no country of their own. Mr. Elphinstone, in his “History of Cabool,” described the Naussers as assembling twice a year to make their semi-annual migrations in search of new pasturage for their flocks. In the autumn it is from the mountains to the plains of Damaun, near the Indus, and in the spring back again to the mountains. The bustle and disorder attendant upon the movement in one body of twelve or fifteen thousand families, with such a great assemblage of sheep and cattle and camels, the fights with their old enemies the Vizerees, who waylay them in the mountain passes, the long marches over barren wastes and through unfrequented mountain defiles in search of subsistence for their flocks,—present, altogether, a picture of pastoral life more like that of Abraham than is to be found anywhere else in the world.

W. L. Fawcett.

MISTRAL.*

A STRONG emotion seizes me as I write the name of Mistral. That name, so full of sound, brings back to me my youth like a wind blown suddenly from the past; I see a vision of blue sky and I feel an impression of delightful warmth. It gladdens me as once the bells of Avignon made me happy, when, escaping the north and the tumult of Paris, I heard their chimes ring out through the limpid dawns of Provence.

I met Mistral for the first time in 1859. He was just being "born into celebrity" by his first poem, "Mirèio," and came to Paris to give his thanks to Lamartine, who had made himself the godfather, the herald, of this budding fame. I was ten years younger than Mistral, who himself was not thirty. So I was almost a boy still, but a boy already smudged with printer's ink; as a rhymester my name had begun to get about among the newspapers and be read in the reviews, and I had begun with all my might, with all my lungs, and all my heart, to blow away on my little trumpet in honor of the great poet of my own province.

I had a room as big as your hand in the Hôtel du Sénat, Rue de Tournon, where my next-door neighbor was a student called Gambetta; it was thither Mistral was brought to see me by the poet Adolphe Dumas. A big, fine-looking chap, but lame, this Dumas was known through a few tragedies which were not lacking in cleverness. A native of a little village close by Mistral's place, he instituted himself Mistral's guide about Paris. Well, well, it seems as if it were yesterday (so clearly have I held it in memory), that little dinner in my small bedroom in the Rue de Tournon, twenty-five years ago!

Mistral, large, powerfully built, sunbrowned, with his head carried proudly, his ample bust buttoned into a frock-coat, was a good representative, notwithstanding that garment, of the fine type of peasantry that belongs to the valley of the Rhone. He wore the military mustache and long imperial, but his own spirit and the vivacity of the poet were easily visible on his lofty forehead, in his widely opened eyes and the dark and deep pupils in which lurked a little rustic suspicion of everything having to do with Paris, that city so much feared and

respected! Very agreeable, very courteous, he spoke and answered with a soft and singing voice, at once attractive from its musical quality. But now and then the voice rose high; he forgot to be polite and smiling as soon as he was asked why he wrote in Provençal. You may believe Mistral was roused at that; he almost lost his temper; then, with a fieriness entirely southern: "Why? — why I write in Provençal? Because Provençal is my language — the language of the land where I was born. Because my father, my mother, speak Provençal. It was in Provençal I was rocked in my infancy. Everybody about me in the village speaks it — that beautiful tongue of Provence; women plucking the olives, little ones trotting about the roads in the sun, speak no other tongue. The farmer speaks it to his oxen, the village priest among us preaches from his pulpit in Provençal, and it is in Provençal that the very birds sing their songs!"

French! To him that language was only a foreign tongue learned at school. He told us about his life, spoke of his boyhood passed in the open country among the vineyards and olive orchards, described for us the farm near Maillane where he was born and brought up, the village into which every Tuesday the whole family marched — father, mother, children, and servants — in order to hear the mass read. The farm near Maillane where Mistral grew up is the very farm of Mirèio, the *Mas des Micocouliers*, with its solid thatch of boughs casting deep shade on the tiled walk, with its beautiful fountain running into the fish-pond, its hives of bees that festoon with their swarms the great *micocoulier* trees. Under the *micocouliers* of Mirèio, there it was that the poet was born.

His father, whom I never knew, but whom I imagine to myself one of those old-fashioned peasants, unflinching in labor, proud of property amassed, and whose glory it is to see their sons in the robe of the priest or the lawyer, instead of the peasant's frock, — this father of Mistral, dreaming doubtless for his boy Frederick a larger horizon than the few roods of cultivated land he owned, wanted to turn him into a man of learning; so he sent him at an early age to the Avignon Lyceum.

*American readers are greatly indebted to Miss Harriet W. Preston for a knowledge of the Provençal revival. See her translation of Mistral's "Mirèio" into English verse; also her book on "Troubadours and Trouvères, New and Old," both published by Roberts Bros., Boston; also her article in "The Atlantic" for November, 1884, on "Mistral's Nerto." See also this magazine for May, 1872: article on Mistral by M. E. M., with translation of the song of Magali by the Rev. Charles T. Brooks. Another American who has made versified translations from the modern Provençals is Mr. Alvey A. Ade, of the State Department. — ED.

With what bitterness did he not tell us of those sorrowful days at college, where the free spirit of his childhood, used to the open air and broad sunshine of the fields, found itself suddenly imprisoned! Having secured the diploma of Bachelor, it was necessary to go to Aix to study law. No longer the narrow prison, still that college was a species of exile, the exile of the poet among the Scythians, of the young Provençal lost in the foreign surroundings of the French language! At last he returned to his country, to Mas; and when his father asked him, "What do you want to do?" he answered, "Work in the fields and make verses." In those words alone lay all that was to be his after life.

His poem "Mirèio," wherein he sings the youthful loves of a lass of La Crau and a little sluice-tender, that touching poem built of love-thoughts and impressions of nature, is the mirror of his early years. In it he unrolls by the aid of light stanzas the sketches of that rustic life which charmed his infantile eyes,—labor, the sowing, sheep-shearing, reaping, the silk-worms, winnowing,—everything which he himself has called "the majestic deeds of rural life, forever harsh, but eternally honest, wholesome, independent, and calm."

It is worth knowing how this poetic nature became revealed to itself. In his college at Avignon Mistral made the acquaintance of an instructor named Roumanille who made verses in Provençal. They were soon friends, and when the pupil had read the lines of his teacher he exclaimed with a thrill, "Behold the dawn that my soul was waiting for, in order to wake to the light of day!" He set himself to translate into Provençal the Eclogues of Virgil, in which he found living the labor, the ideas, the customs and manners of his rural home.

Mistral related to me those recollections of youth while we were at table in my little furnished room. It was a wretched dinner from a tavern, brought up cold from the heater of its kitchen, and served on thick plates. The dessert! I see it now — Rheims biscuits of mournful aspect, dusty and uneatable, that appeared to have been found beneath some pyramid of Egypt. But the unspeakable commonplace of the lean and hungry student's dinner, the wearisome look of the room itself, with its well-worn carpet, old desk and lounge of Empire style, its horrible clock,—all that disappeared while we listened to Mistral. He declaimed a few bits from "Mirèio."*

The whole evening passed after this fashion, and while he spoke, pointing his lines with his liberal gesticulations, it seemed to me that the narrow room was filled with a delicious odor, fresh and living, exhaled from my own country, left so long before. I knew again, in my little corner of Paris, the delightful fragrance of Provence, while listening to that sonorous, musical tongue, as it mingled with the rolling of cabs and omnibuses rising from the pavements of the Rue de Tournon.

From that first meeting on we were friends, and upon leaving him I promised to come very soon to see him in his fields of Maillane, whither he was in haste to return. The next year I kept my word; that journey is one of the most delightful reminiscences of my life.

Oh the waxen impressionability of early years! Never shall I forget the little station at Graveson between Avignon and Arles where I stepped out one morning, happy, jovial, impatient to get there, shaking myself free from the numbness of the long journey, and already driving out of mind all recollec-

* We here give two stanzas,—the Provençal, the French version, and a translation in English:

I.

* "En desfuiant vòsti verguello,
Cantas, cantas, magnanarello!
Mirèio es à la fueio, un bèu matin de Mai.
Aquèu matin, pèr pendeloto,
A sis auriho, la faroto!
Aviè penja dos agrioto. . . .
Vincèn, aquèu matin, passè 'qui tournamai.

"En défeuillant vos rameaux,
Chantez, chantez, magnanarelles!
Mireille est à la feuille, un beau matin de Mai.
Ce matin-là, pour pendeloques,
A ses oreilles, la coquette!
Avait pendu deux cerises. . . .
Vincent, ce matin-là, passa là de nouveau.

"Plucking mulberry leaves in masses,
Sing ye, sing ye, plucking-lasses!
Who's perched among the boughs this lovely day in May?
Mirèio sweet, Mirèio brown as berry!
Mirèio's hung, the mad and merry,
In either ear a ruddy cherry—
By chance, that very morn, Vincen must come that way!

II.

"A sa barreto escarlatino,
Coume au li gènt di mar latino,
Aviè pouldamen uno plumo de gau;
E'n trapejant dins li draiolo
Fasiè fugi li serp courriolo,
E di dindànti clapeirolo
Emè soun bastounet brandissie li frejau."

"A son bonnet écarlate,
Comme en ont les riverains des mers latines,
Il avait gentiment une plume de coq;
Et en foulant les sentiers,
Il faisait fuir les couleuvres vagabondes,
Et des sonores tas de pierres
Avec son bâton il chassait les cailloux."

"And like the men of Castel'maré
Within his scarlet bonnet wore he
Right spruce and gay a plume of chanticleer.
Across the road the lizards cunning
Before his stick were swiftly running;
Each stone-heap slashed with volleys stunning
Sonorous rang, and echoed loud and clear."

tion of Paris, like a lingering remnant of sleep. A wee, wee rustic station in the midst of the plain; on the horizon shaved and fragrant hillocks,—a genuine landscape of Provence, clean-cut, precise, a little spare, with its distances unclouded by mists beneath its light sky. Leaning against the openwork bar, a man. It was Mistral come to meet me, but no longer the Mistral I saw in Paris; another entirely different, a red *tayolle* wound round his loins, a little peasant's hat tipped over his ear, his jacket hung on one shoulder, a stick in his hand. I like him better in this costume; I find him larger, handsomer, more himself. We fall into each other's arms and start off. From Graveson to Maillane it is a long hour to walk. All the way great walls of standing wheat, enormous fields of the vine (there were vineyards there then) whose tangled boughs cover the earth. The wind is tremendous; one of those transmontine gales that cut the words off at the lips. I walk side by side with Mistral, arm in arm, and we scream to make ourselves heard. Great cypresses, with pointed heads like dervishes, wave their thick branches and make walls of somber green, which bend low in the wind. Around us the plain, full of scattered sunlight, has a color of the Orient; the small mountains of the Alpilles, which rise far off warm and golden, seem near by, so transparent is the atmosphere. An hour's walk through that lovely landscape, and all stiffness has disappeared; our friendship seems an old story; we call each other *thou*, and when we get to our destination we are brothers!

Maillane is a largish village which resembles, with its shady boulevards round about, some old Italian small town. You find water running through it—no very common thing in Provence. Water runs in the moats, where one sees a water-wheel turning. From the houses comes a continual noise of the looms of silk-weavers.

Mistral's house was at the other side of Maillane, the last on the left. While we crossed the village he was met at every step by hearty good-days. Young girls, their little velvet ribbons arranged with coquetry, threw him, laughing, a "*Bounjou, Moussu Frédéri*," and he answered, in his strong, joyous voice, "*Bounjou, Azalais; bounjou, Vinceneto!*" Farther on an old man, bent by work in his vineyard, straightened himself to salute in like manner *Moussu Frédéri*. This simple cordiality, this friendly warmth, showed what the man was in his own home, on his own soil, free and at his ease in the midst of all these honest folk whose ancestors had known his own.

The house before which we stopped differed little from the others. A poor little house of a well-to-do peasant, with one floor and an

attic. Only the ticking that is stretched across the door to keep out mosquitoes was replaced by a network with fine openings, a kind of metallic curtain, which is a luxury in villages and a sign of wealth.

To the left on entering is a small room, very simple, furnished with a lounge with yellow squares and with two straw arm-chairs. In a corner is a desk, a poor little registrar's desk, covered with books and blotters. On the wall unpretending plaster-casts, a picture of a first communion. Later on I was to pass many wonderful hours in that workshop, which I then saw for the first time.

There his mother met us: an old peasant woman with a wrinkled, placid face and clear eyes, a *cambresine* on her head. Breakfast was all ready and waiting for us in the middle of the room, which was study, drawing-room, and dining-room at one and the same time. It was the simplest of meals,—potatoes, olives, sweetmeats,—because it was fast-day; and, to wash the lenten meal down, there was some excellent wine. While eating and chatting I looked about. On the wall hung two miniature plows of wood, very cleverly done, like models for patents; they were labors of patience and dexterity, with which he had amused himself. As a child, the son of farming folk, Mistral pleased himself in this way, just as in seaports the children of sailors will fashion little boats. The poet's mother did not breakfast with us. In Provence, as in all parts of South France,—a custom that makes one think of Oriental fashions—women do not eat with men. *Fremo noun soun gen*, says a proverb of the thirteenth century: "Women are not folks." Madame Mistral never seated herself at the table with her husband, never with her son. She ate in the kitchen with the help, the *chato*, the maid-servant. After breakfast we made her a visit and had a chat. She was seated on the stone slab of the wide hearth, and I recall the happy and frank look she gave me as I talked to her about her son. Her ignorance was a bar to understanding fully the fame of her child. Nevertheless she felt in him something above and beyond her peasant understanding, and she told me that, one day, while Frédéri read her "*Mirèio*," she did not appreciate it entirely, but she had seen a shooting-star! O dear old woman! soul of the mother! she had seen indeed a star shooting through the distant sky of poesy!

I dwelt there, in that little house, almost a month. We slept in the upper story, in a big room with two beds of most rural aspect, with posts reaching to the ceiling. To get to it one had to cross the mother's bedroom and pass close by her bed covered with a canopy. When we came in at night, returning from the little

café on the village square, we walked on the tips of our toes ; but old folks have tardy slumbers and light ; she always heard us, and from behind the canopy came her hearty mother's voice, " You are there, children ? Well, good-night — sleep well." And in good sooth we did sleep well in our big dormitory with our tall bed-posts overhead. One day Mistral be-thought himself to cause the old roof of his decked bedstead to disappear ; he dreamed of decorations and improvements to be made with the three thousand francs of the prize from the Académie Française obtained by " Mirèio." But on second thoughts he gave up the project ; the prize was disposed otherwise ; he put the little sum to one side, in a corner, and that money, won by his verses, he employed, to the last *sou*, in giving aid to poets.

In the course of that month passed with Mistral, I lived entirely his life, companion to all his hours, accompanying him on all his walks, comrade in all his labor. He took me to the farm where he was born, and there I saw his brother, much older than he, a large old man with white beard, who superintended the work. To get from Maillane to the *Mas* one follows the St. Rémy road, — a white highway along whose entire length great Spanish reeds border the absent streams which are dried up at the bottom of the ditches ; the sound of their leaves rubbed together by the wind gives the impression of fresh-running water in that waterless land. Near the farm I found once more the same evergreens with pointed tops and thick boughs. Behind those trees, which ward off the wind, beneath the cradling movement of their boughs, Mistral wrote his first lines. He made them singing, and he has kept up the habit. He chooses a rhythm and sings his verses like a genuine *cantaire*, like a real troubadour of the old time ; he sings them and gesticulates them, casting forth his sonorous rhymes upon the open air and into the noise of the wind. Whilst I listened, enthusiastic, delighted, I watched below us on the plain a sower who threw, — he also! — with the same magnificent wide gesture, the yellow rain of the seed across the furrows.

He was at that time at work on his poems called " Iles d'Or," a collection of popular songs of South France ; and I saw him produce, or rather improvise, while singing them, the verses of " Lou Bastimen."

" The saucy sloop hails from Majorca
With oranges in many a group ;
The crew has decked with fresh green garlands
The topmast of the saucy sloop.
Good luck a-poop,
Hails from Majorca
Our saucy sloop !

" The saucy sloop is from Marsilia ;
Believe, her venture's of the best !
The ocean holds his breath, and smoothen
Before the prow that has been blessed.
Now, God you rest !
She's Marseilles-builed,
And has been blessed.

" Her captain, first a sunbrowned sailor,
Was courteous when he quit the helm ;
He carried off a good man's daughter
(No better father in the realm) —
Came home good man,
Good merchant captain
And fisherman.

" Then with his wife's abundant dower
He builed him a handsome sloop ;
He would not stay a simple rower
And fisherman, but off he'd swoop.
' Nay, do not droop,
My wife so bonny' —
And off he'd swoop.

" The saucy sloop like balsam fragrant
Is calked and pitched all fresh and new ;
Like scaly sea-fish bright and vagrant
She glitters fair from ear to clew.
She 's painted well,
And smells like balsam
From ear to clew.

" The saucy sloop hails from Majorca
With oranges in many a group ;
The crew has decked with fresh green garlands
The topmast of the saucy sloop.
Good luck a-poop,
Hails from Majorca
Our saucy sloop !"

Whilst he made his songs and poems Mistral watched his vines, which at that time were flourishing. Living always in the open fields, he loved to chat with peasants ; stopping near a shepherd, or a plowman resting at the end of his furrow, he asked them questions, noted their peculiar terms and the original turns of their picturesque language. Even at that time he nourished the idea of the great dictionary of Provençal, a veritable monument to the tongue of his country, on which he has been working many years, and which is at present almost finished. As one does with a dead language, he undertook to restore and reconstruct his dear and beautiful Provençal tongue fallen into disuse, a tongue which is spoken only in the remoter parts by the working class, and is never written any more. Patiently he sought from the songs of the troubadours forgotten words belonging to Old Provençal, in order to bring them back to life. And if, at a café of the village, or on a farm where peasants were talking, he heard one mingle with the pure Provençal a word of the bastard, Frenchified dialect, such as " Baio me de *pain*" (Give me bread), instead of " Baio me de *pan*," he would jump up in wrath, and cry to the speaker, " Wretch, speak your own language !"

That was his aim, to reawaken the taste for Provençal in the peasants; and it was to reach that end that he composed his songs of "Iles d'Or," and even anonymous songs, like that of the "Sheep-Shearers," which he has not put in his book. "And the proud shearer who has made the song. Think not he has given his name." But I well knew who that proud shearer was; it was Mistral. His breath of poesy has gone abroad over the whole region; there is no village of Provence where one may not hear sung "Lou Bastimen vèn de Maiorco," or "Lou Renegat Jan de Gounfaroun":

"Jan de Gounfaroun, by the corsairs taken,
And his faith forsaken,
A Janissary turns:
Faith! amid the Turks, a Christian skin were better
Toughened for the fetter
And the rust that burns!

"With your mistress drinking,
Love and joys unthinking,
These are what Mohammed calls felicity;
But upon the mountains
Nuts and simple fountains
Sweeter are than warmest love that lacks of liberty.

"Jan de Gounfaroun, no longer to be martyred,
Soul and conscience bartered
At a paltry trade.
Ah, belovéd Lord, this poor sinner pardon,
Who his heart must harden
Turning renegade!

"With your mistress drinking, etc.

"Like a dash of waves when the oars are sweeping
Thus a flood of weeping
Broke his heart so hard.
Then the exile longed for his home unsleeping,
Cursed himself for keeping
For the Turk a guard.

"With your mistress drinking, etc.," etc.

One of the finest pieces Mistral has composed is his "Song of the Sun" (*Lou Cant dou Souleu*), which opens his collection of "Iles d'Or." This has become the people's hymn of the south of France:

"Mighty sun of fair Provence,
Of the mistral comrade fine,
You who drain of waves Durance
Like a draught of La Crau wine

"Show your ringlets golden-spun,
Cause the dark and woes to run—
Soon, soon, soon,
Show your visage, lovely sun!"

Some time was needed before all these beautiful poems, all these sun-steeped songs, made of Mistral the celebrated poet he is today. At first he was hardly known, save by the citizens of Maillane, all peasants and the first persons who ever sang his catches. They considered the village songster a gay comrade, a

good fellow, a little cracked! In the towns the good cits of South France had indeed heard talk of Mistral, but laughed mockingly at the attempts of this rustic to reëstablish in its purity the Provençal tongue. They did not understand him; they did not begin to admire his "Mirèio," nor did they sing in their turn "*Lou Grand Souleu de Provenço*," until the talents of the poet had found an echo as far as Paris, even into the Académie Française. Oh, then Mistral passed for a prophet in his own land; all saluted him as the national singer.

At the time I was near him, this reaction in his favor had only begun. But he hardly perceived it. We walked together from village to village, and went to every Provençal festival. Never a *ferrade* at which we were not seen! In the evening we went out to meet the little bulls of Camargue which came in by *manades* (herds), marshaled by cowboys on little fierce white horses, men half-savage themselves, booted in big leathers, and bringing with them the distant smell of the bogs, where their troops of horses and bulls live in freedom. Their long three-pronged "punchers" stood out against the light background of the Provençal evening skies, like recollections of Don Quixote. At these village festivals I was passionately attached, with Mistral, to all our southern sports,—the three leaps, the leap *sur l'oultre* (on the wine-skin), the wrestling matches for men and half-men (men and youths),—sports in the open air, which, beneath that blue sky, recalled the games of ancient Greece.

And the *farandoles*! I still remember the one we danced on Saint Agatha's day, the votive saint of Maillane: a *farandole* with torches, which they call a *piçoulade*, led about the village during the entire night by the elder brother of Mistral; and the old farmer, despite his white beard, bounded like a young man. Hardly did we now and then stop long enough, breathless, to drink from a butt of wine opened on the village green, and then off went the band. From ten at night to seven in the morning, down the street, across the gardens, across the vineyards, the male and female dancers intertwined and unraveled the long serpent of the *farandole*, as if seized by a fit of insanity.

O the happy hours! O the joyous moments!

It was necessary that we should part, however; but I did not go without promising to return soon. Besides, I remained Mistral's neighbor. In order to work, I installed myself in an old mill two leagues from Maillane. It was a ruin, that windmill,—a tumbling heap of stone, iron, and old planks, which had not been put for many years to the test of the wind; it stood there with all its mem-

bers broken — as useless as a poet. Strange are the affinities between us and things. I loved that pariah of a mill. I loved it on account of its sadness, its road lost among the grass; and I have kept the most delightful impressions of it. I found this picturesque shelter for my work of “grinder, miller of letters” in the hands of relatives and friends who were allowing it to come to a natural and thorough old age in a corner of their estate, — a mill that turned no more, — just as they would allow to die in the pasture an old blind and foundered horse.

Often I thrust the key under the door of my mill, and, being tempted by a morning full of sunlight, set off afoot to Maillane, seized by a resistless desire to see Mistral. I always found him the same, open and warm-hearted, and always faithful to his beautiful literary belief, following his work with a robust will which nothing could distract from its aim. Thus I saw him produce almost all his books, page by page, the pages following one upon another, all wet with ink, covered with a fine handwriting, on the wretched little registrar’s desk. Sometimes we made appointments with other Provençal poets, Théodore Aubanel, Roumanille, Anselme Matthieu, at one time at Maillane in Mistral’s house, again at Arles on the forum in the midst of a crowd of drovers and shepherds, come to hire themselves out to the farmers of the *Mas*. Thence we branched out on expeditions without end. We went to the Ville des Baux, a powdery heap of ruins, wild rocks, palaces with escutcheons, crumbling, wavering in the wind, like an eagle’s nest on a cliff. We dined at Cornille’s tavern, and all the evening we strolled about, singing songs among the little short alleys, between crumbling walls, remains of stairs, fallen capitals — all in a phantasmal light which silvered the grass and stones as with a light fall of snow.

We also met together among the reeds of the island of Barthelasse opposite the ramparts of Avignon and the Papal palace; and, after a breakfast in a sailors’ pot-house, we marched up to Château-neuf-des-Papes, illustrious by reason of its vineyards. O that Papal wine — wine golden, royal, imperial, pontifical! We drank it on the height, up there, while we sang the verses of Mistral — new fragments in the “Iles d’Or.”

These wild expeditions often lasted several days. Then we slept at some village inn, and I found myself again engaged with Mistral, as at his own house in Maillane, in the endless all-night gossip of a single bedroom for two. I shall always remember how, on one of these nights, he recited to me from his bed “La Communion des Saints.”

“With eyes cast down she presses light
The steps and stairs of Saint Trophime;
It is upon the sill of night
And vesper tapers cease to gleam.
The marble Saints within the door
The while she passes her have blessed,
And from the church to her own floor
Their marble eyes upon her rest.”

I cannot read over those lines without peculiar emotion; for I have heard them since under different circumstances. It was in the month of January, 1867. In the middle of one of Véfour’s rooms, Mistral, standing, recited the stanzas of the “Communion des Saints” and I translated them as they were uttered. Around us was a circle of black coats and feminine toilettes — among the latter a little patch all white. Mistral had come to Paris to be a witness to my wedding.

Having married, my windmill became too small, and I returned to the south very little. Mistral wrote me a letter for each one of my books; on my part, I wrote to him whenever he published anything. He himself married, and I was to have been his witness, as he had been mine; but, being ill at the time, I could not be present at his wedding.

So the months and years passed, until last summer, when, finding myself in the south with wife and children, I took the opportunity of seeing Mistral. I hesitated a little to make this visit to the poet, because his mother had just died. Nevertheless, I resolved to go. Nothing was altered in the village when we crossed it in the carriage; only Mistral was no longer in his little peasant house; since his marriage he lived in a new house built opposite the old one, in a little garden which he owned. I ring, and with what feelings! It is Mistral himself who opens the door. We give a great cry, our arms open, and we hug each other with tears coming at the same moment to our eyes! I would not hear of it, that we should breakfast anywhere else but with him. Since his mother’s death he remained shut in with his sorrow. “But you she loved” said he to me; and he talked to us of the dear old woman, who died more than eighty years old. Soon his wife came down and was presented. A tall young woman, very composed, a native of Dijon, who had learned Provençal and was living out her life in that little corner of Maillane, immersed with Mistral in his dictionary and his Provençal poems.

The new house was hardly larger than the old: two large rooms on the ground floor, two in the upper story. It was merely somewhat more comfortable. I recognized the same innocent pictures hung on the white walls, and in the hall I found the two little plows. Everything was upset for our breakfast. The poet himself wished to go and pull the

finest grapes from his trellis in the garden, the only vines remaining to him, the others having been ruined, destroyed, along with all the grape stocks of Southern France. Through the window I saw him walking in the alleys, always the same man, whilst the bees swirled about his broad hat. This breakfast was like those of the past — potatoes, grapes, of course good wines, champagne, an old bottle of Château-neuf-des-Papes, a remnant saved from the wreck of the vineyards. After break-

fast Mistral began to read his new poem, "Nerto,"— Provence, evoked from the middle ages,—consisting of scenes exquisite in color, and little condensed verses full of a light gracefulness. Whilst he read I saw outside the window the sunflowers of the little garden raising their heads; I saw afar off the fine lacework of the Alpilles hills traced on the blue sky, and all the wine of my own youth in Provence mounted once more into my brain!

Alphonse Daudet.

THE NEW TROUBADOURS.

AVIGNON, 1879.

THEY said that all the troubadours had flown—
 No bird to flash a wing or swell a throat!
 But as we journeyed down the rushing Rhone
 To Avignon, what joyful note on note
 Burst forth, beneath thy shadow, O Ventour!
 Whose eastward forehead takes the dawn divine.
 Ah, dear Provence! ah, happy troubadour,
 And that sweet, mellow, antique song of thine!
 First Roumanille, the leader of the choir,
 Then graceful Matthieu — tender, sighing, glowing,
 Then Wyse all fancy, Aubanel all fire,
 And Mistral, mighty as the north-wind's blowing;
 And youthful Gras and, lo! among the rest
 A mother-bird that sang above her nest.

R. W. Gilder.

A FANCY FROM FONTANELLE.

“De mémoires de Roses on n'a point vu mourir le Jardinier.”

THE Rose in the garden slipped her bud,
 And she laughed in the pride of her youthful blood,
 As she thought of the Gardener standing by —
 “He is old — so old! And he soon will die!”

The full Rose waxed in the warm June air,
 And she spread, and spread, till her heart lay bare;
 And she laughed once more as she heard his tread —
 “He is older now. He will soon be dead!”

But the breeze of the morning blew, and found
 That the leaves of the blown Rose strewed the ground;
 And he came at noon, that Gardener old,
 And he raked them softly under the mould.

*And I wove the thing to a random rhyme,
 For the Rose is Beauty, the Gardener Time.*

Austin Dobson.

THE BOSTONIANS.*

BY HENRY JAMES,

Author of "Portrait of a Lady," "Daisy Miller," "Lady Barberina," etc.

XIX.

THIS idea of their triumph, a triumph as yet ultimate and remote, but preceded by the solemn vista of an effort so religious as never to be wanting in ecstasy, became tremendously familiar to the two friends, but especially to Olive, during the winter of 187-, a season which ushered in the most momentous period of Miss Chancellor's life. About Christmas a step was taken which advanced her affairs immensely, and put them, to her apprehension, on a regular footing. This consisted in Verena's coming in to Charles street to stay with her, in pursuance of an arrangement on Olive's part with Selah Tarrant and his wife that she should remain for many months. The coast was now perfectly clear. Mrs. Farrinder had started on her annual grand tour; she was rousing the people from Maine to Texas; Matthias Pardon (it was to be supposed) had received, temporarily at least, his quietus; and Mrs. Luna was established in New York, where she had taken a house for a year, and whence she wrote to her sister that she was going to engage Basil Ransom (with whom she was in communication for this purpose) to do her law business. Olive wondered what law business Adeline could have, and hoped she would get into a pickle with her landlord or her milliner, so that repeated interviews with Mr. Ransom might become necessary. Mrs. Luna let her know very soon that these interviews had begun; the young Mississippian had come to dine with her: he hadn't got started much, by what she could make out, and she was even afraid that he didn't dine every day. But he wore a tall hat now, like a Northern gentleman, and Adeline intimated that she found him really attractive. He had been very nice to Newton, told him all about the war (quite the Southern version, of course, but Mrs. Luna didn't care anything about American politics, and she wanted her son to know all sides), and Newton did nothing but talk about him, calling him "Rannie" and imitating his pronunciation of certain words. Adeline subsequently wrote that she had made up her mind to put her affairs into his hands (Olive sighed, not unmagnanimously, as she thought of her sister's "affairs"), and later still she mentioned

that she was thinking strongly of taking him to be Newton's tutor. She wished this interesting child to be privately educated, and it would be more agreeable to have in that relation a person who was already, as it were, a member of the family. Mrs. Luna wrote as if he were prepared to give up his profession to take charge of her son, and Olive was pretty sure that this was only a part of her grandeur, of the habit she had contracted, especially since living in Europe, of speaking as if in every case she required special arrangements.

In spite of the difference in their ages, Olive had long since judged her, and made up her mind that Adeline lacked every quality that a person needed to be interesting in her eyes. She was rich (or sufficiently so), she was conventional and timid, very fond of attentions from men (with whom indeed she was reputed bold, but Olive scorned such boldness as that), given up to a merely personal, egotistical, instinctive life, and as unconscious of the tendencies of the age, the revenges of the future, the new truths and the great social questions, as if she had been a mere bundle of dress-trimmings, which she very nearly was. It was perfectly observable that she had no conscience, and it irritated Olive deeply to see how much trouble a woman was spared when she was constructed on that system. Adeline's "affairs," as I have intimated, her social relations, her views of Newton's education, her practice and her theory (for she had plenty of that, such as it was, heaven save the mark!), her spasmodic disposition to marry again, and her still sillier retreats in the presence of danger (for she had not even the courage of her frivolity), these things had been a subject of tragic consideration to Olive ever since the return of the elder sister to America. The tragedy was not in any particular harm that Mrs. Luna could do her (for she did her good, rather, that is, she did her honor, by laughing at her), but in the spectacle itself, the drama, guided by the hand of fate, of which the small, ignoble scenes unrolled themselves so logically. The *dénouement* would of course be in keeping, and would consist simply of the spiritual death of Mrs. Luna, who would end by understanding no common speech of Olive's at all, and

* Copyright, 1884, by Henry James.

would sink into mere worldly plumpness, into the last complacency, the supreme imbecility, of petty, genteel conservatism. As for Newton, he would be more utterly odious, if possible, as he grew up, than he was already; in fact, he would not grow up at all, but only grow down, if his mother should continue her infatuated system with him. He was insufferably forward and selfish; under the pretext of keeping him, at any cost, refined, Adeline had coddled and caressed him, having him always in her petticoats, remitting his lessons when he pretended he had an earache, drawing him into the conversation, letting him answer her back, with an impertinence beyond his years, when she administered the smallest check. The place for him, in Olive's eyes, was one of the public schools, where the children of the people would teach him his small importance, teach it, if necessary, by the aid of an occasional drubbing; and the two ladies had a grand discussion on this point before Mrs. Luna left Boston—a scene which ended in Adeline's clutching their irrepressible Newton to her bosom (he came in at the moment), and demanding of him a vow that he would live and die in the principles of his mother. Mrs. Luna declared that if she must be trampled upon—and very likely it was her fate!—she would rather be trampled upon by men than by women, and that if Olive and her friends should get possession of the government they would be worse despots than those who were celebrated in history. Newton took an infant oath that he would never be a destructive, impious radical, and Olive felt that after this she needn't trouble herself any more about her sister, whom she simply committed to her fate. That fate might very properly be to marry an enemy of her country, a man who, no doubt, desired to treat women with the lash and manacles, as he and his people had formerly treated the wretched colored race. If she was so fond of the fine old institutions of the past, he would supply them to her in abundance; and if she wanted so much to be a conservative, she could try first how she liked being a conservative's wife. If Olive troubled herself little about Adeline, she troubled herself more about Basil Ransom; she said to herself that since he hated women who respected themselves (and each other), destiny would use him rightly in hanging a person like Adeline round his neck. That would be the way poetic justice ought to work, for him—and the law that our prejudices, when they act themselves out, punish us in doing so. Olive considered all this, as it was her effort to consider everything, from a very high point of view, and ended by feeling sure it was not for the sake of any nervous personal security

that she desired to see her two relations in New York get so mixed up together. If such an event as their marriage would gratify her sense of fitness, it would be simply as an illustration of certain laws. Olive, thanks to the philosophic cast of her mind, was exceedingly fond of illustrations of laws.

I hardly know, however, what illumination it was that sprang from her consciousness (now a source of considerable comfort) that Mrs. Farrinder was carrying the war into distant territories, and would return to Boston only in time to preside at a grand Female Convention, already advertised to take place in Boston in the month of June. It was agreeable to her that this imperial woman should be away; it made the field more free, the air more light; it suggested an exemption from official criticism. I have not taken space to mention certain episodes of the more recent intercourse of these ladies, and must content myself with tracing them, lightly, in their consequences. These may be summed up in the remark, which will doubtless startle no one by its freshness, that two imperial women are scarcely more likely to hit it off together, as the phrase is, than two imperial men. Since that party at Miss Birdseye's, so important in its results for Olive, she had had occasion to approach Mrs. Farrinder more nearly, and those overtures brought forth the knowledge that the great leader of the feminine revolution was the one person (in that part of the world) more concentrated, more determined, than herself. Miss Chancellor's aspirations, of late, had been immensely quickened; she had begun to believe in herself to a livelier tune than she had ever listened to before; and she now perceived that when spirit meets spirit there must either be mutual absorption or a sharp concussion. It had long been familiar to her that she should have to count with the obstinacy of the world at large, but she now discovered that she should have to count also with certain elements in the feminine camp. This complicated the problem, and such a complication, naturally, could not make Mrs. Farrinder appear more easy to assimilate. If Olive's was a high nature and so was hers, the fault was in neither; it was only an admonition that they were not needed as landmarks in the same part of the field. If such perceptions are delicate as between men, the reader need not be reminded of the exquisite form they may assume in natures more refined. So it was that Olive passed, in three months, from the stage of veneration (I gave a hint of it in the early pages of this narrative) to that of competition; and the process had been accelerated by the introduction of Verena into the fold. Mrs. Farrinder had behaved in the

strangest way about Verena. First she had been struck with her, and then she hadn't; first she had seemed to want to take her in, then she had shied at her unmistakably—intimating to Olive that there were enough of that kind already. Of "that kind" indeed!—the phrase reverberated in Miss Chancellor's resentful soul. Was it possible she didn't know the kind Verena was of, and with what vulgar aspirants to notoriety did she confound her? It had been Olive's original desire to obtain Mrs. Farrinder's stamp for her *protégée*; she wished her to hold a commission from the commander-in-chief. With this view the two young women had made more than one pilgrimage to Roxbury, and on one of these occasions the sibylline mood (in its short, charming form) had descended upon Verena. She had fallen into it, naturally and gracefully, in the course of talk, and poured out a stream of eloquence even more touching than her regular discourse at Miss Birdseye's. Mrs. Farrinder had taken it rather dryly, and certainly it didn't resemble her own style of oratory, remarkable and cogent as this was. There had been considerable question of her writing a letter to the New York "Tribune," the effect of which should be to launch Miss Tarrant into renown; but this beneficent epistle never appeared, and now Olive saw that there was no favor to come from the prophetess of Roxbury. There had been primnesses, pruderies, small reserves, which ended by staying her pen. If Olive didn't say at once that she was jealous of Verena's more attractive manner, it was only because such a declaration was destined to produce more effect a little later. What she did say was that evidently Mrs. Farrinder wanted to keep the movement in her own hands—viewed with suspicion certain romantic, æsthetic elements which Olive and Verena seemed to be trying to introduce into it. They insisted so much, for instance, on the historic unhappiness of women; but Mrs. Farrinder didn't appear to care anything for that, or indeed to know much about history at all. She seemed to begin just today, and she demanded their rights for them whether they were unhappy or not. The upshot of this was that Olive threw herself on Verena's neck with a movement which was half indignation, half rapture; she exclaimed that they would have to fight the battle without human help, but, after all, it was better so. If they were all in all to each other, what more could they want? They would be isolated, but they would be free; and this view of the situation brought with it a feeling that they had almost already begun to be a force. It was not, indeed, that Olive's resentment faded quite away; for not only had she the

sense, doubtless very presumptuous, that Mrs. Farrinder was the only person thereabouts of a stature to judge her (a sufficient cause of antagonism in itself, for if we like to be praised by our betters we prefer that censure should come from the other sort), but the kind of opinion she had unexpectedly betrayed, after implying such esteem in the earlier phase of their intercourse, made Olive's cheeks occasionally to flush. She prayed heaven that *she* might never become so personal, so narrow. She was frivolous, worldly, an amateur, a trifler, a frequenter of Beacon street; her taking up Verena Tarrant was only a kind of elderly, ridiculous doll-dressing: this was the light in which Miss Chancellor had reason to believe that it now suited Mrs. Farrinder to regard her. It was fortunate, perhaps, that the misrepresentation was so gross; yet, none the less, tears of wrath rose more than once to Olive's eyes when she reflected that this particular wrong had been put upon her. Frivolous, worldly, Beacon street! She appealed to Verena to share in her pledge that the world should know in due time how much of that sort of thing there was about her. As I have already hinted, Verena at such moments quite rose to the occasion; she had private pangs at committing herself to give the cold shoulder to Beacon street forever; but she was now so completely in Olive's hands that there was no sacrifice to which she would not have consented to prove that her benefactress was not frivolous.

The matter of her coming to stay for so long in Charles street was arranged during a visit that Selah Tarrant paid them at Miss Chancellor's request. This interview, which had some curious features, would be worth describing, but I am forbidden to do more than mention the most striking of these. Olive wished to have an understanding with him; wished the situation to be clear, so that, disagreeable as it would be to her to receive him, she sent him a summons for a certain hour—an hour at which she had planned that Verena should be out of the house. She withheld this incident from the girl's knowledge, reflecting with some solemnity that it was the first deception (for Olive her silence was a deception) that she had yet practiced on her friend, and wondering whether she should have to practice others in the future. She then and there made up her mind that she would not shrink from others, should they be necessary. She notified Tarrant that she should keep Verena a long time, and Tarrant remarked that it was certainly very pleasant to see her so happily located. But he also intimated that he should like to know what Miss Chancellor laid out to do with her; and the tone of this sugges-

tion made Olive feel how right she had been to foresee that their interview would have the stamp of business. It assumed that complexion very definitely when she crossed over to her desk and wrote Doctor Tarrant a check for a very considerable amount. "Leave us alone — entirely alone — for a year, and then I will write you another;" it was with these words she handed him the little strip of paper that meant so much, feeling, as she did so, that surely Mrs. Farrinder herself could not be less amateurish than that. Selah looked at the check, at Miss Chancellor, at the check again, at the ceiling, at the floor, at the clock, and once more at his hostess; then the document disappeared beneath the folds of his waterproof, and she saw that he was putting it into some queer place on his queer person. "Well, if I didn't believe you were going to help her to develop," he remarked; and he stopped, while his hands continued to fumble, out of sight, and he treated Olive to his large joyless smile. She assured him that he need have no fear on that score; Verena's development was the thing in the world in which she took most interest; she should have every opportunity for a free expansion. "Yes, that's the great thing," Selah said; "it's more important than attracting a crowd. That's all we shall ask of you; let her act out her nature. Don't all the trouble of humanity come from our being pressed back? Don't shut down the cover, Miss Chancellor; just let her overflow!" And again Tarrant illuminated his inquiry, his metaphor, by the strange and silent lateral movement of his jaws. He added, presently, that he supposed he should have to fix it with Mrs. Tarrant; but Olive made no answer to that; she only looked at him with a face in which she intended to express that there was nothing that need detain him longer. She knew it had been fixed with Mrs. Tarrant; she had been over all that with Verena, who had told her that her mother was willing to sacrifice her for her highest good. She had reason to know (not through Verena, of course) that Mrs. Tarrant had embraced, tenderly, the idea of a pecuniary compensation, and there was no fear of her making a scene when Tarrant should come back with a check in his pocket. "Well, I trust she *may* develop, richly, and that you may accomplish what you desire; it seems as if we had only a little way to go, further," that worthy observed, as he erected himself for departure.

"It's not a little way; it's a very long way," Olive replied, rather sternly.

Tarrant was on the threshold; he lingered a little, embarrassed by her grimness, for he himself had always inclined to rose-colored views of progress, of the march of truth. He

had never met any one so much in earnest as this definite, literal young woman, who had taken such an un hoped-for fancy to his daughter; whose longing for the new day had such perversities of pessimism, and who, in the midst of something that appeared to be terribly searching in her honesty, was willing to corrupt him, as a father, with the most extravagant orders on her bank. He hardly knew in what language to speak to her; it seemed as if there was nothing soothing enough, when a lady adopted that tone about a movement which was thought by some of the brightest to be so promising. "Oh, well, I guess there's some kind of mysterious law . . ." he murmured, almost timidly; and so he passed from Miss Chancellor's sight.

xx.

SHE hoped she should not soon see him again, and there appeared to be no reason she should, if their intercourse was to be conducted by means of checks. The understanding with Verena was, of course, complete; she had promised to stay with her friend as long as her friend should require it. She had said at first that she couldn't give up her mother, but she had been made to feel that there was no question of giving up. She should be as free as air, to go and come; she could spend hours and days with her mother, whenever Mrs. Tarrant required her attention; all that Olive asked of her was that, for the time, she should regard Charles street as her home. There was no struggle about this, for the simple reason that by the time the question came to the front Verena was completely under the charm. The idea of Olive's charm will perhaps make the reader smile; but I use the word not in its derived, but in its literal sense. The fine web of authority, of dependence, that her strenuous companion had woven about her, was now as dense as a suit of golden mail; and Verena was thoroughly interested in their great undertaking; she saw it in the light of an active, enthusiastic faith. The benefit that her father desired for her was in her hands; she expanded, developed, on the most liberal scale. Olive saw the difference, and you may imagine how she rejoiced in it; she had never known a greater pleasure. Verena's former attitude had been girlish submission, grateful, curious sympathy. She had given herself, in her young, amused surprise, because Olive's stronger will and the incisive proceedings with which she pointed her purpose drew her on. Besides, she was held by hospitality, the vision of new social horizons, the sense of novelty, and the love of change.

But now the girl was disinterestedly attached to the precious things they were to do together; she cared about them for themselves, believed in them ardently, had them constantly in mind. Her share in the union of the two young women was no longer passive, purely appreciative; it was passionate, too, and it put forth a beautiful energy. If Olive desired to get Verena into training, she could flatter herself that the process had already begun, and that her colleague enjoyed it almost as much as she. Therefore she could say to herself, without the imputation of heartlessness, that when she left her mother it was for a noble, a sacred use. In point of fact, she left her very little, and she spent hours in jingling, aching, jostled journeys between Charles street and the stale suburban cottage. Mrs. Tarrant sighed and grimaced, wrapped herself more than ever in her mantle, said she didn't know as she was fit to struggle alone, and that, half the time, if Verena was away, she wouldn't have the nerve to answer the door-bell; she was incapable, of course, of neglecting such an opportunity to posture as one who paid with her heart's blood for leading the van of human progress. But Verena had an inner sense (she judged her mother now, a little, for the first time) that she would be sorry to be taken at her word, and that she felt safe enough in trusting to her daughter's generosity. She could not divest herself of the faith — even now that Mrs. Luna was gone, leaving no trace, and the gray walls of a sedentary winter were apparently closing about the two young women — she could not renounce the theory that a residence in Charles street must at last produce some contact with the brilliant classes. She was vexed at her daughter's resignation to not going to parties and to Miss Chancellor's not giving them; but it was nothing new for her to have to practice patience, and she could feel, at least, that it was just as handy for Mr. Burrage to call on the child in town, where he spent half his time, sleeping constantly at Parker's.

It was a fact that this fortunate youth called very often, and Verena saw him with Olive's full concurrence whenever she was at home. It had now been quite agreed between them that no artificial limits should be set to the famous phase; and Olive had, while it lasted, a sense of real heroism in steeling herself against uneasiness. It seemed to her, moreover, only justice that she should make some concession; if Verena made a great sacrifice of filial duty in coming to live with her (this, of course, should be permanent — she would buy off the Tarrants from year to year), she must not incur the imputation (the world would judge her, in that case, ferociously) of

keeping her from forming common social ties. The friendship of a young man and a young woman was, according to the pure code of New England, a common social tie; and as the weeks elapsed, Miss Chancellor saw no reason to repent of her temerity. Verena was not falling in love; she felt that she should know it, should guess it on the spot. Verena was fond of human intercourse; she was essentially a sociable creature; she liked to shine and smile and talk and listen; and so far as Henry Burrage was concerned, he introduced an element of easy and convenient relaxation into a life now a good deal stiffened (Olive was perfectly willing to own it) by great civic purposes. But the girl was being saved, without interference, by the simple operation of her interest in those very designs. From this time there was no need of putting pressure on her; her own springs were working; the fire with which she glowed came from within. Sacredly, brightly single she would remain; her only espousals would be at the altar of a great cause. Olive always absented herself when Mr. Burrage was announced; and when Verena afterwards attempted to give some account of his conversation she checked her, said she would rather know nothing about it — all with a very solemn mildness; this made her feel very superior, truly noble. She knew by this time (I scarcely can tell how, since Verena could give her no report) exactly what sort of a youth Mr. Burrage was: he was weakly pretentious, softly original; cultivated eccentricity, patronized progress, liked to have mysteries, sudden appointments to keep, anonymous persons to visit, the air of leading a double life, of being devoted to a girl whom people didn't know, or at least didn't meet. Of course he liked to make an impression on Verena; but what he mainly liked was to play her off upon the other girls, the daughters of fashion, with whom he danced at Papanti's. Such were the images that proceeded from Olive's rich moral consciousness. "Well, he *is* greatly interested in our movement"; so much Verena once managed to announce; but the words rather irritated Miss Chancellor, who, as we know, did not care to allow for accidental exceptions in the great masculine conspiracy.

In the month of March Verena told her that Mr. Burrage was offering matrimony — offering it with much insistence, begging that she would at least wait and think of it before giving him a final answer. Verena was evidently very glad to be able to say to Olive that she had assured him she couldn't think of it, and that if he expected this he had better not come any more. He continued to come, and it was therefore to be supposed that he had ceased

to count on such a concession; it was now Olive's opinion that he really didn't desire it. She had a theory that he proposed to almost any girl who was not likely to accept him — did it because he was making a collection of such episodes — a mental album of declarations, blushes, hesitations, refusals that just missed imposing themselves as acceptances, quite as he collected enamels and Cremona violins. He would be very sorry indeed to ally himself to the house of Tarrant; but such a fear didn't prevent him from holding it becoming in a man of taste to give that encouragement to low-born girls who were pretty, for one looked out for the special cases in which, for reasons (even the lowest might have reasons), they wouldn't "rise." "I told you I wouldn't marry him, and I won't," Verena said, delightedly, to her friend; her tone suggested that a certain credit belonged to her for the way she carried out her assurance. "I never thought you would, if you didn't want to," Olive replied to this; and Verena could have no rejoinder but the good humor that sat in her eyes, unable as she was to say that she had wanted to. They had a little discussion, however, when she intimated that she pitied him for his discomfiture, Olive's contention being that, selfish, conceited, pampered, and insincere, he might properly be left now to digest his affront. Miss Chancellor felt none of the remorse now that she would have felt six months before at standing in the way of such a chance for Verena, and she would have been very angry if any one had asked her if she were not afraid of taking too much upon herself. She would have said, moreover, that she stood in no one's way, and that even if she were not there, Verena would never think seriously of a frivolous little man who fiddled while Rome was burning. This did not prevent Olive from making up her mind that they had better go to Europe in the spring; a year's residence in that quarter of the globe would be highly agreeable to Verena, and might even contribute to the evolution of her genius. It cost Miss Chancellor an effort to admit that any virtue still lingered in the elder world, and that it could have any important lesson for two such good Americans as her friend and herself; but it suited her just then to make this assumption, which was not altogether sincere. It was recommended by the idea that it would get her companion out of the way — out of the way of officious fellow-citizens — till she should be absolutely firm on her feet, and would also give greater intensity to their own prolonged *tête-à-tête*. On that continent of strangers they would cleave more closely still to each other. This, of course, would be to fly before the inevitable "phase," much more than to face it;

but Olive decided that if they should reach unscathed the term of their delay (the first of July) she should have faced it as much as either justice or generosity demanded. I may as well say at once that she traversed most of this period without further serious alarms and with a great many little thrills of bliss and hope.

Nothing happened to dissipate the good omens with which her partnership with Verena Tarrant was now surrounded. They threw themselves into study; they had innumerable big books from the Athenæum, and consumed the midnight oil. Henry Burrage, after Verena had shaken her head at him so sweetly and sadly, returned to New York, giving no sign; they only heard that he had taken refuge under the ruffled maternal wing. (Olive, at least, took for granted the wing was ruffled; she could fancy how Mrs. Burrage would be affected by the knowledge that her son had been refused by the daughter of a mesmeric healer. She would be almost as angry as if she had learnt that he had been accepted.) Matthias Pardon had not yet taken his revenge in the newspapers; he was perhaps nursing his thunderbolts; at any rate, now that the operatic season had begun, he was much occupied in interviewing the principal singers, one of whom he described in one of the leading journals (Olive, at least, was sure it was only he who could write like that) as "a dear little woman with baby dimples and kittenish movements." The Tarrants were apparently given up to a measure of sensual ease with which they had not hitherto been familiar, thanks to the increase of income that they drew from their eccentric protectress. Mrs. Tarrant now enjoyed the ministrations of a "girl"; it was partly her pride (at any rate, she chose to give it this turn) that her house had for many years been conducted without the element — so debasing on both sides — of servile, mercenary labor. She wrote to Olive (she was perpetually writing to her now, but Olive never answered) that she was conscious of having fallen to a lower plane, but she admitted that it was a prop to her wasted spirit to have some one to converse with when Selah was off. Verena, of course, perceived the difference, which was inadequately explained by the theory of a sudden increase of her father's practice (nothing of her father's had ever increased like that), and ended by guessing the cause of it — a discovery which did not in the least disturb her equanimity. She accepted the idea that her parents should receive a pecuniary tribute from the extraordinary friend whom she had encountered on the threshold of womanhood, just as she herself accepted that friend's irresistible hospitality. She had no worldly pride, no traditions of independence, no ideas of what was done

and what was not done; but there was only one thing that equaled this perfectly gentle and natural insensibility to favors,—namely, the inveteracy of her habit of not asking them. Olive had had an apprehension that she would flush a little at learning the terms on which they should now be able to pursue their career together; but Verena never changed color; it was either not new or not disagreeable to her that the authors of her being should be bought off, silenced by money, treated as the troublesome of the lower orders are treated when they are not locked up; so that her friend had a perception, after this, that it would probably be impossible in any way ever to offend her. She was too rancorless, too detached from conventional standards, too free from private self-reference. It was too much to say of her that she forgave injuries, since she was not conscious of them; there was in forgiveness a certain arrogance of which she was incapable, and her bright mildness glided over the many traps that life sets for our consistency. Olive had always held that pride was necessary to character, but there was no peculiarity of Verena's that could make her spirit seem less pure. The added luxuries in the little house at Cambridge, which even with their help was still such a penal settlement, made her feel afresh that before she came to the rescue the daughter of that house had traversed a desert of sordid misery. She had cooked and washed and swept and stitched; she had worked harder than any of Miss Chancellor's servants. These things had left no trace upon her person or her mind; everything fresh and fair renewed itself in her with extraordinary facility; everything ugly and tiresome evaporated as soon as it touched her; but Olive held that, being what she was, she had a right to immense compensations. In the future she should have exceeding luxury and ease, and Miss Chancellor had no difficulty in persuading herself that persons doing the high intellectual and moral work to which the two young ladies in Charles street were now committed owed it to themselves, owed it to the groaning sisterhood, to cultivate the best material conditions. She herself was nothing of a sybarite, and she had proved, visiting the alleys and slums of Boston in the service of the Associated Charities, that there was no foulness of disease or misery she feared to look in the face; but her house had always been thoroughly well regulated, she was passionately clean, and she was an excellent woman of business. Now, however, she elevated daintiness to a religion; her interior shone with superfluous friction, with punctuality, with winter roses. Among these soft influences Verena herself bloomed like the flower that attains such perfection in Boston. Olive

had always rated high the native refinement of her countrywomen, their latent "adaptability," their talent for accommodating themselves at a glance to changed conditions; but the way her companion rose with the level of the civilization that surrounded her, the way she assimilated all delicacies and absorbed all traditions, left this friendly theory halting behind. The winter days were still, indoors, in Charles street, and the winter nights secure from interruption. Our two young women had plenty of duties, but Olive had never favored the custom of running in and out. Much conference on social and reformatory topics went forward under her roof, and she received her colleagues—she belonged to twenty associations and committees—only at preappointed hours, which she expected them to observe rigidly. Verena's share in these proceedings was not active; she hovered over them, smiling, listening, dropping occasionally a fanciful though never an idle word, like some gently animated image, placed there for good omen. It was understood that her part was before the scenes, not behind; that she was not a prompter, but (potentially, at least) a "popular favorite," and that the work over which Miss Chancellor presided so efficiently was a general preparation of the platform on which, later, her companion would execute the most striking steps.

The western windows of Olive's drawing-room, looking over the water, took in the red sunsets of winter; the long, low bridge that crawled, on its staggering posts, across the Charles; the casual patches of ice and snow; the desolate suburban horizons, peeled and made bald by the rigor of the season; the general hard, cold void of the prospect; the extrusion, at Charlestown, at Cambridge, of a few chimneys and steeples, straight, sordid tubes of factories and engine-shops, or spare, heavenward finger of the New England meeting-house. There was something inexorable in the poverty of the scene, shameful in the meanness of its details, which gave a collective impression of boards and tin and frozen earth, sheds and rotting piles, railway-lines striding flat across a thoroughfare of puddles, and tracks of the humbler, the universal horse-car, traversing obliquely this path of dangers; loose fences, vacant lots, mounds of refuse, yards bestrewn with iron pipes, telegraph poles, and bare wooden backs of places. Verena thought such a view lovely, and she was by no means without excuse when, as the afternoon closed, the ugly picture was tinted with a clear, cold rosiness. The air, in its windless chill, seemed to tinkle like a crystal, the faintest gradations of tone were perceptible in the sky, the west became deep and delicate, every-

thing grew doubly distinct before taking on the dimness of evening. There were pink flushes on snow, "tender" reflections in patches of stiffened marsh, sounds of car-bells, no longer vulgar, but almost silvery, on the long bridge, lonely outlines of distant dusky undulations against the fading glow. These agreeable effects used to light up that end of the drawing-room, and Olive often sat at the window with her companion before it was time for the lamp. They admired the sunsets, they rejoiced in the ruddy spots projected upon the parlor wall, they followed the darkening perspective in fanciful excursions. They watched the stellar points come out at last in a colder heaven, and then, shuddering a little, arm in arm they turned away, with a sense that the winter night was even more cruel than the tyranny of men — turned back to drawn curtains and a brighter fire and a glittering tea-tray and more and more talk about the long martyrdom of women, a subject as to which Olive was inexhaustible and really most interesting. There were some nights of deep snowfall, when Charles street was white and muffled and the door-bell foredoomed to silence, which seemed little islands of lamplight, of enlarged and intensified vision. They read a great deal of history together, and read it ever with the same thought — that of finding confirmation in it for this idea that their sex had suffered inexpressibly, and that at any moment in the course of human affairs the state of the world would have been so much less horrible (history seemed to them in every way horrible) if women had been able to press down the scale. Verena was full of suggestions which stimulated discussion; it was she, oftenest, who kept in view the fact that a good many women in the past had been intrusted with power and had not always used it amiably, who brought up the wicked queens, the profligate mistresses of kings. These ladies were easily disposed of between the two, and the public crimes of Bloody Mary, the private misdemeanors of Faustina, wife of the pure Marcus Aurelius, were very satisfactorily classified. If the influence of women in the past accounted for every act of virtue that men had happened to achieve, it only made the matter balance properly that the influence of men should explain the casual irregularities of the other sex. Olive could see how few books had passed through Verena's hands, and how little the home of the Tarrants had been a house of reading; but the girl now traversed the fields of literature with her characteristic lightness of step. Everything she turned to or took up became an illustration of the facility, the "giftedness," which Olive, who had so little of it, never ceased, as we know, to wonder at and prize. Nothing

frightened her; she always smiled at it, she could do anything she tried. As she knew how to do other things, she knew how to study; she read quickly and remembered infallibly; could repeat, days afterwards, passages that she appeared only to have glanced at. Olive, of course, was more and more happy to think that their cause should have the services of an organization so rare.

All this doubtless sounds rather dry, and I hasten to add that our friends were not always shut up in Miss Chancellor's strenuous parlor. In spite of Olive's desire to keep her precious inmate to herself and to bend her attention upon their common studies, in spite of her constantly reminding Verena that this winter was to be purely educative and that the platitudes of the satisfied and unregenerate would have little to teach her, in spite, in short, of the severe and constant duality of our young women, it must not be supposed that their life had not many personal confluent and tributaries. Individual and original as Miss Chancellor was universally acknowledged to be, she was yet a typical Bostonian, and as a typical Bostonian she could not fail to belong in some degree to a "set." It had been said of her that she was in it but not of it; but she was of it enough to go occasionally into other houses and to receive their occupants in her own. It was her belief that she filled her tea-pot with the spoon of hospitality, and made a good many select spirits feel that they were welcome under her roof at convenient hours. She had a preference for what she called *real* people, and there were several whose reality she had tested by arts known to herself. This little society was rather suburban and miscellaneous; it was prolific in ladies who trotted about, early and late, with books from the Athenæum nursed behind their muff, or little nosegays of exquisite flowers that they were carrying as presents to each other. Verena, who, when Olive was not with her, indulged in a good deal of desultory contemplation at the window, saw them pass the house in Charles street, always apparently straining a little, as if they might be too late for something. At almost any time, for she envied their preoccupation, she would have taken the chance with them. Very often, when she described them to her mother, Mrs. Tarrant didn't know who they were; there were even days (she had so many discouragements) when it seemed as if she didn't want to know. So long as they were not some one else, it seemed to be no use that they were themselves; whoever they were, they were sure to have that defect. Even after all her mother's disquisitions Verena had but vague ideas as to whom she

would have liked them to be ; and it was only when the girl talked of the concerts, to all of which Olive subscribed and conducted her inseparable friend, that Mrs. Tarrant appeared to feel in any degree that her daughter was living up to the standard formed for her in their Cambridge home. As all the world knows, the opportunities in Boston for hearing good music are numerous and excellent, and it had long been Miss Chancellor's practice to cultivate the best. She went in, as the phrase is, for the superior concerts, and that high, dim, dignified Music Hall, which has echoed in its time to so much eloquence and so much melody, and of which the very proportions and color seem to teach respect and attention, shed the protection of its illuminated cornice, this winter, upon no faces more intelligently upturned than those of the young women for whom Bach and Beethoven only repeated, in a myriad forms, the idea that was always with them. Symphonies and fugues only stimulated their convictions, excited their revolutionary passion, led their imagination further in the direction in which it was always pressing. It lifted them to immeasurable heights ; and as they sat looking at the great florid, somber organ, overhanging the bronze statue of Beethoven, they felt that this was the only temple in which the votaries of their creed could worship.

And yet their music was not their greatest joy, for they had two others which they cultivated at least as zealously. One of these was simply the society of old Miss Birdseye, of whom Olive saw more this winter than she had ever seen before. It had become apparent that her long and beautiful career was drawing to a close, her earnest, unremitting work was over, her old-fashioned weapons were broken and dull. Olive would have liked to hang them up as venerable relics of a patient fight, and this was what she seemed to do when she made the poor lady relate her battles,—never glorious and brilliant, but obscure and wastefully heroic,—call back the figures of her companions in arms, exhibit her medals and scars. Miss Birdseye knew that her uses were ended ; she might pretend still to go about the business of unpopular causes, might fumble for papers in her immemorial satchel and think she had important appointments, might sign petitions, attend conventions, say to Doctor Prance that if she would only make her sleep she should live to see a great many improvements yet ; she ached and was weary, growing almost as glad to look back (a great anomaly for Miss Birdseye) as to look forward. She let herself be coddled now by her friends of the new generation ; there were days when she seemed to want

nothing better than to sit by Olive's fire and ramble on about the old struggles, with a vague, comfortable sense—no physical rapture of Miss Birdseye's could be very acute—of immunity from wet feet, from the draughts that prevail at thin meetings, of independence of street-cars that would probably arrive overflowing ; and also a pleased perception, not that she was an example to these fresh lives which began with more advantages than hers, but that she was in some degree an encouragement, as she helped them to measure the way the new truths had advanced—being able to tell them of such a different state of things when she was a young lady, the daughter of a very talented teacher (indeed, her mother had been a teacher too), down in Connecticut. She had always had for Olive a kind of aroma of martyrdom, and her battered, unremunerated, unpensioned old age brought angry tears, springing from depths of outraged theory, into Miss Chancellor's eyes. For Verena, too, she was a picturesque humanitarian figure. Verena had been in the habit of meeting martyrs from her childhood up, but she had seen none with so many reminiscences as Miss Birdseye, or who had been so nearly scorched by penal fires. She had had escapes, in the early days of abolitionism, which it was a marvel she could tell with so little implication that she had shown courage. She had roamed through certain parts of the South, carrying the Bible to the slave ; and more than one of her companions, in the course of these expeditions, had been tarred and feathered. She herself, at one season, had spent a month in a Georgian jail. She had preached temperance in Irish circles, where the doctrine was received with missiles ; she had interfered between wives and husbands mad with drink ; she had taken filthy children, picked up in the street, to her own poor rooms, and had removed their pestilent rags and washed their sore bodies with slippery little hands. In her own person she appeared to Olive and Verena a representative of suffering humanity ; the pity they felt for her was part of their pity for all who were weakest and most hardly used ; and it struck Miss Chancellor (more especially) that this frumpy little missionary was the last link in a tradition, and that when she should be called away the heroic age of New England life—the age of plain living and high thinking, of pure ideals and earnest effort, of moral passion and noble experiment—would be effectually closed. It was the perennial freshness of Miss Birdseye's faith that had had such a contagion for these modern maidens, the unquenched flame of her transcendentalism, the simplicity of her vision, the way in which, in spite of mistakes, deceptions, the changing fashions

of reform, which make the remedies of a previous generation look as ridiculous as their bonnets, the only thing that was still actual for her was the elevation of the species by the reading of Emerson and the frequentation of Tremont Temple. Olive had been active enough, for years, in the city missions; she too had scoured dirty children, and, in squalid lodging-houses, had gone into rooms where the domestic situation was strained and the noises made the neighbors turn pale. But she reflected that after such exertions she had the refreshment of a pretty house, a drawing-room full of flowers, a crackling hearth, where she threw in pine-cones and made them snap, an imported tea-service, a Chickering piano, and the *Deutsche Rundschau*; whereas Miss Birdseye had only a bare, vulgar room, with a hideous flowered carpet (it looked like a dentist's), a cold furnace, the evening paper, and Doctor Prance. Olive and Verena were present at another of her gatherings before the winter ended; it resembled the occasion that we described at the beginning of this history, with the difference that Mrs. Farrinder was not there to oppress the company with her greatness, and that Verena made a speech without the coöperation of her father. This young lady had delivered herself with even finer effect than before, and Olive could see how much she had gained, in confidence and range of allusion, since the educative process in Charles street began. Her *motif* was now a kind of unprepared tribute to Miss Birdseye, the fruit of the occasion and of the unanimous tenderness of the younger members of the circle, which made her a willing mouth-piece. She pictured her laborious career, her early associates (Eliza P. Mosely was not neglected as Verena passed), her difficulties and dangers and triumphs, her humanizing effect upon so many, her serene and honored old age,—expressed, in short, as one of the ladies said, just the very way they all felt about her. Verena's face brightened and grew triumphant as she spoke, but she brought tears into the eyes of most of the others. It was Olive's opinion that nothing could be more graceful and touching, and she saw that the impression made was now deeper than on the former evening. Miss Birdseye went about with her eighty years of innocence, her indiscriminating spectacles, asking her friends if it wasn't perfectly splendid; she took none of it to herself, she regarded it only as a brilliant expression of Verena's gift. Olive thought, afterwards, that if a collection could only be taken up on the spot, the good lady would be made easy for the rest of her days; then she remembered that most of her guests were as impecunious as herself.

I have intimated that our young friends

had a source of fortifying emotion which was distinct from the hours they spent with Beethoven and Bach, or in hearing Miss Birdseye describe Concord as it used to be. This consisted (I have touched the fact more than once already) of the wonderful insight they had obtained into the history of feminine anguish. They perused that chapter perpetually and zealously, and they derived from it the purest part of their mission. Olive had pored over it so long, so earnestly, that she was now in complete possession of the subject; it was the one thing in life which she felt she had really mastered. She was able to exhibit it to Verena with the greatest authority and accuracy, to lead her up and down, in and out, through all the darkest and most tortuous passages. We know that she was without belief in her own eloquence, but she was very eloquent when she reminded Verena how the exquisite weakness of women had never been their defense, but had only exposed them to sufferings more acute than masculine grossness can conceive. Their odious partner had trampled upon them from the beginning of time, and their tenderness, their abnegation, had been his opportunity. All the bullied wives, the stricken mothers, the dishonored, deserted maidens who have lived on the earth and longed to leave it, passed and repassed before her eyes, and the interminable dim procession seemed to stretch out a myriad hands to her. She sat with them at their trembling vigils, listened for the tread, the voice, at which they grew pale and sick, walked with them by the dark waters that offered to wash away misery and shame, took with them, even, when the vision grew intense, the last shuddering leap. She had analyzed to an extraordinary fineness their susceptibility, their softness; she knew (or she thought she knew) all the possible tortures of anxiety, of suspense and dread; and she had made up her mind that it was women, in the end, who had paid for everything. In the last resort the whole burden of the human lot came upon them; it pressed upon them far more than on the others, the intolerable load of fate. It was they who sat fixed and chained to receive it; it was they who had done all the waiting and taken all the wounds. The sacrifices, the blood, the tears, the terrors were theirs. Their organism was in itself a challenge to suffering, and men had played upon it with an impudence that knew no bounds. As they were the weakest, most had been wrung from them; and as they were the most generous, they had been most deceived. Olive Chancellor would have rested her case, had it been necessary, on those general facts; and her simple and comprehensive contention was that the peculiar wretchedness which had been the very

essence of the feminine lot was a monstrous artificial imposition, crying aloud for redress. She was willing to admit that women, too, could be bad; that there were many about the world who were false, immoral, vile. But their errors were as nothing to their sufferings; they had expiated, in advance, an eternity if need be of misconduct. Olive poured forth these views to her listening and responsive friend; she presented them again and again, and there was no light in which they did not seem to palpitate with truth. Verena was immensely wrought upon; a subtle fire passed into her; she was not so hungry for revenge as Olive, but at the last, before they went to Europe (I shall take no place to describe the manner in which she threw herself into that project), she quite agreed with her companion that after so many ages of wrong (it would also be after the European journey) men must take *their* turn, men must pay!

XXI.

BASIL RANSOM lived in New York, rather far to the eastward, and in the upper reaches of the town; he occupied two small shabby rooms in a somewhat decayed mansion which stood next to the corner of Second Avenue. The corner itself was formed by a considerable grocer's shop, the near neighborhood of which was fatal to any pretensions Ransom and his fellow-lodgers might have had in regard to gentility of situation. The house had a red, rusty face, and faded green shutters, of which the slats were limp and at variance with each other. In one of the lower windows was suspended a fly-blown card, with the words "Table Board" affixed in letters cut (not very neatly) out of colored paper, of graduated tints, and surrounded with a small band of stamped gilt. The two sides of the shop were protected by an immense pent-house shed, which projected over a greasy pavement and was supported by wooden posts fixed in the curbstone. Beneath it, on the dislocated flags, barrels and baskets were freely and picturesquely grouped; an open cellarway yawned beneath the feet of those who might pause to gaze too fondly on the savory wares displayed in the window; a strong odor of smoked fish, combined with a fragrance of molasses, hung about the spot; the pavement, toward the gutters, was fringed with dirty panniers, heaped with potatoes, carrots, and onions; and a smart, bright wagon, with the horse detached from the shafts, drawn up on the edge of the abominable road (it contained holes and ruts a foot deep, and immemorial accumulations of stagnant mud), imparted an idle, rural, pastoral air to a scene otherwise perhaps expres-

sive of a rank civilization. The establishment was of the kind known to New Yorkers as a Dutch grocery; and red-faced, yellow-haired, bare-armed vendors might have been observed to lounge in the doorway. I mention it not on account of any particular influence it may have had on the life or the thoughts of Basil Ransom, but for old acquaintance sake and that of local color; besides which, a figure is nothing without a setting, and our young man came and went every day, with rather an indifferent, unperceiving step, it is true, among the objects I have briefly designated. One of his rooms was directly above the street-door of the house; such a dormitory, when it is so exiguous, is called in the nomenclature of New York a "hall bedroom." The sitting-room, beside it, was slightly larger, and they both commanded a row of tenements no less degenerate than Ransom's own habitation—houses built forty years before and already sere and superannuated. These were also painted red, and the bricks were accentuated by a white line; they were garnished, on the first floor, with balconies covered with small tin roofs, striped in different colors, and with an elaborate iron lattice-work, which gave them a repressive, cage-like appearance, and caused them slightly to resemble the little boxes for peeping unseen into the street, which are a feature of oriental towns. Such posts of observation commanded a view of the grocery on the corner, of the relaxed and disjointed roadway, enlivened at the curbstone with an occasional ash-barrel or with gas-lamps drooping from the perpendicular, and westward, at the end of the truncated vista, of the fantastic skeleton of the Elevated Railway, overhanging the transverse longitudinal street, which it darkened and smothered with the immeasurable spinal column and myriad clutching paws of an antediluvian monster. If the opportunity were not denied me here, I should like to give some account of Basil Ransom's interior, of certain curious persons of both sexes, for the most part not favorites of fortune, who had found an obscure asylum there; some picture of the crumpled little *table d'hôte*, at two dollars and a half a week, where everything felt sticky, which went forward in the low-ceiled basement, under the conduct of a couple of shuffling negresses, who mingled in the conversation and indulged in low, mysterious chuckles when it took a facetious turn. But we need, in strictness, concern ourselves with it no further than to gather the implication that the young Mississippian, even a year and a half after that momentous visit of his to Boston, had not made his profession very lucrative.

He had been diligent, he had been ambi-

tious, but he had not yet been successful. During the few weeks preceding the moment at which we meet him again, he had even begun to lose faith altogether in his earthly destiny. It became much of a question with him whether success in any form was written there; whether for a hungry young Mississippian, without means, without friends, wanting, too, in the highest energy, the wisdom of the serpent, personal arts, and national prestige, the game of life was to be won in New York. He had been on the point of giving it up and returning to the home of his ancestors, where, as he heard from his mother, there was still just a sufficient supply of hot corn-cake to support existence. He had never believed much in his luck, but during the last year it had been guilty of aberrations surprising even to a constant, an imperturbable victim of fate. Not only had he not extended his connection, but he had lost most of the little business which was an object of complacency to him a twelvemonth before. He had had none but small jobs, and he had made a mess of more than one of them. Such accidents had not had a happy effect upon his reputation; he had been able to perceive that this fair flower may be nipped when it is so tender a bud as scarcely to be palpable. He had formed a partnership with a person who seemed likely to repair some of his deficiencies—a young man from Rhode Island, acquainted, according to his own expression, with the inside track. But this gentleman himself, as it turned out, would have been better for a good deal of remodeling, and Ransom's principal deficiency, which was, after all, that of cash, was not less apparent to him after his colleague, prior to a sudden and unexplained departure for Europe, had drawn the slender accumulations of the firm out of the bank. Ransom sat for hours in his office, waiting for clients, who either didn't come, or, if they did come, didn't seem to find him encouraging, as they usually left him with the remark that they would think what they would do. They thought to little purpose, and seldom reappeared, so that at last he began to wonder whether there were not a prejudice against his Southern complexion. Perhaps they didn't like the way he spoke. If they could show him a better way, he was willing to adopt it; but the manner of New York could not be acquired by precept; and example, somehow, was not in this case contagious. He wondered whether he was stupid and unskilled, and he was finally obliged to confess to himself that he was unpractical.

This confession was in itself a proof of the fact, for nothing could be less to the purpose than such a speculation, terminating in such a way. He was perfectly aware that he cared

a great deal for theory, and so his visitors must have thought when they found him, with one of his long legs twisted round the other, reading a volume of De Tocqueville. That was the kind of reading he liked; he had thought a great deal about social and economical questions, forms of government, and the happiness of peoples. The convictions he had arrived at were not such as mix gracefully with the time-honored verities a young lawyer looking out for business is in the habit of taking for granted; but he had to reflect that these doctrines would probably not contribute any more to his prosperity in Mississippi than in New York. Indeed, he scarcely could think of the country where they would be a particular advantage to him. It came home to him that his opinions were stiff, whereas in comparison his effort was lax; and he accordingly began to wonder whether he might not make a living by his opinions. He had always had a desire for public life; to cause one's ideas to be embodied in national conduct appeared to him the highest form of human enjoyment. But there was little enough that was public in his solitary studies, and he asked himself what was the use of his having an office at all, and why he might not as well carry on his profession at the Astor Library, where, in his spare hours and on chance holidays, he did an immense deal of suggestive reading. He took copious notes and memoranda, and these things sometimes shaped themselves in a way that might possibly commend them to the editors of periodicals. Readers perhaps would come, if clients didn't; so he produced, with a great deal of labor, half a dozen articles, from which, when they were finished, it seemed to him that he had omitted all the points he wished most to make, and addressed them to the powers that preside over weekly and monthly publications. They were all declined with thanks, and he would have been forced to believe that the accent of his languid clime brought him luck as little under the pen as on the lips, had not another explanation been suggested by one of the more explicit of his oracles, in relation to a paper on the rights of minorities. This gentleman pointed out that his doctrines were about three hundred years behind the age; doubtless, some magazine of the sixteenth century would have been very happy to print them. This threw light on his own suspicion that he was attached to causes that could only, in the nature of things, be unpopular. The disagreeable editor was right about his being out of date, only he had got the time wrong. He had come centuries too soon; he was not too old, but too new. Such an impression, however, would not have prevented him from going into politics, if

there had been any other way to represent constituencies than by being elected. People might be found eccentric enough to vote for him in Mississippi, but meanwhile where should he find the twenty-dollar greenbacks which it was his ambition to transmit from time to time to his female relations, confined so constantly to a farinaceous diet? It came over him with some force that his opinions would not yield interest, and the evaporation of this pleasing hypothesis made him feel like a man in an open boat, at sea, who had just parted with his last rag of canvas.

I shall not attempt a complete description of Ransom's ill-starred views, being convinced that the reader will guess them as he goes, for they had a frolicsome, ingenuous way of peeping out of the young man's conversation. I shall do them sufficient justice in saying that he was by natural disposition a good deal of a stoic, and that, as the result of a considerable intellectual experience, he was, in social and political matters, a reactionary. I suppose he was very conceited, for he was much addicted to judging his age. He thought it talkative, querulous, hysterical, maudlin, full of false ideas, of unhealthy germs, of extravagant, dissipated habits, for which a great reckoning was in store. He was an immense admirer of the late Thomas Carlyle, and was very suspicious of the encroachments of modern democracy. I know not exactly how these queer heresies had planted themselves, but he had a longish pedigree (it had flowered at one time with English royalists and cavaliers), and he seemed at moments to be inhabited by some transmitted spirit of a robust but narrow ancestor, some broad-faced wig-wearer or sword-bearer, with a more primitive conception of manhood than our modern temperament appears to require, and a programme of human felicity much less varied. He liked his pedigree, he revered his forefathers, and he rather pitied those who might come after him. In saying so, however, I betray him a little, for he never mentioned such feelings as these last. Though he thought the age too talkative, as I have hinted, he liked talk as well as any one; but he could hold his tongue, if that were more expressive, and he usually did so when his perplexities were greatest. He had been sitting for several evenings in a beer-cellar, smoking his pipe with a profundity of reticence. This attitude was so unbroken that it marked a crisis — the complete, the acute consciousness of his personal situation. It was the cheapest way he knew of spending an evening. At this particular establishment the *Schoppen* were very tall and the beer was very good; and as the host and most of the guests were

German, and their colloquial tongue was unknown to him, he was not drawn into any undue expenditure of speech. He watched his smoke and he thought, thought so hard that at last he appeared to himself to have exhausted the thinkable. When this moment of combined relief and dismay arrived (on the last of the evenings that we are concerned with), he took his way down Third Avenue and reached his humble dwelling. Till within a short time there had been a resource for him at such an hour and in such a mood; a little variety actress, who lived in the house, and with whom he had established the most cordial relations, was often having her supper (she took it somewhere, every night, after the theater) in the dim, close dining-room, and he used to drop in and talk to her. But she had lately married, to his great amusement, and her husband had taken her on a wedding-tour, which was to be at the same time professional. On this occasion he mounted, with rather a heavy tread, to his rooms, where (on the rickety writing-table in the parlor) he found a note from Mrs. Luna. I need not reproduce it *in extenso*; a pale reflection of it will serve. She reproached him with neglecting her, wanted to know what had become of him, whether he had grown too fashionable for a person who cared only for serious society. She accused him of having changed, and inquired as to the reason of his coldness. Was it too much to ask whether he could tell her at least in what manner she had offended him? She used to think they were so much in sympathy — he expressed her own ideas about everything so vividly. She liked intellectual companionship, and she had none now. She hoped very much he would come and see her — as he used to do six months before — the following evening; and however much she might have sinned or he might have altered, she was at least always his affectionate cousin Adeline.

“What the deuce does she want of me now?” It was with this somewhat ungracious exclamation that he tossed away his cousin Adeline's missive. The gesture might have indicated that he meant to take no notice of her; nevertheless, after a day had elapsed, he presented himself before her. He knew what she wanted of old — that is, a year ago; she had wanted him to look after her property and to be tutor to her son. He had lent himself, good-naturedly, to this desire, — he was touched by so much confidence, — but the experiment had speedily collapsed. Mrs. Luna's affairs were in the hands of trustees, who had complete care of them, and Ransom instantly perceived that his function would be simply to meddle in things that didn't concern him. The levity

with which she had exposed him to the derision of the lawful guardians of her fortune opened his eyes to some of the dangers of cousinship; nevertheless, he said to himself that he might turn an honest penny by giving an hour or two every day to the education of her little boy. But this, too, proved a brief illusion. Ransom had to find his time in the afternoon; he left his business at five o'clock and remained with his young kinsman till the hour of dinner. At the end of a few weeks he thought himself lucky in retiring without broken shins. That Newton's little nature was remarkable had often been insisted on by his mother; but it was remarkable, Ransom saw, for the absence of any of the qualities which attach a teacher to a pupil. He was in truth an insufferable child, entertaining for the Latin language a personal, physical hostility, which expressed itself in convulsions of rage. During these paroxysms he kicked furiously at every one and everything—at poor "Rannie," at his mother, at Messrs. Andrews and Stoddard, at the illustrious men of Rome, at the universe in general, to which, as he lay on his back on the carpet, he presented a pair of singularly active little heels. Mrs. Luna had a way of being present at his lessons, and when they passed, as sooner or later they were sure to, into the stage I have described, she interceded for her overwrought darling, reminded Ransom that these were the signs of an exquisite sensibility, begged that the child might be allowed to rest a little, and spent the remainder of the time in conversation with the preceptor. It came to seem to him, very soon, that he was not earning his fee; besides which, it was disagreeable to him to have pecuniary relations with a lady who had not the art of concealing from him that she liked to place him under obligations. He resigned his tutorship, and drew a long breath, having a vague feeling that he had escaped a danger. He could not have told you exactly what it was, and he had a certain sentimental, provincial respect for women, which even prevented him from attempting to give a name to it in his own thoughts. He was addicted with the ladies to the old forms of address and of gallantry; he held that they were delicate, agreeable creatures, whom Providence had placed under the protection of the bearded sex; and it was not merely a humorous idea with him that whatever might be the defects of Southern gentlemen, they were at any rate remarkable for their chivalry. He was a man who still, in a slangy age, could pronounce that word with a perfectly serious face.

This boldness did not prevent him from thinking that women were essentially inferior to men, and infinitely tiresome when they de-

clined to accept the lot which men had made for them. He had the most definite notions about their place in nature, in society, and was perfectly easy in his mind as to whether it excluded them from any proper homage. The chivalrous man paid that tax with alacrity. He admitted their rights; these consisted in a standing claim to the generosity and tenderness of the stronger race. The exercise of such feelings was full of advantage for both sexes, and they flowed most freely, of course, when women were gracious and grateful. It may be said that he had a higher conception of politeness than most of the persons who desired the advent of female law-makers. When I have added that he hated to see women eager and argumentative, and thought that their softness and docility were the inspiration, the opportunity (the highest) of man, I shall have sketched a state of mind which will doubtless strike many readers as painfully crude. It had prevented Basil Ransom, at any rate, from putting the dots on his *i*'s, as the French say, in this gradual discovery that Mrs. Luna was making love to him. The process went on a long time before he became aware of it. He had perceived very soon that she was a tremendously familiar little woman—that she took, more rapidly than he had ever known, a high degree of intimacy for granted. But as she had seemed to him neither very fresh nor very beautiful, so he could not easily have represented to himself why she should take it into her head to marry (it would never have occurred to him to doubt that she wanted marriage) an obscure and penniless Mississippian, with womenkind of his own to provide for. He could not guess that he answered to a certain secret ideal of Mrs. Luna's, who loved the landed gentry even when landless, who adored a Southerner under any circumstances, who thought her kinsman a fine, manly, melancholy, disinterested type, and who was sure that her views of public matters, the questions of the age, the vulgar character of modern life, would meet with a perfect response in his mind. She could see by the way he talked that he was a conservative, and this was the motto inscribed upon her own silken banner. She took this unpopular line both by temperament and by reaction from her sister's "extreme" views, the sight of the dreadful people that they brought about her. In reality, Olive was distinguished and discriminating, and Adeline was the dupe of confusions, in which the worse was apt to be mistaken for the better. She talked to Ransom about the inferiority of republics, the distressing persons she had met abroad in the legations of the United States, the bad manners of servants and shopkeepers in that country, the hope she entertained that "the good

old families" would make a stand; but he never suspected that she cultivated these topics (her treatment of them struck him as highly comical) for the purpose of leading him to the altar, of beguiling the way. Least of all could he suppose that she would be indifferent to his want of income,—a point in which he failed to do her justice; for, thinking the fact that he had remained poor a proof of delicacy in a shopkeeping age, it gave her much pleasure to reflect that, as Newton's little property was settled on him (with safeguards which showed how long-headed poor Mr. Luna had been, and large-hearted, too, since to what he left *her* no disagreeable conditions, such as eternal mourning, for instance, were attached)—that as Newton, I say, enjoyed the pecuniary independence which befitted his character, her own income was ample even for two, and she might give herself the luxury of taking a husband who should owe her something. Basil Ransom did not divine all this, but he divined that it was not for nothing that Mrs. Luna wrote him little notes every other day, that she proposed to

drive him in the Park at unnatural hours, and that when he said he had his business to attend to, she replied: "Oh, a plague on your business! I am sick of that word—one hears of nothing else in America. There are ways of getting on without business, if you would only take them!" He seldom answered her notes, and he disliked extremely the way in which, in spite of her love of form and order, she attempted to clamber in at the window of one's house when one had locked the door; so that he began to interspace his visits considerably, and at last made them very rare. When I reflect on his habits of almost superstitious politeness to women, it comes over me that some very strong motive must have operated to make him give his friendly—his only too friendly—cousin the cold shoulder. Nevertheless, when he received her reproachful letter (after it had had time to work a little), he said to himself that he had perhaps been unjust and even brutal, and as he was easily touched by remorse of this kind, he took up (I have already mentioned it) the broken thread.

(To be continued.)

Henry James.

FRANK HATTON IN NORTH BORNEO.

NOTES ON HIS LIFE AND DEATH, BY HIS FATHER.

I.

FRANK HATTON, without being precocious as a child, developed singular versatility of talent at a very early age. Fond of music, he was a skillful pianist, and could play several other instruments moderately well. He could ride, swim, shoot, skate, and had some long spins on the tricycle; he played chess with great skill, spoke French with a perfect accent, wrote his native language with the polish of a gentleman and the finish of a scholar; was a master of Malay, the Italian of the East, and was versed in Dusun, one of the local tongues of Borneo; and was an authority in the water filtrations and the actions of force on bacteria, and in other matters of scientific research. He died in his twenty-second year, a scientific explorer in the service of the government of Sabah, leaving behind him a record that would have been honorable to a long and industrious life. His was the first white foot in many of the hitherto unknown villages of Borneo; in him many of the wild tribes saw the first white man; he was the pioneer of scientific investigation

among its mountain ranges, on its turbulent rivers, and in its almost impenetrable jungle fastnesses. Speaking the language of the natives, and possessing that special faculty of kindly firmness so necessary to the efficient control of uncivilized peoples, he journeyed through the strange land not only unmolested but frequently carrying away tokens of native affection. Several powerful chiefs made him their "blood brother," and here and there the tribes prayed to him as if he were a god. When he fell in the unexplored regions of the Seguama River, his escort rowed the body by river and sea for fully fifty-three hours without sleep, that it might be buried by white men in the new settlement of Elopura,—an act of devotion which travelers in the equatorial seas will understand and appreciate.

I who write these lines am his father, but he was not only my son, he was my friend and companion. He lost his life while on his way home. The news of his safety and his good health preceded by a few days the telegraphic report of his death. My own young life had been a hard one. His I had guarded and protected from every adverse wind. I

had my reward in a brave, upright, tender-hearted, modest, scholarly son. To-day, with the bright page of his young life before me, with letters concerning him coming to me from all parts of the world, I feel that I owe a duty to his memory and to humanity to tell his story. The justice of my interpretation of this can be judged by the following materials upon which it is founded.

Frank Hatton was born at Hatfield, Gloucestershire, a suburb of Bristol, England, on the 31st of August, 1861. He was connected on his father's side with journalism and music; his mother brought him the health and common sense of the sturdy yeomanry of Lincolnshire. Soon after his birth his parents went to live at Durham. He was known in his childhood for the amiability of his disposition, his love of flowers and animals; he developed a character of great strength and firmness. From Durham the family went to Worcester; after living in Worcestershire, city and county, for some years, to London. At the age of ten he went to his first public school; his chief prizes were for good conduct, and he gave no indication of the characteristics which distinguished him a few years later. At home he cultivated a taste for music and war. He was a collector of arms, pistols, swords, and knives, and his bedroom was quite an arsenal. A frequent visitor at the Zoölogical Gardens, he would bring home every stray dog or cat that would follow him. From the end of 1874 he was a student at the College of Marcy, near Lille, in France. He next became a student of King's College School, where in 1878 he obtained, at nineteen, the third place in the Oxford and Cambridge Examinations.

He had given evidence of a leaning towards scientific studies, and he elected to be "a chemist and mining engineer." Natural history at Lille, physical geography at King's College School, had prepared him for chemistry and mineralogy at the School of Mines. After a short interval of foreign travel, and some private readings with chemical experts, he entered upon the varied course of study then given at Jermyn street and at South Kensington, which he supplemented by geological tours around London, and in the Isle of Wight, Derbyshire, Cumberland, and other districts. "He was," says Dr. Frankland, "one of the most genial, earnest, and talented students I ever had in my laboratory; he was a most indefatigable worker and a skillful manipulator." Dr. Hopkinson, speaking of him to me the other day, said, "He was the only student of his time to whom I intrusted delicate and dangerous operations; he was implicitly reliable, and had a clear, firm grip

of things; there was nothing he could not do that he cared to do." In addition to his arduous work at South Kensington, he contributed a series of letters on chemical subjects to papers and magazines.

When he left England for the islands of the eastern seas, young Hatton was close upon six feet in height, and carried no surplus flesh. After exploring a great part of North Borneo, he organized an expedition in a north-eastern district, chiefly with a view to determine the geological character of the Seguama River and certain regions of the Kinabortomgau. His expedition consisted of four boats. He was in the first one, and Mr. Beveridge, an Australian mining expert, in the last. Hatton fired from his boat at an elephant and wounded it severely. Leaping ashore, accompanied only by his mandore, a Malay named Drahman, he gave chase. They came up to the elephant, which had stopped and was roaring. Thinking possibly that his Winchester rifle was too light for a final attack on the elephant, he went back to the boats for a party of his native attendants. Arming them with Sniders, he led them into the jungle. The elephant, however, had moved off, and it being now nearly dark, he was persuaded by Drahman to return. On the way back he was walking with his Winchester at the shoulder. As he stooped to pass under a creeper, he raised his rifle to lift up the obstruction. The weapon became entangled in an unusually strong growth of vines, whereby the muzzle was suddenly twisted towards him, slid down his shoulder, and went off, the trigger being pulled by some twigs of the creeper. The ball entered at the collar-bone and came out at the back lower down, severing two main arteries. His men were round him in a moment, and seized him before he fell. "Oodeen, Oodeen, mati sahya!" (I am dead), he said in Malay, as he laid his head on the shoulder of his Tutong boy, whose name is Oodeen, and who was devoted to his service. Mr. Beveridge heard the shot and the cry of the men, and, leaping from his boat, was soon by the side of his young chief, who was breathing his last. It was so inconceivable to Mr. Beveridge that Frank Hatton, noted for his coolness and his care in the management of his weapons, had been the cause of the shooting, that he exclaimed, "Who has done this?" The men, most of them shedding bitter tears and crying, "Better we had died," explained the incident; and after satisfying himself that their story was only too true, he had the body carried to one of the largest boats. It was night now, and the lamps which had been brought on shore to aid the search for the wounded elephant in the jungle were used to throw a light upon the

embarkation of his corpse. One of the most affectionate acts of devotion followed. Eleven of the followers, under the direction of Mr. Beveridge, paddled the body to Sandakau by river and sea, a distance of nearly one hundred and seventy miles. They did not sleep, night or day, for fifty-three hours. They only rested three times to cook and eat a little rice.

An inquest was held at Elopura in the bay of Sandakau, and adjourned from time to time during two or three days, until all the boats came in and every man could give his evidence. Doctor Walker said the wound was perfectly consistent with the statements of the mandore and the boy Oodeen. It was inconsistent with the theory that one of the other rifles might have accidentally exploded, as Mr. Hatton was taller than any of the natives and the bullet had entered from above. Further, it seems that the men acted on a general order from Mr. Hatton never to carry their weapons loaded, and only to load when there was something to shoot at. Questioned as to his relations with his men, Mr. Beveridge said, "Mr. Hatton was on the best of terms with his men; they would do anything for him." The jury, which consisted of twelve Europeans, recorded a verdict of which the following is a part:

"The jury are of opinion that Frank Hatton came by his death from the accidental discharge of his rifle on the evening of the first of March, while returning from elephant-shooting at Sugoan Jukol, which is situated about sixty miles up the Seguama River, and about one hundred and sixty miles by water from Sandakau, and whilst he was pushing aside a vine with the end of said loaded rifle carried in his hand.

"The jury much deplore the sudden death of Mr. Hatton, who as an explorer and mineralogist had proved himself of much value to the British North Borneo Company, and to the world generally, and on account of his many social qualities."

Borneo is, with one exception, the largest island in the world. With a coast-line of over three thousand miles, it is larger than France, and three times the size of England. In 1847 the government of Queen Victoria, impressed with the necessity of a marine station in these latitudes, purchased Labuan, an island off the coast of Borneo, and formed a British colony, with a governor and all the necessary requirements of an efficient administration. Within the last few years a company of London capitalists have bought from the sultans and chiefs of the northern portion of the island the country known as Sabork. They have been incorporated under a royal charter, on the principle of the old East India Company. A line drawn across the map of Borneo, from the

Kimomis River on the north-west coast to the Sibruco on the east, will indicate the territory hitherto called Sabork, now better known as British North Borneo.

The pictures on pages 442 and 443 illustrate the newest settlement on the coast — Elopura, in Sandakau bay. Within a few years it has grown from a mere stockade into a busy port. On the wooded slope of its jungle suburb by the sea rests Frank Hatton, whose name will forever be associated with the exploration of the country. Although brick buildings are now being erected at Elopura, it is chiefly constructed after the manner of the ancient lake-dwellers of Europe, on piles, as all the modern Dyaks' and other native houses are in these little-known regions of the Malay Archipelago. Frank Hatton's house, shown on page 442, was the first English house in the Kinoram district of North Borneo.

The wild interior of North Borneo was for the first time partially explored only as recently as 1881, and it was in this year that its finest harbor was discovered by an English cruiser. Mr. Wittl, an Austrian officer in the North Borneo Company's service, crossed the country without encountering any more than the natural obstacles of tropical travel, through jungle, and over unknown rivers; though he fell a victim to over-zeal at a later day, when making his way through known warlike and cruel tribes of Dyaks on the unexplored border-land of the Sibruco River. He and his followers fell into an ambush and were slain. It was to supplement and extend, on a scientific basis, the investigations of Wittl, that Frank Hatton went out to Borneo; and nothing is more remarkable, experts say, than the amount of solid work which he accomplished within eighteen months, right on the equator, in a country without roads, thick with a jungle-growth of centuries, its rivers the home of the crocodile, its "forests primeval" abounding with animal life, and peopled by half-naked savages, many of whom had never before seen a white man.

II.

NOTES FROM THE DIARIES OF FRANK HATTON.

ONE of Frank Hatton's most important explorations was a journey up the Labuk River and overland to Kudat, commencing March 16th, ending June 19th. Avoiding geographical technicalities on the one hand and mineralogical and other scientific details on the other, we propose to make such extracts from this diary report as will interest the general reader, while throwing new lights upon native man-

ners and customs and giving fresh incidents of tropical travel.

"By the 3d of March," he says, "we were well afloat on the Labuk, a bold stream, having a rapid current. At mid-day we passed two small tributaries, one on the right and one on the left. The banks were lined with nipa palms and the stream was very deep and rapid. The weather to-day was beautiful, and nothing could be more delightful than steaming up this unknown river. Presently we left the swamps behind us, and now the banks were lined with vast forests, from whose somber depths could be heard the cries of horn-bills and the chatter of monkeys. Enormous creepers hung in pendent growths from the great dark trees; butterflies and insects of every hue and color fluttered before us; the sun blazing out and shedding a golden radiance over the scene.

"Tander Batu turned out to be a small village on the right bank of the river, having a population of two hundred and fifty persons; only five large houses. The people were originally Sulumen, but having lived for generations in the Labuk they call themselves 'Labuk men.' The chief of this part of the country is Datu Serikaya, who has the company's flag flying on a post outside his house, with two old iron cannon beside it. We sat there for nearly three hours talking over the matter of procuring 'gobangs,' or dugouts, two of which I obtained from a Hadgi trading up the river. I got no assistance whatever from Datu Serikaya. In Bongon, Sheriff Shea told me not to eat in Datu Serikaya's house, as dark stories are told of his having poisoned more than one person.

"In the wet season the Labuk must be terrible: there is a rise of at least twenty feet above its present level, with an irresistible current. Trees of enormous size are piled up on the banks, and even away in the jungle lie trunks of trees which had been swept there by the flood. The amount of denudation effected by these tropical rivers is enormous; vast beds of rolled pebbles, consisting of quartzite, quartz, serpentine, mica schist, porphyritic granite, etc., are to be seen all along the Labuk. The hills in this country are composed largely of rich clayey ironstone, and indeed, in one place near our last night's camping ground, where there had been a landslip, the exposure showed a bright red ironstone, which in England would have been jumped at as a source of wealth. On both banks of the river, at about a mile distant from the water, rise the Labuk hills, heights varying from five hundred to one thousand and two thousand feet.

"Left Tanah Dumpas with my Dusun guides on the 16th, and ran down the river as far as a

small island, into whose right passage flows a tributary called the Telupid. . . . Not being able to find traces of any useful mineral in the Telupid, I left this river and followed up one of the tributaries, going overland to do so. Had the greatest mineral treasure imaginable lain hidden in the hills, nature could have taken no more trouble to conceal it. I was never in a jungle with so many leeches, as well as other crawling and flying pests. The rattans also were a great obstacle, stretched as they were across the path at heights varying from one inch to thirty feet. These catch the feet and trip up the traveler, while the rattan leaves hang down from above, armed with hundreds of thorns, each one strong enough to catch a fish with; and indeed they are used for this purpose.

"Left our camp on March 17th, at Tanah Dumpas, and passed through the northern channel past a large island, which here divides the Labuk into two. Nothing but going up rapids to-day; we ascended one four feet high in twenty yards, and shortly afterwards got up one eight feet in fifteen yards, and passed a veritable whirlpool. The water rushing round a sharp bend was met by some vertical rocks, and the stream striking on these had created a dangerous whirlpool. Just above this pool there is a small Dumpas village, on the left bank, called 'Kabuan.' The population numbers thirty persons, and none of them dare go farther up the river than they are at present, as the men of Sogolitan have closed the river to them. We passed a splendid waterfall on the right bank, the mouth of the Bombolie, which is some eight yards wide, and falls from a height of fifty feet into the Labuk. We camped to-night just below a rattan, which was stretched across the river, marking the frontier of the Sogolitan and Delarnass countries.

"I was informed that in this district there are several thousand people calling themselves Sin-Dyaks. They are painted and tattooed in a peculiar way. On the other side of the rattan, which my Malays were not at all willing to go under, there was a guard of three Dyaks in a native dugout. Their boat was of capital workmanship, being carved at the bow. The men were tattooed with blue all down the arms, breasts, and legs, and had pieces of wood in their ears. They wore a head-cloth of common blue calico fastened on by a plaited rattan, which was passed over the top of the head-cloth and under the chin. They were armed with spears and native-made short swords, and looked very formidable savages.

"It was close upon noon when we started on again. My prahu was leading; a little prahu with Datu Mahmud (my guide when

FRANK HATTON. (FROM PHOTOGRAPH BY VANDEWEYDE.)

we get to Kinoram) followed. Then came Smith and the police, and lastly the mandore and coolies, in a large prahu full of things. We had passed rather a difficult bit of river, when I heard a shriek, and looking round I saw several heads bobbing in the rushing river and a prahu, bottom upwards, floating down and dashing among the bowlders in the distance. I jumped from my gobang and rushed to the spot; but before I arrived the prahu had gone out of sight and most of the men had got ashore, some with great difficulty and many narrow escapes. The Dumpas men, who swim like fishes, were of great help in getting the people ashore, and had it not been for them I think the accident would have been a fatal one. The missing goods were many; the severest losses being two bags of rice, three rifles, six axes and some parango, and a box of blow-pipe apparatus; while all the men's clothes, blankets, etc., had gone out to sea, and some poor fellows had scarcely a rag to stand in. The Dumpas and Sulu men who were following us dived all day trying to recover goods, and by their means two guns and half a bag of rice were got up. The Dyaks here gave us no help, and indeed their prahus were on the watch at a bend of the river some way down for blankets, kaglangs, or other things which might float down, and which they would very quickly clear up. These people are indeed head-hunters. Only seven days ago a head was taken at a tree-bridge over a torrent. A Dumpas man was walking over a felled tree (which in this country always constitutes a bridge), when four Sogolitan men set on him, pushed him down the steep bank, and jumping down after him took his head and hand and made away. I saw the victim's head and his hand in a house

not far from the scene of the murder. Some four or five weeks ago the Sogolitan chiefs, Iamboune and Pongout, admitted that seven heads had been taken from slaughtered men of Tingara (a country near the Kinabatangan). He (Iamboune) said there was a blood feud going on between the men of 'Loundat' in Sogolitan and the Tingara tribes.

"Having got our things together, we crossed the river and made our camp for the night. It was useless to expect anything from the Sogolitan people, as they had already requested us not to go up to their houses, as their women were afraid. The Dyaks here all eat monkeys and preserve the skins, which they fasten round their waists, letting the tails hang down behind, so that in the distance they look like men with tails.

"Progress up the river is very difficult and dangerous; I think we ascended about fifty feet to-day, divided in three rapids. We passed under a second rattan stretched across the river between Kananap, a district of Sogolitan, and Sogolitan proper. These two rattans form one 'key' to the country, and if one is cut down, in defiance, the Dyaks never leave the war-path until the offenders' heads are at rest with the others in their head store. All these people are very superstitious. The 'bad bird' is a great trouble, for it causes trading parties to turn and go back, even when within sight of the end of their journey. On head raids there are several special birds, and great attention is paid to their warnings. If the bird flies from left to right and does not again return, the whole war party sits down and waits, and if nothing comes of the waiting every one goes home. This evening I caught a first sight of Mentapom, stated by Mr. Witt to be eight thousand, but which I should think is at least nine thousand feet high. It is a fine bold peak, with exposures of white rock near the summit, and is not unlike the Matterhorn.

"We camped on the 20th, almost at the foot of Mentapom, and I fired my gun several times as a signal to a prahu which had not yet come up. Some Dusuns, who were catching fish, asked us not to fire, as it made the spirits on Mentapom angry, and we should be sure to get rain. I cannot tell how they got hold of this curious superstition, but, sure enough, half an hour afterwards the rain came down in torrents.

"At about 9 o'clock the next morning the missing gobang came up. Terrible news! She had gone over and all the things had been lost. A gun and sword-bayonet, a box of tinned provisions, four or five blankets, half a bag of rice (being all the rice we had to feed twenty hungry men), and all the biscuit, besides endless things belonging to the Datu and the unfortu-

nates in the boat. This is a most terrible thing for us, as the men have not a grain of rice to eat. I was thinking over the situation when one of the men said he could see a house

on the top of a hill near the base of the Mentapom. He pointed it out to me, and I determined to go up and try and get food. Taking some cloth and four men, I went forward. At our approach all the people ran away and shouted, 'Take the paddy; there it is, there it is!' They were in the midst of cutting paddy. When they saw that we did not intend to rob and murder them, they came back, and gaining confidence by degrees, they at last did not

want to sell us any rice. When told that my men had nothing to eat, and if they did not get rice they must starve, the people merely laughed and said they could not let us have any, as it was not yet time. They have some superstition connected with the beginning of harvest. However, we frightened them a little, and finally succeeded in getting some rice. We left these inhospitable shores at four o'clock.

"On the 26th of March I left Tampias for the Dusun kampong in a small prahu. On arriving there, I was received by the headman, 'Degadong' (a name given by Datu Serikaya), who said he had never before seen a white man, although he had heard of Mr. Witt. His house is called 'Ghanah,' and the country is called 'Touaorum.' It is situated on a hill to the south and on the right bank of the Labuk river. The following day was fixed for 'the cutting ceremony,' which was to take place at my hut. Afterwards Degadong promised guides and porters. I told him I wanted to keep on the right bank, and he said, 'Oh, yes, I could do that.' At about 12 o'clock on the next day the Dusuns began to arrive, boat-load after boat-load, until some hundred men had collected, all armed with spears and swords. The chief now came up, and we at once proceeded with the ceremony. First the chief cut two long sticks, and then, sitting down, he had a space of ground cleared before him, and began a discourse. When he came to any special point in his discourse he thrust a stick into the ground and cut it off at

FRANK HATTON'S HOUSE.

a height of half a foot from the earth, leaving the piece sticking in. This went on until he had made two little armies of sticks half a foot high, with a stick in the middle of each army much higher than the rest, and representing the two leaders. These two armies were himself and his followers and myself and my men. Having called in a loud voice to his god, or Kinarahingan, to be present, he and I took hold of the head and legs of the fowl while a third person cut its head off with a knife. We then dropped our respective halves, and the movements of the dying fowl were watched. If it jumps towards the chief, his heart is not true; if towards the person to be sworn in, his heart is not true; it must, to be satisfactory, go in some other direction. Luckily, in my case, the fowl hopped away into the jungle and died. All my men now fired three volleys at the request of the chief,

and I gave some little presents all around and sent the people away pleased and delighted.

"The Dusun headman, 'Degadong,' was very kind. He presented me with a spear, and I gave him a long knife. This exchange of weapons is customary after the fowl ceremony.

"Two chiefs of 'Touaorum,' Degadong and his brother, accompanied us on our first day's tramp overland. The road lay over a high ridge, and we had often to climb heights of two thousand, and in one case upwards of three thousand feet. From the summit of one of these, where there was no high jungle, I had a splendid view of the country. To the north lay the Kinabatangan valley, with the Silam hills in the distance; eastward stretched the Labuk, girded by hills rising one above the other up to the noble crags of Mentapom. In the distance again was the Sugut vale, with range upon range of tree-capped mountains rising right away to Kinibalu, which, seemingly near, towered like a fairy castle up into the blue sky. I shall never forget this lovely scene, but more especially shall I remember the wonderful tints and shades presented by the distant 'giant hills of Borneo.' A blue sky showed up every crag of the principal mountain, which stood out purple and black. The setting sun shed its rays on rock and tree, and the water streaming down the time-worn sides glistened and flashed, while all the nearer hills were clothed in every shade of green. A few white clouds appeared in the distance, and as I neared the Dusun kampong

SECTION OF STOCKADE SURROUNDING FRANK HATTON'S HOUSE. (FROM SKETCH BY HIMSELF.)

of Toadilah night clouds were closing in the glorious landscape. It was a most exceptional view, and one which this season of the tropical year can alone afford.

“On March 31st some men came in from collecting upas juice. I asked how it was obtained, and they said they make a long bamboo spear, and, tying a rattan to one end, throw it at the soft bark of the upas tree; then pulling it out by means of the rattan, a little of the black juice will have collected in the bamboo, and the experiment is repeated until sufficient is collected. I cannot tell what truth there is in this story, but the people had no reason for deceiving me. The Dusuns at ‘Toadilah’ all wear brass collars, bracelets, and anklets, and a piece of black cloth round the head, kept on by a band of red rattans. The women wear a short sawong of native cloth, which is fixed on tightly at the upper part by brass wire. They also wear collars and anklets of brass wire.

“On the 4th of April I was initiated into the brotherhood of the Bendowen Dusuns. The old men and all the tribe having assembled, the ceremonies began. First the jungle was cleared for about twenty yards, and then a hole was dug about a foot deep, in which was placed a large water-jar. In this country these jars are of enormous value: \$30, \$40, and even \$100 worth of gutta being given for a single jar. The bottom of the jar in question was knocked out, so as to render it useless in future. The clay taken out to make the hole was thrown into the jar, and now the ‘old men’ began to declaim, ‘Oh, Kinarahingan, hear us!’—a loud shout to the Kinarahingan. The sound echoed away down the valleys, and as it died a stone was placed near the jar. Then for half an hour the old men declared by fire (which was represented by a burning stick), by water (which was brought in a bamboo and poured into the jar), and by earth, that they would be true to all white men. A sumpitum was then fetched, and an arrow shot into the air to summon the Kinarahingan. We now placed our four guns,

which were all the arms my party of eight mustered, on the mouth of the jar, and each put a hand in and took a little clay out and put it away. Finally several volleys were shot over the place, and the ceremony terminated.

“On our way from Senendan we passed a solitary grave, marked by a rough stone; the rank grass grew high and green upon it. When I noticed it one of the headmen was on his knees busily tearing away the grass, and talking to the dead man’s ‘ghost.’ He was telling him that the white man had come, and was friends with the Senendan people. The dead man was the brother of the chief.

“The Muruts here are much tattooed. Those men who have fought, or have gone on bold or risky expeditions, are tattooed from the shoulders to the pit of the stomach, and all down the arms in three broad parallel stripes to the wrist. A headman, or rather a sometime headman, of Senendan, had two square tattoo marks on his back. This was because he ran away in fight, and showed his back to the enemy. Another and a braver chief was elected in his place.

“There was a dead man in one of the houses here, and I went to see him. He was placed in a sitting posture, dressed in all the things he had; a cigarette was being held to his mouth, and a brass box containing betel, etc., was open before him. His friends were seated around, and were telling the dead man not to go to the right or left, as they were the wrong roads, but to keep straight ahead, ‘and that is the way to Kini Balu.’ This ceremony lasts one day and one night, and the next day the man is buried with all his belongings.

“Smith [a coal-miner], who is ill, and nearly all the men (most of them also ill), went on to Kudat. I stayed at Kinoram until April 24th, getting material ready for making a house.

“Subsequently I went down to Bongon, and had a tremendous struggle getting stones and kajangs to Kinoram in two prahus up the Kinoram River. The river is quite unnavigable, full of rapids and waterfalls, and subject

THE JOURNEY BACK.

to the most sudden floods. No prahu has ever navigated the river before ; but with my usual good luck I got all the things up, nothing lost and no one hurt.

"I have been in the Bornean bush from March 1st until June 15th, and have traveled several hundred miles by land and river."

During the following July, August, September, and October of the same year, 1882, Frank Hatton conducted an expedition of scientific investigation in the Kinoram district, where he built this first house referred to in the above report. The following extracts are from an abstract of his diary of these investigations.

"As we proceeded up the Kinoram River our road became worse and worse. About two miles up we came to a long stretch of deep and rapid water with precipitous cliffs on either side. It took us until night to get past this obstacle, which, however, we managed to do by clinging on to the almost impassable face of the cliff by roots, trees, or any other hold we could get. The men with heavy loads had a very hard time getting past. The moment we were over, we pitched our camp on the first place which offered, and got some huts made as quickly as possible. I notice that the rock along the lower portions of Tomboyonkon is limestone, of which there are many boulders in the river, together with pieces of a dark, fine-grained syenite, which must come from above.

"Terrific work all day climbing over immense boulders, where a slip would simply be fatal. Great landslips have occurred all along the stream, and enormous boulders have consequently blocked up the bed. The river flows along the spur from Kini Balu, which, running north-north-east, culminates in two peaks, Nonohan-t-ayaioh, 8000 feet, and Tomboyonkon, 6000 feet, the terminal mountain of the spur. As we traveled along I noticed in a small cave in the rock some twenty or thirty swallows' nests. They were greenish-white below, and fixed to the rock by a white glutinous substance. They are said to be worth about a dollar per catti.

"No description could do justice to the difficulty of our road, and the dangers and troubles we passed through could only have been compensated by a great mineral find. At four o'clock, being quite wet through, we camped in a cave, or rather a hole formed of gigantic fallen rocks, one fifty feet and one forty feet high, with eight or ten of fifteen feet and upwards in height forming sides to the cave, which also ran some ten or twenty feet into the rock. The outer apartment was filled with swallows, while the inner one was tenanted by bats, whose guano covered the

floor to a depth of about eighteen inches, there being the same thickness of bird guano in the outer cave. A very rank, mouldy, badger-like smell pervaded the place, and on the roof were about a hundred of the nests previously noted. It was a romantic night sleeping there with the men stowed away in crevices and holes in the cliffs, the vast nature of the latter being most impressive. We were here, with the uncertainty of ever being able to get back or forwards, with provisions for only a few days, and not a living soul in the whole country round, nothing but trees; the true primeval forest of Borneo reigns supreme in these hilly fastnesses, and the camphor and gutta trees near the source of the Kinoram have yet to feel the axe of the pioneer and the trader. We are now up the river about seven miles, and if rain should flood the stream retreat would be quite impossible.

"Up very early this morning (Aug. 8th), as a pain in my knee kept me from sleeping. Not a soul was stirring as I walked about the camp; the last embers of the watch-fire were smoldering away. All the grass and leaves were wet with the morning dew, and the men stretched around in every conceivable position were huddled together in their blankets, for the mornings here are damp and chill. Later on I found that a regular breakdown of the health of our party had occurred, perhaps owing to the sudden change of climate. Out of fifteen, seven were down with fever, including Mr. Beveridge and the two Chinamen. I employed the morning dosing all hands with enormous potions of quinine and epsom salts. I waited here the day in hopes of a change.

"The Chinamen and two Malays are to-day (Aug. 9th) so ill that I sent them back to Kinoram in charge of Dusuns. Mr. Beveridge is better, so we started away on a trip to Marudu. We arrived at Pudi shortly after one o'clock, having traveled only six miles. Every one, however, was quite done up, so we made a stop at Pudi. I think the roughing up the Kinoram tired out all the men. The house at Pudi is a wretchedly dirty place, and the people more miserable and poor than most Dusuns. They 'prayed me for rain,' saying that if the heat continued their crops would wither and they would perish. All their potatoes and kaladis are almost dead for want of rain, and indeed the drought is rather severe. I told them to ask their 'Kinarahingan' for rain, but they said it would be better for me to ask the Kinarahingan, as my asking would surely be answered. It is a curious supposition this of the Dusuns, to attribute anything, whether good or bad, lucky or unlucky, that happens to them to something novel which has arrived in their country.

For instance, my living in Kinoram is thought to have caused the intensely hot weather we have experienced of late. This is attributed to me by all the Dusuns of Kinoram, Munnus, Kias, Lobah, in fact everywhere. I can only conclude that the natives have the most imperfect idea of time, for just now is the close of the dry season, and therefore of course very hot and dry."

These extracts are of the briefest ; and yet we have only space to refer to the explorer's last diary, a pencil record of his last expedition, beginning January 6th, and ending March 1st, 1883. It is a daily and often an hourly report of (to quote the words of the Governor of Labuk himself) "an arduous exploring journey up the river Kinabatangan, and his very plucky though unsuccessful attempt to reach the Seguama overland from the former river, during the prevalence of the rainy season. He was compelled to make the journey by sea, and reached the Seguama with his party in open boats on the 27th of February, after what he has described in his diary as a terrible voyage." His duty was to prospect the

Seguama district for gold, to the existence of which the testimony of all the natives of the east coast unanimously points. With this object, accompanied by Mr. Beveridge, the companion of all his journeys in Borneo, and by a party of Malays, he ascended the river. His diary is continued to the 1st of March, on which day he enters the note, "Just one year ago left Sandakan for the Labuk,"—the first inland journey he had made in the territory,—and this was to terminate forever all his work in this world. The diary is posted up to 3:40, about the time when he left his boat on his fatal excursion after elephants. Other pens have taken up the story of an expedition, which when it comes to be chronicled will fully establish the Bornean explorer's title to the honors that are being conferred upon his memory. The trophies of the young scientist's work are packed away in the room he used to occupy in the home that knows him no more ; but of all those treasures, none are more pathetic than the thumbed log of his last journey, and the compass which he consulted for his last observation.

Joseph Hatton.

LOVE'S IN THE CALENDAR.

WHEN chinks in April's windy dome
Let through a day of June,
And foot and thought incline to roam,
And every sound 's a tune ;
When nature fills a fuller cup,
And hides with green the gray,—
Then, lover, pluck your courage up
To try your fate in May.

Though proud she was as sunset clad
In Autumn's fruity shades,
Love too is proud and brings (gay lad !)
Humility to maids.
Scorn not from nature's mood to learn,
Take counsel of the day :
Since haughty skies to tender turn
Go try your fate in May.

Though cold she seemed as pearly light
Adown December eves,
And stern as night when March winds smite
The beech's lingering leaves ;
Yet Love hath seasons like the year,
And grave will turn to gay,—
Then, lover, listen not to fear,
But try your fate in May.

And you whose art it is to hide
The constant love you feel :
Beware, lest overmuch of pride
Your happiness shall steal.
No longer pout, for May is here
And hearts will have their way ;
Love's in the calendar, my dear,
So yield to fate in May.

Robert Underwood Johnson.

McCLELLAN'S CHANGE OF BASE.

THE CONFEDERATE PURSUIT.

WILLIS'S CHURCH, ON THE QUAKER ROAD, NEAR GLENDALE.
USED AS A CONFEDERATE HOSPITAL AFTER THE
BATTLE OF MALVERN HILL.

FIVE of the six Confederate divisions north of the Chickahominy at the close of the battle of Gaines's Mill remained in bivouac all the next day (June 28th), it being deemed too hazardous to force the passage of the river in the presence of the enemy. General Ewell was sent with his division to Dispatch Station on the York River railroad. (See map on page 453.) He found the station and the railroad-bridge burnt. J. E. B. Stuart, who followed the retreating Federal cavalry to the White House on the Pamunkey River, found destruction of stations and stores all along the line. These things proved that General McClellan did not intend to retreat by the short line of the York River railroad; but it was possible he might take the Williamsburg road. General Lee, therefore, kept his troops on the north side of the river, that he might be ready to move on the Federal flank, should that route be attempted. New Bridge was repaired on Saturday (the 28th), and our troops were then ready to move in either direction. The burnings and explosions in the Federal camp Saturday afternoon and night showed that General McClel-

lan had determined to abandon his strong fortifications around Richmond. Ewell, who was watching him at Bottom's Bridge, and the cavalry, holding the crossings lower down, both reported that there was no attempt at the Williamsburg route. Longstreet and A. P. Hill were sent across the river at New Bridge early on Sunday morning to move down the Darbytown road to the Long Bridge road to intercept the retreat to the James River. This movement began before it was known that General McClellan had evacuated his stronghold. Lee gave here the first illustration of a quality for which he became noted — the remarkable discernment of his adversary's plans through the study of his character. McClellan could have retreated to Yorktown with as little loss as Johnston sustained on his retreat from it. The roads from Richmond to Yorktown lead through a wooded and swampy country, on which strong rear-guards could have afforded perfect protection to a retreating column without bringing on a general engagement. General Johnston, on his retreat from Yorktown, did fight at Williamsburg, but it was a battle of his own choosing, and not one forced upon him by the vigor of pursuit. Lee had but little idea that McClellan would return to Yorktown, judging rightly that the military pride of his distinguished opponent would not permit him to march back a defeated column to the point from which he had started, a few months before, for the capture of the Confederate capital, with his splendid army and magnificent outfit.* It is a proof of Lee's sagacity that he predicated his orders for an advance upon the belief that General McClellan was too proud a man to fall back by the same route by which the triumphal advance had been made. A great commander must study the mental and moral characteristics of the opposing leader, and Lee was specially endowed with an aptitude in that direction. At the battle of Salzbach, Montecucculi, the Austrian commander, noticed the French troops making a movement so different from the cautious style of his famous rival that he exclaimed, "Either Turenne is dead or mortally wounded." So it proved to be; the French marshal had been killed by a cannon-ball before the movement began.

In pursuance of General Lee's plan, Huger

* The capture of Petersburg would have been almost as disastrous to the South as the capture of Richmond, and for many days Petersburg was at the mercy of the Federal army. There were no troops and no fortifications there when General McClellan reached the James. Some two weeks after the battle of Malvern Hill the first earth-works were begun at Petersburg, by my order.— D. H. H.

was directed (on the 29th) to take the Charles City road to strike the retreating column below White Oak Swamp. Holmes was to take possession of Malvern Hill, and Magruder to follow the line of retreat, as soon as the works were abandoned. The abandonment became known about sunrise on Sunday morning, but Grapevine bridge was not completed till sunset. Jackson then crossed his corps at that point, my division leading. We bivouacked that night near Savage's Station, where McLaws's division had had a severe fight a few hours before. Just at dawn on Monday, the 30th, we were in motion, when I discovered what appeared to be a line of battle drawn up at the station, but which proved to be a line of sick and of hospital attendants, two thousand five hundred in number. About half a mile from the station we saw what seemed to be an entire regiment of Federals cold in death, and learned that a Vermont regiment had made a desperate charge upon the division of McLaws, and had been almost annihilated. From the time of crossing the river, we had evidence everywhere of the precipitate nature of the Federal retreat. Dabney, in his life of Jackson, says:

"The whole country was full of deserted plunder, army wagons, and pontoon trains partially burned or crippled; mounds of grain and rice and hillocks of mess beef smoldering; tens of thousands of axes, picks, and shovels; camp kettles gashed with hatchets; medicine chests with their drugs stirred into a foul medley; and all the apparatus of a vast and lavish host; while the mire under foot was mixed with blankets lately new, and with overcoats torn from the waist up. For weeks afterwards agents of our army were busy in gathering in the spoils. Great stores of fixed ammunition were saved, while more were destroyed."

In our march from Savage's Station my division picked up a thousand prisoners, stragglers from the retreating army, and gathered a large number of abandoned rifles. I detached two regiments (the Fourth and Fifth North Carolina) to take the prisoners and arms to Richmond. We reached White Oak Swamp about noon, and there found another hospital camp, with about five hundred sick in it. Truly, the Chickahominy swamps were fatal to the Federal forces. A high bluff was on our side of the little stream called White Oak, and a large uncultivated field on the other side. In this field could be seen a battery of artillery, supported by a brigade of infantry — artillerists and infantry lying down and apparently asleep. Under cover of Munford's regiment of cavalry, thirty-one field pieces were placed upon the bluff, and were ordered to open fire as soon as the cavalry mask was removed. The battery fired its loaded guns in reply, and then galloped off, followed by its infantry supports and the long

lines of infantry farther back in the field. Munford crossed his regiment over the ford, and Jackson and myself went with him to see what had become of the enemy. We soon found out. The battery had taken up a position behind a point of woods, where it was perfectly sheltered from our guns, but could play upon the broken bridge and ford, and upon every part of the uncultivated field. It opened with grape and canister upon us, and we retired rapidly. Fast riding in the wrong direction is not military, but it is sometimes healthy. We had taken one prisoner, a drunken Irishman, but he declined the honor of going back with us, and made fight with his naked fists. A soldier asked me naively whether he should shoot the Irishman or let him go. I am glad that I told him to let the man go, to be a comfort to his family. That Irishman must have had a charmed life. He was under the shelter of his gum-cloth coat hung on a stick, near the ford, when a citizen fired at him four times, from a distance of about fifty paces; and the only recognition that I could see the man make was to raise his hand as if to brush off a fly. One of the shells set the farm-house on fire. The owner came out and told us that General "Baldy" Smith was taking a bath in the house at the time. I do not know how refreshing the general found it, or whether the story was true. We learned, however, that Franklin's corps was in front of us, and that item of news was true.

Our cavalry returned by a lower ford, and pronounced it perfectly practicable for infantry. But Jackson did not advance. Why was this? It was the critical day for both commanders, but especially for McClellan. With consummate skill he had crossed his vast train of five thousand wagons and his immense parks of artillery safely over White Oak Swamp, but he was more exposed now than at any time in his flank march. Three columns of attack were converging upon him, and a strong corps was pressing upon his rear. Escape seemed impossible for him, but he *did* escape, at the same time inflicting heavy damage upon his pursuers. General Lee, through no fault in his plans, was to see his splendid prize slip through his hands. Longstreet and A. P. Hill struck the enemy at Frayser's Farm (or Glendale) at 3 P. M. on the 30th, and, both being always ready for a fight, immediately attacked. Magruder, who followed them down the Darbytown road, was ordered to the assistance of General Holmes on the New Market road, who was not then engaged, and their two divisions took no part in the action. Huger, on the Charles City road, came upon Franklin's left flank,*

* See map on page 470.

but made no attack. I sent my engineer officer, Captain W. F. Lee, to him through the swamp, to ask whether he could not engage Franklin. He replied that the road was obstructed by fallen timber. So there were five divisions within sound of the firing, and within supporting distance, but not one of them moved. Longstreet and A. P. Hill made a desperate fight, contending against Sumner's corps, and the divisions of McCall, Kearny, and Hooker; but they failed to gain possession of the Quaker road, upon which McClellan was retreating. That night Franklin glided silently by them. He had to pass within easy range of the artillery of Longstreet and Hill, but they did not know he was there. It had been a gallant fight on their part. General Lee reported: "Many prisoners, including a general of division, McCall, were captured, and several batteries, with some thousands of small arms, were taken." But as an obstruction to the Federal retreat, the fight amounted to nothing.

Major Dabney, in his life of Jackson, thus comments on the inaction of that officer: "On this occasion it would appear, if the vast interests dependent upon General Jackson's coöperation with the proposed attack upon the center were considered, that he came short of the efficiency in action for which he was everywhere else noted." After showing how the crossing of White Oak might have been effected, Dabney adds: "The list of casualties would have been larger than that presented on the 30th, of one cannoneer wounded: but how much shorter would have been the bloody list filled up the next day at Malvern Hill? This temporary eclipse of Jackson's genius was probably to be explained by physical causes. The labor of the previous days, the sleeplessness, the wear of gigantic cares, with the drenching of the comfortless night, had sunk the elasticity of his will and the quickness of his invention for the nonce below their wonted tension. And which of the sons of man is so great as never to experience this?"

I think that an important factor in this inaction was Jackson's pity for his own corps, worn out by long and exhausting marches, and reduced in numbers by its score of sanguinary battles. He thought that the garrison of Richmond ought now to bear the brunt of the fighting. None of us knew that the veterans of Longstreet and A. P. Hill were unsupported; nor did we even know that the firing that we heard was theirs. Had all our troops been at Frayser's Farm, there would have been no Malvern Hill.

Jackson's genius never shone out when under the command of another. It seemed then to be shrouded or paralyzed. Compare his inertness on this occasion with the

wonderful vigor shown a few weeks later at Slaughter's Mountain, in the stealthy march to Pope's rear, and later still in the capture of Harper's Ferry. MacGregor on his native heath was not more different from MacGregor in prison, than was Jackson his own master from Jackson in a subordinate position. He wrote once to Richmond requesting that he "might have fewer orders and more men." That was the keynote to his whole character. The hooded falcon cannot strike the quarry.

The gentleman who tried his "splendid rifle" on the drunken Irishman was the Rev. L. W. Allen. Mr. Allen had been raised in that neighborhood, and knew Malvern Hill well. He spoke of its commanding height, the difficulties of approach to it, its amphitheatrical form and ample area, which would enable McClellan to arrange his three hundred and fifty field guns tier above tier and sweep the plain in every direction. I became satisfied that an attack upon the concentrated Federal army so splendidly posted, and with such vast superiority in artillery, could only be fatal to us. The anxious thought then was, Have Holmes and Magruder been able to keep McClellan from Malvern Hill? General Holmes arrived at Malvern at 10:40 A. M. on the 30th, with five thousand one hundred and seventy infantry, four batteries of artillery, and one hundred and thirty improvised or irregular cavalry. He did not attempt to occupy the hill, although only fifteen hundred Federals had yet reached it. Our cavalry had passed over it on the afternoon of the 29th and had had a sharp skirmish with the Federal cavalry on the Quaker road.

As General Holmes marched down the river, his troops became visible to the gunboats, which opened fire upon them, throwing those awe-inspiring shells familiarly called by our men "lamp-posts," on account of their size and appearance. Their explosion was very much like that of a small volcano, and had a very demoralizing effect upon new troops, one of whom expressed the general sentiment by saying: "The Yankees threwed them lamp-posts about too careless like." The roaring, howling gun-boat shells were usually harmless to flesh, blood, and bones, but they had a wonderful effect upon the nervous system. General Junius Daniel, a most gallant and accomplished officer, who had a brigade under General Holmes, gave me an incident connected with the affair on the 30th, known as the "Battle of Malvern Cliff." General Holmes, who was very deaf, had gone into a little house concealed from the boats by some intervening woods, and was engaged in some business when the bellowing of the "lamp-posts" began. The irregular cavalry stam-

peded and made a brilliant charge to the rear. The artillerists of two guns of Graham's Petersburg battery were also panic-struck, and cutting their horses loose mounted them, and, with dangling traces, tried to catch up with the fleet-footed cavaliers. The infantry troops were inexperienced in the wicked ways of war, having never been under fire before. The fright of the fleeing chivalry would have pervaded their ranks also with the same mischievous result but for the strenuous efforts of their officers, part of whom were veterans. Some of the raw levies crouched behind little saplings to get protection from the shrieking, blustering shells. At this juncture General Holmes, who, from his deafness, was totally unaware of the rumpus, came out of the hut, put his hand behind his right ear, and said: "I thought I heard firing." Some of the pale-faced infantry thought that they also had heard firing.

Part of Wise's brigade joined Holmes on the 30th, with two batteries of artillery and two regiments of cavalry. His entire force then consisted of five thousand eight hundred and twenty infantry, six batteries of artillery, and two regiments of cavalry. He remained inactive until 4 P. M., when he was told that the Federal army was passing over Malvern Hill in a demoralized condition. He then opened upon the supposed fugitives with six rifled guns, and was speedily undeceived in regard to the disorganization in the Army of the Potomac by a reply from thirty guns, which in a brief time silenced his own. The audacity of the Federals and the large number of their guns (which had gone in advance of the main body of Porter's corps) made General Holmes believe that he was about to be attacked, and he called for assistance, and, by Longstreet's order, Magruder was sent to him. After a weary march, Magruder was recalled to aid Longstreet; but the day was spent in fruitless marching and countermarching, so that his fine body of troops took no part in what might have been a decisive battle at Frayser's Farm. General Holmes was a veteran soldier of well-known personal courage, but he was deceived as to the strength and intentions of the enemy. General Porter says that the force opposed to General Holmes consisted of Warren's brigade and the Eleventh U. S. Infantry; in all, fifteen hundred infantry and thirty pieces of artillery. Here was afforded an example of the proneness to overestimate the number of troops opposed to us. The Federals reported Holmes to have twenty-five thousand men, and he thought himself confronted by a large part of McClellan's army. That night he fell back to a stronger position,* thinking appar-

ently that there would be an "on to Richmond" movement by the River Road. He lost two killed, forty-nine wounded, two pieces of artillery, and six caissons. The guns and caissons, General Porter states, were afterwards abandoned by the Federals. General Holmes occupied the extreme Confederate right the next day, July 1st, but he took no part in the attack upon Malvern Hill, believing, as he says in his official report, "that it was out of the question to attack the strong position of Malvern Hill from that side with my inadequate force."

Mahone's brigade had some skirmishing with Slocum's Federal division on the 30th, but nothing else was done on that day by Huger's division. Thus it happened that Longstreet and A. P. Hill, with the fragments of their divisions shattered at Gaines's Mill, were struggling alone, while Jackson's whole corps and the divisions of Huger, Magruder, Holmes, McLaws, and my own were near by.

Jackson moved over the Swamp early on the first of July, Whiting's division leading. Our march was much delayed by the crossing of troops and trains. At Willis's Church I met General Lee. He bore grandly his terrible disappointment of the day before, and made no allusion to it. I gave him Mr. Allen's description of Malvern Hill, and presumed to say, "If General McClellan is there in force, we had better let him alone." Longstreet laughed and said, "Don't get scared, now that we have got him whipped." It was this belief in the demoralization of the Federal army that made our leader risk the attack. It was near noon when Jackson reached the immediate neighborhood of Malvern Hill. Some time was spent in reconnoitering, and in making tentative efforts with our few batteries to ascertain the strength and position of the enemy. I saw Jackson helping with his own hands to push Riley's North Carolina battery farther forward. It was soon disabled, the woods around us being filled with shrieking and exploding shells. I noticed an artilleryman seated comfortably behind a very large tree, and apparently feeling very secure. A moment later a shell passed through the huge tree and took off the man's head. This gives an idea of the great power of the Federal rifled artillery. Whiting's division was ordered to the left of the Quaker road, and mine to the right; Ewell's was in reserve. Jackson's own division had been halted at Willis's Church. The divisions of Magruder, Huger, and McLaws were still farther over to my right. Those of Longstreet and A. P. Hill were in reserve on the right and were not engaged.

At length we were ordered to advance.

* Half a mile below the upper gate at Curl's Neck. (See Holmes's Report, Vol. XI., Pt. 2, Rebellion Records.)—D. H. H.

The brigade of General Joseph R. Anderson first encountered the enemy, and its commander was wounded and borne from the field. His troops, however, crossed the creek and took position in the woods, commanded by Colonel C. C. Tew, a skillful and gallant man. Rodes being sick, his brigade was commanded by that peerless soldier, Colonel J. B. Gordon. Ripley, Garland, and Colquitt also got over without serious loss. My five brigade commanders and myself now made an examination of the enemy's position.* He was found to be strongly posted on a commanding hill, all the approaches to which could be swept by his artillery and were guarded by swarms of infantry, securely sheltered by fences, ditches, and ravines. We remained a long while awaiting orders, when I received the following :

July 1, 1862.

GENERAL D. H. HILL: Batteries have been established to act upon the enemy's line. If it is broken, as is probable, Armistead,† who can witness the effect of the fire, has been ordered to charge with a yell. Do the same.

R. H. CHILTON, A. A. G.

A similar order was sent to each division commander. However, only one battery of our artillery came up at a time, and each successive one, as it took position, had fifty pieces turned upon it, and was crushed in a minute. Not knowing what to do under the circumstances, I wrote to General Jackson that the condition upon which the order was predicated was not fulfilled, and that I wanted instructions. He replied to advance when I heard the shouting. We did advance at the signal, and after an unassisted struggle for an hour and a half, and after meeting with some success, we were compelled to fall back under cover of the woods. Magruder advanced at the same signal, having portions of the divisions of Huger and McLaws, comprising the brigades of Mahone, Wright, Barksdale, Ransom, Cobb, Semmes, Kershaw, Armistead, and G. T. Anderson. But he met with some delay, and did not get in motion till he received a second order from General Lee, and we were then beaten.

The Comte de Paris, who was on McClellan's staff, gives this account of the charge of my most gallant division :

"Hill advanced alone against the Federal positions. . . . He had therefore before him Morell's right, Couch's division, reënforced by Caldwell's brigade . . . and finally the left of Kearny.* The woods skirting the foot of Malvern Hill had hitherto protected the Confederates, but as soon as they passed beyond the edge of the forest, they were received by a fire

from all the batteries at once, some posted on the hill, others ranged midway, close to the Federal infantry. The latter joined its musketry fire to the cannonade when Hill's first line had come within range, and threw it back in disorder on the reserves. While it was re-forming, new (Federal) battalions marched up to the assault in their turn. The remembrance of Cold Harbor doubles the energy of Hill's soldiers. They try to pierce the line, sometimes at one point, sometimes at another, charging Kearny's left first, and Couch's right, . . . and afterwards throwing themselves upon the left of Couch's division. But here also, after nearly reaching the Federal positions, they are repulsed. The conflict is carried on with great fierceness on both sides, and, for a moment, it seems as if the Confederates are at last about to penetrate the very center of their adversaries and of the formidable artillery, which but now was dealing destruction in their ranks. But Sumner, who commands on the right, detaches Sickles's and Meagher's brigades successively to Couch's assistance. During this time, Whiting on the left, and Huger on the right, suffer Hill's soldiers to become exhausted without supporting them. Neither Lee nor Jackson has sent the slightest order, and the din of the battle which is going on in their immediate vicinity has not sufficed to make them march against the enemy. . . . At seven o'clock Hill reorganized the *débris* of his troops in the woods; . . . his tenacity and the courage of his soldiers have only had the effect of causing him to sustain heavy losses." (Pp. 141-142, Vol. II.)

Truly, the courage of the soldiers was sublime! Battery after battery was in their hands for a few moments, only to be wrested away by fresh troops of the enemy. If one division could effect this much, what might have been done had the other nine coöperated with it!

General Lee says :

"D. H. Hill pressed forward across the open field and engaged the enemy gallantly, breaking and driving back his first line; but a simultaneous advance of the other troops not taking place, he found himself unable to maintain the ground he had gained against the overwhelming numbers and the numerous batteries of the enemy. Jackson sent to his support his own division, and that part of Ewell's which was in reserve; but owing to the increasing darkness, and the intricacy of the forest and swamp, they did not arrive in time to render the desired assistance. Hill was therefore compelled to abandon part of the ground that he had gained, after suffering severe loss and inflicting heavy damage upon the enemy."

I never saw anything more grandly heroic than the advance after sunset of the nine brigades under Magruder's orders.‡ Unfortunately, they did not move together, and were beaten in detail. As each brigade emerged from the woods, from fifty to one hundred guns opened upon it, tearing great gaps in its ranks; but the heroes reeled on and were shot down by the reserves at the guns, which a few squads reached. Most of them had an open field half a mile wide to cross, and this under the terrible fire of field artillery in front, and the

* See map on page 477.

† Immediately on my right.—D. H. H.

‡ Toombs's brigade belonged to this command, but had been moved up to the assistance of my division by my order when we were hard pressed. It was not, therefore, in the final attack made by Magruder.—D. H. H.

fire of the heavy ordnance of the gun-boats in their rear. It was not war—it was murder.

Our loss was double that of the Federals at Malvern Hill. Not only did the fourteen brigades which were engaged suffer, but also the inactive troops and those brought up as reserves too late to be of any use met many casualties from the fearful artillery fire which reached all parts of the woods for miles around. Hence, more than half the casualties were from the Federal field-pieces—an unprecedented thing in warfare. The artillery practice was kept up till nine o'clock at night. The darkness of the night added to the glory of the pyrotechnics, and though we were on the wrong side of the belching flames, we could not help looking at the gorgeous display with admiration, and even with enthusiasm. It was quite late when I had posted for the night the last of the reënforcements that had come up when the battle was over. A half hour before the last disposition was made, an incident occurred which is thus related by General Trimble:

“I proposed to General D. H. Hill to ride forward and reconnoiter the enemy's position. We approached within one hundred steps of the enemy's batteries, and could hear plainly the ordinary tone of conversation. The guns were then firing on the woods to our left, where the last attack had been made, at right angles to that part of the field we were then in. I suggested to General Hill the advantage of making an attack on this battery, and that it must be successful, as the enemy would not expect one from our position, and under cover of the darkness we could approach them undiscovered. General Hill did not seem inclined to make the movement.”

The chivalrous Trimble proposed to make the attack with his own brigade, but there were many troops now in the woods, and I thought that the attack would but expose them to a more intense artillery fire. We saw men going about with lanterns, looking up and carrying off dead and wounded. There were no pickets out, and the rumbling of wheels in the distance seemed to indicate that the retreat had begun. The morning revealed the bare plateau stripped of its terrible batteries.

The battle of Malvern Hill was a disaster to the Confederates, and the fourteen brigades that had been so badly repulsed were much demoralized. But there were six divisions intact, and they could have made a formidable fight on the 2d.

Possibly owing to the belief that Longstreet and A. P. Hill were making a march between Malvern and Harrison's Landing, the retreat was the most disorderly that took place. Wagons and ambulances were abandoned,

knapsacks, cartridge-boxes, clothing, and rifles by the thousand were thrown away by the Federals. Colonel Nance, of the Third South Carolina regiment, gathered nine hundred and twenty-five rifles in fine condition that had been thrown away in the wheat-field at Shirley, a farm between Malvern and Haxall's.

The fruits of the Seven Days' Fighting were the relief of Richmond, the capture of ten thousand prisoners, fifty-two pieces of artillery, and thirty-five thousand stands of arms, and the destruction or capture of many military stores.

I have not the means of ascertaining the relative losses. I crossed the Chickahominy with 10,000 effective men. Of these, 3907 were killed or wounded, and forty-eight were reported missing, either captured or fugitives from the field. With the infantry and artillery detached, and the losses before Malvern Hill, I estimate that my division in that battle was 6500 strong, and that the loss was 2000. Magruder puts his force at between 26,000 and 28,000 (I think a very high estimate), and states his loss as 2900.

Throughout this campaign we attacked just when and where the enemy wished us to attack. This was owing to our ignorance of the country and lack of reconnoissance of the successive battle-fields. Porter's weak point at Gaines's Mill was his right flank. A thorough examination of the ground would have disclosed that; and had Jackson's command gone in on the left of the road running by the McGee house, Porter's whole position would have been turned, and the line of retreat cut off. An armed reconnoissance at Malvern would have shown the immense preponderance of the Federal artillery, and that a contest with it must be hopeless. The battle, with all its melancholy results, proved, however, that the Confederate infantry and Federal artillery, side by side on the same field, need fear no foe on earth.

Both commanders had shown great ability. McClellan, if not always great in the advance, was most masterly in retreat, and is unquestionably the greatest of Americans as an organizer of an army. Lee's plans were perfect; and had not his dispositions for a decisive battle at Frayser's Farm miscarried, through no fault of his own, he would have won a most complete victory. It was not the least part of his greatness that he did not complain of his disappointment, and that he at no time sought a scape-goat upon which to lay a failure. As reunited Americans, we have reason to be proud of both commanders.

D. H. Hill.

REGION OF THE SEVEN DAYS' FIGHTING.

REAR-GUARD FIGHTING AT SAVAGE'S STATION,

AND THE ENGAGEMENT, THE FOLLOWING DAY (JUNE 30), AT WHITE OAK BRIDGE.

WOODBURY'S BRIDGE ACROSS THE CHICKAHOMINY. (FROM A PHOTOGRAPH, 1862.)

THE positions of the troops holding the Union line on the south side of the Chickahominy on the 26th of June, 1862 (the day before the battle of Gaines's Mill), were the following: General W. F. Smith's division of my corps, the Sixth, held the right of the line, its right resting on the hill overlooking the Chickahominy, and my other division, General Slocum's, was next on the left. Going towards the left, General Sumner's corps came next, then General Heintzelman's, and then, on the extreme left reaching to White Oak Swamp, General Keyes's corps. On the 26th an epaulement was thrown up by the troops of the Sixth Corps in a wheat-field in front of our lines, which was ready for guns on the morning of the 27th. During the night of the 26th five batteries of the reserve artillery, under the command of Colonel (now General) Getty, were collected in rear of the epaulement, ready to take position in it and commence a heavy artillery fire on the enemy's line in front of Golding's Farm. (See map, page 453. Golding's is near the Chickahominy on the extreme right of the Union intrenched line.) Five days' rations, cold tea in the canteens, etc., etc., had been issued, so that everything was ready to follow up the

projected bombardment, which it was presumed would commence on the morning of the 27th. But on the evening of the 26th the fight at Beaver Dam Creek occurred, and General McClellan called at my headquarters on his way to confer with General Porter as to his operations of the next day. I was then absent at General Slocum's headquarters, conferring with him in regard to the attack we were expecting to make, and therefore missed General McClellan, so that I received no word from him until the next morning.

About daylight on the 27th I received orders to send General Slocum's division across the Chickahominy to report to Gen-

eral Porter. This order was countermanded a short time after the division had started by way of Woodbury's Bridge, and it returned to its station. About 10:30 o'clock in the morning the enemy opened on our artillery with theirs, doubtless unaware of the presence of the five batteries of reserve artillery mentioned above. The fire was kept up for an hour, and as theirs slackened, so did ours, until both sides ceased firing. Two hours before the bombardment began I received orders not to do anything to bring on a general engagement, and after the cessation of the artillery fire everything was quiet in our front for several hours. At two o'clock I was ordered again to send General Slocum's division to report to General Porter. It went accordingly, became engaged at once in the battle of Gaines's Mill, lost very heavily, and did not return to its station until after nightfall.

During the afternoon several of the heavy guns with us were used with effect on columns of the enemy on the north side of the Chickahominy moving against General Porter, causing them to fall back and seek some other route of attack. The range was about two and one-half miles. About sundown General Hancock's brigade, which held the extreme right of Gen-

A SAMPLE OF THE CHICKAHOMINY SWAMP. (FROM PHOTOGRAPH, 1862.)

eral Smith's line, was attacked furiously by the enemy. It was nearly dark when the fight began, and the combatants were not fifty yards apart; but General Hancock was, as usual, equal to the occasion, and the enemy was driven back. This fight was preceded by a severe artillery fire from the enemy, which, however, was soon silenced. This day's operations of Smith's division were known as "the action at Golding's Farm."

The position held by General Smith's division was about one and one-half miles from the Gaines's Mill field; and possibly because the interval was filled with dense timber, not a gun of the Gaines's Mill battle was heard by the troops in our vicinity.

The next morning, the 28th of June, General Smith's division was moved to the rear and left of the clearing of Golding's Farm; General Slocum's division remaining to the rear and right of Smith, where it had taken position the night before. During this retrograde movement the enemy kept up a lively cannonade from the left, front, and right, doing wonderfully little harm. That evening the corps commanders were assembled at McClellan's headquarters at the Trent house. The commanding general announced to us his purpose to begin a movement to the James River on the next day, and each corps commander was furnished with a map on which were laid

THE RETREAT FROM THE CHICKAHOMINY. (FROM A SKETCH MADE ON THE FIELD AT THE TIME BY A. R. WAUD.)

[The scene is near McClellan's headquarters at Dr. Trent's farm, before daylight on Sunday, June 29; the Sixth Corps (Franklin's) is falling back; the fires are from the burning of commissary stores and forage; the artillery in position covers the approaches from the Chickahominy, the artillerymen resting under each the guns. The regiment in the middle ground is the 16th New York, who wore straw hats in this campaign, and were, partly in consequence, such conspicuous targets for the enemy that in the Seven Days fighting they lost 228 men.—EDITOR.]

down the positions that the respective corps were to hold until the next evening, when all the troops remaining near their present positions were to move across the White Oak Swamp *en route* for the James. The assembly broke up about two o'clock in the morning, and each corps commander had all the information necessary to determine his action for the 29th, should nothing unforeseen occur.

The relative position of the Sixth Corps

the White Oak bridge than the intrenched line in front of Fair Oaks and Golding's Farm (described above), and was nearly parallel. It was much shorter than the old line, its left reaching nearly to the swamp, and its right to the brink of the Chickahominy hills. This second line was about three-quarters of a mile in front of Savage's Station on the York River Railroad, which had been the depot for unloading and storing supplies for the troops that held the old line, and where had been

UNION TROOPS BUILDING THE CORDUROY APPROACHES TO GRAPEVINE BRIDGE. (FROM A PHOTOGRAPH, 1862.)

[It was mainly by this bridge that the Union troops were withdrawn the night after the battle of Gaines's Mill.]

was not changed. General Smith's division was still to have its right on the Chickahominy, extending down the river, where it was to touch the left of General McCall's division, which, however, played no part in holding the line on June 29th, as it crossed White Oak Swamp early in the day.

General Slocum's division was to be at Savage's Station, in reserve. Then came General Sumner's corps and General Heintzelman's. General Keyes's was to cross the White Oak Swamp at once. General Porter's corps had already crossed the swamp, and was under orders to press forward to a position on the James River.

This new line was about two miles nearer

gathered in tents two thousand five hundred sick and wounded, most of the latter from Gaines's Mill.

General Slocum's and General Smith's divisions both moved to their new positions before daylight of Sunday, the 29th of June — the day of the fighting at Savage's Station. As General Slocum's division had suffered so severely in the battle of Gaines's Mill, and had not yet recovered from its exhaustion, General McClellan ordered it to cross White Oak Swamp at once, and it accordingly left its position. Through some inadvertence I was not informed of this change of plan; so when I joined General Smith early in the morning, I found him in his proper position,

THE SECOND LINE OF UNION WORKS AT FAIR OAKS STATION, LOOKING SOUTH. (FROM SKETCH MADE ON THE FIELD BY A. R. WAUD.)

[On the day of the battle of Gaines's Mill the Confederates made demonstrations along the front of McClellan's left wing, of which Fair Oaks Station was the center. After the battle of Seven Pines this position had been greatly strengthened, as may be seen by comparing the above picture with the sketches of the same position in the May CENTURY.—EDITOR.]

but with an interval of more than a mile between him and the troops on the left. It was soon learned, by sending out cavalry, that General Sumner had not moved from the position that he held the day before, and was, at the very time we learned this fact, engaged with the enemy at Allen's Farm. It was also apparent that straggling parties of the enemy were in front of the interval already mentioned. These circumstances

FIELD HOSPITAL AT SAVAGE'S STATION, AFTER THE BATTLE OF GAINES'S MILL. (FROM PHOTOGRAPH.)

showed an alarming state of things, and General Smith and I rode over to Savage's Station to learn something of the positions of other troops. We found no troops in the vicinity except General Meagher's brigade and the Fifteenth Massachusetts Infantry, which had been sent to the station to destroy the stores that had to be abandoned. I at once wrote General Sumner, describing the situation, and informing him that I should move General Smith's division to Savage's Station, the vicinity of which offered a good fighting position, and advising him to bring his corps to that place. He answered the note at once, telling me that he was then engaged with the enemy,

and that as soon as things were quiet he would join me with his corps. Soon after I had sent to General Sumner General Heintzelman rode up, and I told him what I had done. He approved, and said that he would also join us at the station with his corps. He afterwards changed his mind, however, and instead of halting in the wood in front of the station, as we naturally supposed he would, he marched off towards White Oak bridge, hidden from us by the woods, and crossed the swamp, so that we saw him no more that day, supposing, nevertheless, until we were attacked by the enemy, that his troops were in position on a part of our front.* General

* General Heintzelman in his report says: "The whole open space near Savage's was crowded with troops — more than I supposed could be brought into action judiciously." He then states that an aide of the commanding general was with him to point out the road for his crossing. "I ordered the whole of my corps to take this road, with the exception of Osborn's and Bramhall's batteries." These were turned over to General Smith's division.—W. B. F.

PLAN OF THE BATTLE AT SAVAGE'S STATION.

[The order in which the Union troops entered the fight has by request been described for *THE CENTURY* by General William W. Burns, in a letter dated Governor's Island, May 10, 1885, in which he says :

"The enemy appearing in the woods west of Savage's Station, General Sumner sent me forward to occupy the space between the Williamsburg road and the railroad. Thinking that two regiments of my brigade would suffice, I led them forward to the fences, at the edge of the woods on the west side of the clearing, about five hundred yards distant from the ravine on the east side of the clearing. General Sumner had his headquarters east of this wooded ravine and could not observe what was occurring on the west side of the open field.

"When I reached the fences I sent skirmishers through the belt of trees, and found the enemy advancing on the Williamsburg road and on the railroad, where General Lee's famous railroad monitor was slowly approaching. I had to throw back the right company of the right regiment, the Seventy-second Pennsylvania, to rake the monitor. Then I found my two regiments not enough to extend across between the Williamsburg road and the railroad. I sent an aide in haste after my other two regiments, informing General Sumner of the situation. The First Minnesota, of Gorman's brigade, being most handy, was first sent, my two reserve regiments following. While placing the First Minnesota on the left to extend across the Williamsburg road, the battle began. My right flank swept the railroad monitor, which had advanced to the edge of the woods, and it ran back. The battle moved to my left and I discovered that our works east of Seven Pines had been evacuated by Heintzelman. I threw back the left flank of the First Minnesota across the Williamsburg road and sent the Sixty-ninth Pennsylvania of my brigade to prolong the left, to prevent the turning movement of the enemy; at the same time informing General Sumner of the conditions in front. He would not believe that Heintzelman had withdrawn until I sent my last mounted man, urging and demanding reinforcements. The Seventy-first Pennsylvania (also called the First California), of my brigade, arriving, I placed it behind the center of my line where a gap had been made by extending the First Minnesota to the left. General Franklin sent General Brooks's brigade to the left of my line to check the turning movement of the enemy, and Sumner, when

he realized that Heintzelman had withdrawn, sent Gorman's and Dana's brigades to my support in front.

"General Sumner formed the Eighty-eighth New York, of Meagher's brigade, and the Fifth New Hampshire, of Caldwell's brigade, for a charge. A mass of men came up in my rear in full yell. I halted the crowd and asked for their commander. 'I am Captain Quinlan of the Eighty-eighth New York, sir,' exclaimed an officer. I got them into line (about two hundred and fifty men), facing up the Williamsburg road, which was raked by the grape and canister of the enemy's batteries. I gave the command, Double quick — charge! They went in with a hurrah, and the enemy's battery fell back. General McClellan mistakenly gave the credit of that gallant charge to the Sixty-ninth New York. It seems that the Fifth New Hampshire halted before the charge which General Sumner had put in motion reached me.

"I was shot in the face with a minie-ball at the time the enemy broke through the gap in the center. There we had a hand-to-hand encounter, which determined the day in our favor. At nightfall I relieved the first line, its ammunition being exhausted, with the Seventy-first Pennsylvania, the Fifteenth and Twentieth Massachusetts, and the Eighty-second New York. My report of the Seven Days' fighting was made at Harrison's Bar in hot July. I was prostrated with my wound, malaria, and twenty-eight days of constant strain, and was unable to write or to collect my thoughts. The battle at Glendale on the 30th of June, the next day after that of Savage's Station, was saved by my brigade, which kept the enemy from piercing the center of the Army of the Potomac; but, like the instance above, history has given the credit to 'General Misunderstanding,' who, in history, fights most battles. — William W. Burns."

Parts of Hazzard's, Pettit's, and Osborn's batteries were engaged on the Union side.

The Confederate infantry north of the railroad (Cobb's, Toombs's, and Anderson's brigades) did not take an active part in the battle. Anderson's brigade is not shown, its position being outside the northern bounds of the map.

The Confederate artillery engaged comprised Kemper's battery, two guns of Hart's battery, and Lieutenant Barry's "32-pounder rifled gun mounted on a rail-car, and protected from cannon-shot by a sloping roof, in front, covered with plates of iron, through which a port-hole had been pierced."—EDITOR.]

Smith's division arrived at the station about noon or shortly after, and took position on the left in a wood. General Sumner's corps, consisting of General Sedgwick's and General Richardson's divisions, arrived about 2 P. M.

There was a cleared field of several acres on the north side of the railroad which was

eral Heintzelman's troops to be; on the left of the Williamsburg road was timber also, and General Smith's division was in position therein. Sumner's corps took position in the clearing between the Williamsburg road and the railroad. It consisted of two divisions of infantry, Sedgwick's and Richardson's. Burns's

BATTLE OF SAVAGE'S STATION. (FROM A SKETCH MADE AT THE TIME BY A. R. WAUD.)

[The 2500 sick and wounded in the field hospitals, and attendants were left behind when the army fell back from Savage's Station, during the night following the engagement. The explosion on the railway is of an ordnance train. Other ordnance trains were set on fire and were run back to Bottom's bridge where they plunged into the Chickahominy.—EDITOR.]

occupied by a camp hospital, containing about twenty-five hundred sick and wounded men. The field was filled with hospital tents laid out in rows, each tent containing fifteen or twenty men on comfortable, clean beds, with the necessary surgeons and attendants. South of the railroad, and between it and the Williamsburg road, was another clearing, east of which was a ravine running obliquely across the railroad, its edges skirted by trees, and the ravine itself filled with undergrowth. This clearing was nearly square, and was about one-third or one-half mile in length and breadth. In front of the ravine were some small hills which made good shelter for the troops; and west of the clearing was timber, where we supposed Gen-

eral Heintzelman's troops to be; on the left of the Williamsburg road was timber also, and General Smith's division was in position therein. Sumner's corps took position in the clearing between the Williamsburg road and the railroad. It consisted of two divisions of infantry, Sedgwick's and Richardson's. Burns's brigade of Sedgwick's division was in front, Sedgwick's other two brigades being just behind. The three brigades of Richardson's division, Meagher having joined him, were farther to the rear, but more to the right. Three batteries of field artillery, Hazzard's, Pettit's, and Osborn's, were posted towards the left, near the front of the ravine.

The day was hot and sultry and wore away slowly as we waited either to be attacked or at nightfall to start for White Oak bridge. Large quantities of all kinds of quartermasters' and other stores, partly in cars, were burning at the station, and at intervals shells would burst as the fire reached them, jarring the nerves of the tired and expectant men.

THE ARTILLERY ENGAGEMENT AT WHITE OAK BRIDGE. (BY A. R. WAUD, AFTER A SKETCH MADE BY HIM AT THE TIME.)

[Ascending the north slope the road bends to the left, the upper side being skirted by woods along the edge of which the Confederate artillery took position.—EDITOR.]

Shortly before 4 o'clock General Sedgwick and I rode over to the hospital to visit some of our wounded friends, whose condition was found to be as comfortable as could be expected under the circumstances. From the hospital we started to make a call upon General Heintzelman, whose supposed position has already been described. As we rode over the open field we saw a group of men come out of a wood on the north of the railroad, but some distance from the place where we expected to find Heintzelman. I thought they were our men, but General Sedgwick looked at them more closely, stopped, and exclaimed: "Why, those men are rebels!" We then turned back in as dignified a manner as the circumstances would permit. But we had hardly started when they opened on us with a field-piece, keeping up a lively and uncomfortable fire. A second piece soon joined the first and they kept up the fire until they were silenced by our batteries. This ludicrous incident prevented what might have been a disastrous surprise for our whole force. A few minutes afterwards, before we had reached our troops, the signal-officers reported the approach of a force of infantry and a railroad car upon which was a rifled cannon, from the direction of Richmond. This artillery car halted in a cut of the railroad a little distance in front of the station, and at once began to shell the troops in the open field, and so about five o'clock the fight was begun. I immediately sought Gen-

eral Sumner, to inform him of the situation and get instructions. He had been fighting at the head of his corps during the morning, and being much exhausted, was asleep when I reached his headquarters. I awoke him, and in a short time he had ordered two regiments of General Burns's brigade to attack at a point in the timber in front near the Williamsburg road, where the enemy's infantry had by this time appeared. These regiments entered the wood, and before they became engaged were joined by the First Minnesota Regiment. General Burns extended his line to the vicinity of the railroad, so that its center was necessarily weak. During this movement the enemy's artillery played with effect upon our troops, but was answered and finally silenced by the three batteries on our side already mentioned.

The enemy made the infantry attack with great fury, and pierced the center of General Burns's line. General Burns was wounded but remained on the field. At this time General Sumner placed himself in front of two regiments and waved his hat. With a cheer they moved forward at double time to the endangered place in General Burns's line, enabling him to rectify it and drive the enemy from his front. Several other regiments joined General Burns's line at about the same time, but the fight was over not long after the charge, and the enemy was driven from the wood. A Confederate battery placed near the Williamsburg road was compelled to withdraw in haste. On
